Twenty years ago my mother took up the study of Christian Science in order to help my father, who was suffering from severe heart trouble, and in a short time he was healed thereby. Since then a family of seven of us have not employed a doctor, nor have we used any medicine, but have relied entirely upon Christian Science for healing. At the time it came to us I was a small child, and have practically been brought up in this thought; know the names of very few diseases and almost nothing about them, and never think of using material remedies. As children we had to meet some of the sicknesses supposedly common to childhood, but in each case our attacks were lighter than usual, and they were overcome in shorter time than they generally are. Not only have I found Christian Science a most effective remedy for physical ailments, but I have received help from it in my school and college work. On taking a compulsory examination by a physician at college, I was told I had a spinal trouble and a condition of the heart which would prevent me from taking violent exercise. A short time afterwards I started running in competition for the track team, and as I attained some success in this line, it was desired that I continue. The doctor objected, but allowed me to run one race on condition that I be examined before and after. Finding that my heart gradually improved, although I was engaged in extremely violent strains, he allowed me to continue, but for some time kept a close watch over me. Under Christian Science treatment I continued to improve, until the doctor, much to his surprise, could discover no trouble with my heart, and did not care to examine me any more. Neither did I follow his advice in regard to the spinal trouble, but my back gave me no trouble whatever.

The works of Christian Science alone are sufficient to prove its truth; but to me the faultless logic of its teaching, and the fact that by its interpretation the Bible, which without its light seems filled with contradictions and enigmas, has become an open and understandable book, are quite as convincing. We who have been fortunate enough to gain some knowledge of Christian Science, have found a religion and philosophy which satisfies; one which can be applied to our daily life, and which can be implicitly trusted in the case of physical or other trouble.

I am indeed grateful to Mrs. Eddy for giving us this understanding.—R. L. HENRY, JR., Chicago, Ill.

I was first attracted to Christian Science by hearing that it could make people good. I had always loved the Bible, but in the light of Science it is doubly precious. Many blessings have come to me through Christian Science. The first reading of Science and Health convinced me of its truth, and I knew no power could shake my conviction that it was what Jesus came to teach. The first physical effect was the disappearance of the fear of getting my feet wet, and since that first reading, over fifteen years ago, I have experienced but one sick-headache, whereas I had suffered severely from them up to that time.

About three years ago an almost complete breakdown occurred, seemingly through overwork in school. Through the aid of a Christian Scientist I slowly regained strength, and after a year and a half resumed school work. I am now in better health than ever before. Another trouble that has been removed by Science was a predisposition to homesickness, so great as to make me return home after two weeks' attendance at a normal school. This impression was so vivid that for several years I could not speak of it without tears, but through Christian Science I learned that as a child of God my true home is wherever He is. I later returned to the same school, and completed a four-year course, and for the past year have been across the continent from my former home without any serious attack of the old malady. I am very grateful for the many blessings that have come to me in Christian Science, including the help of the *Journal*, *Sentinel*, and *Quarterly*. Much of the time I have been away from other Scientists, but these helps have made me feel near to them and have indeed been "good news from a far country," which will grow nearer each day if we are "willing and obedient."

My gratitude to our Leader, Mrs. Eddy, can only be expressed by trying to live each day my understanding of the truth that has been revealed through her in Christian Science.—LUELLA M. WILCOX, Ellensburg, Wash.

It is over seven years since Christian Science first came into my life. At that time I was without God and without hope. Not having received a religious training, it never occurred to me to resort to prayer for the cure of any kind of trouble, but I wish to state that I have been healed of many physical ailments through Christian Science prayer alone, which we all learn in due time is the prayer of understanding. Not only have I been healed of bodily troubles, but I have received a great moral uplift through the study of our wondrous text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Christian Science has taught me to read and love the Bible, although I had, until seven years ago, absolutely no interest in it. My son met with a severe injury to his arm while coasting. He was a pupil in a Christian Science Sunday School, and we both declared the truth, so that fear was overcome at once. The arm was set by a doctor, who said that he would have trouble with it, but the healing was a beautiful and painless demonstration of Truth's power. In a short time he was able to use the injured arm as well as the other.

I am profoundly grateful that Christian Science has come into my life, for now I am no longer without God, hope, or faith. I wish to express my love and sincere thanks to God, and to our dear Leader.

MRS. IDA E. ZIEGLER, Baltimore, Md.

I have several times made the attempt to write a statement of my wonderful healing. It was indeed a wonder to all who knew my condition, that I recovered in Christian Science. I therefore am anxious to lead others to see that there is help for them, even when all earthly means fail to give relief. I feel deeply my inability to express even a small part of my gratitude for the understanding of the truth that freed me from a complication of diseases, when the very best means in *materia medica* had failed to do so. I had gone through three operations at different times, two being within one year, and underwent very severe treatment for stomach trouble, but without getting relief from anything until I came to Christian Science, when in two weeks I was so greatly improved that friends looked at me in astonishment and asked what had helped me. It has been eight years since my healing, and during that time all discords have been successfully met by the understanding of the truth which our Leader has given us in Science and Health.—MARGARET N. ROBBINS, Niles, O.

When Christian Science found me, I was ill mentally and in dark despair. I had a sick baby, and the means used for its recovery I felt to be worse than the disease. When a Christian Science practitioner came to town, after a great deal of persuasion I took the baby to her, though with grave fear. The child was helped at once, but we continued treatment for three weeks. I was perfectly satisfied and relieved of doubt when I learned that Christian Science was the way Jesus healed. I bought a copy of Science and Health, and used the "scientific statement of being" (p. 468) for everything that came up, feeling that the truth would heal; and it did.

My children were so quickly relieved of a contagious disease by the little understanding which I had, that a neighbor said they did not have the ailment. This demon-

Digitized by Google

stration naturally made me want to know more of the truth. Since then I have been trying to show by my daily life how glad and grateful I am to know God, how thankful to our dear Leader for Science and Health, and for all the Christian Science literature. I came to Christian Science for physical healing, but I received the spiritual healing also. All that I am I owe to Christian Science.

MRS. EMMA TABASINSKY, Springville, Ia.

I have had so many blessings from the understanding gained through Christian Science, that it would seem ungrateful not to tell of this demonstration. Last April my little daughter, six years old, met with a terrible injury. I was some distance away, but at once began to declare the truth, and when I reached the child I said to her that error has no power. She stopped crying, and while I was washing the blood off I talked to her of the power of divine Love. She was completely healed in a very short time. The fear was expressed that she would lose an eye, but the alarming appearance was overcome. This demonstration of Truth's power is very sacred to us. I realize that the sweet, trusting thought of the child made it easy. She is able to help herself in Science, and others also. Not a day passes but I have positive proof of God' great help in time of need, and I am more thankful than words can express.

I am so grateful to our dear Leader for Christian Science.

ANNA C. BELL, Memphis, Tenn.

It is with gratitude that I give my testimony. For many years I suffered from various ills, and underwent four operations for internal trouble. I spent much money for medical treatment, both in England and America, but without permanent help. When the doctors said they had done all they could for me, then a Christian Science practitioner came to me, and as a drowning man catches at a straw, I clung to Science, and was healed. I had been a physical and mental wreck, and had no hope of ever being better. I had in all four weeks' treatment, and after the first one I left off my glasses, which I had been using for a defect of the eyes. The doctor said I could not possibly do without them; but that was nine years ago, and thanks to God, I have never needed them since, nor have I resorted to any kind of medicine. I am indeed grateful to God, and to dear Mrs. Eddy, through whom this healing truth has again been revealed to mankind.

MRS. EMMA THOMPSON, Leeds, Yorkshire, England.

It is with heartfelt gratitude that I give testimony to the healing power of Christian Science, as shown in the case of our son, fifteen years of age, in March, 1905. While coasting he was so badly injured that for a few days he was unable to move, and suffered greatly. He was hurt on Tuesday and gained so rapidly under Christian Science treatment that on Saturday he was downstairs. One week from the day he was injured he was at school, and the following day played in a game of basket ball. We have had many demonstrations of divine power, and to me they have been stepping-stones to a higher and better understanding of God, the one Mind. My gratitude for Christian Science increases daily. I wish to express my thankfulness to God, and to our dear Leader for my knowledge of Christian Science.—MRS. AMANDA WALKER, Pittsburg, Pa.

About four years ago I found it necessary to have some teeth extracted, and the fear of the pain was more than I could overcome, so I went to a Christian Science practitioner, who gave me treatment. I then went to a dentist who had been recommended, and on examination he found twelve or thirteen teeth to extract. When all was ready he asked if I would take an anesthetic. I answered in the negative. He then brought some brandy, which he said it would be necessary for me to take. I again refused suring him I did not need it. I also objected to the of cocaine. He then warned me of the danger of coll but I told him I felt quite equal to the task, and i found, after he had extracted one or two teeeth, that I giving him my trouble, I would then submit to any t ment he might advise. He then extracted four teeth, asked if I would not rest. I said not until they wer out; and the work was completed without interrup The dentist was much pleased, and said he had never i his practice seen anything like it, with man or woman then told him something of this blessed truth that had g me the strength to endure and quieted my fears. Thi only one of the many benefits I have received from C tian Science, for all of which I am truly grateful.

MRS. M. E. AMELIA DEIGHTON, Toronto, On

Shortly before Christmas, in 1905, my eyes became s sitive to the light and at times quite painful. I asked help from a Christian Science practitioner. Having sc sewing I wished to finish, I worked constantly for sev days, when my eyes seemed to give out completely. S eral years before, my husband had had a similar trouble a one of San Francisco's foremost oculists had pronounce a serious case. Believing my eyes to be in worse condit than his had been, I felt that I was face to face with a v difficult problem. I knew the practitioner to be very fi in her reliance upon Truth, as revealed in Christian S ence, and that knowledge helped me in my decision to r solely upon God for deliverance. I wrote, telling her h urgent was my need of help. I no longer felt any fear to the outcome, though I felt obliged to exclude every r of light from the room, the sense of suffering at times bei intense. There was no visible improvement till the nig of the following day, when the pain vanished, suddenly a completely. There was no further need of a dark roo In less than a week I was using my eyes as freely as eve with no sense of inconvenience whatever, and they ha given me no further trouble. Shortly after this experien my husband's throat became sore, and as we were unable overcome the trouble, we again asked for help. As t treatment was absent there was some delay in reaching o practitioner, but as conditions were made known to h they were quickly overcome. In a week health was r stored and strength rapidly regained.

These and other benefits I have received from Christia Science have assured me that the faithful application o the truth will finally remove every obstacle to the expressio of health and harmony. With gratitude I acknowledge th great good Mrs. Eddy has brought to humanity in thi fuller understanding of God.

KATE B. SEVERSON, Suisun, Cal.

In December, 1905, when I first came in contact wit Christian Science, I was indeed miserable. Afflictions o many kinds had fallen thick and fast around me; some were such as could be put down with a brave heart, but the sickness of my only child, a boy of four, was more than I could bear. He had suffered for over a year, during which time I had five different doctors for him: but instead of improving he gradually grew worse. He lost the power of speech, and in December the last doctor told me he could do nothing more for him, that it was an affection of the brain and he would be an idiot if he lived, as he was getting worse. This was two weeks before Christmas. The night before he had been dreadfully ill, and I was up with him all night, but my decision was made. I threw all the medicines out and took the child to a Christian Science practitioner. He grew better from that day, gradually the different symptoms left him, and after six weeks of absent treatment he was entirely healed. He has never

Digitized by Google

taken any medicine since, and is perfectly well, thanks to God and to Christian Science.

HANNAH M. THOMPSON, Denver, Col.

For twelve years I had been most miserable with a complication of diseases. A physician treated me a long time, but I grew steadily worse. When I came to Pittsburg I had three doctors, one after another, then a specialist. They all agreed that it was an abnormal growth which caused me so much trouble. I underwent surgical treatment seven times, and finally the specialist said he had done all he could, but advised me to go to a hospital and have the growth removed. About this time I heard of Christian Science, and decided to try it before submitting to an operation. Under Christian Science treatment I began improving at once, and was entirely healed in six weeks. Later, I applied for treatment for chronic frosted feet, from which I had suffered terribly from childhood. The trouble would begin each year at the first appearance of frost, and would remain until warm weather. I could seldom wear shoes, and stood on my feet with great difficulty. In one week's treatment this condition was entirely healed, and I have had no trouble from it since, now three years. I had spent a great deal for ineffectual medical treatment, while I have paid only a small amount for the help received in Christian Science, and am well.

My husband's healing from catarrhal trouble seems very wonderful to me. He had used large quantities of material remedies, without being healed. He is a locomotive engineer, and after my healing he began to study Science and Health and improved very much during the year. Finally he went to the same practitioner who had treated me, and in three weeks was perfectly healed. He thinks the most wonderful part of his healing is that he has never been tempted to use any profanity or tobacco since he first became interested in Christian Science. We are both very grateful to Mrs. Eddy for this revival of primitive Christianity with "signs" following.

MR. and MRS. JOHN KIND, Pittsburg, Pa.

If any person had told me a year ago that I would become a Christian Scientist, I would not have believed it, but I am grateful to God, and to our Leader, for the blessings I now enjoy through Christian Science. In July, 1905, I received a severe scald on my foot, which would have put me off work for weeks had I depended upon *materia medica*. On the third day after the accident my mother asked if I would like to have a Christian Science practitioner help me. I consented, and was back at work in two weeks. The physical healing was not all. For years I had been a hard drinker; would give up the habit for a while, only to return to it. I tried every kind of material remedy, but it was of no avail. Christian Science cured me of the appetite for drink in six days, and I have never had the least desire to return to it. I know I never can with the enlightment from the divine Mind and the new environment which the change has brought,—a happy mother, sisters, and the return of friends.

I was chef in a hotel when I was first led to the study of Christian Science. Not only was I healed, but an ambition to be a better man was aroused, and most of all I desired to know and to obey the great and only power according to His laws. For over thirty years I had seemingly been in the power of strong drink and tobacco, but both of these were soon given up. Although my work calls me frequently to the bar, these very articles of enslavement make no appeal to me. My whole physique is rapidly undergoing that change of which Paul speaks,—transformation by the renewal of the mind. The effects of fatigue, exposure, and starvation in the Spanish-American war are disappearing, and I am also overcoming a very quick temper.

I hope this statement may do some good to any who may be down under the power of the liquor habit,—that it may help them to see the true light that leads us out of darkness into the brightness of Life, Love, and Truth. I cannot give praise enough to Christian Science for the good it has done me. Through Christian Science I have come to understand more clearly the Bible, and with "Science and Health with Key to the Scriptures" by Mrs. Eddy, what seemed a hard problem is being solved.

ALVA L. SOURBECK, Alliance, O.

Last April I was suddenly stricken with a severe attack of illness and was carried to a hospital, where I was placed under the care of a physician and nurse, who did all they could for me. My suffering was terrible. As day after day passed with no signs of my ever getting well, I expressed to the nurse my longing to go to a Christian Scientist whom I knew, and receive treatment. To my surprise she approved the idea. We planned every way, so that I might be able to take the trip, as it seemed impossible for me, in my condition, to travel three hundred miles. The doctor had told the nurse that he had done all he could for me, that there was no chance at all for my recovery. There was, therefore, nothing left for me to do but to try Christian Science. With plenty of morphine tablets to deaden the pain, I was helped to the train. I reached my friend, and began treatment at once. As a result I was in bed only a week after my arrival, and in four weeks more I was entirely healed.

Words cannot express what Christian Science has done for me. That it heals, I know. I also find that the better I understand its teaching, the better I understand God and my relation to Him—the Bible becomes clearer to me. In all my years of trying to be a Christian I could not realize man's at-one-ment with the unseen infinite as I have since studying Christian Science.

MRS. A. L. JONES, Joplin, Mo.

When I became interested in Christian Science, about three years ago, I was eighteen years old and I thought I was as happy as any mortal could be; but through the truth as revealed in our text-book, Science and Health, I have learned what real happiness is. I know now that it is to be found only in Spirit and not in materiality, and is therefore eternal and indestructible, not transient or dependent on material conditions. Although I did not seek Christian Science for physical healing, it has proved a preventive of sickness, as I have been kept in perfect health during the past three years, whereas I would formerly have two or three attacks of sickness during the year. It has been proved to my entire satisfaction that there is a loving Father, God, who is the ever-present help for our every need, and I am very grateful to our dear Leader, who has made it possible for me to know this and whose loving sacrifice is doing so much for humanity. I am thankful every day that I know about Christian Science and that it is my privilege to help others to learn of this great truth.

CELIA E. ABERNATHY, Kansas City, Mo.

Six years ago, when I first heard of Christian Science, I was in very poor health, suffering with severe rheumatic trouble. I became acquainted with a young lady student of the University of California, who was also a student of Christian Science. She loaned me a copy of Science and Health to read, and also helped me greatly. I have been a constant student of the Science since that time, and I can truthfully say that through Christian Science the above-mentioned disease, and some others, have all been cured. I feel humbly thankful for having been so lovingly helped in Christian Science, and my heart goes out to our heavenly Father, who has met our need in giving us this truth through our beloved Leader. May His choicest blessing ever be hers.—MRS. LUDIE M. BROWN, Gazelle, Cal.

FROM OUR EXCHANGES.

[*The British Congregationalist.*]

During the last fifty years great changes have passed over the minds of men on religious subjects. . . . Look where one may, he is met with evidence strong and convincing that the churches do not stand, so far as their living faith is concerned, where they stood, and the end of the transformation has not yet been altogether reached. This is true of most countries. . . . The critical period through which the teachings of all schools of theology have passed has removed the old landmarks, changed the standpoint of vision, and thereby created a distrust in the old and a longing for a new statement of the essentials of the faith. The thoughts of many, particularly of inquiring and intelligent youth, are in solution, and require to be crystallized, otherwise they may in the stress of life evaporate into a weak sentiment of little or no practical value. The restatement demanded is not to be of the nature of a revolution, an entire rebuilding on an altogether new foundation. All the great fundamental truths held, in one form or another, by the Church in all ages are not to be thrust aside as if they were of no permanent use in the household of faith. The spiritual realities are the same in all the centuries, though explanations of them may differ according to the idiosyncrasies of their expounders and the spirit of the times in which they lived.

[*Wall Street Journal.*]

Whatever may be a man's own personal beliefs, there is no one who would not prefer to do business with a person who really believes in a future life. If there are fewer men of such faith in the world, it makes a big difference, and if faith is to continue to decline, this will require new adjustments. There are certainly, on the surface, many signs of such a decline. Perhaps, if it were possible to probe deeply into the subject, it might be found that faith still abounded, but is no longer expressed in the old way. But we are obliged to accept the surface indications. These include a falling off in church attendance, the abandonment of family worship, the giving over of Sunday, more and more, to pleasure and labor, the separation of religious from secular education, under the stern demands of non-sectarianism, the growing up of a generation uninstructed as our fathers were in the study of the Bible, the secularization of a portion of the Church itself, and its inability in a large way to gain the confidence of the laboring people. If these are really signs of a decay of religious faith, then indeed there is no more important problem before us than that of either discovering some adequate substitute for faith, or to take immediate steps to check a development that has within it the seeds of a national disaster.

[*The Hibbert Journal.*]

If the Church on her side treats the world as lost and ruined, the world will retort by challenging the competency of its judge. Extremists have not yet perceived how disastrously the dualistic theory thus recoils upon the cause they would defend. They do not see that in condemning the world they condemn themselves. Nor do they recognize that the world is slowly acquiring the functions of a church, that a world-church is in process of formation, embracing multitudes whom they disown, and destined hereafter to do the work which they claim as theirs, only on a scale and with a vigor of which the most daring imagination has not dreamed. If they choose to stand apart, society will leave them in their sublime isolation and go on its own business in its own way. . . . The alienation from the Church life of so much that is good in modern culture, and so much that is earnest in every class, is the natural sequel to the traditional attitude of the Church to the world.

[*The Christian Register.*]

The words of Jesus, "Love one another," are a person direct command. It is to the individual he addresses self, to you and to me. There is nothing so much ne in the world as love, nothing of which the supply is so sr Until the world gets a new conception of this principle, t can be but little hope of a great revival of religion. who is to restore the ideal of Jesus? Why, you an for, if the flower is raised in our little garden-plot, the will spread to neighboring lands.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science Health with Key to the Scriptures" by Mary Baker G. E with latest revisions and additions, and numbered li 700 pages.

For description, price, and other information, see last p of cover.

THE CONCORDANCE.—A complete Concordance to ence and Health with Key to the Scriptures. This w has been compiled from the late revised edition of SCIE AND HEALTH, and contains about eighty thousand referer (more than ten thousand words being indexed). It a contains an index to the Marginal Headings, and a list the Scriptural Quotations in SCIENCE AND HEALTH. pages, 10 x 7, bound in cloth, marbled edges. Price, p paid, single copy, $5. Twelve or more to one addr $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to d of The Mother Church, The First Church of Christ, S entist, in Boston, Mass. This does not include the list members. Price, prepaid, $1 per copy; $5 per half doze $9 per dozen.

Address all orders for books named above to JOSE ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blar will be supplied by The Christian Science Publishing S ciety to practitioners who wish their names and address inserted in the advertising columns of *Der Herold d Christian Science*. These applications should be proper endorsed and forwarded to the Society. The rate f advertisement will be $2.00 for the first line, and $1.00 f each additional line. It is desirable that those who off their names in this way should be able to communicate wi patients and inquirers who speak the German languag only.

CLERK OF THE MOTHER CHURCH.—Correspondence re lating to membership with The Mother Church and reques for blank applications for membership, should be addresse to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Churc of Christ, Scientist, Falmouth, Norway, and St. Pau Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church o Christ, Scientist,—The Mother Church,—printed on folde sheet for the use of Branch Churches of Christ, Scientist with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

MR. KIMBALL'S LECTURE. 31 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00

Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00

Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

According to the testimony of the Standard Oil Company's own witnesses, just given in the suit brought by Missouri against the trust for violations of the anti-monopoly laws of the State, Attorney General Herbert S. Hadley of that Commonwealth has accomplished practically what he set out to do. The allegation on which the action was based was that the three companies which supplied oil to Missouri were entirely in the control of the Standard, and that they were operated in a manner to prevent competition. Under an order of the courts the Standard officials admitted the control of the stock. The president of the Republic Oil Company of Cleveland, one of the defendants, testified that the concern had already abandoned business in Illinois and Iowa, and that it was getting ready to quit also in Missouri. This he said, was due largely to exposures in the newspapers of the company's connection with the Standard Oil Company. Prior to the campaign begun by Attorney General Hadley the concern was known as an independent dealer, and the belief among its customers that it was a rival of the trust brought it a great amount of business. When it became more and more apparent that the Republic Company was merely one of the many ramifications of the Standard Oil Company, sales fell off to such an extent that it was thought prudent to abandon the business and turn over the properties of the concern to the trust.

Trial tests recently conducted at Sandy Hook developed the fact that one hour's firing of a 12-inch gun will so impair its accuracy as to render it inefficient. Smokeless powder produces rapid deterioration of these great guns. The 12-inch guns now mounted or building for coast defence purposes number one hundred and five. The construction of each has cost the Government about $75,000. Fourteen-inch guns with shorter barrels and greater capacity of initial velocity will be constructed. To build the first 14-inch gun and carriage has required an expenditure of $132,000, but if the calculation of ordnance experts prove correct the other guns of this type can be built and mounted for about the same cost as the 12-inch guns.

Experiments conducted by the Signal Service within the past few months have resulted in the construction by the Government of a number of portable wireless outfits, and they are now being distributed among the various commands. These outfits can be transported on the backs of three horses, and can be set up in twenty minutes. They can transmit messages about one hundred miles. The coast artillery stations will be fitted up with the same outfits, from which communication may be had with ships at sea and transmitted to the field if necessary.

Extensive land frauds in the Indian Territory, in which a number of Government officials, unscrupulous whites, and a score or more of civilized Indians are alleged to be involved, is about to be made the subject of investigation under the direction of Ethan A. Hitchcock, Secretary of the Interior. The land in question, said to be worth anywhere from $5,000,000 to $6,000,000, consists of town sites in several prosperous and booming cities in the Territory.

"We are working too hard, too rapidly, and too long each day," said Senator Henry C. Hansbrough of North Dakota, who was instrumental in inducing the Interstate Commerce Commission to institute an inquiry into the causes of the car shortage. "This evil is not peculiar to the railroad world alone. It extends into nearly every line of American business life. The pace is too swift."

The two sections of the East River Tunnel, New York, were joined on the 15th. The two tubes joined exactly. The river ends of the north tube of the Pennsylvania Railroad Tunnel under the North River were joined with only a variation of one-sixteenth inch on Sept. 12; the south tube without any variation Oct. 10.

William H. Moody, formerly Attorney General, on Dec. 17 entered upon his duties as an Associate Justice of the Supreme Court of the United States, thus bringing the Court up to its full membership.

Shippers who delay unnecessarily in unloading cars at large centers are said to be quite as much to blame for the "car shortage," which is now a matter of Government investigation, as are the carriers.

The outstanding principal of the public debt of the United States June 30, 1906, was $895,159,140.

Foreign.

The German Society of Wireless Telegraphy has succeeded in holding wireless telephonic communication between Berlin and Nauen, twenty-four miles away. Professor Slaby, in an interview, described the experiment as eminently successful. He says the problem of wireless telephony is solved, but that the limit of distance is not yet known. He sees no reason to set any limit, and believes that the time is coming when a man will be able to speak wirelessly with a friend in any part of the world. The method employed consists of the use of the microphone in connection with the ordinary wireless telegraph apparatus.

By the terms of the contract of the railway merger just made public, the Mexican Government procures absolute control of the Mexican Central, the National, the International, the Inter-Oceanic, and the Hidalgo and Northeastern Railroads, all of which will be merged into one great railroad system. The Government also comes into control of the Texas-Mexican, a railroad at Laredo, Texas, which is owned by the National. The mileage of the system will aggregate ten thousand miles.

The British Foreign Office has received from the British Minister *ad interim* to China, proposals from China with regard to the duty on opium imported into China from India. China is desirous that some restrictions be placed on the importation of Indian opium in order to strengthen her endeavors to put down the traffic in the drug.

It is officially announced that by an a ment with Russia, China will, on Jan. 1 fore the complete withdrawal of the Ru troops from Manchuria open as place international residence and trade, C Chuin, Kirin, Harbin, and Manchuri first station on the railway on the Ch side of the Russian frontier.

By an overwhelming majority, Man last week voted in favor of Govern ownership of long-distance telephone and municipal ownership of municipal changes.

Industrial and Commercial.

The construction of a canal across Cod, a project that has been discussed more than two hundred years, has been t up by August Belmont & Company an to be pushed by that firm and its assoc as rapidly as possible. William Barclay sons is to have charge of the work. canal will be about eight miles long," he "and extend in a straight line from Buzz Bay on the south to Sandwich, on Barnst Bay, on the north. It will have a dept at least twenty-five feet at low water at least thirty feet at high water. The nal will cost about $10,000,000 and can completed easily in two years and a There will be no locks."

The least amount of power, says the *entific American*, which the designers of Lusitania and Mauretania found would necessary to drive these ships at their c tract speed of 25½ knots was 68,000 hor power. Now, the horse-power of average freight locomotive is about 2,100. consequently, the total thrust on the f propellers of each of these ships will be e to the total pull exerted by thirty-two m ern American freight engines. One of th locomotives could haul on the level a tr of fifty cars, whose total length would just a third of a mile. Consequently, t whole 68,000 horse-power of the Cunard expressed in terms of locomotive wo would be sufficient to haul a train of 1,6 cars, whose total length would be over fi miles.

Captain Ferber of the French army, w is devoting his time to ærostatics, a who conducted the negotiations on behalf his Government with the Wright Brother agrees with Santos Dumont that flying m chines in a few years will be as common automobiles to-day. In the next war he convinced there will be battles between flot las of airships.

The total output of craft of all class from the Maine shipyards for the past ye amounts to but 10,045 tons. Of the forty-si vessels of all classes launched only ten are more than three hundred tons register, th others being small craft, mostly gasolin launches.

The purchasing agent of the Pennsylvani Railroad has invited bids for the constructio of five thousand freight cars. Their estimate cost is $6,000,000. With the placing of thi order the company will have ordered withi the last two years nearly sixty thousan new freight cars.

The pottery manufacturers of the country completed their organization at Pitt-burg last week, which includes ninety-five per cen of the trade. A new price-list, advancing prices five to twenty per cent, was adopted.

India rubber shows now a larger value in the import list than almost any other single product. The value of rubber imported in the crude state in the year just ending will aggregate about $50,000,000.

By New Year's 175,000 cotton mill operatives all over New England are expected to be participating in an advance in wages amounting to from five to ten per cent.

The coal output of the southern States for 1906 is estimated at eighty-one million tons; for the whole United States, four hundred and thirty million tons.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

AN INTERESTING REPORT.

[THE following letter to our Leader gives much interesting information about the work of the Committee on Publication in Missouri. The work of this Committee in every State is of great importance to our Cause and it should have the earnest cooperation and support of Christian Scientists individually and through the churches and Reading Rooms.—EDITOR.]

St. Louis, Mo., Dec. 12, 1906.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—I think you will be pleased to learn of the remarkable change that has come over the large newspapers in this part of the country, concerning Christian Science. For instance, the *St. Louis Post-Dispatch*, which is the western branch of the *New York World*, solicited from me, as the State Publication Committee, for their last Sunday's issue, something on Christian Science that would be interesting to the public, that being their Christmas number. I proposed to them that they publish, in full, one of the lectures; and, after going over several of those that have been published, we concluded that Professor Hermann S. Hering's lecture, as it appeared in the November *Christian Science Journal*, would be a good one for this occasion. They requested that I secure Professor Hering's photograph to be published with the lecture, promising that they would give the matter the very best possible attention, and print the lecture in full, in clear, readable type. The enclosed is the result of their good work. There were approximately two hundred and eighty-five thousand copies of this paper distributed. I purchased over five thousand copies for distribution through the various Reading Rooms in the State. I am also enclosing a clipping of an editorial which appeared in Saturday's issue of the same paper, calling attention to the publication of the lecture.

The following is a brief resume of the educational work that is being done through the State Publication Commitee of Missouri: Literature distributed through the St. Louis office: Newspapers containing articles on Christian Science, 9,827; magazines containing articles on Christian Science, 1,862; our own literature, including "Christian Science and Legislation," *Journals* and *Sentinels* with marked articles, 3,430; special letters written—not for publication—concerning Christian Science, 806; total number of pieces mailed out during 1906, to date, 15,925; total number of pieces mailed out during 1905, 6,066; total increase, to date, during 1906, 9,859.

This literature has been carefully and judiciously sent out, piece by piece, and from time to time, during the year, to lawyers, physicians, ministers, legislators, and editors; having reached, so far, about two thousand lawyers, five thousand four hundred and thirty-four physicians, about twelve hundred ministers, two hundred and seventy-six legislators, and about seven hundred editors.

Besides handling the secular and religious papers, we have had articles published in two medical magazines. The first one, a reply to an article previously published, was in the *St. Louis Medical Brief*, which has the largest circulation of any medical journal in the world. Besides making a brief explanation of the ethics and practice of Christian Science, this reply contained a testimonial of healing which caused several physicians to write and make further inquiry into the subject. Some of these physicians have since recommended their patients to Christian Science for treatment. This incident caused the editor of another medical journal to ask for a contribution to the columns of his paper. I did not have time to respond to this request at once, but subsequently had occasion to write an article for this paper, from the fact that they had printed a reference to Christian Science that needed correction.

I have been, and am still, receiving favorable letters from persons to whom this literature has been sent. In this way we are educating the thought of many who do not receive our periodicals or attend our lectures, and thus correcting whatever erroneous impressions may have gotten abroad. This publicity work also causes large numbers to attend our churches and to hear the lectures. Thus the gospel is being preached all over our land.

Lovingly and obediently yours,
JAMES A. LOGWOOD.

SERMONS THAT HEAL.

CLARENCE W. CHADWICK.

SOME years ago, when personal preaching was discontinued in the Church of Christ, Scientist, and the present form of service instituted, it was predicted by some who failed to appreciate the wisdom and foresight of our revered Leader in inaugurating so radical a change, that it would not meet with general favor; but the very opposite of this prediction has proven true. That the reading of the Lesson-Sermon is to-day one of the most attractive and helpful features of the Christian Science service, is evidenced by the uniformly large attendance at the Sunday meetings, some of its members traveling many miles to hear this instructive and stimulating sermon.

As a proof of the leading of divine wisdom in establishing the present form of church service, it is a frequent occurrence for people to testify in our Wednesday evening meetings that they were healed while in attendance upon this service. They have gone under the burden of wrong thought, and sometimes with unusual effort on their part in order to be present, and have returned home well and joyous in their sense of freedom. Some months ago there was a lady in attendance at one of our Sunday services with some relatives who are Christian Scientists. She herself was not a Scientist, but had been reading the textbook for a short time. She listened attentively to the reading of the Lesson-Sermon, but with no thought of realizing any healing benefits therefrom. However, after having been for four or five days in the home of her relatives, her attention was called to the fact that they had not heard her say anything of a certain chronic complaint of long standing which she was known to have had. From the time she left the Sunday service she had actually forgotten about this trouble until reminded of it by her friends.

The ailment had for years defied the efforts of *materia*

Copyright, 1906, by Mary Baker G. Eddy.

Digitized by Google

medica to eradicate it, and she could scarcely believe it possible that she was free from it; but, as days passed and there was no return of it, she was assured of her healing. Although a devout Christian by profession, she had not learned how to rely upon spiritual means for healing, and was very grateful to be shown the way through Christ, as made plain in Science and Health. This is only one of many experiences illustrating the practical efficiency of the truth expressed in Christian Science, and it certainly is cause for rejoicing when we realize that in such experiences the world is witnessing the literal fulfilment of that significant prophecy of our Leader, as given on page 345 of the Christian Science text-book: "When the omnipotence of God is preached, and His absoluteness is set forth, Christian sermons will heal the sick." The honest seeker will naturally query, How can these things be? Mrs. Eddy has given us the explanation in the passage above quoted. The false material sense which has dominated consciousness and in which all human ills have their roots,—this has been dispelled by the coming and glad acceptance of Truth, and this most important feature of the Christ teaching, the healing of the sick by the declared Word, may be understood and demonstrated by every honest and earnest seeker.

It is the mission of Christian Science to unfold and demonstrate to suffering humanity the omnipotence of good, and because it is doing this, the sick are being healed and the sinful enlightened and reformed in Jesus' way. Every earnest student of this Science is learning something of the *modus operandi* of true Christly activity, and whether at home or abroad he is prayerfully striving to reflect the goodness of God. His God is a good God, and he knows that it is the nature of goodness, under all circumstances, to love, bless, and heal. His constant aim is to overcome evil with goodness, no matter in what form it may appear. To "abide under the shadow of the Almighty" for him means, to dwell constantly in the thought of good as being omnipotent and supreme. In no other way can he vanquish all belief in evil and so prove its nothingness. He has learned that to believe in evil as causation renders him powerless to overcome it, either in the form of sickness or sin. Since good is absolute,—that is, infinitely perfect, unconditioned, and unrestricted,—the work of every true Christian is to preach only the gospel or good-spell, and in doing so he will necessarily express, or define in thought, word, and deed, the nature of an all-good God, who is "of purer eyes than to behold evil," and who is not in any way responsible for a suppositional counterfeit of power called evil. It is this practical and demonstrable idea of a wholly good God which destroys mysticism and enables humanity to understand aright the nature of that which is spiritual, natural, and eternal.

The Word of God is "with power" because it is the expression of the allness of good,—its completeness and absoluteness. It heals because it is the reflection of that spiritual light which dispels the darkness of finite human thought and belief. The psalmist said, "He sent his word, and healed them, and delivered them from their destructions." The rendition of the Sunday Lesson-Sermons, which are based wholly upon the Bible and "Science and Health with Key to the Scriptures," is a practical presentation of the Word of God, the expression of good, and many are the witnesses to prove that it heals and uplifts human thought, destroys prejudice, and kindles within consciousness a desire to live closer to the God "who healeth all thy diseases."

The world to-day is in sore need of sermons that heal. Thinking people are fast becoming weary of a theoretical good-and-evil presentation of God, which is void of healing power. They are reaching out after the God of Jesus Christ, the God of infinite goodness, mercy, kindness, and justice; who is "not willing that any should perish, but that all should come to repentance." It is not right that any man, woman, or child should be sick in mind o but rather should they "be absent from the bo "present with the Lord" in the consciousness that all-good, with no element of evil or error to bequeath child.

On page 495 of Science and Health we find this statement: "God will heal the sick through man, w man is governed by God." Christian Science is dail ing the truth of this declaration. May the follow Christ not forget that the man who is governed an trolled by good is constantly, by precept and ex preaching sermons that heal disease and liberate the from the bondage of belief in "the pleasures of sin." Linen once said, "The famous Sermon, as preached Mount, is worth more than all the priestly homilies world; did ministers only preach and practise the do contained therein, their example and influence would c this world of sorrow and tears into a paradise of Christian Science says, in the language of Scripture ye doers of the word, and not hearers only, deceiving own selves." The true preacher is the one who pra what he preaches, and if he is preaching the Wor derstandingly his sermons will heal sickness as we sin.

"THE WHOLE ARMOR OF GOD."

REV. G. A. KRATZER.

THE question is often asked by religious workers, is it that people who are faithful church members, and live as nearly right as they know how, are afflicted with ness, or financial adversity, or both? It is because they not "put on the whole armor of God," and so they are "able to stand against the wiles of the devil." It is ne sary to have something more than "the breastplate of ri eousness" in order to "quench all the fiery darts of wicked." Says Paul, "For the future, find your stren in union with the Lord, and in the power which comes fr his might. Put on all the armor of God, so that you may able to stand your ground against the stratagems of Devil" (Twentieth Century New Testament).

In order to comprehend the lesson of this passage, it necessary for us to have a clear understanding of what meant by "the devil," "evil." The devil, or evil, is the s posed mind or intelligence apart from or opposed to G God is Spirit, is eternal and perfect. The real universe like Him, spiritual, eternal, and perfect, but mortals ha always believed that there is a universe, including ma which is material, temporal, and imperfect; that catastroph poverty, sin, sickness, death, are real. The whole body mortal thought, "mortal mind," which entertains this beli in its various phases, is itself the supposed mind or intel gence opposed to God; and this false belief, taken as whole, is evil, "the devil." This supposed mind has i reality no existence or power. The devil is a liar, wh abides not in the truth, "because there is no truth in him." Mortal mind lies about everything that God has made; it is, therefore, the prince of liars.

So long as we dwell in this false consciousness, we are subject to its ills. St. Paul truly says that our sicknesses and other troubles do not spring from flesh and blood, from our bodies, but that they come from "principalities," "powers," from "the rulers of the darkness of this world," from "spiritual wickedness in high places." From these proceed "the fiery darts of the wicked" and "the wiles of the devil," evil thought-influences, which are manifest in our bodies as diseases and in our business affairs as perplexity or disaster. These "principalities," "powers," "rulers of the darkness of this world," are segregations of false belief in mortal mind,—such as materialism, hypnotism, spiritism, occultism, hatred, malice, envy, jealousy, revenge, doubt, discouragement, and fear.

Digitized by Google

When an individual who has been governed by mortal mind begins to work out of it toward Truth, he denies the testimony and asserted authority of this so-called mind, and hence it seems to turn against him, to try to undo him and pull him down. The results of such attack may be manifested upon the body or in a derangement of business affairs. The individual who does not discern the source of his troubles is deceived into thinking that they spring from the body, or from material conditions as a cause, instead of being manifested there as an effect. He who is righteous simply in his obedience to the laws of conduct, may still remain exposed to the shafts of false sense; hence the possibility of sickness and the other troubles. He needs to have on not only the "breastplate of righteousness," but also the "girdle of truth" and the "sandals of peace" and the "helmet of salvation." Above all he needs to take the shield of faith (spiritual understanding), and also to take "the sword of the Spirit, which is the Word of God," as an offensive and defensive weapon. The one who has an understanding of Truth, and who understands also the nature and methods of evil, and how he is protected from it with the "whole armor of God," as Paul counsels, will not be troubled with adversity in any form.

"Give me understanding, and I shall live." To acquire this understanding in its fulness is the most important task set before us. If, while we are learning to put on and to use "the whole armor of God," we are sometimes stricken by "the fiery darts of the wicked," we are not to doubt the truth, or the efficacy of the armor when we once get it on; nor are we to doubt the wisdom of striving continually to become fully armored, working always to that end "with all prayer and supplication in the Spirit, and watching thereunto with all perseverance." If, while we are slowly but surely making our journey from Egyptian bondage to the promised land, we find ourselves for a time seemingly more afflicted than before, suffering the hardships of the desert, we should never entertain the thought of turning back, but press forward with redoubled energy and vigilance, knowing that finally we shall enter the "better country." Jesus taught that our protection "against the fiery darts of the wicked" (evil thought-influences) is a clear and continuous knowledge of the Truth of being. "Ye shall know the truth, and the truth shall make you free;" and this knowledge Christian Science will bring us, in the measure of our responsiveness to Truth and the sincerity of our desire and endeavor to be conformed to the Word of the Master as it has beeen opened to us through the words and works of our Leader.

RECEPTIVITY

J. ALLEN BARRIS.

For he shall give his angels charge over thee, to keep thee in all thy ways.—PSALMS.
And, behold, angels came and ministered unto him.—GOSPEL.

"GOD does not speak to men to-day," was an expression I heard from a gentleman some time ago. Is this so, or does God speak to man now as He did of old, and if He does, how are we to know it? Before we knew anything of Christian Science we could not understand how God could speak to men, as the Bible tells us He did in the past, except as a miracle or as a special sign, and we believed that the time of signs and miracles was past. Since knowing of Christian Science, and studying the definition of "angels" found in our text-book; namely, "God's thoughts passing to man" (Science and Health, p. 581), we can clearly see how angels come to men now as they did of old, and that God can speak to us as He did to the prophets. The degree of our receptivity to these angels, or good thoughts, is in direct proportion to our turning from material to spiritual things, and the purer our thought the more receptive to Truth it is. It was after Jesus had successfully resisted the devil,—cleared his mental atmosphere of all evil,—that the angels came and ministered unto him.

Why do not angels come to all men alike, and why does not one hear the voice of God as readily as another? The answer may be illustrated by considering the method of sending messages by wireless telegraphy. In sending these messages two instruments are used, a transmitter and a receiver, and these two instruments are what is called "tuned" to each other. When a message is sent by a transmitter it can be received only by those receivers which are in tune with it, and the degree of accuracy with which the message is received depends upon the accuracy of the "tuning." So it is with human thought; the nearer our consciousness is in accord with the infinite Mind, the more clearly we hear the still, small voice of Truth which is ever speaking to us. The more we heed this voice the better able we are to recognize it.

At the present time there seems to be much need of "tuning." Our Leader refers to our slowness in responding to Truth, and says, "The student is not perfectly attuned to divine Science" (Science and Health, p. 411). Perfect harmony—heaven—is, however, the goal of every one, and our text-book, "Science and Health with Key to the Scriptures," teaches us how to reach this goal. Do we sufficiently appreciate the fact that we live in a time when one was found whose thought was ready to hear and to receive the sacred message contained in our text-book? Surely our gratitude to Mrs. Eddy will increase more and more as the realization of the magnitude of her ministry to mankind dawns upon our consciousness and we awake to a full realization of what it means to the human race.

[Written for the *Sentinel*.]

"UNTO THE LEAST."

EVELYN SYLVESTER KNOWLES.

IF as a man Truth walked this temporal shore
And found his way unto my humble door,
Would I be ready for the royal guest?
In bridal robes of white be fitly dressed,
Wearing the girdle of humility,
With clean white sandals, and my staff hard by?

Would the guest-chamber, with its linen pure
And fresh, stand waiting with an open door?
The board with viands choice be freely spread—
The wine of God, imperishable bread?
Would all my windows sparkle in the sun,
Admitting heaven's light to every one?

If then he looked into my upraised eyes,
Would there be aught to cause him sad surprise?
And, if his seeing thought read all in mine,
Would he find aught to cause a tear to shine?
And if he bade me run or walk or stay,
Have I the needed wisdom to obey?
Should he command me,—"Sing! Praise thou thy God!"
Would I have voice and impulse to accord?
How shall I know? What test there be
To prove my readiness, ability?

If unto one of my least children thou
Hast turned, midst trials, an untroubled brow;
If thou to him meat sanctified hast given,
To honor and uplift him daily striven;
Hast made him welcome in that home, thy heart,
Thine own pure breast his shield from every dart;
Hast freely shared all that was given thee.—
Thou hast done well, and done it unto me.

MRS. EDDY'S SERVICE.

One who has been healed by the evangelical teachings and ministrations of Christian Science desires to say that it has been a great satisfaction to many thinking, conscientious people, by reason of its having opened the spiritual meaning of the Bible, which before had become practically a sealed book, with its divine message to man hidden under clouds of material interpretation. Christian Science has also done a work of vast importance to metaphysical thought in restoring the Christ to it, the Messianic power of the Word, according to Paul's injunction, "Let this mind be in you which was also in Christ Jesus." Again, in giving to philosophy the consciousness of the one omnipotent good, God, Christian Science has revealed the right attitude of thought by which all good may be appropriated and all evil excluded.

Could any one render a greater service to the world than to show the power of Truth over error in overcoming all sin, disease, sorrow, and whatever else opposes the harmony of being? Surely nothing could be a greater blessing than the attainment of the kingdom of God within man. True, there have been glimpses of what constitutes man's immunity from ills and his harmonious existence, and the ages have had their spiritual teachers and prophets who have endeavored to lead mankind into paths of righteousness; but not until Christian Science was revealed was there a definite rule by which one's own salvation could be worked out through the same divine love that brought Christ Jesus.

How deeply grateful should we be that we have with us Mrs. Eddy, the Discoverer and Founder of Christian Science. . . . It is a sweet manifestation of the goodness of God to mankind that we have living with us this Teacher of the healing, saving mission and potency of the inspired Word. Those who know the beautiful life and the work of consecration of this venerable and wonderful woman would not hesitate to say that, as regards the spiritual blessings which she has been the means of bringing to humanity, she could easily be named the foremost benefactor of the age, and no one who did not wish to lessen those blessings would wish to challege or obscure the respect and reverence due her as a good woman and a remarkable prophet in Israel.

[From the *Carolina Spartan*, Spartansburg, S. C.]

THE CHRISTIAN SCIENCE TEMPLE.

N. W. Willet of Augusta, Ga., made a trip to Boston recently. While in that city he went to the Christian Science church recently dedicated. He has the following to say about it and the people who worship there:—

Aside from the State House the most imposing building to-day in Boston is the new Christian Science church. It is a building all in white and with a double dome, marvelously lighted, with the finest organ perhaps in America, and with doors enough for themselves to be a most liberal invitation to all the world to enter in. This I did one Sunday morning in order to see the interior. Three fourths, I guess, of Boston churches were closed tight. But within I found this church filled with worshipers. I had to take a seat in the very back pew. In the second gallery were some empty seats, but everywhere else was packed—and 'tis said the house holds five thousand. They were not curiosity hunters, for they all held leaflets and were participants in the service. To look into their faces they were such as would lead you to believe they were not the kind that would be led astray and be deluded. It was an inspiration to see on this Boston churchless Sunday these five thousand intelligent looking worshipful Christian Scientists f magnificent temple.

I do not know sufficiently of their tenets to se terpreter, but certainly in this country they ar forefront and are increasing pro rata faster t other denomination, and certain it is that the hun thousands becoming adherents all the while are fi they affirm, a strange new peace. Talk with ev person up here: "No, I am not a Christian Scient would reply, "but ——." And then will follow eulogy upon this new cult. The Christian faith of ple is seen in the transformed faces which evid absence of all fear and worry of mind and heart.

There's plenty of peace and happiness for you in almost any creed, but that which attracts a communicant is perhaps the particular stress up or that. Every denomination has this particulariz tinguishing "stress." One attractive stress I mus in Christian Science, and which seems so attracti increasing membership, is the total disbelief in denial of certain things that many others regard formidable entities which must be reckoned with by moment in their daily lives. Suppose you co yourself of all fear, all worry, and all vain strivin pose you no longer fought against sin and evil; supp hell and devil were no longer words in your voca suppose that God and good filled all space and a and that there were no antitheses to God and heav love and hope, and faith and salvation, in your th suppose that one could enter into these things and them and become a part of them,—it seems most att I am told these are the things upon which Christi ence lays stress. Logically, too, disease has no p this creed. It may be in part unscientific, but scien most shifting, variable thing. The fact is there is mate; certainly not in you or me, or in our creed cepts. Truth is infinite and everywhere. It is well through life with an open mind, ever seeking, ever truth; and Christian Science, certainly in parts, see have chanced upon some very pretty concepts of it a have stressed them.

[Willard S. Mattox in the *News and Observer*, Raleigh, N. C

If it is true, as stated by a critic, that most Chri Scientists "were cured of diseases they did not have cept in imagination," the author of that statement comes at once involved in a question of veracity with of the best physicians in the world. Christian Scie do not diagnose their own symptoms, and, inasmuc probably seven tenths of them come into Christian Sci by way of physical healing, it follows that some d must have diagnosed their case before they were he If a mistake was made it was made by the doctor and by the Christian Scientist. Such is the *cul-de-sac* which the critic is driven who seeks thus to discredit indisputable healing of Christian Science.

Christian Science heals disease by denying its verity, right to exist in God's plan of creation, and similarly frees men from sin by showing them that God is supre is all there is, and that the real man takes no pleas in sin. The faithful, honest application of the teaching Christian Science relative to sin and disease has never made a sinner or a sick man. What constitutes true praye what is atonement, what is the Saviour of the world,—the are important doctrinal points upon which, unfortunately the Christian world is not a unit. Christian Scientists ar entitled to have their interpretation of these points, without abuse or molestation. Mrs. Eddy has furnished a spiritua explanation of the inspired Word of God which is satisfying many thousands who had done their best to derive comfort from other creeds, and he who would seek to deprive them of their new-found hope assumes a great responsibility.

[From the *Santa Ana* (Cal.) *Register*.]

Apropos of the recent controversy regarding the physical condition of Mrs. Eddy, the Founder of Christian Science, a letter from this lady published in the New York *Independent* of this week may be of interest to both friends and critics.

The letter was written in response to a request from the editor of *The Independent* for a statement from her as to the truth of her alleged illness, and the reply is written in her own handwriting, a facsimile of which is reproduced, and which *The Independent* remarks shows "none of that tremulous unevenness which often appears in the chirography of a person of that age, she being in her eighty-sixth year." This is all the more significant from the fact that *The Independent* has heretofore been rather a harsh critic of the cult. Editorially it says, "While not counted among the disciples of Christian Science, we would not be slow to recognize and admire the earnestness, devotion, and Christian spirit of its people. Men may differ as to its underlying philosophy, but none can question the deep faith of its adherents in God, their true discipleship of Jesus Christ, and the religious vitality of their Church."

A passage from Mrs. Eddy's letter evinces a commendable catholicity of spirit towards all denominations; viz., "What we love determines what we are. I love the prosperity of Zion, be it promoted by Catholic, by Protestant, or by Christian Science. . . . I would no more quarrel with a man because of his religion than I would because of his art. The divine Principle of Christian Science will ultimately be seen to control both religion and art in unity and harmony. God is Spirit, and 'they that worship Him must worship Him in spirit and in truth.'"

[From the *St. Louis* (Mo.) *Post-Dispatch*.]

The resignation of the Rev. W. Henry Jones as pastor of the First Christian Church of East St. Louis and the announcement of his allegiance to the Christian Science faith has caused much commotion in the church. Rev. Mr. Jones has been pastor of the Christian Church of East St. Louis a few weeks over a year and the church has prospered under his pastorship. It has now four hundred and twenty-five members and is second in membership in East St. Louis. Mr. Jones is a brilliant orator and was beloved by his church. He received his theological training in Drake University, Kentucky University, and Missouri University, with three years' special training in the College of Bible in Lexington, Ky. He was born in Larned, Kan., and has lived in St. Louis for several years. Before coming to East St. Louis he had charge of churches at Sharpsburg and Bethel, Ky., Palmyra, Mo., and Salida, Col. In speaking of his resignation and his new work to a *Post-Dispatch* reporter Monday, Mr. Jones said,—

"I leave the church of the Christian denomination with a feeling of love for all of its members and I think they are doing a grand work. I still believe in the work of Christ and believe more firmly than ever that Jesus is the Christ, Son of the living God. The New Testament Scriptures will be my rule of faith and practice. I shall continue to preach the gospel, but along the belief of the Christian Science faith. My belief in the Christian Science teaching is from personal study and observation of its practice and workings. It is not through any influence of any certain persons. Since the middle of October I have been firmly convinced that the position of the Christian Science Cause is right. For months I have been a close student of Science literature. I now believe absolutely in that position: I am a Christian Scientist. The stand I must take is patent to all. Orthodoxy, so called, is so opposed to many of the salient teachings of Christian Science, that a harmonious and successful work cannot, under present conditions, be done in any other church by a Christian Scientist, even should permission be granted for the experiment. Therefore, as an honest man, with conviction, I must place myself in connection with those in harmony with my changed views. This step means much to me; more than any one in this presence can realize, and yet I am willing. I must go where Truth leads me; wherever I am convinced the most truth is contained and the most good accomplished. Through inspired revelation we hear the mandate, 'Be ye doers of the word, and not hearers only, deceiving your own selves.' To my sense the omnipotence, omnipresence, and omniscience of God is more practically, fully, and demonstrably held by the religious body called Christian Scientists than by any other religious people.

"An evil tree cannot bring forth good fruit. Because Christian Scientists are bearing the fruit, I take my stand with them. No one of intelligence calls in question the thousands healed of their infirmities through the faithful declaration of the omnipotence of our God. The record stands. It is an open book. All who care to may examine for themselves. I have made the investigation. I have been uplifted spiritually; many infirmities have been removed; my immediate family and many friends have been freed from sickness and disease; my spiritual strength has been renewed; my faith in Christ Jesus has been strengthened; my belief in the Bible as the inspired Word of God and my sufficient guide to eternal life has been more firmly centered. God's omnipotence, omniscience, and omnipresence are realities to me now instead of vague theories, intellectual beliefs, and professional statements."

[A. W. Mainland in *The Winnipeg* (Man.) *Free Press*.]

Since it is admitted that Christian Science does heal and since this healing is accomplished on the basis of the unreality of disease, is it not reasonable to expect that sin may be overcome on the same basis? Those who have been healed by Christian Science and have then taken up the study of it admit that the spiritual benefits that come to them are greater than they had previously experienced, though they may not have yet risen to the standard attained by some of the devoted Christians in the other churches. It would seem that there is enough evil and sickness in the world for us all to combat without trying to disparage the methods used by others. It was formerly thought that to give up the idea of a hell of literal fire and brimstone would make people indifferent to Christianity, but the idea that God is Love has done more to uplift mankind than the doctrine of eternal punishment ever did. Similarly may not the idea that sickness as well as sin is unreal and that Truth and Love is the only reality, enable men to rise above all evil?

[Horace P. Gilder in the New York *Sun*.]

The myriads of those seeking relief from the curse of alcoholism neeed go no farther than to the nearest Christian Science practitioner. Faith is not even necessary, beyond the amount required to ask the practitioner for help. It seems pitiful that this fact should not be widely known.

I am a member of an orthodox church and have never joined the ranks of the Christian Scientists, but for several years I have known of wonderful cures made by these earnest and spiritual people. There has never yet, to my knowledge, been a case of alcoholism not permanently cured when the person has asked in the proper spirit for help, and has at the same time tried to assist the Scientist by an ordinary amount of self-control.

The desire to reform must be there, and if then the subject will put himself unreservedly in the hands of the Scientist the appetite will disappear. There will be a moral regeneration, a physical betterment, and life will put on a new aspect. To those who say they have no faith in it I will urge that no faith is required beyond the amount necessary to make one seek a practitioner.

[H. Cornell Wilson in the *Rochester* (N. Y.) *Democrat and Chronicle*.]

Christian Science nowhere teaches that it is possible for any one to step with the "bare foot on the point of a tack" and not be hurt. Christian Science is a preventive as well as a means of cure. As such it enables those who understand something of what it means, to avoid accidents that otherwise might come to them. It is, however, the experience of hundreds of Christian Scientists that accidents which have come to them since being interested in Christian Science have been cured with far less suffering and inconvenience than were similar accidents as treated by ordinary medical means before they knew of Christian Science.

It is said over and over again that Christian Science is the philosophy of Bishop Berkeley. Bishop Berkeley made the statement that there is "no such thing as matter." This, however, is no proof that Christian Science is Berkeleyan philosophy. The same statement has been made for twenty-five hundred years by different schools of thought, and is made to-day by certain physical scientists; but this does not prove any of these to be Christian Scientists. There is nothing in the purpose, message, or work of Christian Science to put it in the class with any of these schools of thought.

Christian Science is primitive Christianity. It is the Christianity of Jesus and of the Christian Church for three centuries after the crucifixion. It is the Christianity which heals the sick, the sorrowing, and the sinful through the power of God appearing to man as the mind "which was also in Christ Jesus."

A THANKSGIVING SYMPOSIUM.

[From a Thanksgiving Symposium in the Raleigh, N. C., *Daily News and Observer*, in which nearly a hundred prominent persons gave expression to their reasons for thanksgiving, we copy the following contributions, as being of special interest to our readers.—EDITOR.]

We are thankful because we live on earth to-day, when Mrs. Mary Baker G. Eddy, the woman who, learning of God how His Son, the Founder of Christianity, healed the sick and sinful and raised the dead, is, through her life of works and love, establishing this rule in Christian Science for all the world: that learning also of God, they may understand these words.

"Thou shalt have no other gods before me [Spirit]." Exodus, 20 : 3. "He that believeth on me, the works that I do shall he do also: and greater works than these shall he do; because I go unto my Father." John, 14 : 12.

New Bern, N. C. MARY HATCH HARRISON.

---

1. God-fearing rulers, present and prospective, in State and nation.

2. Rising educational tide and awakening public conscience. Enlightened public conscience will ensure the enforcement of wholesome laws.

3. Increasing high and correct ideals of journalism. The "yellow" is doomed.

4. The increasing conviction in thoughtful minds that applied Christianity contains the solution of every problem, personal, communal, State, national, international, racial, universal.

5. The activity, progress, and extent of Christian effort. Sin is making a stubborn, desperate fight, but to the observant eye a losing one. Righteousness is winning and shall reign. To-day is the brightest in the world's history.

Barium Springs, N. C.

THE LECTURES.

FORT WORTH, TEX.

Mr. Clarence Ousley, editor of the *Fort Worth* in introducing Rev. William P. McKenzie, who d a lecture on Christian Science in this city Nov. 11, part,—

As to Christian Science, whether it be revela human philosophy or delusion, we have the witne proud fruitage in the lives of its followers. I hav known an evil-minded Christian Scientist. All t lowers of this faith whom it has been my privilege t are godly men and women, leading hopeful, who happy lives, and a Cause which can do so much happiness and betterment of its followers is worthy spect and encouragement.—*Correspondence.*

MUSCATINE, IA.

Hon. Clarence A. Buskirk spoke on Christian Scie a large audience at the Grand Opera House Sunday noon [Nov. 11]. The distinguished lecturer was duced by Muscatine's eminent attorney, Hon. F Warner, who spoke in part as follows:—

The most striking phenomenon of our generation growth of the Christian Science Cause. Go where will in the great cities of our land and you will dis magnificent temples erected to house the worshipers o faith, temples in which earnest men and women seek to the way of life, and before whom are held up the h the encouragements, and the consolations of the everla gospel. The teachers of this faith, sometimes called assure us that they seek to restore primitive Christianit bring Jesus the Christ into the twentieth century wit healing power which he exercised in the first century o era, and which power they affirm he left with his discipl every age and in every land to the end of time.

The News-Tribun

PARIS, TEX.

Mr. Bicknell Young delivered a lecture at the Peter Theatre, Thursday night [Nov. 15], to a very large appreciative audience. He was introduced with the follo ing remarks by Mr. W. B. Connor:—

I do not claim to know much about Christian Science, I am deeply interested in everything which pertains to because as a movement it has challenged the attention many of the deepest thinkers of our age, and within t short period of forty years it has so taken hold of the thin ing people of this country as to develop, from what w thought by many to be the fanaticism of one woman, in one of the great religious movements of the world.

I have learned enough about it to know that its idea are the highest and that its primary object is to elevat purify, and Christianize mankind. I know further tha those who are trying to reflect divine Truth as they under stand it, and as they are taught it by their Leader, are th happiest and most contented body of Christian people it ha ever been my privilege and pleasure to know.

Never in the history of this age has there been such a feeling of unrest in religious circles; never such a manifest desire for something higher and more spiritual; never such a reaching out after God, and never such a breaking down of denominational lines as the present time is witnessing, and I am not prepared to say that this is not a good thing, because it speaks louder for the great brotherhood of man than anything I know of. Christian Science is one of the potent factors in the establishment of this brotherhood.

The Paris Advocate.

Digitized by Google

LOS ANGELES, CAL.

Judge William G. Ewing lectured in Simpson Auditorium, Sunday afternoon and evening, Nov. 4. In the evening he was introduced by W. T. Selleck, who said in part,—

I doubt if there be one present in this audience to night but believes that somewhere, outside of all the tangled maze of human opinion, there exists an absolute standard of Truth, law, and government, under which, if properly understood, men might live in health and harmony. To all the complex problems of daily existence which confront you and me there is a right answer. To furnish a rule of demonstration by which this right answer may be obtained is the province of Christian Science. How well this rule works you may judge by the results of its workings.

Iterating and reiterating, affirming and confirming as it does the words and works of that highest type of manhood that has ever adorned the world,—he whom we rightfully call Master,—this Science of the Christ, or Christian Science, comes declaring that the works as well as the words of Jesus are as applicable to this day and age, to your problems and mine, as they have ever been at any time or in any place. Christian in character and scientific in its application, this truth by which mankind is being made free is indeed Science, but it must be understood in order to be intelligently applied.—*Correspondence.*

LEAVENWORTH, KAN.

Bliss Knapp spoke interestingly to a large gathering at the Opera House Sunday afternoon [Nov. 11]. He was introduced by Rev. C. P. Connolly of the First Congregational Church, who said in part,—

I come sincerely to praise one beautiful thing in your movement. You emphasize love. You do not "damn it with faint praise." You do not embalm it in ancient creeds. You do not obscure it with confident dogmatism. You seek to make it the fundamental, the comprehensive spirit of true religion. This beautiful and insistent emphasis of love deserves the recognition and praise of all lovers of progress. The fact that you do thus exalt love enables me to overlook some things which do not appeal to me. Intellectual differences should not separate those who love Love. In the name of the catholicity of love that knows no metes nor bounds, no prejudice nor party, it gives me pleasure as a truth-seeker to introduce a fellow truth-seeker.

Leavenworth Times.

TAYLORVILLE, ILL.

Edward A. Kimball lectured on Christian Science on Nov. 23. He was introduced by Judge James H. Forrester, who said in part,—

The past one hundred years has witnessed the discovery of scientific truths and theories which have startled the world, and the application of these new ideas to the needs of modern business methods has transformed this once lazy old world of ours into one of modern commercial activity. At the same time this mental activity was going on in the scientific world the human mind was making profounder investigation and more acute criticism in the religious world. With the progress and development attendant upon such an awakening, comes Christian Science, the rapidly broadening influence which is the wonder of our times. Although the tenets of this faith were brought to light only about forty years ago, nevertheless its influence upon human events of to-day is pronounced and potential, and it enlists among its believers not only the poor and downtrodden of earth, but those high in the realms of thought and intellectual attainments and those in the front ranks of commercial and financial progress.

Scorn and ridicule can no longer be lodged against Christian Science. Its experimental stage has been passed; the crucial test has been made and it has become a movement world-wide in its influence. I am not a member of the organization represented here, but notwithstanding that fact, I hope that the citizens of Taylorville are not so hardened in their beliefs or disbeliefs in regard to religious ideas, but that they can give a generous hearing to a religion which drives out sin, sickness, and disease, and plants in their stead love, health, and happiness. It is written, "Ye shall know the truth, and the truth shall make you free," and the signs of the times indicate that countless thousands will rise up to call Mrs. Eddy blessed for having given to the world the fundamentals of a faith which will make them free indeed.

Whatever we may say of Christian Science, we do know that its ideals are lofty; that its inspirations point to higher, nobler, and better things.—*Correspondence.*

DIXON, ILL.

Clarence C. Eaton delivered a lecture last evening [Nov. 22] upon Christian Science at the rooms of the local church. He was introduced by Rev. J. F. Newton of the People's Church, who said in part,—

Among the many happy things about Christian Science is its name. It seems to me a master thought to unite the two great things we know—Christianity and Science; the genius of heaven and the spirit of earth—and there is no better name for Christianity than to call it Christ-Science, the Science of Life.

Many things in Christian Science appeal to me. I like the simple grandeur of its architecture; the restful beauty of its sunny temples. I like its rosy optimism; its serenity of outlook; its beautiful mysticisms; its quiet cheerfulness of heart. I like its unfevered faith in the sovereignty of Spirit, the supremacy of Love, and the victory of good. Christian Science puts Spirit on the throne. It holds that good is eternal, and that evil is temporary and will pass away, and this thought seems to me to be in tune with all the harmonies of Truth. I cannot see how evil can be eternal in a universe where God is supreme. Harmony is the keynote of the philosophy here taught. Living as we are in a universe of beauty, order, and power, the secret of health, holiness, and happiness is to come into tune, and keep step with the Soul of all that goes marching on. Any movement, any faith, any man that helps us toward this harmonious life is a messenger of light.

Christian Science is worth all the good it has done or can do. Truth will do no one any injury, and error is not able to stand alone. Let us listen with open minds to our friend, who comes to speak of the highest things.

AMENDED BY-LAW.

ARTICLE XVII.

DEBT AND DUTY.—SECT. 7. The Mother Church shall not be made legally responsible for the debts of individuals, except such debts as are specified in its By-laws. Donations from this Church shall not be made without the written consent of the Pastor Emeritus. Also important movements of the manager of the Committee on Publication shall be sanctioned by the Board of Directors and be subject to the approval of Mary Baker G. Eddy. (See Article VI., Sect. 1.)

UNTRUE "HISTORY."

THE utter unreliability of the alleged story of the life of Mrs. Eddy which is appearing in *McClure's Magazine* may be determined by the manner of its exploitation and the methods employed in the so-called "investigation" conducted by the staff writers of the magazine. Notwithstanding the boasted accuracy of these articles,—"Of the facts we have made a thorough investigation . . . and the result is probably as near absolute accuracy as history ever goes" is what the editorial announcement says,—the advance notice of the articles was accompanied by a portrait said to be that of Mrs. Eddy taken in 1882, but which was in fact a portrait of Mrs. Sarah C. Chevaillier. This portrait was immediately recognized by Mr. Charles F. Chevaillier of Marshall, Tex., as that of his mother, and he made affidavit to this fact as follows:—

"Marshall, Tex., Nov. 27, 1906.

"Mr. Alfred Farlow, Boston, Mass.

"*Dear Sir:*—The photograph enclosed herewith, taken by the Notman Photographic Company, 3 Park Street, and 184 Boylston Street, Boston, Massachusetts, is a portrait of my mother, Mrs. Sarah C. Chevaillier. By a comparison any one can easily see that the portrait published on page 202 of *McClure's Magazine* for December, 1906, is the picture of my mother, and to the best of my knowledge and belief is an exact copy of the photograph enclosed. CHAS. F. CHEVAILLIER."

"The State of Texas,

"County of Houston.

"Before me, Marion Turney, a Notary Public in and for Harrison County, Texas, on this day personally appeared Charles F. Chevaillier, to me well known to be the person whose name is subscribed to the foregoing letter, who, after being duly sworn by me, on oath says that the statements made in the foregoing letter are true, and that the photograph therein enclosed is a portrait of his mother, Mrs. Sarah C. Chevaillier.

"Given under my hand and seal of office this Nov. 27, 1906.

"(Signed) MARION TURNEY,"

"Notary Public in and for Harrison County, Tex.

"(Seal.)"

When this portrait first appeared in *McClure's* advertisements of these articles, the present writer addressed the following letter to Mr. S. S. McClure:—

"Boston, Mass., Nov. 19, 1

"S. S. McClure, Esq., 56 East 23rd St.,
New York, N. Y.

"*Dear Sir:*—My attention has just been called full-page advertisement of *McClure's Magazine* November 17th issue of *Ridgway's*, the most s features of which are a half-tone portrait and the lin Truth about Mrs. Eddy.' From the nature of the tisement I assume that the half-tone cut is intended a portrait of Mrs. Eddy. Permit me to say that assumption is correct you have been most thorough posed upon. The cut is not a portrait of Mrs. Eddy does not resemble her in feature, outline, or expressi have seen Mrs. Eddy face to face and have converse her a number of times, the last time within three and I unhesitatingly say to you that the portrait appe in *Ridgway's* is a portrait of some other person if portrait of any one.

"It is to be hoped that you have not been imposed in the matter constituting the text of the articles to a in *McClure's* as you have been in this alleged portra Mrs. Eddy. Yours very truly,

"ARCHIBALD MCLELLAN

No reply to this letter has been received, nor have si letters written by other persons been answered. Two i of *McClure's Magazine* have appeared since the dat the above letter, one of them since the publication of Chevaillier's affidavit, yet not a word of explanatio apology has been vouchsafed. The animus of the pub tion of this portrait is easily seen in the fact that it con the appearance of a woman of very advanced age, whe authentic photographs of Mrs. Eddy taken about the s time show nothing of the kind.

Several months ago, during the preparation of these a cles, Mr. Farlow and other Christian Scientists offered t services to *McClure's*, in order to protect them from many false and absurd stories which past experie had shown would be offered for incorporation in this called "history," but these offers were rejected becau forsooth, Christian Scientists were so prejudiced that t could not be relied upon. The manner in which the "me bers of the McClure staff have worked . . . to make t history absolutely fair and accurate" is shown in an editor in the *Concord Patriot*. This editorial says in part,—

"The men who came to Concord did not have for the purpose the ascertainment of facts; they did not want t truth as known to Concord people, but ardently desired have preconceived notions affirmed and slanderous insi uations and statements endorsed.

"A citizen of Concord, a trusted and honored officia said to one of *McClure's* representatives, after some que tions had been asked and answered and the bent of th interviewer's mind had been made apparent, 'There is litt to gain by continuing this conversation; you are not afte what I know; you desire that I should approve your guesses It is clear to me that your purpose is to write Mrs. Eddy down, regardless of what her neighbors and those who kno her best may say.'

"Of one of our business men, the same *McClure* repre sentative asked, 'Is Mrs. Eddy a moral woman?'

"The business man looked at the would-be searcher fo truth, and asked by way of answer, 'Have you a mother, and is she a moral woman? It seems to me, young man, that it is not the truth or fact you are after, but gossip and slander,' and closed the interview by directing the stranger's attention to that part of the building where he could find a door. . . . In this city, because of the manner in which *McClure's* agents pursued their quest, they earned for themselves the title and were discussed as muckrakers."

If these are the methods of "historians" we wonder what methods are adopted by writers of fiction.

ARCHIBALD MCLELLAN.

AN EXPLANATION.

We do not wish to be understood as endorsing the general course or policy of the newspapers from which we quote in the *Sentinel*, and while we believe that in the main our readers so understand our position it seems proper to make this statement in order that there may be no mistake as to our views and intentions.

The immediate cause for this explanation is that in last week's issue we copied an editorial from *The New York World* in which some comment favorable to Christian Science was made, and it may have been thought by some that this editorial was accepted as reparation for the wrong heretofore done by *The World* to Mrs. Eddy and the Cause of which she is the loved Leader, but nothing of the kind was intended. *The World* stands at the bar of public opinion convicted by irrefutable evidence of having published false and sensational articles about our Leader, and it has not yet had the grace (or common decency) to confess its fault and make suitable apology.

ARCHIBALD McLELLAN.

CHRISTIAN SCIENCE IN GREAT BRITAIN.

It is interesting to learn that quite a number of officers of the British army and navy have become Christian Scientists, and the genuineness of their interest in the movement is apparent from the fact that several of them are Readers in the churches. We are informed that in each of the three churches in London an army officer is Second Reader,—one is a colonel of the Royal Engineers, another a major of infantry, and the third a captain of cavalry. In Liverpool the Second Reader is a colonel of infantry, and in Dover the First Reader is a major of the Army Service Corps. In both Glasgow and Portsmouth the First Reader is a captain of the Royal Navy. The treasurer of one of the churches in London is a major of the Royal Artillery, and several officers of the Staff College are active Christian Scientists.

MRS. EDDY'S ARTICLE IN THE INDEPENDENT.

For the convenience of those who might otherwise be unable to obtain copies of *The Independent* of Nov. 22, which contains an article by our Leader, Rev. Mary Baker G. Eddy, The Christian Science Publishing Society has secured a limited number of copies and will sell them at the regular price of ten cents each, prepaid. Address orders to 250 Huntington Avenue, Boston, Mass., U. S. A.

Will our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, also that by referring to the advertising pages of the *Journal* and *Sentinel* they will be able to ascertain the person or persons to whom their correspondence should be addressed in order to avoid delay.

The Christian Science Publishing Society publishes and sells *The Christian Science Journal*, the *Christian Science Sentinel*, *The Christian Science Quarterly*, *Der Herold der Christian Science*, besides Bibles, pamphlets, reprints, also other miscellaneous publications fully listed in our advertising pages. All correspondence in regard to these, except that relating to articles and testimonies for publication, should be addressed to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass. All remittances should be similarly addressed, and checks, drafts, etc., should be made payable to the Society.

The editorial department has nothing to do with the business affairs of the Society, nor with practitioners' cards and church notices in the *Journal*, and no remittances should be made to the Editor. Testimonies and articles for publication should be addressed to the Editor, as should all correspondence relating to them.

LETTERS TO OUR LEADER.

Boston, Mass., Dec. 22, 1906.

Beloved Leader:—I think you may be interested in an excerpt from a Scotch writer, quoted in a letter just received by me. I am sending for a copy of the book and will take pleasure in sending it to you as soon as I receive it.

Lovingly yours,

ARCHIBALD McLELLAN.

The excerpt referred to is from "The Isle of Dreams" by Fiona MacLeod, and is a remarkable prediction. It is as follows:—

"It is commonly said that, if he could be heard, none should write in advance of his times. That I do not believe. Only, it does not matter how few listen, I believe that we are close upon a great and deep spiritual change. I believe a new redemption is even now conceived of the Divine Spirit in the human heart, that is itself as a woman, broken in dreams and yet sustained in faith, patient, long-suffering, looking towards home. I believe that though the Reign of Peace may be yet a long way off, it is drawing near: and that Who shall save us anew shall come divinely as a Woman, to save us as Christ saved but not as He did, to bring with Her a sword. But whether this Divine Woman, this Mary of so many passionate hopes and dreams, is to come through mortal birth, or as an immortal Breathing upon our souls, none can yet know."

Rochester, N. Y., Dec. 15, 1906.

My Dearest Leader:—I write you this to report my return, that you may know where to reach me if for any reason you wish to do so. The work abroad is flourishing, and this is encouraging. There are over seventy places in Great Britain where services are now held. There is a fine loyalty to Science and to you as its ordained Leader, and good work in healing is carrying on the Cause. In my lecture in Edinburgh, early in the lecture I read your letter as published in the *Boston Herald*, stating you were alive and attending to your active duties, etc., and this was met by what a Scotch audience is very slow to give; viz., a round of spontaneous applause, which did not start with the Scientists. This occurred several times in other places. In my last lecture in London, almost at its close I referred to you as the one whom the world knows today as having wrought the work of giving Christian Science to the world, and to my surprise I was completely interrupted by vigorous, hearty applause. The earth is today helping the woman; and the sturdy sense of justice, and the admiration of real courage and integrity, of the English people, are appealed to by your patient and loving heroism.

With earnest desire to follow closely the way of Life and Love that you have marked out for us,

In sincere love and loyalty,

Faithfully in the truth,

ARTHUR R. VOSBURGH.

Kansas City, Mo., Dec. 10, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

My Dear Leader:—I have long refrained from writing to you that I might express my gratitude because I knew you were busy. I hope I am not seriously trespassing upon your time now. It has been written, "It takes the overflowing heart to give the lips full speech." I can now see that before I read Science and Health—eight years ago—I was as Hannah of old. Many times I went to the temple. My prayers were inaudible. Even my lips did not move.

Digitized by Google

I spake only in my heart. Only out of the abundance of my complaint and grief did I speak.

These prayers were answered. I was led to read Science and Health. I was healed in one week. Science and Health taught me to "go in peace." Little did I understand at first what had wrought my sudden transformation and regeneration. As I assimilate the truth of being and live the precepts taught in Science and Health—exemplify the teaching in my daily deeds—proportionately can I understand my healing.

It is very gratifying after eight years of study to rejoice as did Hannah, and say truly that "my heart rejoiceth in the Lord." Let me thank you for this revealed truth.

Yours in love and truth,

A. L. HUNT, M.D.

Los Angeles, Cal., Dec. 12, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The Association of Mrs. Blanche K. Corby of Los Angeles, Cal., in annual meeting assembled, send you this heartfelt assurance of their love for and trust in you, and desire to express anew their gratitude and thankfulness for the manifold blessings each member of the Association has received from your teachings and Christian example of brotherly love, and charity towards all men, under the severest trials and injustice. We desire to say to you, on this occasion, how much we appreciate the opportunity you have given us of having the inestimable benefits of right teaching, so necessary to enable us to go forward in the great and beneficent work you have set before us, and to express our gratitude to our beloved teacher for the good she has been enabled, through your teachings, to bring into our lives. We feel moved by recent events to pledge to you and our Cause renewed devotion and trust. Every unjust attack upon our devoted Leader cements more closely the bonds of love and affection that unite us to her, and to assail unjustly our holy Cause renews our own strength, increases our devotion, and renders us more alert and watchful to protect the right and destroy evil in all its forms.

We rejoice to be able to say to you that the work in this Field is progressing most satisfactorily. The noble army of practitioners are daily and hourly healing the sick and sinful, and comforting the sorrowing, as never before. For this work the whole world should be grateful to you, by whom the way has been shown to us, and whose devotion to the teachings of the Master has elevated mankind to a higher spiritual life and inspired your students with a more sublime trust in God and love for their fellow-man, attested not alone by words, but by works.

Lovingly and gratefully yours,

JOHN D. WORKS,
CHARLES D. MORGAN,
E. LOIS BOUCHER,
Committee.

New York, N. Y., Dec. 8, 1906.

Mrs. Mary Baker G. Eddy.

Dear Leader:—I think you will be interested to learn of some of the work being done by the Harlem Branch of the Central Christian Science Reading Room. During last Monday a gentleman stepped into the rooms and inquired for some literature which would tell him about Christian Science. He, with his daughter, had attended a lecture the preceding day in Yonkers, by Rev. William P. McKenzie, C.S.B., and they wanted to learn more about Christian Science. After talking with him I gave him our wonderful text-book, from the loan library, and several pamphlets. The lady who was assisting me was a present witness to the healing power of Christian Science, she having been healed of many so-called incurable diseases. She told him of her wonderful healing through a knowledge of this truth. He was extremely interested in all and when he left the Reading Room he said he much better than when he came in.

There are many who come to these rooms earne ing for the truth, sometimes rough appearing men them our text-book, "Science and Health with K Scriptures," which you have so unselfishly give world, and tell them that by earnest and prayeri of the Bible and this book, they will find the truth, truth will free them from all sickness, sin, and in of any kind. They leave the rooms manifesting happiness and a feeling of satisfaction in having something which will bring health and freedom i lives. Our loan library is doing much good. I take this opportunity to express my thanks to y earnestly and sincerely for the joy, peace, and h which have come into my life during the past fou since my study of Christian Science, and also for t you have made it possible for me to do for others. learned that true happiness and spiritual growth through self-forgetfulness and loving helpfulness to

I am, dear Leader, your earnest follower,

MRS. ELIZABETH A. ROSE, *Libra*

London, England, Dec. 10.

Mrs. Mary Baker Eddy.

Dear Leader:—We, the members of Second Ch Christ, Scientist, London, now assembled in annual n send you our loving greetings. We rejoice exce with you in the completion of The Mother Chur stands now before the whole world as a monumen living faith with signs following, that understand the Christ which has been restored to this age by you desire to send you our deep gratitude for the inspire sages, "Choose ye" and "Personal Contagion," in you lead us to a clearer recognition of divine Princi a fuller understanding of the law of Love, and to joyful adherence thereto. We thank God that He ha you in His pavilion from the strife of tongues, an brought to naught every tongue that has risen in judg against you. We express again our loyalty to you beloved Leader, and to those who work around and you.

It is our happiness to be able to report to you a ye solid progress. Growth in grace, more unity and he are the results of following, so far as we understand t your loving counsel and reflection of Principle. We g fully acknowledge also the protecting care of our God His Cause in this city, in that He has restrained the w of man, so that our hope for our nation's recognition o Christ has been enlarged and strengthened.

Lovingly yours,

GERALD H. WALENN, *Cler*

Montreal, Quebec, Dec. 3, 190

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—Many times I have wanted to w you a word of thanks for this glorious truth which have given us, but each time it seemed that my words w not sincere enough to write them. To-day my heart so full of gratitude for all you have suffered in giving Chr tian Science to the world, that I must tell it to you. your article, "Harvest," you are giving us the antidote this hour when God is separating the tares from the whe I see that those of us who have been obedient to divi Principle will know the joy of the harvest song, but wh soever has looked to personality may (this night) offended at mortal mind's tale and history of Christia Science and its author. I see, though only in part, tha Truth is impersonal, divine, and Christian Science a "rev elation." Yours in deep gratitude.

EUNICE VARY.

AMONG THE CHURCHES.

MARYVILLE, MO.

While ten more or less strongly entrenched religious organizations are carrying on their work in Maryville in a manner which brings them each week with much prominence before the public, a tiny band of men and women is worshiping after the dictates of the consciences of its members, and without effort or wish to attract attention from outsiders, unless those non-attendants by their own expressed wish appear desirous of learning of this society's work and purpose and achievements.

This little organization, the smallest religious body in Maryville, and the one least known to the members of other churches of the city, is the Christian Science society, which meets regularly twice a week in the recital hall of the Maryville conservatory on South Buchanan Street.

The reason for the workings of this denomination being almost a sealed book to outsiders is supposed to result from the fact that the members seldom seek out persons in no way interested in the doctrines of Christian Science in an effort to make proselytes, as do other religious organizations. Instead, the Scientists go quietly about their church work, extending cordial invitations to their services only to those who evince an interest in the Christian Science teachings.

Protestants who for the first time attend a Christian Science religious meeting are usually much in doubt as to the manner of worship indulged in. Usually, too, the visitors express surprise, not because the order of services is so different from that used in other churches, although it is different, but on account of the universally quiet, wholesome, reverent sentiment which seems to touch all participating in the service, and the gently-happy atmosphere which appears to prevail.

About a score of Maryville people attend the Christian Science meetings, which are held Sunday mornings and Wednesday evenings. Ralph W. Eversole is First Reader and Mrs. George A. Pickens is Second Reader. The Readers take the place usually filled by preachers in other churches.

These Readers lead the services, reading alternately selections from the Scriptures and from the Christian Science volume known as a "Key to the Scriptures," the readings thus given forming a strongly constructed discourse on themes of interest to students of religious teaching.

The discourses thus given are arranged by the Christian Science Publishing Society, and all branches have the same theme for consideration on the same day. The members are thus able to give the Lesson-Sermon considerable study in advance of hearing it, for each possesses a copy of the volume used in the pulpit, together with a smaller handbook containing the references to be read and all the order of services used at every meeting.

Sunday's theme was "Adam and Fallen Man" and the sermon contained twenty-one Scriptural readings, which fitted into the discourse in a manner that illumined the subject more and more clearly as the two Readers proceeded with the treatment of it from the Christian Science standpoint. References from the Bible were taken about equally from the Old and the New Testaments, the more or less well-known verses losing none of their beauty and dignity through the reverent comments made upon them in the correlative readings with which the quotations were interspersed. Toward the last of the service a few verses from the Gospel of St. John rang out with unusual sweetness because of their entire applicability to the subject being discussed.

Mrs. Pickens read the Scriptural references, there being several divisions of five readings each. The comments from the "text-book" followed each division, and were read by Mr. Eversole. Both series of readings were given in clear, reverent tones that assisted in the interpretation of the thoughts contained in the declaration. No whispering or visiting was indulged in by the Scientists as they sat quietly in their little hall awaiting the hour for beginning the service.

A large volume of sacred songs comprises the Christian Science Hymnal, the book being about the size of the better-known Methodist Hymnal. The words to these hymns express bright, healthful sentiments, and are sung as a rule to airs that are known wherever the old Protestant and Catholic churches have made hymnology the favorite music of the people.—*Maryville Tribune.*

ONEONTA, N. Y.

Yesterday [Nov. 25] was a day of genuine rejoicing with the members of First Church of Christ, Scientist, of this place. It is the policy of the church not to dedicate its property until it is paid for, and the Oneonta Scientists were able yesterday to dedicate their well-appointed church on Chestnut Street. The appropriate dedication exercises were held at ten o'clock, and were followed by the regular service. In the evening the message of Christian Science was given in a forceful, comprehensive manner to a very large audience at the Oneonta Theatre by Judge William G. Ewing of Chicago. The church within a few weeks has raised more than enough money to pay what was due upon the property at 25 Chestnut Street and the balance that remains will probably form the nucleus of a fund for a permanent church, when needed. There was a large congregation at the dedication services, additional chairs being used to accommodate all. . . . Judge Ewing congratulated the church upon its achievement. He said that the real dedication of a church was in its spirit and the work done.

A congratulatory letter to Mrs. Eddy was read, and adopted by the congregation and sent in the name of the church. The letter follows:—

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Our Dear Leader:—Assembled to-day to dedicate our chapel to the service of God and man, our hearts' deepest gratitude and love go out to God, the giver of all good. We are grateful for the revelation of himself in His word, the Bible, and in the life and work of Christ Jesus, the Wayshower; also for the proof that He is still revealing himself, as evidenced by the healing and regenerating influence of Christian Science, given to the world through you, His faithful messenger to this age.

We are aware that as yet we catch but faint glimpses of God as Spirit, of man as His image, or of the spiritual church, as you have discerned them. We are, however, earnestly striving to understand and demonstrate more of this great truth. Lovingly and gratefully your followers.

FIRST CHURCH OF CHRIST, SCIENTIST,
MARY B. MOSHER, *Clerk.*
The Oneonta Star.

SANTA BARBARA, CAL.

The first service will be held to-day [Nov. 29] in the new Christian Science church, which is located on State Street near Victoria. This very artistic and complete little edifice has a seating capacity of three hundred. The church has only been in existence about ten years, but so rapidly has it grown that they have been obliged to move into larger quarters a number of times.

The Reading Room, which has been located for the last six years in one of the studios opposite the Arlington, will soon be moved to its new quarters.—*Morning Press.*

TESTIMONIES OF HEALING.

In September 1900, I first learned of Christian Science. At that time I was a member of an orthodox church, a church to which my entire family belonged and in which I had been brought up. I had, however, become dissatisfied with its teachings and simply clung to my Bible. I wanted a religion which was practical, not merely theoretical, and when reading the Bible and thinking of the promises therein, I had often wondered why people were not healed now as they were in Jesus' time. About this time I chanced to meet a woman with whom I had been acquainted for several years, and who had been a great sufferer. While talking with her I noticed that she seemed to be free from her old trouble, and asked her what she had been doing. In reply she told me she had been healed by Christian Science. Instantly I declared, "If you have been healed by Christian Science, I know it will heal my mother;" for she also had been subject to that very trouble for fourteen years.

Soon after this I called upon a practitioner, who kindly loaned me her copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, for one day, saying that she could not spare it longer than that. After reading the book that first evening, I became very much interested in the truths which it contained, and a week later purchased a copy for myself. I read the book almost constantly, and explained it as best I could to my mother, who could not at that time read or understand the English language. At the end of three weeks I found I had no further use for glasses, which I had been obliged to wear for ten years. After six weeks' study in this way my mother was completely healed of asthmatic and bowel trouble, and I was entirely free from diseases from which I had been a sufferer for many years, despite the efforts of the specialists whom I had employed. I was so impressed by the practicability and beauty of this Christ religion that I continued to study it, then united with the local Christian Science church, and six months later with The Mother Church, and I have since devoted all my time to Christian Science work. About two years ago my mother was seriously ill, and was healed in one week by Christian Science treatment. Before coming into this thought, she had had the same disease, and although she had the best medical treatment, eight weeks elapsed before she recovered, and even then she was in a very weakened condition. During the past five years my mother, although now seventy-five years of age, has learned to read Science and Health somewhat, and is trying to make her own demonstrations.

It is impossible for me to find words to express my gratitude to God, who has spoken to this age through our dear Leader, Mrs. Eddy. She has patiently and lovingly shown us the way and has told us to follow her as she follows Christ.

MRS. EMILY DOPKE KAUFMAN, Milwaukee, Wis.

I first heard of Christian Science about twelve years ago. After a fruitless search of years for health, I had my case diagnosed by one of the best physicians in New York City, and when he gave me no hope I went for several summers to a beautiful health resort in the western part of Pennsylvania. The complete change seemed to do me good for a while, but it was not permanent; so as a last resort I went to a sanitarium in New York State. While there a friend told me of Christian Science, and loaned me the first copy of Science and Health I ever saw. I afterwards bought a copy for myself, and read it with the eagerness of a famished soul, for it was the first book I had read, for several years, without suffering. It taught me how to pray, and showed me why my prayers had not been answered before, even though but faintly, the meaning of our Leader when she says that Jesus' prayers were "deep and c tious protests of Truth," of man's "unity with T Love" (Science and Health, p. 12); and this healc found that even a little understanding of Truth wor heals, and while I cannot say I have yet gained the over all sin, I can say that not a week passes in wh not have a proof of God's healing power, through H in Christian Science, over some form of error, eithe disease.

With my whole heart I thank Mrs. Eddy for h "Science and Health with Key to the Scriptures." impossible for me to express in words the great b has been to me. Besides the physical healing, it rev true law which I now understand will enable me to ov every form of evil and sin. Human will is revealc true light, and as I read in the Lesson-Sermon, I s we should "sanction only such methods as are dem ble in Truth, and known by the fruit thereof" (Scien Health, p. 106). Even before I left the sanitariu many times since, I have had a great desire to give thi to all who are not satisfied, and especially to those v my darkest hours lovingly and faithfully tried to he Although passionately fond of reading, having read everything I could get my hands on, yet the satisfying ing truth, for which I had always been reaching out, e childhood, was never realized until I read Science Health.

For twelve years I have neither taken drugs nor any material remedies. Sickness has come to me d that time, and I have passed through deep waters, but my Bible and Science and Health, the Lesson-Ser *Journal*, and *Sentinel*, and the patient, faithful help o of our Leader's loyal students, I have always been al come through safely, and have had better health, joy and real happiness than in all my life before. I to be able to help others as I have been helped, for I u stand this to be the truest expression of gratitude.

MRS. W. R. LOFTIN, Kinston, N.

In the year 1875 I was badly injured, and my gen health became much impaired. I took the best care p ble of myself, and avoided heavy lifting, but I steadily g worse, until at the expiration of nine years I was compe to wear a truss. I was also afflicted with stomach tro from which I suffered intensely. I consulted physic and had medical treatment, receiving only slight temp relief. During the following eighteen years I had tried the different healing methods available, but continued grow worse. The year 1903 found me in a serious phys condition and very much discouraged. In this suff ing and hopeless condition Christian Science was reco mended to me, but it seemed absurd to expect it accomplish what *materia medica* had failed to do. I re ized, however, that I had nothing to expect from materi ways and means, and with little or no faith in Christia Science I called at the office of a practitioner and arrang for treatment. The second day I forgot to put on my trus as had been my custom each morning for eighteen yea and I have not used it since, being entirely healed. M general health soon began to improve. I could eat wha ever I wished without any ill effects, and in a reasona length of time had gained good health, for which I a indeed truly thankful. Being a business man, I have ma opportunities to recommend Christian Science to oth who are in need of it as I was, and never fail to impro the opportunity.

I feel that language is a poor medium with which t express my gratitude to Mrs. Eddy for Christian Scien which has given me health and happiness. I greatly re joice in this fact. "With what measure ye mete, it shall be

Digitized by Google

measured to you again." Surely her recompense for good done to others will be great.—Wm. H. Suppe, Joplin, Mo.

Nearly two years ago, when I sought Christian Science, I was a complete wreck, both physically and mentally. From childhood I had been doctored by the best physicians in our county for almost every possible disease, and in 1893 our family physician had me examined by the medical board of our home town. They pronounced my case hopeless, and told me if I had any business to fix up I had better attend to it at once; that I positively could not live much longer. When Christian Science found me, I had heart trouble in its worst form, and my family physician said that I was liable to go at any moment, that he had done all he could for me. I thought my only relief would be the grave. I could not rest, day or night; but my loving wife, who never tired, stayed by me all the time, until it seemed as if she must wear out. My father had died the year before with the same trouble, and I believed that I would go the same way.

At this time a Christian Science practitioner visited our neighborhood, and I went at once for treatment, for I was determined to give it a trial. I experienced marked improvement from the first, and am glad to say that I have not used any material remedy since my first treatment, and am restored to health. Christian Science has not only benefited me in a physical way but it has been a wonderful help spiritually. It has given me a better understanding of the Bible and a desire to read and study it. For these and many other blessings I am very thankful to God for sending His beloved Son to reveal the truth. I am also grateful to Mrs. Eddy, who has rediscovered and taught us the Christ-way of healing, not only from sin but from sickness. I would be ungrateful if I did not love the one who brought the light to us. My prayer is that infinite wisdom, Truth, and Love may keep me ever worthy to be found in the onward and upward march of the true Christian Scientist. Now I see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." What a happy thought to know that when in trouble we can call for Divine help. In the constant study and application of Christian Science I am content, knowing that only as I am obedient to God's commands can I prove my sincerity. I thank God for the help that came to me when I was in utter despair and darkness. Only those who have been led from the darkness of materiality to the light of Christian Science can understand how grateful I feel.—T. J. Lee, Epes, Ala.

I can never express in words my gratitude for the benefits and blessings which Christian Science has brought to me. I had heard practically nothing of this glorious truth until about a year and a half ago. When a neighbor mentioned the fact that she was a Christian Scientist, it meant nothing to me, but when she said she had taken up its study as the best manner in which to rear her boy, it immediately appealed to me, as I was trying to find something that would give me a firm and sure foundation by which to guide our boys' footsteps upward. I had prayed daily for wisdom to attain this end, and consider my coming to Christian Science a direct answer to my prayer. When I first opened Science and Health,—our revered Leader's "Key to the Scriptures"—and read the chapter on "Prayer," I saw at once that it was a revelation of Truth and Love. I never doubted that it would ultimately be the faith of all, even as the apostle said, "Till we all come in the unity of the faith . . . unto a perfect man." I have had some dark hours, when even Christian Science seemed unavailing against the claims that mortal mind sets up, but I realize fully that these arise from a lack of understanding of the divine Principle that rules and governs all mankind harmoniously. We are told, "With all thy getting get understanding."—an understanding of God as Love, as divine Principle, that which can never err or change, whose law is immutable right. We have had many beautiful demonstrations in healing, but as all Christian Scientists know, the physical healing is secondary to the spiritual healing.

Incipient fever of a supposedly dangerous type was, with the help of a practitioner, overcome in one treatment, as was also an advanced case of cold. An intense earache was overcome in less than an hour. Our second son, when three years old, was playing with an empty grocery box, and sat down in it. He attempted to get out, but could not, as a nail in the box had deeply penetrated the flesh. He cried out in great pain, and after one or two efforts to extricate him, I succeeded. I took him in my arms and began to declare the truth. I had been interested in Christian Science only a short while, and knew very little of the methods of treatment, but I used what knowledge I had. My next-door neighbor, a Scientist, came over and began to work vigorously. In less than fifteen minutes the little fellow was quiet and went with my friend to play with her boys, she advising me to go to church as I had intended doing. When I returned she said there had been no complaint at all. That night he went quietly to sleep, and the healing was steady and sure, —the place where the nail had entered not even becoming inflamed.

My heart goes out in deepest love and gratitude to our dear Leader, and I daily pray that divine Love, and the light which is shed abroad in our land, may penetrate into the dark recesses of mortal thought and enrich all mankind.—Janet G. Montague, Mobile, Ala.

Christian Science gives an understanding of God through which we may eliminate, slowly perhaps, but surely, every element of discord from our lives, but to make those unacquainted with Mrs. Eddy's interpretation of the Bible comprehend what it is to us, seems difficult. The first honest attention I gave the subject revealed a consistency and logic so new to my concept of religion that I was deeply interested, and at every spare moment I read the text-book of Christian Science. During a period of three years my progress has often seemed slow, but there recur those moments of spiritual vision which mark sure advancement. Briefly, the old unsettled state of thought, that desired constant diversion and entertainment, is gone. Every physical ill which has appeared since taking up the study of Christian Science, has been healed by Truth alone; also a chronic disability dating from birth and an organic trouble of rather serious nature, these latter being healed through the help of a practitioner. The birth of a child, which from a medical standpoint was impossible without serious injury to mother or child, was comparatively easy, and my complete recovery very rapid. A healthier child than my fifteen-months-old boy would be hard to find. The bitterest prejudice toward one whom I should have loved, even from a human standpoint, has been entirely overcome. I have learned that the question of supply is a matter between God and myself alone, and by that I do not mean that my husband is not a capable business man, but that as I realize the truth I am learning that because God is all-sufficiency His child cannot feel apprehension concerning any human need.

I wish to be ever alert, and to be a ready instrument in God's hands to help spread the light which our much-loved Leader, Mrs. Eddy, has made again available to humanity after centuries of obscurity.

Gertrude George Delano, Chicago, Ill.

Of the many blessings I have received through Christian Science I wish to tell a few. Among the first was my

Digitized by Google

own healing of several chronic diseases of twelve or thirteen years' standing,—lung and rheumatic trouble being among them. I received absent treatment in Christian Science one day, and next day not a trace of these ailments was left. On several other occasions help was received immediately. I have been able from the first to make demonstrations for myself and others. The first proof I had that any one can make this truth practical was when our oldest boy was under treatment. Our local practitioner had given me a *Journal* to read, and one night I waked up with a severe sense of suffering. I began to speak about my throat paining me, but remembered the words I had read during the day,—that God is all,—and the same instant the pain was gone. Such a sense of peace and joy came over me that I lay awake till well nigh morning, and after this experience I tried to put into practice all that I knew, gaining a little each day, and at the same time teaching my children to put it into practice too. Three of them, ranging from nine to thirteen years of age, have made some good demonstrations. I have been studying Science and Health now for five years, also our other literature, and have depended on this truth entirely, never using any material remedies whatever, and getting along much better in every way than we did in the old thought.

I can never express in words how grateful I am to Mrs. Eddy for the help we have received. With many others I must say the physical healing is the smallest part of Christian Science; the spiritual uplifting is worth many times more. I find my greatest joy in helping others. I could tell of some good done through Christian Science every day.

MRS. ROSE CRUEY, Rantoul, Ill.

[Translated from the Spanish.]

For the past eight years I had been in the hands of physicians in connection with a distressing and dangerous disease in my breast. My condition in the last two years became so aggravated that I had to look for some new treatment. When I came to Mexico in November, 1904, I brought with me, under instructions from my physician in Paris, a large quantity of medicines. Six months after reaching Mexico I was attacked by acute throat trouble, from which I suffered terribly. The specialist whom I consulted in this city decided an operation was the only thing that would aid me, and prior to the operation I was treated medically twice a week. At the end of seventy-two visits which I made to this physician, and after which I felt no better but was still in terrible suffering, I had the pleasure of meeting a Jewish lady of this city who had been healed here, and she spoke to me about the benefit to be derived from Christian Science. I immediately left the physician and took treatment from a Christian Science practitioner. At the end of one month I was perfectly well, and the growth on the breast came away. The truth of Christian Science has delivered me from many other ills from which I suffered very much. My only desire is to make this wonderful religion of Christian Science known to every one, for to my thought it is the real religion of God, delivering us from our bodily ills and filling our thought with peace and health. Again and again I thank God and Christian Science for my own healing.

BERTHE THEVNEZ, Mexico City, Mexico.

It was divine Love that led me to Christian Science. I was invited to go into the Reading Room one day, and there opened a book which proved to be the Christian Science text-book, "Science and Health with Key to the Scriptures." The first chapter, "Prayer," led me on to the next, and so on, until I found that this book gave a better understanding of the Bible than I had ever had before. It seemed as if I could not leave the book. This was in October, 1906. I went again the next day, and have been going to the Rooms to read from that time until I find that Science and Health brings me nearer I had indulged in medicine most of my life: h through many serious sicknesses, and for twel had used an electric battery every morning. After Science and Health I forgot my battery one morn have never used it since. That was the beginning change,—Mind ruling instead of matter. I soon l feel that divine Mind heals, and my medicine looked strange to me,—in fact they were soon away. Everything was beginning to look more s and I was each day gaining a better understand Truth. It has given me strength, courage, and n truth and love. Throat trouble to which I had be ject was healed through the understanding of divine I have learned that there is but one God, divine Pr and that Truth heals all our diseases.

FLORA B. HINMAN, Boston, M

In November, 1902, I was taken with a severe f paralytic trouble. For three months I could not d thing at all. I had several physicians, but could g relief. One morning I went to a Christian Science tioner and told her what I had come for, and while talking to her my arm became easy. I was told practitioner that God is as willing and able to hea as in Jesus' time, and all pain at once left my arm. next morning I was able to move my arm and dress out assistance. In two days I was at my work, and since been milking from one to three cows daily. I perfect health now, and I take the *Christian Science terly* and study the Lesson-Sermon each day. I am grateful to God, and to Mrs. Eddy for the blessing has come to me through Christian Science.

MRS. E. L. STUBBS, De Funiak Springs, F

I never can feel grateful enough for what Chri Science has done for me. I know it is of God, everla Truth. For years I suffered with stomach and trouble. I had three doctors, but grew worse all the t We had given up all hope of my ever being well again, w we heard of Christian Science. I did not think of helping me, but I was ready to try anything. I was he after a few treatments and by the study of "Science Health with Key to the Scriptures" by Mrs. Eddy. Bible is now a new book to me. I read it and underst it. I am deeply thankful to God, and my heart is of love to Mrs. Eddy for bringing this healing truth to I try to live Christian Science and I am learning to love.

MRS. E. E. WILKINSON, Carbondale, Ill

I have received so many benefits from Christian Scien that I feel I would like to add my testimony to the ma that have already been given. I came into Christian S ence through the healing of a sister who had been und the doctor's care for many years with very little benef Since that first awakening to the truth I have been heal of diseases of the most distressing kind. I was also heal of a very severe and abnormal condition of my *left foo* I suffered terribly, so that it was very difficult for me t walk, and I could not wear a shoe without pain. At las I asked a doctor what he thought could be done. He sai he knew of no cure, and no relief but amputation of the toe. I would not consent to this, and turned to Christian Science. After about six weeks' treatment I was entirely healed. This was nine years ago. For this relief I am of course very thankful, but I am most grateful for the spiritual understanding of the Bible gained through read- ing Science and Health. I had never read the *Bible be-* fore going to the Christian Science church, but since then

Digitized by Google

I have read it each day, and find my real joy is in gleaning some new thought from its pages.

I cannot close without speaking a word about our beautiful Mother Church, which I had the great privilege of seeing in June. To my sense it is perfect in every detail, and stands as an everlasting monument to Christian Science as a healing religion. I was very much interested in watching the throngs of Scientists, and thought, as I stood in the crowd, What do these people stand for in the sight of the world to-day? The answer was, In proof of the healing done in Christian Science, and because of their thankfulness to God and gratitude to our beloved Leader, Mrs. Eddy. My wish and desire is to be more loving and kind, and to be true to the teachings of Christian Science.

LEONA N. CRABBE, Washington, D. C.

My last illness covered a period of eighteen weeks, during which time I had six physicians, three of whom diagnosed the case as a most serious form of liver trouble, but none gave any encouragement. I was treated in Christian Science, and resumed regular work after the third treatment. I continued the treatment three weeks, and am well. At the time I began Christian Science treatment I weighed one hundred and twenty-five pounds, and in three weeks' time I had gained twenty-four pounds.

JOSHUA VAN STONE, Bridgeport, Conn.

We first heard of Christian Science three years ago last February, when my mother, who had suffered intensely for nearly four years, was healed through this blessed truth. She had been treated by nine different doctors, six of whom were specialists; had taken osteopathic treatment; had three operations performed, etc., but she continued to suffer without any relief whatever. We had given up all hope of ever seeing her well again, but as a last resort we were ready to send her to Chicago for another operation. This was in January 1903, but she was unable to go. At this time a friend advised her to try Christian Science, which she did at once. A practitioner was called upon, and relief came immediately; she could enjoy every meal with us at the table, and in one week she was able to ride twenty-eight miles to see her practitioner. Since that time we have had many other beautiful demonstrations, through this spiritual understanding of God as all,—the giver of all good,—and the realization of the unreality of evil.

Last fall I had a severe attack of lung trouble, and could scarcely sleep at all. I had to give up work entirely. I then took Christian Science treatment, and gained quickly, the cough and pain leaving me entirely. I used to have a great fear of everything, but it has been destroyed through this wonderful truth,—that God has all power and there is nothing to fear.

Words cannot express my gratitude to God, and to our dear Leader, Mrs. Eddy, for the understanding of Truth which she has given us. My prayer is that I may be more obedient to the demands of Truth.

MISS IDA E. JOHNSON, Tampico, Ill.

That Christian Science can and does heal all manner of disease, regardless of distance or age, or any other seeming human obstacles, I have had many proofs, not the least among which was the healing of severe injuries resulting from an accident. Six years ago my father, a man then past seventy-one years of age, had planned for a visit among friends in the country. In the evening, while being driven from the railroad station, the driver lost control of his horse. My father was thrown out, and severely injured. He was carried to the house of a friend near by, in what seemed a most alarming condition. A physician had been summoned in the mean time, and when he came he pronounced the condition very serious, and told the friends who had accompanied him that he did not think father would live until morning. We then telegraphed to a Christian Science practitioner in Scranton, the message reaching him about midnight. The bleeding gradually stopped, and he rested quite easily in his chair, not being able to lie down. The next morning he was unable to walk at all, the whole left side of the body showing hardly a place that had not been trampled upon by the horse. The Scientist reached the house about ten o'clock, and at noon father walked to the dining-room with a little assistance, and ate and relished his dinner. That night he rested in his bed, and the next day he took a drive of about two miles to the house of another friend. There he walked about as he wished in the open air, enjoying himself for two days, and on the third day took a ride of about ten miles into the country, over as rough a road as one will find among the hills of Pennsylvania, and complained of no more fatigue than usual.

Those who on the night of the accident expected to have to carry him home lifeless, left him to enjoy the rest of his visit, and the life which God alone gives and which He does not take away. Father's name is E. D. Tyler, and his physical condition at this time gives no evidence of his ever having met with such an accident. I would say further that the above is only a very small fraction of what I have to be grateful for through Christian Science.

MARY T. REYNOLDS, Scranton, Pa.

I came to Christian Science for the healing of the body, not knowing how much more the human mind was in need of healing. At the very first I received the impression that I would immediately be transformed, but in time I found I must work out my own salvation. I have been on stormy seas, when it was only God's hand that upheld me and kept me from being lost in the waves. Many times has the "still, small voice" whispered "peace, be still." I have found by experience that when trouble seems to threaten we should at once go to the Bible and Science and Health for guidance. A year ago I seemed to be in trouble, and was even threatened with the law. I asked human aid, and it failed me. In my extremity I went to the Bible and Science and Health, and there found help. I wish I might say to all beginners in the study of Christian Science, Keep close to God, and do not allow yourselves to become discouraged. The way may sometimes seem steep and rugged, but we can always keep our thoughts good and pure. We should search for God's promises, as they are given to us in the Bible, and commit them to memory. Many times have I come to the point that I did not know where to place my thoughts, for they seemed to wander, but by repeating some helpful Bible texts, or some passages from Science and Health, I have been wonderfully helped and brought back to the path which ever leads upward. We should have as many of our Leader's books as we are able to purchase, also the *Sentinel* and *Journal*.

MRS. HENRIETTA E. WHITE, Osgood, Ind.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

[*The British Congregationalist.*]

There has been of late years a serious reaction against theology, arising largely from the way doctrine has been insisted upon rather than the plain and simple declarations of the Scriptures. The evil arising from this has been increased, leading some to conclude that life and conduct in no degree depend on dogma, and can be promoted and enjoyed without any doctrinal teaching. . . . This state of mind has been produced by insisting that the religion of Jesus Christ and his gospel is only contained and expounded in the creeds of the Church, ancient and modern. . . . These claims have been made for centuries, with the effect, in recent times, of driving thoughtful and inquiring minds away from all Church connection, producing in them a positive dislike to doctrinal teaching. Such contentions, however, overlook the distinction between doctrine and fact, failing to observe that the one may be imperfect, and must be, but that the other is perfect and true. . . . The facts of Christianity are the main factors to be held fast, and when realized in any degree of fulness will produce saving and elevating results. Doctrines depend on the facts, are only their human explanations, and will and ought to change as knowledge and reverence increase. It would be a sign of decay and death if the human explanation of the facts which constitute the historical revelation God has given to the world in and through Jesus Christ were not enlarged, and new views of their content given to a waiting world.

[*The* (London) *Christian Life.*]

There are those who, judging by some features of the age, conclude that the influence of religion is on the wane. It is not so. Far from it. There have been changes in the forms of expression of religion, but no decline of real goodness—which is, after all, the very essence of religion. Systematized theology which has misrepresented Christianity is happily falling into discredit, and hence we are beholding some suspense of faith. But the demand of the age is for sincerity and veracity, and these drive out creeds and forms that no longer represent current religious thought and feeling. Religion is now much less identified with pretence and cant than ever before. For, on the whole, modern professors of piety have grown greatly in rationality and genuine worthiness as compared with their predecessors, say of a hundred years ago. In this respect they are still growing.

[Rev. W. P. Du Bose, in *The Churchman.*]

If we have the truth wrapped up in a napkin as a sacred deposit handed down from the past, if we hold it now as the decision of a council or the letter of a creed and not by the continuous self-demonstration of its truth in itself and its meaning and necessity to us, then indeed may our dead or dormant catholicity be afraid of the much alive and wide-awake heresies that confront it as in the earliest ages. Then may we indeed not know what to do with them, but rule them out of existence in the church by the letter of a law or a statute. But that will not do nowadays. Nothing but the life and the living thought that shaped the decisions and wrought the creeds can maintain the decisions or defend the creeds now.

[*Zion's Herald.*]

It has always been peculiarly hard for those who stand in the old paths to admit that innovators can really be actuated by good motives and are as sincerely attached to the cause of truth as they are themselves. The martyrs and reformers have been those who dared to differ from the majority, and were willing to suffer for their God-given convictions.

[*The* (London) *Christian World.*]

We adore the God whose infinite splendors we these are not His perfection. That belongs to which eye hath not seen nor ear heard; the dis whose treasures will be the occupation of eternity.

[Rev. Washington Gladden, in *The Congregational*

What makes a man a Christian is not his ph explanation of Christianity, but his purpose of pra It is this which he needs to keep steadily before mind.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Sc Health with Key to the Scriptures" by Mary Baker with latest revisions and additions, and number 700 pages.

For description, price, and other information, see of cover.

THE CONCORDANCE.—A complete Concordance ence and Health with Key to the Scriptures. T has been compiled from the late revised edition of AND HEALTH, and contains about eighty thousand r (more than ten thousand words being indexed). contains an index to the Marginal Headings, and the Scriptural Quotations in SCIENCE AND HEALT pages, 10 x 7, bound in cloth, marbled edges. Pr paid, single copy, $5. Twelve or more to one $4.50 each.

CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Chr entist, in Boston, Mass. This does not include the members. Price, prepaid, $1 per copy; $5 per half $9 per dozen.

Address all orders for books named above to ARMSTRONG, 250 Huntington Avenue, Boston, Mass

---

CARDS IN THE GERMAN PERIODICAL.—Application will be supplied by The Christian Science Publishi ciety to practitioners who wish their names and ad inserted in the advertising columns of *Der Hero Christian Science.* These applications should be pr endorsed and forwarded to the Society. The rat advertisement will be $2.00 for the first line, and $1. each additional line. It is desirable that those who their names in this way should be able to communicate patients and inquirers who speak the German lan only.

CLERK OF THE MOTHER CHURCH.—Correspondenc lating to membership with The Mother Church and req for blank applications for membership, should be addr to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Ch of Christ, Scientist, Falmouth, Norway, and St. Streets, Boston, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00

Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00

Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,
Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Commission which for six months has been studying postal conditions, giving hearings in New York and Washington, will ask Congress for authority to conduct a far broader investigation and in the mean time will positively reject the recommendation of Third Assistant Postmaster General Madden that the rate on second-class matter be raised to four cents a pound. The Commission will ask Congress for authority to employ expert accountants to go over the postal accounts and devise and institute a system whereby it can be easily ascertained at what loss or profit the various divisions of the service are maintained, the cost of carrying the several classes of mail, the cause of the annual deficit, etc.

The Nobel Peace Prize has been awarded by the Norwegian Parliament to President Roosevelt. In a short speech the President of the Parliament, Gunnar Knudsen, said what had especially attracted the attention of the world was President Roosevelt's efforts to end the war between Russia and Japan. The amount of the Nobel Peace Prize will be given to trustees to be used as a fund to be expended for the purpose of bringing together at Washington representatives of capital and labor to discuss industrial problems, with a view to promoting a better understanding between employers and employes. The committee of six in charge of the fund will be called "The Industrial Peace Committee."

The Interstate Commerce Commission concluded their inquiry at Chicago into the car shortage and the delay in the movement of freight. It is probable that testimony will be taken at Galveston in January in regard to the congestion of traffic at Gulf ports. The remedy suggested by most of the witnesses was a car clearing-house with every railroad in the country in it, so that a freight car would be at home on any line and available for use wherever unloaded; and an increase in the per diem charges to railroads for retaining foreign cars beyond a specified time limit.

As a result of the investigation into the land frauds of Indian Territory, which has disclosed great dishonesty, there is a probability that Secretary of the Interior Hitchcock will make a clean sweep in reorganizing the Government personnel in the Territory. The law governing the disposal of the Creek lands prohibits an individual from acquiring more than one site or lot. Through a method of fradulent scheduling a number of persons secured town lots aggregating in value over $5,000,000.

The three years' deadlock over the granting of a franchise to the New York Connecting Railroad has been broken. This means that work on the $20,000,000 improvement which is to unite the Pennsylvania and New Haven Railroads by a belt line running around Brooklyn and Long Island City will soon begin. According to the agreement, the railroad is to pay $1,237,500 for the twenty-one year franchise.

Interstate Commerce Commissioner Clark, appearing before the House Committee on Public Lands in support of the President's suggestion that the Government cease to sell coal lands and lease them hereafter to mining companies, reiterated his charge that great corporations in league with railroads have "cornered" coal lands and forced the prices up to an unreasonably high point.

The Senate has agreed to a resolution directing the Department of Commerce and Labor to make an investigation of the "combination or trust organization known as the International Harvester Company," engaged in the production and sale of farm machinery. The investigation is to ascertain if a combination in restraint of trade exists.

The fifty-sixth meeting of the American Association for the Advancement of Science was held at Columbia University Dec. 27 to Jan. 2. Several important scientific discoveries which have been made since the last meeting of the Association, in New Orleans, were made subjects of addresses and discussions.

James Bryce, the well-known author of "The American Commonwealth," will come to the United States as British Ambassador. As he declines a peerage, he will thus be the first plain citizen to be Ambassador of his country at Washington.

The subscriptions to the San Francisco relief fund aggregated $9,295,151.06, of which $5,943,460.02 has been received by the Relief Corporation, leaving a balance due of $3,351,691.64. The expenditures have been $4,628,452.23.

The total receipts of the National Red Cross Society for the fiscal year ended Nov. 30, 1906, were $3,373,237, with a balance in the treasury of $2,381,334.

The total wealth of New York State is said to be $15,000,000,000, while that of the United States is estimated at a little over $107,000,000,000.

During this year's hunting season seventy-four persons have been killed by accident and seventy others seriously injured.

Foreign.

The French Commission which went to England to study the use and value of turbine engines in warships, has returned the following unanimous conclusions: The Commission is in a position to assert that turbines afford, from the military point of view, the following positive advantages: Possibility of constantly obtaining the maximum power without trouble; the possibility of maintaining it during as long a time as may be wished, so far as concerns the propelling machinery; an important reduction in the personnel employed for attending to the machinery, and in the fatiguing duties to which this personnel is subjected; the extreme facility of manœuvring, whether it be a question of reversing or of varying the speed; the practically complete suppression of vibration at all speeds. The Commission unanimously concludes that turbines are capa of replacing reciprocating machinery w very marked advantage from the milit point of view, particularly in the case large vessels.

A few months ago the Sultan of Tur placed a small steamer on the waters Galilee in his domains in the northern l of Palestine. It has been brought ab primarily for the convenience of the incre ing number of tourists visiting the dist and the inhabitants dwelling around the la The steamer, which was built at Constanti ple, is fifty-two feet long by ten feet br and will accommodate from thirty to fi passengers. It has an engine of eight hor power and runs about ten knots an hour.

Large contracts are being placed in United States for the equipment of huge s works which the Japanese Government is operate under the name of the Imperial S Works on the island of Moji. The Japan plant will entail a cost of fully $10,000,0 The orders for equipment so far call for t bar mills, tube mill, blooming mill, roll tables, furnaces, cranes, and a general line steel-making equipment.

The remains of a tomb supposed to be t of Cicero, the great Roman orator, have b discovered in Formia, Italy. They stand o hill dominating both the Appian and Her laneum Ways.

Poor art students in Paris are complain that the studios of the Latin Quarter taken by wealthy faddists, who outbid real students and drive them to into poo quarters.

The census of the German Empire Dec. 1, 1905, shows the population to h been 60,641,278, compared with 56,367,178 1900.

The debt of Germany is $950,000,000, a more than half of this sum was spent on army and navy.

Industrial and Commercial.

The year 1906, says the *Chicago Trib* will long be remembered as one of gr trials and tribulations for railways and r way officials that had broken the laws. M of these suits were brought for violations the Elkins law against giving or receiv rebates, and in most instances they were stituted not only against the railways a their officials who gave the rebates, but a against the individuals or corporations t solicited or accepted them. In most stances prosecutions were successful. T fines assessed aggregate many hundred- thousands of dollars. Two men were co victed and sentenced to imprisonment un the Federal Conspiracy Law.

In a special report on the foreign trade American meats the Bureau of Manufact ers shows a decided decrease in the volu of canned goods marketed abroad. T value of canned meats exported in the fi nine months of 1904 was $5,397,137. Th figures increased to $7,289,283 for the sa period of 1905, but for the first nine mon of 1906 the figures have shrunk to $4,5327 Despite the decrease in canned meat expor the total foreign sales of American m products for the nine months ended Sept. increased to $155,644,168, from $132,188, for the same period in 1905.

The total production of all branches the fisheries in the State of Maine for t year 1905 was 211,657,874 pounds, valued $4,154,115, and for the past year, 170,882 pounds worth $4,048,923, as shown by t biennial report of the Commissioner of S and Shore Fisheries.

Figures just announced show that t trade between the United States and Por Rico in the calendar year 1906 will exce $40,000,000, against less than $4,000,000 1897, the year before annexation.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MRS. EDDY'S REPLY TO THE JANUARY MC CLURE ARTICLE.

It is calumny on Christian Science to say that man is aroused to thought or action only by ease, pleasure, or recompense. Something higher, nobler, more imperative, impels the impulse of Soul.

It becomes my duty to be just to the departed and to tread not ruthlessly on their ashes. The attack on me and my late father and his family in *McClure's Magazine*, January, 1907, compels me as a dutiful child and the Leader of Christian Science to speak.

McClure's Magazine refers to my father's "tall, gaunt frame" and pictures "the old man tramping doggedly along the highway, regularly beating the ground with a huge walking-stick." My father's person was erect and robust. He never used a walking-stick. To illustrate: One time when my father was visiting Governor Pierce, President Franklin Pierce's father, the Governor handed him a gold-headed walking-stick as they were about to start for church. My father thanked the Governor, but declined to accept the stick, saying, "I never use a cane."

Although *McClure's Magazine* attributes to my father language unseemly, his household law, constantly enforced, was no profanity and no slang phrases. *McClure's Magazine* also declares that the Bible was the only book in his house. On the contrary, my father was a great reader. The man whom *McClure's Magazine* characterizes as "ignorant, dominating, passionate, fearless," was uniformly dignified—a well-informed, intellectual man, cultivated in mind and manners. He was called upon to do much business for his town, making out deeds, settling quarrels, and even acting as counsel in a lawsuit involving a question of pauperism between the towns of Loudon and Bow, N. H. Franklin Pierce, afterward President of the United States, was the counsel for Loudon and Mark Baker for Bow. Both entered their pleas, and my father won the suit. After it was decided, Mr. Pierce bowed to my father and congratulated him. For several years father was chaplain of the New Hampshire State Militia, and as I recollect it, he was Justice of the Peace at one time. My father was a strong believer in States' rights, but slavery he regarded as a great sin.

Mark Baker was the youngest of his father's family, and inherited his father's real estate, an extensive farm situated in Bow and Concord, N. H. It is on record that Mark Baker's father paid the largest tax in the colony. *McClure's Magazine* says, describing the Baker homestead at Bow: "The house itself was a small, square box building of rudimentary architecture." My father's house had a sloping roof, after the prevailing style of architecture at that date.

McClure's Magazine states: "Alone of the Bakers, he [Albert] received a liberal education. . . . Mary Baker passed her first fifteen years at the ancestral home at Bow. It was a lonely and unstimulating existence. The church supplied the only social diversions, the district school practically all the intellectual life."

Let us see what were the fruits of this "lonely and unstimulating existence." All my father's daughters were given an academic education, sufficiently advanced so that they all taught school acceptably at various times and places. My brother Albert was a distinguished lawyer. In addition to my academic training, I was privately tutored by him. He was a member of the New Hampshire Legislature, and was nominated for Congress, but died before the election. *McClure's Magazine* calls my youngest brother, George Sullivan Baker, "a workman in a Tilton woolen mill." As a matter of fact, he was joint partner with Alexander Tilton, and together they owned a large manufacturing establishment in Tilton, N. H. His military title of Colonel came from appointment on the staff of the Governor of New Hampshire. My oldest brother, Samuel D. Baker, carried on a large business in Boston, Mass.

Regarding the allegation by *McClure's Magazine* that all the family, "excepting Albert, died of cancer," I will say that there was never a death in my father's family reported by physician or post-mortem examination as caused by cancer.

McClure's Magazine says that "the quarrels between Mary, a child ten years old, and her father, a gray-haired man of fifty, frequently set the house in an uproar," and adds that these "fits" were diagnosed by Dr. Ladd as "hysteria mingled with bad temper." My mother often presented my disposition as exemplary for her other children to imitate, saying, "When do you ever see Mary angry?" When the first edition of Science and Health was published, Dr. Ladd said to Alexander Tilton: "Read it, for it will do you good. It does not surprise me, it so resembles the author."

I will relate the following incident, which occurred later in life, as illustrative of my disposition:—

While I was living with Dr. Patterson at his country home in Rumney, N. H., a girl, totally blind, knocked at the door and was admitted. She begged to be allowed to remain with me, and my tenderness and sympathy were such that I could not refuse her. Shortly after, however, my good housekeeper said to me: "If this blind girl stays with you, I shall have to leave; she troubles me so much." It was not in my heart to turn the blind girl out, and so I lost my housekeeper.

My reply to the statement that the clerk's book shows that I joined the Tilton Congregational Church at the age of seventeen is that my religious experience seemed to culminate at twelve years of age. Hence a mistake may have occurred as to the exact date of my first church membership.

The facts regarding the McNeil coat-of-arms are as follows:—

Fanny McNeil, President Pierce's niece, afterward Mrs. Judge Potter, presented me my coat-of-arms, saying that it was taken in connection with her own family coat-of-arms. I never doubted the veracity of her gift. I have

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

another coat-of-arms, which is of my mother's ancestry. When I was last in Washington, D. C., Mrs. Judge Potter and myself knelt in silent prayer on the mound of her late father, General John McNeil, the hero of Lundy Lane.

Notwithstanding that *McClure's Magazine* says, "Mary Baker completed her education when she finished Smith's grammar and reached long division in arithmetic," I was called by the Rev. R. S. Rust, D.D., Principal of the Methodist Conference Seminary at Sanbornton Bridge, to supply the place of his leading teacher during her temporary absence.

Regarding my first marriage and the tragic death of my husband, *McClure's Magazine* says: "He [George Washington Glover] took his bride to Wilmington, South Carolina, and in June, 1844, six months after his marriage, he died of yellow fever. He left his young wife in a miserable plight. She was far from home and entirely without money or friends. Glover, however, was a freemason, and thus received a decent burial. The masons also paid Mrs. Glover's fare to New York City, where she was met and taken to her father's home by her brother George. . . . Her position was an embarrassing one. She was a grown woman, with a child, but entirely without means of support. . . . Mrs. Glover made only one effort at self-support. For a brief season she taught school."

My first husband, Major George W. Glover, resided in Charleston, South Carolina. While on a business trip to Wilmington, North Carolina, he was suddenly seized with yellow fever and died in about nine days. I was with him on this trip. He took with him the usual amount of money he would need on such an excursion. At his decease I was surrounded by friends, and their provisions in my behalf were most tender. The Governor of the State and his staff, with a long procession, followed the remains of my beloved one to the cemetery. The Freemasons selected my escort, who took me to my father's home in Tilton, N. H. My salary for writing gave me ample support. I did open an infant school, but it was for the purpose of starting that educational system in New Hampshire.

The rhyme attributed to me by *McClure's Magazine* is not mine, but is, I understand, a paraphrase of a silly song of years ago. Correctly quoted, it is as follows, so I have been told:—

Go to Jane Glover,
Tell her I love her;
By the light of the moon
I will go to her.

The various stories told by *McClure's Magazine* about my father spreading the road in front of his house with tan-bark and straw, and about persons being hired to rock me, I am ignorant of. Nor do I remember any such stuff as Dr. Patterson driving into Franklin, N. H., with a couch or cradle for me in his wagon. I only know that my father and mother did everything they could think of to help me when I was ill.

I was never "given to long and lonely wanderings, especially at night," as stated by *McClure's Magazine*. I was always accompanied by some responsible individual when I took an evening walk, but I seldom took one. I have always consistently declared that I was not a medium for spirits. I never was especially interested in the Shakers, never "dabbled in mesmerism," never was "an amateur clairvoyant," nor did "the superstitious country folk frequently" seek my advice. I never went into a trance to describe scenes faraway, as *McClure's Magazine* says.

My oldest sister dearly loved me, but I wounded her pride when I adopted Christian Science, and to a Baker that was a sorry offence. I was obliged to be parted from my son, because after my father's second marriage my little boy was not welcome in my father's house.

McClure's Magazine calls Dr. Daniel Patterson, my second husband, "an itinerant dentist." It says that after my marriage we "lived for a short time at Tilton, then moved to Franklin. . . . During the following nine years the Pattersons led a roving existence. The doctor practised in several towns, from Tilton to North Groton and then to Rumney." When I was married to him, Dr. Daniel Patterson was located in Franklin, N. H. He had the degree D.D.S., was a popular man, and considered a rarely skilful dentist. He bought a place in Rumney, which he fancied, for a summer home. At that time he owned a house in Franklin, N. H.

Although, as *McClure's Magazine* claims, the court record may state that my divorce from Dr. Patterson was granted on the ground of desertion, the cause nevertheless was adultery. Individuals are here to-day who were present in court when the decision was given by the judge and who know the following facts: After the evidence had been submitted that a husband was about to have Dr. Patterson arrested for eloping with his wife, the court instructed the clerk to record the divorce in my favor. What prevented Dr. Patterson's arrest was a letter from me to this self-same husband, imploring him not to do it. When this husband recovered his wife, he kept her a prisoner in her home, and I was also the means of reconciling the couple. A Christian Scientist has told me that with tears of gratitude the wife of this husband related these facts to her just as I have stated them. I lived with Dr. Patterson peaceably, and he was kind to me up to the time of the divorce.

The following affidavit by R. D. Rounsevel of Littleton, N. H., proprietor of the White Mountain House, Fabyans, N. H., the original of which is in my possession, is of interest in this connection:—

About the year 1874, Dr. Patterson, a dentist, boarded with me in Littleton, New Hampshire. During his stay, at different times I had conversation with him about his wife, from whom he was separated. He spoke of her being a pure and Christian woman, and the cause of the separation being wholly on his part, that if he had done as he ought he might have had as pleasant and happy home as one could wish for.

At that time I had no knowledge of who his wife was. Later on I learned that Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, was the abovementioned woman.

(Signed) R. D. ROUNSEVEL.

Grafton S. S. Jan'y, 1902. Then personally appeared R. D. Rounsevel and made oath that the within statement by him signed is true.

Before me,

(Signed) H. M. WOOD.
Justice of the Peace.

Who or what is the McClure "history," so called, presenting? Is it myself, the veritable Mrs. Eddy, whom the *New York World* declared dying of cancer, or is it her alleged double or dummy heretofore described?

If indeed it be I, allow me to thank the enterprising historians for the testimony they have thereby given of the divine power of Christian Science, which they admit has snatched me from the *cradle* and the grave, and made me the beloved Leader of millions of the good men and women in our own and in other countries,—and all this because the truth I have promulgated has separated the tares from the wheat, uniting in one body those who love Truth; because Truth divides between sect and Science and renews the heavenward impulse; because I still hear the harvest song of the Redeemer awakening the nations, causing man to love his enemies; because "blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake."

Mary Baker G. Eddy

A COMPLETE SALVATION.

CLARENCE W. CHADWICK.

It is the completeness of salvation that gives it its greatness.
MELVILL.

THE message of Christian Science to the world is one of completeness. It scales the heights of holiness and from the view-point of pure spirituality it re-echoes the cry of the Galilean Teacher, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Perfection on any plane of human attainment demands the elimination of all mistakes. Mortals may be encouraged by their religious instructors to live as good a life as they can here, leaving the final or complete solution of the problem of salvation for the so-called hereafter, but Christian Science from the mount of spiritual discernment and understanding urges upon mankind the absolute necessity of beginning the great work of overcoming all evil, here and now. In the language of Scripture it says, "Awake to righteousness, and sin not," which reads as follows in the Modern Speech New Testament by Weymouth: "Wake from this drunken fit; live righteous lives, and cease to sin." It emphasizes the fact that no one is morally and spiritually awake to true Christian thinking and living until he recognizes the necessity of crossing swords to-day with every phase of evil that confronts him, instead of leaving much of the struggle to an uncertain future. Lopping off a few branches only, "having a form of godliness, but denying the power thereof" to work a present salvation from the besetments of sin and disease, does not enable one to glorify God in his body, nor to present it "holy, acceptable unto God," which, according to Scripture, is the only "reasonable service" he can render.

If a Christian Scientist ever falls short of grace, it will be along this line of half-hearted service to the divine Principle, which he has proven to be true, and which says, Be ye perfect. The constant suggestion of error is to soothe human thought into declaring peace,—peace, when there is no peace,—and in "this drunken fit" of material existence mortals boldly continue the indulgence of every phase of belief supposed to bring pleasure to the senses, while struggling to conquer their pains without making the scientific application of divine law. They forget that the divine law is one of exclusion to every form of error. It does not say, You can indulge this sin, but must overcome that one. The divine law does not legalize any form of evil, and this is the one important point for mortals to heed if they would grasp the completeness of salvation through Christ,—Truth. When we once see that all evil must be forsaken before we can understand and prove its unreality, then, and not till then, do we begin to comprehend the reality and completeness of good. Some people seem to be shocked when told that Christian Science makes nothing of evil, calling it unreal and powerless. This is because they have not yet grasped the meaning of a full salvation, whereof it was declared by the prophet that the time would come when we should not see or know evil any more. They zealously oppose the indulgence of certain evils, just as much as do Christian Scientists, but stubbornly refuse to abstain from others, not understanding the divine law of Be ye perfect. When they begin to grasp the idea that the comprehension of the allness and completeness of good is consequent upon a complete salvation from all belief in evil, they will gladly join with the students of a demonstrable theology, which teaches and proves scientifically the powerlessness and nothingness of evil.

Christian Science seems to be an innovation upon modern religious thought, for the reason that it crosses swords with all forms of evil, many of which were not recognized as evil before the advent of this Science. The fact is, however, that it is simply presenting to humanity a complete salvation, the salvation taught by Christ Jesus, a salvation from all sickness, sin, and death. It is not a salvation that promises forgiveness of sins upon profession of "faith without works," while leaving the pain-racked body to the mercy of *materia medica;* it is not a salvation that promises freedom from sin and disease through the experience called death, but through a present higher and more spiritual activity of right thinking and living: it is not a salvation that offers deliverance from any sin or error so long as this sin or error is even temporarily indulged under the plea that it is both natural and harmless, or because *materia medica* may recommend its indulgence as a sure means to health; it is not a salvation that encourages submission to any sin under the guise of "suffer it to be so now;" it is not a salvation that studiously relies upon "bodily exercise" and pleasure for the proper development and preservation of mind and body, but rather upon the continual contemplation of pure thought models, as a stimulus to daily Christian practice.

The soul-saving efforts of Christianity in the past have fallen far short of a perfect salvation. They have left the poor body with little or no hope of redemption this side of the grave, in the vain belief that in some unexplainable way his soul would be saved because the mortal has been persuaded into professing "belief" "on the Lord Jesus Christ," without adequate spiritual enlightenment upon so momentous a theme, for the Scriptures declare, "No man can say that Jesus is the Lord, but by the Holy Ghost." The result has been disastrous in that it has left mortals at the mercy of matter. In attempting "to save the soul" they have left the poor body a slave to sin and disease, and the "inevitable" subject for the grave. Christian Science rationally explains away the un-Christian belief in a sinning soul, making it plain to any right-minded person that sin alone sins, while Soul is God, divine and never human or sinful.

Since "there's a divinity that shapes our ends," why imagine that aught which it bestows can ever be lost or separated from its source? Can the infinite ever be less than complete? Why try to save something that belongs to God and was never for one instant divorced from Him? Does the idea that two and two make four need saving? Isn't it already saved because inseparable from its basic law? If some deluded mortal imagines that two and two are five, what is it that needs saving? The elimination of a wrong thought is all that is needed to restore harmony. So is it in theology; the correction of humanity's misconception or wrong thought of Soul is all that is needed to set mortals at work to overcome evil with good, and to grasp the idea of a complete salvation. The scientific healing of the human mind and body hinges on this very point of sinless Soul that needs no saving lotions. A proper and accurate concept of the term Soul gives man dominion over all that is finite, mutable, and mortal, and this concept may be gained by the study of the Christian Science text-book, especially pages 477 to 482 of the chapter "Recapitulation." Where there is a correct understanding of Soul and body, there is health, happiness, and strength, both moral and spiritual.

The individual who begins to recognize the dominion of Soul sense over physical sense, is the one to grasp the idea of the Christ-healing and to begin the solution of that all-important problem of working out his own salvation. He gladly turns away from the human supposition of a soul in matter, and joyfully contemplates the "life hid with Christ in God." He no longer appeals to a suppositional lower nature in man, but to the higher or spiritual sense that ever leads thought into purer and holier realms of spiritual activity. The real man, the man who is spiritual and not material, needs no saving here or hereafter, and the sooner humanity awakens to a scientific understanding of Soul, the sooner it will grasp the fact that "salvation is a complete, an absolutely perfect work, yea, the greatest work of God," as expressed by an early English

Digitized by Google

theologian; and being complete, it must and does include the healing of all bodily ailments.

It is a lamentable fact that the ills of the flesh have been ignored on the part of the Church in its haste to save souls. The first Christian service rendered by the Saviour to sin-sick and suffering mortals was the healing of their sicknesses and sins, the uplifting of human thought, buried as it was in the suppositional belief of life in matter and hampered by corporeal limitations, to the plane of perfect, spiritual thought models, where it could begin to grasp the true meaning of the word Soul. So long as thought and desire are at home in the body (corporeality) they are "absent from the Lord," and the first step towards salvation is to break the shackles of blind human belief that would forever hold them in matter, and so usher in the freedom and "liberty of the children of God." It affords little consolation or comfort to a so-called sick man to tell him that he has a lost soul that needs saving, for his thought is thoroughly immersed in the belief of a diseased body that needs to be cured, and until the cleansing balm of Truth is experienced in bodily healing, his thought is not prepared to grasp the meaning of the word Soul. The individual who is led to believe that his soul is saved, but who is conscious of a pain-racked body, has not yet experienced a perfect salvation.

Christian Science does not divide Truth's seamless robe, but teaches and demonstrates the completeness of righteousness in overcoming sickness as well as sin. Both are accomplished through the spiritual uplifting of thought, and then it is that all mystery concerning Soul and body is done away with, and the new creature in Christ is made manifest in perfect manhood and womanhood.

The great Wayshower of humanity taught and demonstrated complete deliverance and redemption through a correct understanding of good, not through a mistaken belief in both good and evil which has since led his professed followers to reject his complete salvation by resorting to *materia medica* for the healing of the body, a practice absolutely unjustifiable by either the teaching or works of the Master. The cry of modern Christianity is, "Back to the standard of the Master and his apostles." They healed the sick through Mind, not matter; so should we if we would be worthy of the name "followers." Human thought is rapidly trending Mindward, for there is no healing balm in matter, and mortals are woefully weary and heavy-laden, waiting for the glad tidings of joy and health which accompany the message of a complete salvation, given to this age through Christian Science under the wise guidance of its Discoverer and Founder, Mrs. Eddy.

ALL GOOD COMES FROM GOD.

F. B. HOMANS.

THE statement that God is the author of all good is generally admitted by all Christians. The pure thoughts of Abraham, Moses, Elijah, and other ancient prophets were preparatory steps which helped to remove much materiality from human thought, and thus made possible Mary's spiritual conception of the child Jesus, and also enabled him to do the great works he accomplished toward the regeneration of mankind. The pure thoughts of Love and Truth which Jesus held, and those which his followers have held during the past two thousand years, made it possible for Mrs. Eddy, the Founder of Christian Science, to receive this glorious light of Truth which she has given and is giving to the world; but it all comes from God. Christian Science is the radiance of divine Love, which is being revealed more and more clearly through the purity and Christian character of those who, because of their fitness, are able to receive, grasp, and scatter this great truth broadcast. The reflected light from Christ Jesus kept up its brilliancy for three hundred years and made it possible for the work of the Messiah to be carried on. Then material sense buried the Christ-healing in its sepulcher of matter and rolled the stone of pride and superstition against the door, there to remain until one richly endowed by divine Love, and with sufficient spiritual strength, should roll it away and reveal to the world the long hidden Christ-healing. This our beloved Leader, Mrs. Eddy, has done.

There have been many, many prayers of sincere Christians heard and answered during these two thousand years. Why? Because the one offering the prayer was pure enough to catch the light reflected from the Gospels,—the words and the works of Christ Jesus,—and because God is always good. But neither the suppliant nor the world could tell why some prayers were answered and many which seemed equally pure remained unanswered. In the light of Christian Science this explanation becomes easy; it is simply that though honest prayers were offered, the scientific understanding of man's relation to God, and how to reach Him, were lacking. This is now made clear in Science and Health; so plain, indeed, that "the wayfaring men, though fools, shall not err therein." This knowledge of God is now being scattered throughout all the world, and it is benefiting all mankind, even though they do not know it or may not admit its source.

This new-old truth, as taught in Christian Science, is making prayer more answerable to people of all classes. The underbrush of materiality is being cleared away, the presence of divine Mind is becoming more real, and the supplications of all unconsciously partake of this wave of love and spirituality. It matters not who offers the petition,—whether it be Jew, Gentile, or Christian Scientist,—if the prayer is for good and is answered, the good comes from God. Even though one receives good without direct appeal for divine help, the good comes from God, as in the case of being saved from accident, recovering from sickness, relief in any case of suffering or sorrow which comes unexpectedly. This unasked-for aid must come from God, since He is the only source of good, and it is the result of the good that exists and that is being made manifest to the world,—the good which is made possible through the teachings of Jesus and the scientific revelations of Christian Science. Christian Science is not a specific for a few. It is the "open door" for all the world to enter heaven, harmony, now. Christ Jesus first gave to the world the Christ-healing, and our Leader has discovered its Principle and offered the truth to the world, so that all are now taught anew to turn away from personality and understand that God is the author of all good. We are constantly taught both by precept and example to do our work in an impersonal manner and to give God the glory.

The word "impersonal," as commonly used by Christian Scientists, implies the absence of human personality. Jesus said, "And ye shall know the truth, and the truth shall make you free." He also said, "Verily, verily, I say unto you, The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." And again, "Blessed are the pure in heart: for they shall see God," and so reflect good to those around them.

Mrs. Eddy makes it very clear that by our purity, and only by our purity, are we enabled to reflect divine Love, and thus heal the sick. Those who with great care and precision draft maps, charts, and road-guides, do not provide the means needed in traversing the localities shown. Each person must decide for himself if he will use these guides, and in what manner he will apply them to his needs. Mrs. Eddy has prepared the spiritual charts which, if followed, will certainly and surely enable us to find freedom from all our infirmities: but she leaves us free to avail ourselves of this information if we will. We must work out our own salvation, and since all true healing is by and through the power of Truth and Love, it is impersonal.

Jesus did not bring the healing Christ into the world,

Digitized by Google

for the Christ was always here and remained after the great Exemplar had withdrawn from mortal view. Not because of Jesus' personality, but through his impersonal purity he was enabled to apprehend and explain Christ, Truth, the healing power, to his age. Never can we forget or lose sight of the great work of the Master; but would Jesus' personality have accomplished any wonderful work if he had not been endowed with purity, spirituality, and the understanding and love of God? It was these qualities or attributes that made him the Wayshower for all mankind.

Mrs. Eddy constantly states that her power to lighten the great load of disease and sin is through her understanding of divine, ever-present Love. It is not of herself, but the Father that worketh in her. She has, through her purity, seen the good that exists all about us, and explains that it always existed and always will endure, and she has given us a clear, concise, scientific method of availing ourselves of the Christ-healing of sickness and sin.

Since many wonderful testimonies are recorded in our weekly and monthly publications and are being told in our Wednesday evening meetings, we can but recall the words of Jesus, "The works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," and realize that the time is fast approaching when these words shall be proven true and applicable to all time. As a Christian Scientist is but a transparency through which divine Love may pass to mortals, he realizes the need of losing sight of self and meekly treading the path which Jesus mapped out and which our dear Leader, Mrs. Eddy, has patiently followed. As this healing is done, and is told and re-told to the world, we lose sight of all personality and see God reflected. Our work is impersonal if we heal as did Jesus. We express our love and gratitude by humbly showing to the world our healing work as a result of obedience.

ERROR HELPLESS.

GERTRUDE SMITH.

For I, saith the Lord, will be unto her a wall of fire round about, and will be the glory in the midst of her.—ZECHARIAH, 2: 5.

How often do we awaken and rejoice anew in the realization of man's coexistence with God, as revealed in Christian Science. The above-quoted passage of Scripture came to me at a time when help was greatly needed in working for another. In the quiet realization of its meaning discord was soon subdued, and since that time this verse has helped me in overcoming the fear of an approaching illness. Illuminated by the well known and much loved words of our Leader, "Clad in the panoply of Love, human hatred cannot reach you," and the side note, "The armor of divinity" (Science and Health, p. 571), these words of the prophet revealed the defense from what appeared to be an overwhelming approach of the enemy. Divine Love like a wall of fire round about! From this refuge, this defense, how harmless the supposed approach of evil! Error was seen to be impersonal, without name or power or hope of entrance,—the flames of Love driving back its threatened advance; and not one of God's children without this wall! Infinite Love was also seen as baptizing all consciousness, every desire, every aspiration! The fire of divine Love consuming, before it is thought or named or manifested, every assumption of error! "The glory in the midst of her" is undoubtedly the divine understanding of Divine Science in hours of great need.

There is many a Christian who feels the irksomeness of the duties of life and feels his spirit revolting from them. To get up every morning with the firm resolve to find pleasure in those duties and to do them well and finish the work which God has given us to do,—that is to drink Christ's cup.—FREDERICK W. ROBERTSON.

SELECTED ARTICLES.

[Albert Cope Stone in the *Mildura Cultivator*, Victoria, Australia.]

There is no body of Christians who are more prayerful than Christian Scientists, for they believe in "prayer without ceasing." They understand true prayer to be the constant uplifting of one's thoughts to God, as the source of all being,—Life, Truth, and Love—the giver of all good. Their supreme desire is that they may have the constant realization of the ever-presence of divine power to overcome every temptation of sin or fear of disease that may present itself. The efficacy of this spiritual communion is proved by the results gained thereby; viz., the healing of the sick and sinful. In Mrs. Eddy's book, Science and Health, a chapter containing seventeen pages is devoted to the subject of prayer.

The assertion that Christian Science rejects the atonement is incorrect. Christian Scientists endorse the Bible teaching regarding the birth, life, death, resurrection, and ascension of our Lord, but hold that what is necessary to the salvation of mankind is the understanding of his life and wonderful works, as indicated by Paul in the following: "For if, when we were enemies, we were reconciled to God by the death of his Son, much more, being reconciled, we shall be saved by his life." We maintain that the purpose of Jesus' life-work was the reconciliation of man to God indicated in his prayer: "That they may be one, as we are." Although Christian Scientists hold that sin, sickness, and death are not creations of God, but are the emanations of the carnal (mortal) mind, they maintain that these errors must be recognized, grappled with, overcome and destroyed by the supremacy of Spirit, as taught and practised by Jesus and his disciples.

[Edward E. Norwood in the *Washington* (D. C.) *Post*.]

The reverend gentleman [who criticises Christian Science] is quite severe, but is he exact? When he says Christian Science destroys faith in the religion of the Christian Church, he is woefully mistaken and unjust, for it is doing the very works which the early Christian Church did and all should be doing now, and which the great Master enjoined, viz., "To preach the kingdom of God, and to heal the sick." Those who are Christian Scientists are endeavoring to do this, and do it in all love and respect to other systems of religion, carefully refraining from condemning others for not doing it. When the gentleman asserts that Christian Science is not Christian, he simply means it does not agree with his own peculiar views of Christianity; and we might well ask, How many sick folk has his understanding of Christianity enabled him to heal? A profound respect is entertained by Mrs. Eddy for the sacred Scriptures, and she lays great stress upon gaining the spiritual meaning, agreeing with Paul that "the letter killeth, but the spirit giveth life." Christian Science does not teach, as asserted, that "things do not exist at all, and denies that God made them," but explains that the universe is not what purely material perception would have us believe it to be. So far from denying the trinity, Mrs. Eddy gives a very satisfactory explanation of it, and the very name "Christian Science" shows its followers to have unbounded reverence for their great Master as the Son of God.

[Rev. O. J. Nelson in the *Bellingham* (Wash.) *Herald*.]

I do not agree with some of Mrs. Eddy's conclusions in metaphysics, yet I firmly believe that thousands upon thousands of weary, fearful, and discouraged men and women have been led into a purer and healthier life through her teachings. I honor her as I honor few women.

I have known personally those who were saved from

Digitized by Google

fear, sin, and disease through her ministrations. I think that Christian Scientists do not know their limitations, but who of us can see our own limitations? I find Christian Scientists a gentle, cheerful, upright people. I have seen this strange teaching—call it by any name you please—transform lives so completely as to make them seem like other people. Will the ministerial critic condemn teachers who feed his flock what he cannot feed them?

I know there are people in this city whose spiritual and soul hunger I cannot feed. I am anxious that some other teacher should feed them. There are people in my own congregation who could get so much from the Christian Scientists if they would. I have received inspirations and blessings from their teachings. In a crude way they have applied Christianity to the concrete, every-day life and the crudity is disappearing. As ministers we have been visionary and "other-worldly" too long, and if we don't give the people some practical and every-day help the Christian Scientists will, and God bless them for it.

When shall we know that all knowledge is relative, and that those who differ from us are often looking upon the same truth from a different point of view? When shall we be so broad in our scholarship as to be eager to learn from those in other schools? At least each individual must have his or her own unique religious experience and find God and truth and life in terms of that experience. May we know ourselves as brothers in the republic of God.

[Caleb H. Cushing in the *Waterville*,(Me.) *Sentinel*.]

Our great Exemplar, Christ Jesus, looked beyond the veil of materiality into the realm of Spirit, into the eternal reality of things. This looking away from the temporal, mutable, and discordant to the harmonious, unchangeable verities of Spirit brought a realizing sense of the perfect man, in the image of God, and this correct and scientific view of man healed the sick and the sinful. Our Master said, "Ye shall know the truth, and the truth shall make you free." To Christianly and scientifically "know the truth" as taught by the Galilean Prophet, is the demand of Christian Science today, and its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, has enabled multitudes to realize that the spiritual understanding of God's Word not only promises a future salvation but "is a very present help" in bringing health, harmony, and holiness here and now.

[W. E. Brown in the *Los Angeles* (Cal.) *Herald*.]

In your issue of the 4th appears an account of the meeting of Methodist ministers, at which one of the pastors, Rev. Mr. Bruce, made a number of remarks which were misleading, and which therefore need correction. Mr. Bruce stated that when persons became interested in Christian Science they seemed to lose all their common sense and were beyond the reach of spiritual teaching. It is unfortunate that a minister of the gospel, who should stand for tolerance and broad-mindedness, should make remarks of this kind, which are clearly the result of unfamiliarity with the subject of Christian Science.

That which attracts mankind to Christian Science is its high degree of spirituality and its common-sense practicability in the every-day affairs of life. Christian Science offers to the diseased and sinful mortal that which he has been unable to find elsewhere, *i.e.*, health and spirituality, and gives him a religion which can be used in a practical way every hour of the day, and furthermore which must be used if he is to remain a Christian Scientist.

Christian Science is the essential religion of Jesus Christ, and is affording proof of the correctness of its teachings in fulfilling the proof established by the Master, "And these signs shall follow them that believe."

It is frequently commented upon by those who are not interested in Christian Science, that the Christian Scientists as a body are good citizens, successful business men, and enjoy a degree of health and morality far above the average, and this would indicate that Christian Science teachings bring out in the lives of those who adhere to and practise them the highest degree of common sense and spirituality.

[From the *Chicago Chronicle*.]

Dr. R. E. Johonnot, pastor of Unity Church of Oak Park, Ill., speaking recently on "Jesus and the Modern Christian Church," said,—

"If Jesus should come into our modern world, what would be his position toward our churches? Would he be in sympathy with their rites, forms, creeds, and works? No doubt he would find much that would be foreign to him. . . . We may believe that he would be most in sympathy with simple forms and the simple doctrines of God as the Father and His love for His children. But if under the forms and creeds of to-day Jesus found real reverence and love for God, real devotion, humility, and self-sacrifice, the spirit of the humble and contrite heart, and the unselfish service of mankind, he would gladly own the church as his, whether ritualistic or non-ritualistic, orthodox or heterodox. What he would repudiate most would be the worship of himself instead of God."

[W. C. Williams in the *Baltimore* (Md.) *American*.]

Christian Scientists believe that all that God made was good. If sick and evil men were God's handiwork it would be monstrous for any one to attempt to cure them; man cannot improve on God's handiwork. Christian Science teaches that God does not make man sinful or diseased; that pain and suffering are no more necessary as an aid to righteousness than is sin. Pain often makes a man seek God, after all other remedies have failed or he has learned that sin is the cause of his suffering and wishes to abandon it, but this does not make sickness a necessary forerunner of goodness any more than insanity is the predecessor of spirituality; such a law would banish the healthy man from heaven.

Jesus sent his followers into all the world to heal the sick; he would not have done so if he thought sickness was God-ordained to engender sympathy. The bishop also, I believe, commended the physicians for giving their lives to the blessed work of assuaging pain, yet he derided Christian Science for denying "pain and suffering and all the sympathy they need and call for."

The reverend doctor said we must have pain to have Christian sympathy. If he had the same realization that Christian Scientists have, that pain is caused by the breaking of God's law, he would not think, perhaps, that sympathy was so well merited. Rather should the ignorance of the sufferer be accorded sympathy for his unconsciously self-imposed fears and beliefs and pains; but true sympathy is not condolence—it is enlightenment. As Bishop Leighton said, "Ignorance itself is disease, the deepest, most treacherous and damning malady of the soul."

[James A. Logwood in the *Kansas City Medical Record*.]

Fear, error, evil, and sin, as experienced by humanity, are generally admitted to be mental, and are so considered in their treatment in Christian Science. Neither a mustard plaster nor the scalpel can reach fear or sin. They may be applied to their effects, but they cannot reach the cause. The Bible teaches that sin brought death. According to this premise, sickness and disease are the allies of sin and death. Jesus said, "How can one enter into a strong man's house, and spoil his goods, except he first bind the strong man?" Hence it is necessary to remove the erroneous mental cause before the evil effects can be successfully eliminated.

Digitized by Google

It is not the purpose of this article to argue against surgery or medicine, which have so patiently responded to humanity's call for so long a period. However, the world is awake to the fact that these means have not satisfied the human craving for something better. A more practical and positive method of deliverance and immunity from mortal anguish, ignorance, and suffering is needed. Certainly God, in His infinite wisdom and plan, has provided a positive and sure way: and all conscientious physicians are yearning to know a better way. Christian Scientists operate from the basis that the way is spiritual and not material, and conscientiously believe that they have Scriptural authority for it.

Jesus Christ taught that the power of God could and did heal the sick, and he implied that it was a knowledge of the truth that did the healing, for he said, "Ye shall know the truth, and the truth shall make you free." In order to show that attention to the physical or material conditions was not all that was necessary, he said, "It is the spirit that quickeneth: the flesh profiteth nothing."

St. Paul, who was for a time a persecutor of the Christians, but who subsequently became one of the most profound expounders of Christianity, said, "For to be carnally *minded* is death; but to be spiritually minded is life and peace;" showing that life and peace is to be gained through *a mental* process; that is, thinking spiritually; while thinking in an opposite way; viz., letting the thought *rest upon* the carnal,—physical,—brings death. To the Romans he said, "Be not conformed to this world [the *material*]: but be ye transformed by the renewing of your mind, that ye may prove what is that good, and acceptable, and perfect, will of God."

[Burt Knowles in the *Worcester* (Mass.) *Gazette*.]

To give an intelligent exposition of Christian Science, one should be both well informed and unbiased. From our critic's remarks we feel sure that he has been greatly misinformed regarding Christian Science and the methods of its Leader, Mrs. Eddy.

It is true that, as in the physical sciences, terms are often used in dealing with this subject which are unusual and new; they may be high sounding, but the statements are illogical only to those who have not taken the trouble to study and demonstrate their truth. The faith of Christian Scientists is not "blind," and "the reason of the hope that is in them" may be discovered by inquiring into the lives of any of the thousands of men and women who have been raised to health and happiness from conditions of hopeless suffering.

It is conceded by all who know Mrs. Eddy that she has a remarkably clear mentality. Not to this alone, however, is due her success as a Leader. It is her spiritual discernment and humble obedience to divine authority that has enabled her, like Moses of old, to lead suffering humanity out of the darkness of superstition and the bondage of false beliefs, materialism, and idolatry.

As regards inconsistencies in the lives of Christian Scientists, we concede at once that we make many mistakes and fall far short of our ideals, but at least we are trying to obey the entire command of the Master, "To preach the kingdom of God, and to heal the sick." Is the stability of the science of mathematics shaken when a student fails to solve a given problem in algebra? Christian Scientists do not claim that they never lose a case, but should not the marvelously larger proportion of their successes be taken into careful consideration? The fact that Christian Science, which some dozen years ago was often dismissed with a smile of ridicule or some less kindly thought, is to-day discussed in religious conventions, in philosophical societies, in many other learned bodies in all parts of the world, is one of the greatest tributes to its worth.

AMONG THE CHURCHES.

TEXARKANA, TEX.

At the request of the Christian Scientists the Jewish congregation has granted the use of their temple to the afore-mentioned society, free of all charge, for an indefinite period.—*Evening Texarkanian.*

AVONDALE, O.

The members of the Avondale Christian Science Church returned to the newly renovated auditorium of their church yesterday. The usual large congregation listened to the Lesson-Sermon.—*Cincinnati* (O.) *Commercial-Tribune.*

RICHMOND, VA.

The congregation of First Church of Christ, Scientist, which has been worshiping for the past twelve months in Belvidere Hall, has just secured, through J. Thompson Brown and Company, a beautiful corner lot in the heart of Lee District, on which will be erected a fifty-thousand-dollar building. It is immediately in front of Lee Park, the pretty triangle bounded by Meadow, Ivy, and Park Avenue, which was acquired last year by the city, and upon which the city has already begun improvements. The purchase price was ten thousand dollars. It is the intention of the congregation to begin at once a preliminary improvement, which will be followed later by a fifty-thousand-dollar building, in addition to a library.

The Christian Scientists began in Richmond five years ago, with only six members, meeting in the parlor of a private residence. From this small beginning has sprung up quite a large following.—*The Times Dispatch.*

MERRILL, ORE.

The dedication of the first Christian Science church in this city, Thanksgiving Day, was attended by a large crowd, many of them coming from the Falls as well as from different parts of the valley.

In giving the history of the church Mrs. Rhoads stated that the first organization of the Christian Scientists here was effected in the fall of 1892, with but three or four members, but the time soon came when the membership was increased, until it became necessary to provide a place to meet. In January, 1904, the society purchased a building-site and the corner-stone for their edifice was laid Dec. 11, 1905. The church was completed in August of the same year at a cost of seventeen hundred dollars.

The Scientists may well be proud of their neat little edifice. While it did not cost them a great deal of money, it is all paid for and is a credit to Merrill as well as the people who erected it.—*Merrill* (Ore.) *Record.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY'S REPLY.

WE are glad to give prominence in this issue of the *Sentinel* to an article by Mrs. Eddy, in which she concisely and dispassionately states some facts concerning her early life, in contradiction of the erroneous statements published by a magazine which claims to be writing history. Mrs. Eddy has approached this subject in the calm and Christian spirit which animates her life-work and is apparent in all her writings. She has no other purpose than to supplant error with truth. This purpose is a fundamental of her teachings, which she not only persistently preaches to her followers, but also consistently presents as an object-lesson in her own life. Error has no power beyond that which a mistaken mortal sense concedes to it, and Truth, and Truth alone, destroys it. Good is the real and eternal, and evil is as powerless as it is unreal and transitory. Good annuls evil just as surely as light banishes darkness, and Christian Scientists have learned this through the teachings of Mrs. Eddy, hence their entire dependence upon Truth to right the wrongs which have been done to them and to their Leader.

It is a favorable sign of the times that these attacks are now meeting with the condemnation which they deserve. We quote the following from an article by the well-known English writer, "John Strange Winter" (Mrs. Stannard) in *The Lady of Fashion*, regarding a recent attack upon Mrs. Eddy. This writer says,—

"The indecencies of journalism have, I think, impressed me more during the course of my life than perhaps anything else has ever done. There are times when one feels proud of one's Press, when one feels that it is an organization on which we may justly pride ourselves. But there are other times when I am bound to admit and confess that its indecencies turn one's very soul sick.

"At the present time I am feeling this more strongly than usual, for during the last few days there have been columns of sensational writing in the papers dealing with the purely private and personal life of a very great woman, . . . I speak of Mrs. Eddy, the Founder and organizer of Christian Science, a woman whom everybody may well acknowledge as one of the public benefactors of the world, whether her teaching is accepted in every detail or not. That Mrs. Eddy is an exceptionally gifted woman of the purest life and the noblest instincts, I think there will not be found one right-thinking person in this whole world to deny. A woman who has brought the consolation of a simple, clear, and singularly pure idea of religion to many thousands of men and women surely might be regarded as one somewhat set apart from the curse of vulgar curiosity. . . . [Her life has] been characterized by dignity, purity, and extremest refinment of feeling. That such a woman, whose whole life has proved her to be deeply religious in the truest sense of the words, could turn from her habitual ways of thought . . . is manifestly absurd."

The above is but one of the many protests which have appeared in the press of both America and England, and these protests show that attacks upon Christian Science and its Leader are not favorably received by either press or public.

ARCHIBALD MCLELLAN.

THE REPOSE OF TRUTH.

Thus saith thy Lord the Lord, and thy God, that pleadeth the cause of his people, Behold, I have taken out of thy hand the cup of trembling.

In quietness and in confidence shall be your strength.—ISAIAH.

ONE of the crowning moments of the Master's earthly career was that in which, having been awakened by a clamor of tempest and of fear, he spoke to the raging elements about him, and immediately there was a great calm. Again and again in the most trying exigencies of human experience Jesus exhibited that perfect repose which most fittingly expresses a sense of spiritual power, and which speaks for far vision and conscious loyalty to Truth.

Much of human experience to-day, as in all the years, begets the temptation to anxiety, unrest of heart and of mind. The apparently unrestrained rapidity with which evil multiplies; the ignorance, weakness, and untrustworthiness of human sense; the oft-recurring assaults of disease upon those most near and dear, and the yet more continuous assaults of ignorance and malice upon the cause of Truth,—how often are Christian Scientists awakened by circumstances akin to those which threatened the Master and his little band of followers, and how imperatively do they need the calmness of that spiritual authority with which he met the storm and spoke it into silence.

The possible gain of any trial inheres in the opportunity it presents for the realization of mastery over material sense, the demonstration of power which both establishes one's own conviction and awakens conviction in others. It is in the overcoming that we are best able to see, and make others see the relation of spiritual assertion to spiritual advance, and it is thus that we come to understand St. Paul's declaration that he even gloried in tribulations. Apart from this mastery it is clear that there can be neither glory nor gain in tribulation, and Paul's exultation over it evidences that he understood the advantage, not of suffering, the stoical endurance of trial, but of Science, the demonstration of error's nothingness. Hence, even when bound and in prison, the night echoed his songs.

And may we not also sing, though the sea of mortal sense rage never so wildly? Surely the arm of the Lord is not shortened; therefore the answer to our query lies with us. If we are maintaining that consciousness of Truth which renders thought ever more receptive to the divine touch, which insures quiet command of self and of the situation, a husbanding of resources, a discriminating judgment, and that unfailing equanimity and loving kindness of word and bearing which befits a Christian Scientist and which disarms prejudice and antagonism ere it is aware,—then indeed may we sing as we stand and see "the salvation of our God."

This is the repose of Truth. It says to threatening error, "Be still," and there is fulfilment of the promise that one shall chase a thousand, and two put ten thousand to flight. The poise of true faith is both the most winsome and the most commanding thing in human life, and if to the oft-repeated assurances of the Master's abiding presence and support, we add our Leader's wondrous chapter on "Love Your Enemies" (Miscellaneous Writings, p. 9), and give them frequent and thoughtful reading, and if with earnestness, sincerity, humility, and unfailing love we seek to manifest the gentleness and grace of Christ Jesus toward all, and especially toward those who misjudge and wrong us, we need not be troubled when the storms of sense arise. Our God is able to deliver us and to make even these things work together for good, and in this we may continually rejoice.

JOHN B. WILLIS.

MAN'S POSSIBILITIES.

AT this season, when thought turns so naturally to Christ Jesus, we remember with love and gratitude that he was the first to awaken the true sense of man's possibilities as

Digitized by Google

a spiritual being. In the light of Christian Science we come to have an enlarged sense of the mission and ministry of the great Teacher, and we can best estimate their value to the world by recognizing their significance to ourselves as individuals. First of all he gave to the eternal fact of the divine fatherhood supreme importance, and linked to it the brotherhood of man. He declared a perfect Father, then maintained that His child must be no less perfect. He knew that others before him had held forth lofty theories as to man's possibilities, but he set himself to the heroic task of proving the truth of his own statements respecting man; and that, too, in the face of all human opinion, both religious and secular.

The world of Jesus' day believed, even as the many believe to-day, that man is material, and because of this belief history has been perpetually darkened by strife for the possession of all the materiality which could be grasped and held in the brief span of mortal existence. Jesus declared and proved the universe of Spirit by demonstrating spiritual law in the healing of the sick and sinful and in overcoming death. He thus proved that man is spiritual and governed by spiritual law,—the law which gives man dominion over himself and over the whole earth, though not over his fellow-men,—and he made clear the way to the attainment of this dominion when he said, "Blessed are the pure in heart: for they shall see God."

Those who see God see good; they also reflect good and realize its sovereignty over all evil. If it be asked how far this teaching can be carried, we have but to remember Jesus' words, "If a man keep my saying, he shall never see death." Never once did he in any wise limit man's possibilities, but maintained by word and deed his likeness to the infinite Father. The Master insisted that the divine fatherhood should be recognized by his followers, when he said, "Call no man your father upon the earth: for one is your Father, which is in heaven;" and we find Peter emphasizing the command, "Be ye holy; for I am holy," thus showing that whatever is possible to God, is possible to man as His child.

The practical significance of this teaching, when supported by demonstration, was seen in the great changes brought about in moral conditions where Christianity was first accepted and lived. Had this continued, as it should, the world would long since have been freed from all discordant conditions,—all that does not represent the divine government. We may, therefore, rejoice that man's infinite possibilities have again been declared and the Science of the Christ made known by a clear-visioned prophet, so that these possibilities are being realized, not by a favored few, but by "whosoever will." When the clouds of material sense are rolled back, so that humanity can catch clear glimpses of God and His idea,—the infinite Father and His child,—then is found the true scientific basis for progress in every right direction, then are man's infinite possibilities grasped and realized. An ever-increasing volume of testimony goes to show that in Science and Health we have the chart and compass to this great attainment, which begins with healthful mental and moral conditions and extends to everything within the range of thought, until God is seen to be all—and all good possible to man as His idea. For this discovery and its beneficent results we return our heartfelt thanks, and set ourselves to the glorious task of proving that "with God all things are possible."

ANNIE M. KNOTT.

THE ARENA.

THE January issue of *The Arena* contains a forceful and interesting condemnation of "Reckless and Irresponsible Attacks on Christian Science," by the editor, Mr. B. O. Flower. The article is a strong protest against such attacks and we are sure it will be appreciated by Christian Scientists.

LETTERS TO OUR LEADER.

New York, N. Y., Dec. 16, 1906.

Beloved and Revered Leader:—As this Christmastide draws near, and I think upon other Christmas times I have known, a song of gratitude and praise arises to God, and to you His servant, who listened for His word, and beholding the Star, followed it to where the young child lay, and proclaimed the glad tidings of "on earth peace, good will toward men" to this age, as did the shepherds of old. Truly, "unto us a child is born," "not of blood, nor of the will of the flesh, nor of the will of man, but of God," "and of his fulness have all we received." Words are inadequate to express the joy and peace which this discernment of the new birth has brought me; and the understanding in a measure of man as God's image. What it means to this world of mistaken beliefs only those know who have seen the faint far gleam. "God's glory is a wondrous thing." I have passed through deep waters of sickness and sin, but beholding the Star, I am made strong, and I "cling steadfastly to God and His idea;" and to His word to this age, as given to the children of men in your book "Science and Health with Key to the Scriptures." Thank God for this light, and for all the waymarks to aid us on our journey from "sense to Soul;" for all His faithful ones who are letting their light so shine before men that they may see their good works and glorify their Father which is in heaven.

Beloved Mother in Israel, may the light which came to your "spiritualized consciousness," which discerned this true origin of man, grow brighter and brighter, until no cloud appears. "And I, if I be lifted up, . . . will draw all men unto me." "Hark, the herald angels sing, Glory to our newborn king."

May my daily life show forth some of the gratitude I would tell, is my prayer.

Humbly and gratefully,

ALICE HAYDON JONES.

Frankfurt, Germany, Dec. 9, 1906.

Mrs. Mary Baker Eddy.

Dear and Revered Leader:—It may give you a little pleasure to hear of a demonstration over fear, based upon an utterance of yours in the recent time of cruel persecution: "No physician but God. His everlasting arms are around about me. That is enough." The article, "Mrs. Eddy Interviewed," in which these sentences occur, was read from the *Sentinel* at one of our Wednesday meetings. A few nights later, a young German lady, who belongs to the little band of Frankfurt Scientists, whilst passing through a dark, unfrequented street, on her way home from a concert, was startled by a man emerging suddenly from the shadow and thrusting himself on her path. Instantly there rose to her consciousness—checking the tremor of fear—your words, "His everlasting arms are around about me. That is enough." And so complete was the resulting realization of the Divine presence and protection, that the intruder drew back and she was left to pursue her way unmolested. Measureless love and gratitude go out to you, not alone from the happy young Scientist who made this demonstration, but from all who listened to the telling of it. May we listen ever more attentively to God's voice speaking to us through your words and your life.

Sincerely and gratefully,

ELLEN BENTINCK-BEACH.

Toledo, O., Dec. 17, 1906.

Dearly Beloved Leader:—The study of this week's Lesson-Sermon, entitled "Christian Science," has so filled me with gratitude to you that I feel I must express it by telling you how much I love you, and with what awe and reverence

Digitized by Google

I behold the great and wonderful work you have accomplished for all mankind. Had I never been healed of a single diseased condition, I would yet praise God through all eternity for the understanding of divine Love which you have given us in Science and Health, and which you have so beautifully illustrated in your life. The first illustration in "Christ and Christmas," called "Star of Bethlehem," has always reminded me of my own hopeless condition just previous to my first glimpse of Christian Science. After years of membership in an orthodox church, dire need drove me to seek a God who answered prayer. Months of pleading for health were followed by weeks of repentant appeals to the unknown God to forgive and to teach me how to be good. I learned then truly, that "desire is prayer," as Science and Health says (p. 1); and God did hear, for I arose from my knees, healed. I declared I was forgiven and healed, and awaited with confidence the physical response, which came in five days. Two weeks afterward I met a dear Christian Scientist, and when she found I was eager to know the truth, she invited me to attend a service at the church. I did so, purchased a copy of Science and Health, and soon found in it just what I had been seeking. This was ten years ago, and although deep waters have seemed to roll over me since then, Christian Science has always been my great joy and comfort. The remembrance of you as you stood in the little church in Concord, in February, 1898, and talked to us of the 91st Psalm, has cheered me in many a dark moment. Your words, "If I had not proven these things, I could not stand here and tell you what I have just said," lifted me up at one time, when I felt that all I had in the world had forsaken me, and that there was nothing to hold to. Then I remembered these words, and I said to myself, "If all the world is false, I know that Mrs. Eddy is true; she has proven God; she does know, and I will hold to this until the light comes." The light did come, and I know that all I have and am I owe to God through you, and my heart bends low in grateful recognition of all you have endured that we might have the privilege of learning to understand what God is.

Words are too feeble. I can only say, I love you, love you most gratefully; and I know that Love loves you and enfolds you in the infinite All.

Most sincerely yours,

(Mrs.) Fannie L. Bonner.

Washington, D. C., Dec. 10, 1906.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—With an ever-increasing love and a heart full of gratitude I can refrain no longer from writing to you, though you may not see it. May I tell you in humility how much we as a family owe to you and your wondrous teaching. Through an honest, prayerful perusal of your inspired writing, "Science and Health with Key to the Scriptures," in less than thirty minutes my mother was raised up from invalidism to health and strength. This case had seemed to baffle the skill of many physicians in *materia medica*. To-day she is rejoicing in the truth which you have brought again to us, and which was taught by Christ Jesus, for it has had many "signs" following. All I am and all I have I owe to Christian Science. I must tell you that after I had read three pages of our text-book I knew it was the truth, and have never since doubted, though I have been through some seemingly severe tests. I feel a special sense of love to you for "Harvest," and my daily prayer is that I may ever obey your loving injunction to follow you as you "follow Christ." My mother and husband join in sending you a heart full of gratitude and love for all the manifold blessings received through Christian Science. Most lovingly your student's student,

Katharine M. Pyne.

Dallas, Tex., Dec. 19, 1906.

Beloved Leader:—Some time ago, when malice and envy were expressed towards you and your unselfish work, our Master's words came to me: "Could ye not watch with me one hour?" To me it meant to stand with you and pray without ceasing; and God's glorious promise went out from my heart to you, my dear Leader: "A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee . . . for he shall give his angels charge over thee, to keep thee in all thy ways." The joy and gratitude I experienced I cannot express in words; I felt that you were protected, for Love does care for its own. I do pray, dear Leader, to be ever ready to be about our Father's business. My husband has joined me in the work of healing, which is made so plain in the wondrous "little book." We both went through dear Mrs. Mims' class a year ago.

With love and gratitude to you, beloved Leader, we are your faithful followers,

Louise Rittner.
Paul Rittner.

Atlanta, Ga., Dec. 3, 1906.

Mrs. Mary Baker Eddy.

Beloved Leader:—At the close of the Thanksgiving-day service, many testimonials of gratitude to Christian Science, and devotion to you, its beloved Leader, were voiced, culminating in a motion that we, the members of First Church of Christ, Scientist, honor ourselves and the occasion by sending to you a message of thanks and loyalty. Thanks most sincere that God could, through you, show us how to meet hatred and destroy it by the method our Master taught, when he said, "Love one another, as I have loved you." We know that He "will not suffer thy foot to be moved: he that keepeth thee will not slumber." It was meet that we should make merry, and be glad, for having been "dead," are we not "alive again"? having been "lost," are we not "found"?

Out of full hearts we bless you, and renewedly pledge our willing love and labor, praying that you may have all comfort and joy in your supreme and royal work, and that your every hour may be crowned with the nimbus of the Divine approval. Gratefully yours,

Harriet K. Scott, Edward H. Carman,
Margaret Hall, *Committee.*

Portland, Me., Dec. 17, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—Has your attention been called to a new book just published by Dodd, Mead & Co., by William Hanna Thomson, M.D., LL.D., entitled, "Brain and Personality, or the Physical Relations of the Brain to the Mind"? If you have not seen it, let me say that it is a demonstration, from the standpoint of so-called physical science, that "there is no mind in matter." While recognizing matter as an entity, and basing its argument upon premises acknowledged in the realm of mortal thought, the book reaches a conclusion which you gave to the world in Science and Health. This author, who thus arrives at a part of the truth which you discovered, is said to be "one of the greatest nerve specialists of the world."

Error may rage, as it will doubtless do for a time, but those of us who owe, as I do, physical, intellectual, moral, and spiritual resurrection to your teachings, have learned to know the allness of Truth and the nothingness of error (learned, so far as I am concerned, entirely from your printed pages), and that mankind must some time come universally to acknowledge Truth's reign. This book marks another stage of progress toward that goal.

With great sincerity and affection, I am

Your humble student,

George W. Norton.

THE LECTURES.

EL DORADO, KAN.

Bicknell Young of Chicago, who lectured upon Christian Science Saturday, Nov. 10, at the Opera House, was introduced by Rev. F. C. Fay, who said,—

It gives me great pleasure to be here this evening for the purpose of introducing the lecturer, Mr. Young. While I am a Methodist and expect to be, I see, however, the time coming when I expect to join the Baptists, the Presbyterians, and also with the followers of Christ who are Christian Scientists, around the throne of our common Christ, because every honest interpretation of the Word of God will blend into that of every other like interpretation. We do not all see things alike now, because "we see through a glass, darkly; but then face to face." I love the Christian Scientists because of what they do. They tell us not to worry; not to look at evil; to magnify the right and not the wrong; to think of the things that are good, just, pure, of good report, honest, and true, as the great apostle has exhorted us. Your mission is to scatter sunshine and to drive away the shadows. We do not do as the disciples did,—forbid you because you follow not with us; for the world is big, broad, and bad, and "he that is not against us is on our part." Your plan of overcoming evil with good is God's way, and every effort for the right is a part of the great battle in which we are all engaged.

Correspondence.

BERLIN, GERMANY.

In Beethoven Saal Wednesday afternoon, Nov. 21, a lecture on Christian Science was given under the auspices of First Church of Christ, Scientist, Berlin, entitled "The Idealism of Jesus." Over seven hundred people were present. The lecturer was the Rev. Arthur Reeves Vosburgh, of Rochester, N. Y., U.S.A. He was introduced by Dr. Clinton L. Babcock, Ph. D., of the Bureau of University Travel, who said in part,—

There is no tendency more common than that which causes men to look with great distrust upon startling innovations in religious matters. I frankly confess that—in common, no doubt, with many of you—I have felt this tendency assert itself strongly regarding Christian Science. It is a tendency that quite runs away with us sometimes and even makes us take a keen delight in what our soberer judgment tells us must be reckless and unwarranted misrepresentation. But nowadays, both because of the number and because of the character of the adherents, Christian Science commands respect, and awakens a saner interest on the part of us who stand outside, a desire to know the truth. It is, as I understand it, for the purpose of furnishing such information that the Christian Science Board of Lectureship has been established. We are therefore, it seems to me, enjoying a great privilege in being here to-day, and I count it an honor, as it is also a great pleasure, to introduce to you the speaker of the afternoon.

Continental Herald.

INDIANAPOLIS, IND.

Before a large and attentive audience in Caleb Mills Hall, Nov. 15, Bliss Knapp of Boston gave a lecture on Christian Science. Mr. Knapp was introduced by Miss Frances C. Shoecraft, First Reader of First Church of Christ, Scientist, of this city, under whose auspices the lecture was given. Miss Shoecraft said in part,—

Mankind in general are agreed that the Bible is the Book of books, the Word of God, the guide to heaven; but notwithstanding the presence in the world for centuries of this immortal work,—universally read, and believed to contain all truth,—yet sin, disease, and discord in every form conceivable has held sway over mankind, because they have supposed that the sublime utterances of the prophets, the heaven-inspired philosophy of Paul, the positive, direct demands of Jesus' teaching were too transcendental to be wholly understood and utilized on this plane of existence and in this age, but that in some far-away hereafter the stone of obscurity would be rolled away and their full meaning revealed, their grand promises fulfilled. Our Master, Jesus the Christ, made his teachings practicable in his works of healing, as did also his followers for about three hundred years, but their meaning and application were again lost to the world, until the teaching of Christian Science revealed once more an understanding of the Bible which is proving itself to be the key to the kingdom of heaven here and now, harmonizing the Ten Commandments with the Beatitudes and the Sermon on the Mount, and making the entire Bible a practicable, provable text-book to be understood and lived. The healing of disease and sin in Christian Science is the direct result of this clearer understanding of the Scriptures, and in these works this age is witnessing the fulfilment of Jesus' own prophecy, "Ye shall know the truth, and the truth shall make you free."—*Correspondence.*

TESTIMONIES OF HEALING.

I first heard of Christian Science twenty years ago, and from curiosity obtained the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it in a desultory sort of way. Many of its statements gripped me firmly; this I remember. I had, however, determined upon the practice of medicine as a career, and was therefore loyal to the craft; so the "little book" was put away. Then came sin and its suffering; still I continued on in the way of the materialist, and in line with my ambition graduated from Rush Medical College, receiving the degree of M.D. from the Chicago Homeopathic College and an appointment as physician to its hospital. After several years of surgical practice, I added to my knowledge of medicine by work in Europe and also in the Orient. My interest in Christian Science was likewise revived, and my experience was rather unique, as I would operate during the day and read Science and Health in the evening. My health, never very good, now began to improve, and I gained forty pounds in weight. A violent temper was overcome, worry was forsaken, and the tobacco habit of years vanished. It was now clear to me that Christian Science was true, yet there were dark hours when it seemed I could not face the situation, for my friends and family became alarmed at this juncture and predicted my downfall and ruin; but I turned from matter to Spirit, and affirmed the truth that "one with God is a majority." Divine Love was near, and there was peace. A little later I had the great privilege of class instruction. Here I abandoned the practice of medicine for the practice of Christian Science.

Our tender gratitude to Mrs. Eddy, our Leader, is unfeigned, for we now realize that because she has been faithful to her glorious mission, the Bible, once closed and incomprehensible, has been opened to the world. As we understand more fully the words, "I and my Father are one," and strive for that Mind to be in us "which was also in Christ Jesus," we know that we shall be like him and partake of that Divine wisdom which annihilates death and demonstrates Life eternal.

FRANK H. EDWARDS, M.D., Evanston, Ill.

When perfect health follows the attainment of the knowledge of divine Principle, the very least one can do is to spread the glad tidings. Christian Science lifted me from a state of seeming physical collapse that had come slowly, but with terrifying results. Medical men did their best for a long period, until the last chapter of shattered health and hopes was being written. I was without any knowledge of Christian Science eight years ago, when a lady told me what this scientific Christianity had done for her, and asked me if I cared to know more of it. I admitted that I felt hopeless of recovery, but would try almost anything, however uncertain it might be. In this frame of mind I went, a few days later, to a Christian Science practitioner and asked for treatment. Within an hour there was a change for the better, and a new-born hope that to me changed the whole world. It was but a matter of weeks to my complete recovery. I realized at once that it was necessary for me to do something myself, and I began reading the text-book. Although for some time I gained the understanding but slowly, I realized that from a literary standpoint Science and Health was beautiful. While common sense told me that as this was the only text-book of the Science, and as some one else had gained from it a knowledge which, properly applied, had given me my health, that this understanding would surely be mine if I persevered in the study. I therefore persisted and the inevitable reward came to me. For eight years perfect health has been mine. Grateful as I am for the physical healing, I am even more grateful for the understanding which enables me to aid others in their hour of need.

It is sometimes asked, "Why are Christian Scientists in general so enthusiastic and so positive?" It may be answered, "Because they have an understanding which they can demonstrate." This is an invincible argument. The great Principle of good made known to us by Mrs. Eddy is not hard to understand, and once understood our knowledge can be most beautifully applied.

MRS. CORA B. COOPER, Detroit, Mich.

It is with a heart full of gratitude and love to God, and to our dear Leader, Mrs. Eddy, that I gratefully add my testimony to those of the thousands of others who have been raised from sorrow and suffering into the understanding of the omnipotence, omnipresence, and omniscience of our Father-Mother God. Five years ago I first heard of Christian Science from my daughter, who had become much interested in it, and who told me of some wonderful cases of healing. Some time after, I was taken seriously ill with stomach trouble, and also suffered from sleeplessness. I had the care and attention of two most excellent doctors and three nurses, who did their very best to relieve me, but the illness lasted for three months.—sometimes I felt better, sometimes worse. A third doctor was consulted, who suggested a thorough change of air and scene. —a trip abroad.—which I took, accompanied by my nurse, who received orders from him as to diet, exercise, etc., as my heart was said to be in a terribly weak state.

After three weeks in Switzerland I became better, the lovely bright sunshine and surroundings quite cheered me, and at the end of five weeks we returned. I parted with the nurse, and went to stay with my daughter, though still keeping to the same careful diet. I began to feel very much as if another attack of sickness was coming, and in a few days I was indeed very ill. A doctor was called, who pronounced me in a very weak and dangerous state. Some time previously I had almost made up my mind that when able to go to London I would see a Christian Science practitioner, and this was my opportunity. I refused to take any more medicine and just kept very quiet, recovering sufficiently to carry out my wish. I received treatment for a fortnight, but was thoroughly healed after my first treatment (the only present one). I was told to throw away all medicines, and to eat whatever was set before me; which I did, and felt all the better. Since then I have enjoyed the best of health, am able to undertake any exertion or exercise, knowing that God is my strength.

I desire to express my deep gratitude to our revered Leader, the Discoverer and Founder of Christian Science, for her loving labor in bringing this saving truth to mankind, and in making it clear to all humanity how to follow the footsteps of our blessed Master.

C. M. BOUCICAULT, Southsea, England.

A little over two years ago I was in an almost helpless condition, having been obliged, several months previous, to resign my position as a commercial traveler on account of a paralytic trouble. Among the numerous physicians whom I had consulted were two of the most noted specialists in America, but during many months spent under medical treatment my condition had not improved; on the contrary, I seemed gradually to grow more helpless, until finally I gave up all hope of recovery. It was at this stage, and while in Denver, Col., that I was induced by friends to try Christian Science as a last resort. After the first few treatments there was a marked improvement in my condition, and after two months I left Denver for the East, where I remained under absent treatment for two months longer. By this time my condition had so much improved that, although not yet entirely recovered, I was able to resume my work of traveling on the road.

I left New York in January, 1905, and traveled almost continually for ten consecutive months. During the last

Digitized by Google

five months of this time I carried with me, as I am doing now, several trunks of heavy samples, which means several hours of very hard work in packing or unpacking almost daily. Even under these circumstances, as well as the inconveniences one is obliged to put up with while traveling, the changes of climate from the Atlantic to the Pacific coast, etc., my condition has continued to improve, until to-day I am stronger and in better health than I have been for many years.

It would be impossible for me to relate on paper the many other ways in which I have been benefited through Christian Science. I have lost all desire for smoking, a habit of nearly fifteen years and one which I used to think would be impossible for me to give up. Morally there is yet considerable room for improvement, but I am striving daily to apply my understanding of Truth, and to live in such a manner that I may soon be worthy to be called a Christian Scientist.

Words cannot express my gratitude to God for what has been accomplished in my case; also for the knowledge which I have gained through the earnest study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.

EDWARD D. ROGERS, Chicago, Ill.

I am very grateful for what Christian Science has done and is doing for me. Among the many physical benefits received has been the complete healing of bowel and rectal trouble, etc.; also of the liquor and cigarette habits, with which *materia medica* or will power was of no avail, although tried very often. I am very grateful that Mrs. Eddy was prepared to give to others, myself included, this blessed truth, when mankind most needed it. I feel that the world owes her more than it ever can repay.

I am most grateful to God for the moral and spiritual uplifting which has come to me through Christian Science, and which the world cannot give or take away. I am daily learning more of God as divine Principle, Life, Truth, and Love (Science and Health, p. 465); and that God fills all space, hence the unreality of doubt, envy, hate, jealousy, malice, fear, and sickness. All the seeming creations of mortal mind are daily becoming less real to me, and the change in this respect is very noticeable.

ELIAS T. SMITH, Kansas City, Mo.

Words fail to express my gratitude for Christian Science, and to our beloved Leader, Mrs. Eddy. When I first heard of Christian Science I was suffering from what I supposed to be rheumatic trouble. My leg was in a bad condition, and I suffered terribly, so much so that I employed an eminent doctor, who informed me that I had injured the bone, and he thought I would have to go to the hospital for an operation. He treated me for many weeks, but the trouble became worse instead of better; then he said that I must have the operation performed, or I would lose not only my leg but my life. A friend then sent word to me to try Christian Science. I procured a copy of "Science and Health with Key to the Scriptures" and also sent for a practitioner, who gave me treatment. The healing was slow, and I did not gain as fast as my family thought I should. They expected me to walk right off, with a few treatments, after I had suffered terribly for months under medical treatment and had been unable to walk during that time. My daughter said that I must give up Science and go to the hospital at once, that she had the doctor and surgeon engaged, and that I would die if I did not. The thought then came to me, "Choose you this day whom ye will serve;" and I said, "What God cannot do, man need not attempt" (Science and Health, p. 231). I sent for the practitioner to come to me as soon as possible. After warning me that I would surely die if I persisted, my daughter went out. I was alone with God, and I prayed as I never had prayed before. The answer came to me, "Fear not; I am with you; peace, be still." I then threw away all my medicine, took up our text-book, and read and worked earnestly and faithfully until the practitioner came. He repeated some comforting words from our text-book, and then gave me treatment. After a few treatments I was able to walk with perfect ease, praising God, "from whom all blessings flow." I then told the practitioner that I had worn a truss for thirty years, having been treated by a specialist who had said that I must wear it constantly. When I asked the practitioner if I could leave it off, he replied, "If you wish; as there is nothing impossible with God." I then removed it, and walked across the floor very much like a little child taking its first steps, with fear and trembling. I put it on again the next morning, but the thought came to me, "O ye of little faith;" God has healed the bone, can He not heal this trouble also? I then threw the appliance away, and with a few treatments I walked with perfect confidence in God, happy and free as a bird escaped from a cage which had imprisoned it.

I praise God for my freedom; and let me say to all who are suffering in any wise, I pray you, listen to Christ's call, —"Come unto me, all ye that labor and are heavy laden, and I will give you rest." Come: accept the help of Truth, Life, Love through Christian Science, and gain eternal life.

MRS. HARRIET REED, St. Louis, Mo.

Almost from the birth of our little one it seemed to be difficult to secure a food that would agree with him. The doctor in attendance was not meeting this condition, which was becoming a serious one. My wife had careful instructions, and was told that unless they were followed fatal results would occur. Things went along this way for several weeks with no change for the better. The doctor admitted at this point that the child might not live three days. After hearing this verdict my wife concluded to have Christian Science treatment. That night when I came home from business she told me that she had dismissed the doctor, and the next morning I telephoned two practitioners who had helped me (a gentleman and his wife). I told them the little fellow had been practically given up, and they agreed to treat him at once and assured me that everything would be all right. After business that day the gentleman made the trip of nearly an hour and a half by train to where we lived, and gave one present treatment, all the rest being absent. It is needless to say the child improved from the start. Christian Science has brought him safely through some seemingly trying conditions since this experience, as also my wife and myself, and always with the most satisfactory results.

We are very grateful for these blessings, as well as for the spiritual uplifting which comes with even a slight understanding of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, our beloved Leader, taken in connection with the Bible.

JAMES W. STAGG, Bedford Park, N. Y.

The earthquake and conflagration in this city of San Francisco has brought me such a lesson, through the understanding of Christian Science, that I feel I must make it public. For over eight months I had been trying to make a financial demonstration, but the seeming difficulty lay in the fact that I was still conscious of some reliance on material means and human wisdom. A couple of weeks before the fire I had opened an office as public stenographer, and this office was totally destroyed by fire and dynamite. Human wisdom was then indeed baffled, and there was nothing material to turn to. It was precisely at this point that the scales fell from my eyes and I distinctly realized the nothingness and self-destructiveness of matter, and with it all there came to me an all-absorbing consciousness of absolute trust in the Father. I now felt that because to

Digitized by Google

sense all was lost, all was really gained through my new spiritual attitude; and it was so. Without solicitation on my part, help came to me so abundantly that I was enabled to open a new office with more machines than before, and work in my line is increasing daily. For this and many other demonstrations, physical and otherwise, not the least of which was the overcoming of a moral weakness to which I had been a slave for years, I am deeply indebted and truly grateful to the Father, who has so often brought me out of dark places, and to our revered Leader, who has made this truth practical for me and for all.-

A. P. TONIELLI, San Francisco, Cal.

After suffering for over thirty years with a severe bowel trouble and complications resulting from the same, I was healed in Christian Science. These conditions had grown worse after the birth of my first child. I had tried the best physicians, both in the East and in the West, and finally an operation was advised; however, I decided to try hygienic and massage treatment instead. Not deriving the benefit I had expected to receive from this source, I became very much disheartened, and had Christian Science not come to the rescue, I fear I would have given up entirely. I must state here that I was also taking treatment from an oculist for my eyes, and was wearing glasses at the time I took up the study of Science. Some months previous to this, one who was not a Scientist told me of the healing of one of her friends, through Christian Science. I was not aware at the time that it had made any impression upon me, but in an hour of desperate need, after suffering for a week, it came to me that Christian Science would heal me. All during the day this thought was with me. I resisted it, until toward evening, and then went to a practitioner. This was Thursday. I had but slight physical relief with this first treatment, but a wonderful mental uplifting. Saturday night and Sunday I seemed to be very ill, but there was in consciousness the thought that all would be well. I found myself constantly saying the Lord's Prayer, and during Sunday night perfect freedom came to me. On Monday morning I awoke to find myself absolutely healed. Oh, the light that poured into my life! the peace—the love for humanity—the desire to do good—to overcome all that is unlike God. It convinced me that this was the truth! Had my healing only been in the physical, I do not think I should have become a student of Christian Science, but this new light that comes into our lives brings us nearer to God and the Bible. The Bible, which before was a sealed book, became my daily guide. For three months I lived in these books, the Bible and Science and Health, and did little else but satisfy my longings for Truth. Old things had passed away; all things had become new.

I hope later to give some of the beautiful demonstrations we have had with the children during the last nine years. Every need has been met in Christian Science. We really have been transformed by the "renewing" of our minds.

MRS. ELIZABETH H. DUNBAR, Los Angeles, Cal.

I feel it a duty as well as a pleasure to tell what God has done for me through Christian Science. I was healed of a complication of diseases, besides weak eyes, for which I had worn glasses constantly for ten years, and also of what the doctors called a serious heart trouble. They said my case was hopeless, that I never would be able to do another day's work, or even to walk across the floor. Another doctor was called, and he did not give me any encouragement, but said that I had a disease of the heart that no one could heal. Very great fear was thus aroused in myself and family, although I had been warned from the first that my time was short. I prayed to die, but God did not hear me when I prayed that way.

I was in this condition when Christian Science found me. I put myself in God's care, and was healed. Since coming into Christian Science I have learned how to pray aright, and that God does not send sickness upon us, nor does He put death before our faces and finally take us out of this world. I have proved that He is a very present help in time of trouble. I soon saw that Christian Science was the only way for me. A Scientist was staying with me at the time of my illness, and we had several talks on the subject. I loved to hear of it, and when I asked if she thought it would cure me, I always had an encouraging answer. One day a dear friend came to visit me, and I was suffering severely at the time. My friend was a Scientist, too, and after we had talked a while, I arose from my bed and sat up three hours, something I had not been able to do since the beginning of my illness. I then sent word to a practitioner for help, and she asked me to come to her, which I thought would be impossible, for I had not even been able to walk across the house; but my husband was anxious for my healing, and wanted me to go. I rode that day, but thank God, I was able to walk ever after that. I have been a student of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," over three years, and in that time never have needed medicine, although I have two children and have had many little battles to fight; but my faith has been wholly in God, and every discord that has made its appearance has been quickly overcome.

I am a member of our little church here, and also of The Mother Church. Along my path from sense to Soul there have been some thorns and briers, but as our dear Leader, Mrs. Eddy, says, "I pressed on through faith in God, trusting Truth, the strong deliverer" (Science and Health, p. 226); and by so doing, I always came out of the difficulty bright and happy. I could write a volume, and then not tell all that Christian Science has done for me and my family, and my heart is overflowing with gratitude. Christian Science has not only healed me physically, but mentally and morally. I love it, because it teaches us how to love God and man. It also teaches that God loves us, which was a great comfort to me, as I had never thought God had much love for us in letting us suffer so, but I know now that God does not make us suffer. My greatest desire is to live a life that will prove to poor suffering humanity the allness of God.—MRS. LILLIAN GOODRICH, Webster City, Ia.

Hoping that this testimony will be of help to some one in despair, I will state my condition when I took up the study of Christian Science. From childhood I was despondent and a great sufferer. As I grew to womanhood, I had medical treatment much of the time, but without receiving permanent help. In 1900 an operation was performed which left me very nervous; then my people decided to send me to Europe,—Sweden being my native country, and noted for its mineral springs. The summer was spent at one of the most famous springs, and I seemed to be benefited somewhat, but after about two years I again became very ill. I was under the care of two of the best physicians at the place where I was staying, one of them being especially noted for his success in treating nervous cases. I seemed better for a time, but soon found myself as ill as before. My distress seemed greater than ever and the sense of fear became almost unbearable. When I begged the doctor to give me something that would relieve me, he frankly told me there was no medicine which could help me, and advised me to give up my business and go to some quiet place for rest; and this I did.

About five years previous to this I had heard of Christian Science, and at that time had bought a copy of the text-book, "Science and Health with Key to the Scriptures," but did not seem able to understand it. When material remedies failed, one after another, the thought would come to me that if nothing else helped me I would try Christian Science. In the spring of 1902 I found myself in great

Digitized by Google

distress, and having become satisfied there was no help for me in material means, I was willing to turn to Christian Science. My first visit to the Reading Rooms convinced me that Christian Science would help me, and after two weeks' treatment I felt very much stronger and benefited in every way. With a heart full of gratitude, my only desire was to know God aright. I would also like to say that my mother has been greatly benefited in Christian Science, after having been under a doctor's care almost continuously for years. Science and Health is now her daily study, and she is very grateful to God for Christian Science. I am thankful to God, and to Mrs. Eddy for all the blessings I have received and am receiving daily.

MATHILDA ALLEN, Seattle, Wash.

It is over eight years since I became interested in Christian Science through the healing of both physical and mental troubles. For some years previous to this I had suffered severely, and kept getting worse until my whole system seemed to be out of order. Along with the rest was trouble with the eyes, and headaches. I had followed my doctor's instructions as to diet faithfully, till I found myself wondering if there was anything at all I could eat. An optician said I should get glasses at once, that I would have to wear them steadily. I wore them about two and a half years, and could read but a few minutes without them. I was most unhappy and dissatisfied over becoming such a physical wreck, and also because I could get no help either physically or mentally. I longed to know God, and had many times consulted with my pastor on this subject, telling him how dissatisfied I was, but he always said that I wanted to know too much. I had come to the place where there seemed to be nothing left but death, and no hope of anything beyond that. I was afraid to go to sleep and afraid if I did not sleep, and very much afraid when I learned that my brother with whom I lived was anxious about me.

In this condition of fear—almost despair—I came to Christian Science, to see if there was anything in it for me. I felt that there surely would be, since it was both Christian and Scientific. I told the practitioner my story, was given a treatment, and was to return the following evening, at which time I would receive a copy of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I remembered the following morning that I had not mentioned anything about my eyesight, but I felt sure that if God could heal me of other ailments, my sight could also be restored. I was treated that evening (Saturday), took my book home, and read five or six hours on Sunday without even thinking about glasses or feeling the slightest need of them, nor have I ever needed them since. My sense of spiritual sight was restored, and when my brother came to my door on the fourth evening to ask for me, I was able to tell him that I was the most comfortable in mind and body that I had been for years; that I felt such a sense of safety, and was not afraid to go to sleep. The other ailments yielded more slowly, although from my first treatment I ate whatever was set before me. In a few weeks I was healthy and well, and able to do my work. My healing dated from the 16th of April, 1897. Four weeks later I was told by my brother that I looked ten years younger.

My home has been in Winnipeg, Man., all along, and my opportunities have been many to tell others of my remarkable healing, of my present health, and of my entire reliance on Christian Science for all I have and am, all praise being due to our much-beloved and revered Leader, Mrs. Eddy, for showing us how to regain man's inheritance.

MISS ANNIE LAMB, Winnipeg, Canada.

I am very desirous of expressing gratitude to the Publishing Society for the spiritual light that has come to me through our periodicals. Spiritual understanding has robed our *Sentinel* in a beautiful new dress that speaks to me of unlimited growth in Christian Science. With the sweet simplicity of the tall figures standing on a pedestal, the whole effect is to give the *Sentinel* the appearance of added stature, and I see weeks of study confronting me as I gaze at the words below the forms, and at the lamp held in the hand, symbolizing to me the light of Love with its own perpetual shining. The simple costume reminds me of the words of St. Peter, where he says, "Whose adorning let it not be that outward adorning of plaiting the hair, and of wearing of gold, or of putting on of apparel; but let it be . . . the ornament of a meek and quiet spirit, which is in the sight of God of great price." Christian Science indeed reveals the inner life,—the imperishable beauty of a quiet and gentle spirit; and in Psalms we read, "Thy word is a lamp unto my feet, and a light unto my path."

What I see on this cover means more growth in every direction. I thank our dear Leader for her continuous labor in bringing to us the spiritual light to lead us into higher altitudes of Love, and I am grateful to every toiler who is striving to follow her in advancing the Cause of Truth.

MRS. MARINDA MAY, Lafayette, Ind.

I was healed in Christian Science when in the last stage of lung trouble. I had been given up by a noted doctor, who said I could not possibly live two weeks. He said I might send for a Christian Science practitioner, but that it would do no good, that nothing could save me. I sent for a practitioner, who came and treated me three weeks. This was twelve years ago, and I have had no signs of the disease from that time to this.

MRS. W. B. SKEELS, High Gate Center, Vt.

[Written for the *Sentinel*.]

THE POWER OF LOVE.

ETHEL DOUGLAS.

"Peace, be still."
The billows sank in a wonder-hush,
The little ship, like some cradled babe,
Rocked gently on the Love-calmed wave;
The wind to a silent breath was stilled—
Where storms had raged came a thought that filled
All things with Love.

"Peace, be still."
Long years have passed, and the words grown old;
The thought of the Master mind that spake seemed lost,
and Love grown cold.
The uplifted word that had healed and stilled
Seemed dead, 'mid the strife and tears that filled
Earth's weary fold.

"Peace, be still."
The Master's voice, tender, pitying, calls again;
While the same strange hush steals softly down
And overshadows the world's long pain.
Unheeding the clamor of strife or creed,
Comes the Christ to the hungry,
Their souls to feed.

"Peace, be still."
Now once more, to a sin-tired world,
Again through one faithful life is borne,
On the wings of love, through the clouds of earth,
the Spirit's song!
Once more, with its hidden law revealed,
Comes the word of Christ, and the world is healed
By the power of Love.

FROM OUR EXCHANGES.

[*The British Congregationalist.*]

The grand Christian verities are recorded in the volume of the Book. There stand on its every page the unfoldings of the purpose of the divine will and grace, climaxing in the person of God's only begotten and well-beloved Son. The life, works, words, sufferings, death, resurrection, ascension, and glory of Jesus Christ are the Christian facts on which the human mind has wrought for two thousand years, not without an enrichment of thought and life. They have been the objects of the intense study of able, reverent, honest thinkers, and more during the last hundred years than ever before. Doctrines concerning them have been, and are in the course of being formed, which are, and should be, in advance of those entertained in other periods of the Church's history. Nor should this cause alarm on the part of the followers of the Master, for they do not, and cannot even when erroneous, destroy the facts which they profess to explain. The facts remain, are immovable, the gates of Hades cannot prevail against them. While they remain Christ and his gospel of redemption will remain, answering the cry of the soul to see the Father and enjoy his love.

[*The Universalist Leader.*]

Turn your religion into life, and thus put it in circulation. Religion locked up in a church is not of much more worth than money locked in the mint. Too often our religion is caged by stained glass and good clothes and deep thinking. Get it out into the open. Take it into the shop and office, take it into the social relations, take it into politics and transform it into life, then shall all things become religious. But we must have something to transform, and to get it we must go to the sources from which it flows. Let those who have no religion and who have trouble with living get some with which to inoculate life. Let those who have religion and do not know what to do with it, take it out of the churches and Sunday, and put it at work in every-day life, and we shall find the Church problem solved in the solving of the Life-problem.

[Prof. Allen Macy Dulles in *The Christian Work and Evangelist.*]

As a matter of fact, what is understood by Christianity is, commonly, the religion of some church; or, as a well-known theological professor has defined it, a system of doctrines; Christianity is a thing embodied in an ecclesiastical organization or in a creed, or a diluted portion of the Spirit of Christ, diffused through a society called by too much courtesy, Christendom. Christianity has never been an adequate representation of Jesus. Actual "Christianity" has often antagonized Christ. The difference between Christianity and Christ has been great. The Church, as organized Christianity, has lamentably failed to realize the kingdom of God which Jesus preached as near at hand. We merely hint at an indisputable fact.

[*The Churchman.*]

To isolate theological study, to make it mimic past phraseology and ancient systems of thought, is to reduce it to a state of paralysis. Man will keep on, because he must keep on, working at, in order to work out, the greatest of all problems—the relation of the divine and the human in his past and present history, at different points of his intellectual horizon. The spiritual progress of mankind is possible only when each element which goes to make up his personality is permitted to develop freely and without restraint. The exercise in attaining the result, not merely the result attained, is of vital importance.

[*The Christian Register.*]

One of the wonders of the discoveries made by this generation is that the merciful man is not only needed to be the leader and the savior of his community and his nation, but that the safest and easiest way to get such good gifts as health, wealth, long life, and happiness is to combine justice and mercy in the common affairs of business and in our social relations with all our fellow-men.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00

Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00

Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT, Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The United States Navy will make a grand display at Jamestown in May next. According to present plans the Atlantic fleet will reach Hampton Roads on April 11, after manœuvres in Southern waters and the small arms target practice and the record target practice with heavy guns at Guantanamo. The fleet will include all of the battleships in commission in home waters. It is expected that at the same time there will be representations of foreign navies at Hampton Roads and the spectacle will probably be the most notable in a naval way which has ever occurred in this country.

The Commissioner of Indian Affairs has submitted to President Roosevelt the outline of a plan to be put in the form of a bill, under which it is proposed that the coal and asphaltum lands of the Choctaw and Chickasaw tribes in the Indian Territory, estimated to be worth anywhere from $100,000,000 to $200,000,000, shall be managed by a joint stock company, the board of directors of which shall be composed of officers of the Government and representatives of the tribes named.

A heavy rain fell last week and the flood waters of the Gila and Salt Rivers, pouring into the Colorado River, washed away ten bents on the new trestle from which it was expected to begin dumping rock in a day or two to stop the flooding of the Salton Sea. This will delay work for a week or ten days.

Two additional forest reserves will be established in the far West. One of them, in northeastern Oregon, will cover an area of 718,760 acres. It will be known as Chesnimus and Wallowa reserve. The other, in Idaho, to comprise 600,000 acres, will be called the Pressuss and Caribou reserve.

The House Committee on Industrial Arts and Expositions last week decided to make a favorable report on the bill providing for the loan of one million dollars to the Jamestown Exposition, with the gate receipts as security. A similar bill was reported to the Senate.

Oct. 19 has been selected as the date of the International Cup balloon race and the start will be made from St. Louis. This date falls on Saturday in the full of the moon. If the weather conditions are unfavorable the start will be postponed until the following day.

It is probable that the Committee on Rivers and Harbors will recommend an appropriation of $6,000,000 for a new "Soo" lock, a like amount for improvements in the Detroit River, and a smaller amount for Boston Harbor.

The total valuation of taxable real and personal property in the cities and towns of Massachusetts May 1 last, was $3,408,893,165.

Foreign.

The formal signing of the Algeciras Convention took place at the State Department at Madrid, Dec. 31, in the presence of representatives of all the nations who took part in the conference. The ratification of the United States contains the reservation formulated by Henry White, who was head of the American delegation to the conference on April 7, and the resolution passed by the American Senate on Dec. 12, that it does not accept the obligations of responsibility with regard to the measures necessary to carry out the provisions of the protocol. The signing of the convention was expected to enable the Franco-Spanish police to be installed Jan. 2. The rules governing the policing of the ports will be worked out at Tangier by the French and Spanish Ministers and a representative of the Moroccan Foreign Office, and as soon as they are approved by the Sultan the police will be installed.

Under regulations issued by the Chinese Government not only is the cultivation of the poppy to cease altogether, but the use of opium is after ten years to be totally abolished. Though it is calculated that some forty per cent of the people of China take opium, every user of the drug, and the amount he uses, are henceforth to be registered. Those who after ten years are still addicted to the drug will have their names publicly posted. In the case of officials under sixty, abandonment of the drug must begin at once. Exceptional treatment is, however, to be given to Princes, Dukes, Viceroys, and Tartar Generals, even though under sixty. If they continue to smoke opium, substitutes are to carry on their duties until they are cured. There is every expectation that the reforms will be fully carried out.

The contract for the third British battleship of the Dreadnought type, which is to be named the Superb, has been placed with the Armstrongs of Newcastle-on-Tyne. The machinery will be built by the Wallsend Shipway Company and the engines of her two sister ships, the Bellerophon and Temeraire, now under construction at Portsmouth and Devonport respectively, will have their engines built by the Fairfield Shipbuilding and Engineering Company of Glasgow, and Hawthorn, Leslie and Company of Newcastle. The ships will be of 18,400 tons displacement and are to have a speed of twenty-one knots.

The Anglo-American Executive Committee for the Keats-Shelley memorial has purchased the house in the Piazzo Spagna, Rome, where Keats died, paying $12,000 for it. Besides this amount and the $1,200 already paid for an option on the property, $8,000 more must be raised to free the house from mortgage. It is hoped within six months that the books, manuscripts, portraits, and all mementoes of Keats and Shelley will be in place in the house.

Industrial and Commercial.

The *Manufacturers' Record* says: "Ever increasing interest in the progress of the South, inspired by the notable progress it has made in recent years in manufacturing, in mining, in lumbering, and in railroad construction, not infrequently loses sight of that section's agricultural importance, present and potential. When its agriculture is considered one's mind is prone to dwell upon the cotton crop. That crop, in its value, is second among the great crops of the country, but it is in such worldwide demand, and the comfort of so many millions of persons depend upon the great industry of which it is the basis, that it is natural for it to overshadow at times other crops which the South raises, either as specialties or in common with other parts of the country. But, leading as it does the agricultural South, cotton has some valuable allies in corn, wheat, hay, tobacco, oats, Irish potatoes, rice, and rye, which reach a valuation of over six hundred and ten million dollars.

During the year 1906 the Chicago and Northwestern Railroad Company made a series of "surprise tests," numbering 1,625 and the record shows that there was not a single failure to obey the signals and to observe the rules governing block signalling. "Surprise tests" are made without previous knowledge of the engine crews and consist of every conceivable question which may arise in connection with block signals and their observance. The management of the Northwestern began making these tests several years ago, and found that in a certain percentage of cases the signals were not observed. As the result of a series of early tests ten engineers were discharged from the service and others were severely dealt with for failure to obey signals. The result of the campaign on the Northwestern shows, according to the officials, that engine crews can be disciplined to a point where failure to obey signals will practically never occur.

The New Singer Building, now under construction in New York, will, upon its completion, May 1, 1908, be the tallest building in the world. From the sidewalk to the top of the tower the building will measure 612 feet 3 inches, from the basement floor, 648 feet 9 inches. The main building is to be 191 feet 8 inches high, and will have frontages of 137 and 237 feet. The tower, twenty-seven stories in height, will be sixty-five feet square. The total floor area of the building will be 411,333 square feet, or 9.44 acres. Not a cubic inch of wood will be used, the materials being limited to steel, cement, and composition. Sixteen high-speed elevators will furnish service to the tenants.

Estimates prepared by the United States Geological Survey for the year 1905 give the value of mineral products of Massachusetts for the year as $14,024,200; Vermont, $8,790,544; Maine, $5,065,804; New Hampshire, $2,028,638; Connecticut, $4,098,625, and Rhode Island, $1,327,795. Pennsylvania leads the country with $569,828,673, Ohio is second with $169,203,710, and Illinois third with $105,065,567.

Demands on all the railroads operating west of Chicago for an increase in wages and an eight-hour day have been made by fifty-seven thousand locomotive engineers. The increase in pay is asked by the switching engineers, forty cents an hour being demanded instead of the present maximum of thirty-five cents an hour. The shorter workday is asked by freight engineers, who now work ten hours a day.

The Pacific States Telephone and Telegraph Company, and the Sunset Telephone and Telegraph Company have merged into one company to be called the Pacific Telephone and Telegraph Company. The consolidated company has been capitalized at $50,000,000 with $32,000,000 in preferred and $18,000,000 in common stock.

The total amount paid in dividends by the cotton manufacturing corporations of Fall River, Mass., during the past year was $1,485,100, against $688,600 paid in 1905, and $786,950 in 1904. In 1903 the dividends paid amounted to $1,604,575.

The total appraised value of imported merchandise received at New York for the calendar year 1906 was $787,652,456. The importation of precious stones, cut and uncut, and pearls amounted to $43,573,488.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MRS. EDDY'S REPLY TO THE JANUARY MC CLURE ARTICLE.

[WE are republishing this article because in our desire to secure its insertion in last week's *Sentinel* the matter was rushed into type at such short notice that a correction in the name of a town was overlooked, and not discovered until too late to rectify the mistake in that issue. This we regret, and make herewith the only reparation in our power. The lines "While I was living with Dr. Patterson at his country home in Rumney, N. H.," should have read "While I was living with Dr. Patterson at his country home in North Groton, N. H.;" again, the sentence "He bought a place in Rumney, which he fancied, for a summer home." should have read, "He bought a place in North Groton, which he fancied, for a summer home."—EDITOR.]

IT is calumny on Christian Science to say that man is aroused to thought or action only by ease, pleasure, or recompense. Something higher, nobler, more imperative, impels the impulse of Soul.

It becomes my duty to be just to the departed and to tread not ruthlessly on their ashes. The attack on me and my late father and his family in *McClure's Magazine*, January, 1907, compels me as a dutiful child and the Leader of Christian Science to speak.

McClure's Magazine refers to my father's "tall, gaunt frame" and pictures "the old man tramping doggedly along the highway, regularly beating the ground with a huge walking-stick." My father's person was erect and robust. He never used a walking-stick. To illustrate: One time when my father was visiting Governor Pierce, President Franklin Pierce's father, the Governor handed him a gold-headed walking-stick as they were about to start for church. My father thanked the Governor, but declined to accept the stick, saying, "I never use a cane."

Although *McClure's Magazine* attributes to my father language unseemly, his household law, constantly enforced, was no profanity and no slang phrases. *McClure's Magazine* also declares that the Bible was the only book in his house. On the contrary, my father was a great reader. The man whom *McClure's Magazine* characterizes as "ignorant, dominating, passionate, fearless," was uniformly dignified—a well-informed, intellectual man, cultivated in mind and manners. He was called upon to do much business for his town, making out deeds, settling quarrels, and even acting as counsel in a lawsuit involving a question of pauperism between the towns of Loudon and Bow, N. H. Franklin Pierce, afterward President of the United States, was the counsel for Loudon and Mark Baker for Bow. Both entered their pleas, and my father won the suit. After it was decided, Mr. Pierce bowed to my father and congratulated him. For several years father was chaplain of the New Hampshire State Militia, and as I recollect it, he was Justice of the Peace at one time. My father was a strong believer in States' rights, but slavery he regarded as a great sin.

Mark Baker was the youngest of his father's family, and inherited his father's real estate, an extensive farm situated in Bow and Concord, N. H. It is on record that Mark Baker's father paid the largest tax in the colony. *McClure's Magazine* says, describing the Baker homestead at Bow: "The house itself was a small, square box building of rudimentary architecture." My father's house had a sloping roof, after the prevailing style of architecture at that date.

McClure's Magazine states: "Alone of the Bakers, he [Albert] received a liberal education. . . . Mary Baker passed her first fifteen years at the ancestral home at Bow. It was a lonely and unstimulating existence. The church supplied the only social diversions, the district school practically all the intellectual life."

Let us see what were the fruits of this "lonely and unstimulating existence." All my father's daughters were given an academic education, sufficiently advanced so that they all taught school acceptably at various times and places. My brother Albert was a distinguished lawyer. In addition to my academic training, I was privately tutored by him. He was a member of the New Hampshire Legislature, and was nominated for Congress, but died before the election. *McClure's Magazine* calls my youngest brother, George Sullivan Baker, "a workman in a Tilton woolen mill." As a matter of fact, he was joint partner with Alexander Tilton, and together they owned a large manufacturing establishment in Tilton, N. H. His military title of Colonel came from appointment on the staff of the Governor of New Hampshire. My oldest brother, Samuel D. Baker, carried on a large business in Boston, Mass.

Regarding the allegation by *McClure's Magazine* that all the family, "excepting Albert, died of cancer," I will say that there was never a death in my father's family reported by physician or post-mortem examination as caused by cancer.

McClure's Magazine says that "the quarrels between Mary, a child ten years old, and her father, a gray-haired man of fifty, frequently set the house in an uproar," and adds that these "fits" were diagnosed by Dr. Ladd as "hysteria mingled with bad temper." My mother often presented my disposition as exemplary for her other children to imitate, saying, "When do you ever see Mary angry?" When the first edition of Science and Health was published, Dr. Ladd said to Alexander Tilton: "Read it, for it will do you good. It does not surprise me, it so resembles the author."

I will relate the following incident, which occurred later in life, as illustrative of my disposition:—

While I was living with Dr. Patterson at his country home in North Groton, N. H., a girl, totally blind, knocked at the door and was admitted. She begged to be allowed to remain with me, and my tenderness and sympathy were such that I could not refuse her. Shortly after, however, my good housekeeper said to me: "If this blind girl stays with you, I shall have to leave; she troubles me so much." It was not in my heart to turn the blind girl out, and so I lost my housekeeper.

My reply to the statement that the clerk's book shows

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

that I joined the Tilton Congregational Church at the age of seventeen is that my religious experience seemed to culminate at twelve years of age. Hence a mistake may have occurred as to the exact date of my first church membership.

The facts regarding the McNeil coat-of-arms are as follows:—

Fanny McNeil, President Pierce's niece, afterward Mrs. Judge Potter, presented me my coat-of-arms, saying that it was taken in connection with her own family coat-of-arms. I never doubted the veracity of her gift. I have another coat-of-arms, which is of my mother's ancestry. When I was last in Washington, D. C., Mrs. Judge Potter and myself knelt in silent prayer on the mound of her late father, General John McNeil, the hero of Lundy Lane.

Notwithstanding that *McClure's Magazine* says, "Mary Baker completed her education when she finished Smith's grammar and reached long division in arithmetic," I was called by the Rev. R. S. Rust, D.D., Principal of the Methodist Conference Seminary at Sanbornton Bridge, to supply the place of his leading teacher during her temporary absence.

Regarding my first marriage and the tragic death of my husband, *McClure's Magazine* says: "He [George Washington Glover] took his bride to Wilmington, South Carolina, and in June, 1844, six months after his marriage, he died of yellow fever. He left his young wife in a miserable plight. She was far from home and entirely without money or friends. Glover, however, was a freemason, and thus received a decent burial. The masons also paid Mrs. Glover's fare to New York City, where she was met and taken to her father's home by her brother George. . . . Her position was an embarrassing one. She was a grown woman, with a child, but entirely without means of support. . . . Mrs. Glover made only one effort at self-support. For a brief season she taught school."

My first husband, Major George W. Glover, resided in Charleston, South Carolina. While on a business trip to Wilmington, North Carolina, he was suddenly seized with yellow fever and died in about nine days. I was with him on this trip. He took with him the usual amount of money he would need on such an excursion. At his decease I was surrounded by friends, and their provisions in my behalf were most tender. The Governor of the State and his staff, with a long procession, followed the remains of my beloved one to the cemetery. The Freemasons selected my escort, who took me to my father's home in Tilton, N. H. My salary for writing gave me ample support. I did open an infant school, but it was for the purpose of starting that educational system in New Hampshire.

The rhyme attributed to me by *McClure's Magazine* is not mine, but is, I understand, a paraphrase of a silly song of years ago. Correctly quoted, it is as follows, so I have been told:—

Go to Jane Glover.
Tell her I love her;
By the light of the moon
I will go to her.

The various stories told by *McClure's Magazine* about my father spreading the road in front of his house with tan-bark and straw, and about persons being hired to rock me, I am ignorant of. Nor do I remember any such stuff as Dr. Patterson driving into Franklin, N. H., with a couch or cradle for me in his wagon. I only know that my father and mother did everything they could think of to help me when I was ill.

I was never "given to long and lonely wanderings, especially at night," as stated by *McClure's Magazine*. I was always accompanied by some responsible individual when I took an evening walk, but I seldom took one. I have always consistently declared that I was not a medium for spirits. I never was especially interested in the Shakers, never "dabbled in mesmerism," never was "an amateur clairvoyant," nor did "the superstitious country folk frequently" seek my advice. I never went into a trance to describe scenes far-away, as *McClure's Magazine* says.

My oldest sister dearly loved me, but I wounded her pride when I adopted Christian Science, and to a Baker that was a sorry offence. I was obliged to be parted from my son, because after my father's second marriage my little boy was not welcome in my father's house.

McClure's Magazine calls Dr. Daniel Patterson, my second husband, "an itinerant dentist." It says that after my marriage we "lived for a short time at Tilton, then moved to Franklin. . . . During the following nine years the Pattersons led a roving existence. The doctor practised in several towns, from Tilton to North Groton and then to Rumney." When I was married to him, Dr. Daniel Patterson was located in Franklin, N. H. He had the degree D.D.S., was a popular man, and considered a rarely skilful dentist. He bought a place in North Groton, which he fancied, for a summer home. At that time he owned a house in Franklin, N. H.

Although, as *McClure's Magazine* claims, the court record may state that my divorce from Dr. Patterson was granted on the ground of desertion, the cause nevertheless was adultery. Individuals are here to-day who were present in court when the decision was given by the judge and who know the following facts: After the evidence had been submitted that a husband was about to have Dr. Patterson arrested for eloping with his wife, the court instructed the clerk to record the divorce in my favor. What prevented Dr. Patterson's arrest was a letter from me to this self-same husband, imploring him not to do it. When this husband recovered his wife, he kept her a prisoner in her home, and I was also the means of reconciling the couple. A Christian Scientist has told me that with tears of gratitude the wife of this husband related these facts to her just as I have stated them. I lived with Dr. Patterson peaceably, and he was kind to me up to the time of the divorce.

The following affidavit by R. D. Rounsevel of Littleton, N. H., proprietor of the White Mountain House, Fabyans, N. H., the original of which is in my possession, is of interest in this connection:—

About the year 1874, Dr. Patterson, a dentist, boarded with me in Littleton, New Hampshire. During his stay, at different times I had conversation with him about his wife, from whom he was separated. He spoke of her being a pure and Christian woman, and the cause of the separation being wholly on his part, that if he had done as he ought he might have had as pleasant and happy home as one could wish for.

At that time I had no knowledge of who his wife was. Later on I learned that Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, was the above-mentioned woman.

Justice of the Peace.

Whom or what is the McClure "history," so called, presenting? Is it myself, the veritable Mrs. Eddy, whom the *New York World* declared dying of cancer, or is it her alleged double or dummy heretofore described?

If indeed it be I, allow me to thank the enterprising historians for the testimony they have thereby given of the divine power of Christian Science, which they admit has snatched me from the *cradle* and the grave, and made me the beloved Leader of millions of the good men and women in our own and in other countries,—and all this because the

Digitized by Google

truth I have promulgated has separated the tares from the wheat, uniting in one body those who love Truth; because Truth divides between sect and Science and renews the heavenward impulse; because I still hear the harvest song of the Redeemer awakening the nations, causing man to love his enemies; because "blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake."

Mary Baker G. Eddy

DISCOVERY AND REVELATION.

M. G. KAINS.

FOR some time I have been specially interested in the meaning of the words discovery and revelation, especially in their application to religious thought. At first glance these words appear to be closely united in some respects and distinctly separate in others. As defined by the Standard Dictionary the word "discover" means "specifically, to find and bring to the knowledge of the world; as to discover . . . a principle." The word "reveal" means "to disclose, make known, or communicate by or as by supernatural or divine agency or instruction." It is to be noted that as used in these ways the two words indicate the actual existence of something previously unknown, though this existence may have been surmised, for "discover" comes from the Latin *dis*, a negative, and *cooperio*, to hide; that is, it means an *un*hiding of something. "Reveal" is from *re*, back, and *velum*, a veil; that is, something is seen when the veil is withdrawn. In each case, therefore, something previously hidden has been found. But here comes a marked distinction: discovery implies a conscious effort on the part of the actor who himself removes or overcomes an obstacle, as in the discovery of America or of a lost article; whereas revelation implies that the obstacle is removed by other means than by the action of the searcher, as the lifting of a fog reveals a scene hitherto hidden, or in the case of the revelation of spiritual truth, that it has come in the measure of that spiritual responsiveness of the individual channel of revelation, *which* has been attained to through spiritual aspiration and endeavor. In support of these statements, so far as *religious* thought is concerned, it may be remarked that no passage in the Bible implies that mankind has "discovered" *God: but* numerous passages say that God has "revealed" himself or His ways to mankind. These revelations have, *however*, invariably been made to those in active search for God or already occupied in God's service.

A casual glance through the Bible will show that as a general rule these revelations when presented to the world at large have been received with opposition more or less violent. Moses, Elijah, in fact, the prophets generally had to pass through ordeals because of their "Thus saith the Lord." The populace did not then, any more than now, want to be dictated to by any being whom they could not see, hear, or handle; and any one who asserted God's law and the penalty for its infraction was treated as if he were the lawgiver and consequently to blame for their sins of omission or commission. They often attacked the mouthpiece in the hope of silencing the voice and thus escaping the penalty which they were warned would follow as the result of wrong thinking and doing. But in no single instance did persecution, or even martyrdom of the prophet avert the penalty for wrong doing; and in no single instance has obedience to the voice of God failed to reap its reward.

Most conspicuous of all the men who in Biblical history opposed the teachings of his day with a revelation, stands Jesus of Nazareth. At a time when the priests had reached a climax of perfunctory religion, he came,—a more active heretic than any of his predecessors with whom the Jewish nation had had to deal. Prophets had declared God's law, the law of Love, had in isolated instances healed the sick and wrought other miracles in proof of their mission, but Christ Jesus stated God's law more succinctly than had any of his forerunners, and gave a new meaning to the words, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength: this is the first commandment. And the second is like, namely this, Thou shalt love thy neighbor as thyself. There is none other commandment greater than these." On the basis of these two commandments he built his ministry, healed the multitude, restored sight to the blind and hearing to the deaf, publicly raised the dead, and taught humanity how to do as he did. His teachings, thus exemplified by his works, carried conviction to the populace, to whom he revealed his mission and who followed him like sheep that had found their shepherd. Such an efflux from the stereotyped rites of priesthood aroused the envy and jealousy of the priests and Pharisees, who, as John writes, began to fear that if they let him alone all men would believe on him. This would mean the downfall of their ritualistic worship and the destruction of their traditional concept of God. So, following the climax of his works, the raising of Lazarus from the tomb, they gathered a council at which, while compelled to acknowledge his miracles, they asked one another the fruitless question, "What do we?" They had no healings, no raisings from the dead, no good deeds to enumerate; nothing to prove the truth and value of their dead-letter ceremonies. So, assuming that these forms were right and that Jesus' teachings were wrong, they ignored the necessity of harmonizing their practice with their precepts, rectifying their imperfect—nay, sinful—thoughts and acts, and followed in the footsteps of their progenitors: "From that day forth they took counsel together for to put him to death."

Never has the world witnessed a more dismal, barren, profitless victory. At best, for them it was only a three-days triumph; but it gave Jesus an opportunity to show the powerlessness of death and the grave, and thus add the last link to the chain of proof that man lives—not dies—in the Lord. The victory was really that of the one who seemed to have been vanquished. It placed the faith of Jesus' followers on a basis rendered impregnable because it had proved man's life to be continuous; single not double; eternal not temporal; thus revealing the truth of Jesus' own words: "I am come that they might have life, and that they might have it more abundantly;" "this is life eternal, that they might know thee the only true God;" "if any man keep my saying, he shall never see death."

It will be recalled that when Jesus stood up in the synagogue to read he chose this passage from Isaiah: "The Spirit of the Lord is upon me, because he hath anointed me to preach the gospel to the poor; he hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised." And then he declared, "This day is this scripture fulfilled." But neither the reading of the prophecy nor the declaration of its fulfilment would have been of the slightest significance had Jesus not given proof that the prophecy related to him by actually doing the works predicted. These were his irrefutable and convincing evidences. To such works he pointed inquirers who wanted assurance, as when John the Baptist sent two of his disciples to question Jesus as to his ministry. In all these works Jesus was revealing, not only to his disciples and contemporaries but to and for all men of all time, that the works are the essential, the vital proof of the presence and power of Spirit, God,—not only for him, but for every one who understands his teachings. This he equivocally declared when he said, "He that believeth on me, the works that I do shall he do." There was no exception. His followers, at first falteringly (as when they tried

Digitized by Google

but failed to heal the epileptic boy), but later confidently (as when Peter healed the impotent man at the gate of the temple), gave the proofs of their understanding of God's power. As each one apprehended the Master's words, the "Spirit of the Lord" was upon him as upon his Master, and was revealed in similar works. The only reason why the follower did not at once do as great works, was because of his faltering faith—faith not equal to a mustard seed.

Jesus' revelation of the actuality of eternal Life, though opposed, gained adherents and proved its truth by the signs which, as in his own case, characterized the ministry of his apostles and immediate followers. But later, when his teachings had become so contaminated with worldly thought and policy that the integral signs of his pure religion mentioned in the last chapter of Mark's Gospel disappeared, from that time on, for sixteen centuries, mankind found itself in the predicament of asserting the verity of the teachings without producing their imperative proofs. Christians have admitted that works were the dominant feature of Jesus' ministry, but failing themselves to do such works, they have attempted to justify a dead faith by maintaining that these works were only for a limited period. This contradicts the declarations of Jesus, who at no time authorized passive assent, or belief, as the earnest of eternal Life. Activity, works, obedience, love were his demands and commands. Mere belief cannot take the place of that knowledge of the truth which makes free. Indeed, since no one can assert that there is extant an original document written by any one of the men who are credited as the authors of either Gospels or Epistles; and since it is declared to be impossible to prove that Jesus ever lived, mere believers are in a dilemma; for if they say that obedience to Jesus' commands will secure Jesus' promises, then they are asked to show their proof in works as he presented his proof; on the other hand, if they assert that the time has passed when such results can be expected, they are asked why they cling to a dead doctrine. In all these centuries scholastic theology has not been able to give satisfactory answers to such questions. Nevertheless, religiously-minded people have clung to the Bible, with the conviction that it contains the chart to eternal Life. During all this time there have been people who have learned and have pointed out where some of the shoals and rocks are, but were unable to locate the safe channel because of the fogs which had accumulated through these centuries of dogma, human opinion, and speculation. Thus Jesus' revelation, though perpetuated for a time, has been both covered and veiled, to await its modern discovery and revelation.

All these centuries the truth of the Bible has continued to exist, like live coals beneath a heap of ashes. As a little puff of wind shows the live embers, so men now and then have seen the glow of the Bible truth, have caught some gleam of its vitality; but through scholasticism the light was quickly obscured, and again nothing seemed left but ashes. Yet the fact that these impressions have occasionally reached mankind is proof positive that the vital part of Jesus' religion is in the book and has been the means of keeping it, during centuries of obscuration, for the present generation; for "my words shall not pass away." Yet their meaning, their vitality, has been buried like the embers beneath the ash-heap. Men have been content to pick up fragments around the edges of the great body of Biblical truth, and dilate on what once was; but early in the last century this seemingly extinct fire became of all-absorbing interest to a young girl, who as years advanced delved beneath the surface and little by little found things undiscovered by superficial searchers. Her investigations led her, through a series of awakenings, to the final discovery that God is as able now as ever to heal the sick; for being in extremity herself, she was given the irrefragable proof through God's revelation of this fact by her restoration to health after all material means had proved unavailing. Thus she became the recipient of a revelation which at once silences all controversy as to whether the New Testament records are authentic or not; whether the works of Jesus and his followers were ever done or not; whether Jesus ever lived or not. The very fact that she had been healed was to Mrs. Eddy the culminating proof of the truth of both the New and the Old Testaments and the present-hour applicability of Biblical teachings. Her duty seemed clearly to be to give her discovery to the world, so that all might avail themselves of the glad tidings. Though opposed as were prophets and apostles, her work has been accompanied by the characteristic signs of healing which Jesus declared shall designate his true followers. More than this, her students, whether taught by her direct, or self-taught through our text-book, "Science and Health with Key to the Scriptures," also exhibit these signs; so that now, as in Jesus' time, the passage from Isaiah already quoted can be applied to her. Nay, further, this passage applies to each and every individual who gains an apprehension of the truth of Christian Science as taught by Jesus and explained in this age by Mrs. Eddy. For it is impossible to apprehend the truth without essaying to test it. With an unbiased test comes proof; with proof, comprehension; with comprehension, the conviction that Jesus' command "to heal the sick" is as binding now upon every individual as any other precept. As a consequence, he who makes this discovery through Mrs. Eddy's teaching will have its truth revealed to him through his own better health, improved morals, and increased spirituality, and he will see the fallacy of trusting to another's vicarious efforts to win his salvation. He will learn that in proportion as he follows and strives to obey Christ's commands he can declare as Jesus did, "The Spirit of the Lord is upon me, because he hath anointed me" to do the works that Jesus did; and in proportion as I love Christ and keep his commandments, I shall receive the "Spirit of truth," the Comforter, which will guide me into all truth and abide with me forever.

"ABIDE IN ME."

VIOLET KER SEYMER.

ALTHOUGH Jesus inhabited this planet his thought dwelt in the infinite fatherland of Spirit. Speaking through him, Christ, Truth, says to his followers in all ages: "Abide in me, and I in you. . . . He that abideth in me, and I in him, the same bringeth forth much fruit." Christ Jesus ever communed with the Father, in whom dwelt his own true being, and his unclouded perception of the real gave him dominion over every falsity which was paraded before his human gaze. The spectacle of famine and tempest, of sin, sickness, and death, could not deceive him for one moment, because his constant mental association with Truth enabled him to see through and beyond these impostors and thereby prove their impotence.

In this age it is owing to our Leader's strict obedience to the injunction, "Abide in me," that her inspired teaching is accomplishing so much for the human race. God needs faithful witnesses, who will reflect the stability of Truth through "evil report and good report," without fear, moral cowardice, or deviation of any kind. Jesus said, "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." Christian Scientists are learning to train thought upward, and to let it expand in the contemplation of infinite good, so that the truth of the following words may be made practical in daily life: "Fixing your gaze on the realities supernal, you may rise to the spiritual consciousness of being" (Science and Health, p. 261). This we may do here and now and reflect its harmony. In allowing our mental gaze to waver, the vision remains clouded at these points.

The mere fact that one is subjected to temptation does not mean that he is incurably wicked, and that he must,

Digitized by Google

therefore, yield to self-condemnation. When Jesus silenced the tempter, we read that the devil left him only "for a season." Temptation comes in various ways, such as in dread of illness for oneself or for others, in fear of poverty, love of ease, pride of intellect, sensual desire; in self-pity, selfishness, mental apathy or discouragement; in jealousy of others' achievements or possessions, and in the degree in which these intruding suggestions are permitted to turn us aside from the contemplation of the "realities supernal," viz., Life, Truth, and Love, we are failing to "abide" in their healing light and reflect it for our brothers and sisters in need. In the midst of daily work and seemingly perplexing problems it is helpful to try to realize what the calm purity of man's true consciousness must be. Realization is reflection, and reflection of Truth is always harmony. Evil is never reflection; it is the want of it. The attainment of this perfect mental condition is the goal of each one, and our work in advancing towards it is twofold. Wrong thoughts need to be uncovered and cleared out, and other and truer ones acquired, and this mental process will continue until the Master's precept is fully obeyed, "Be ye therefore perfect, even as your Father which is in heaven is perfect." At times there seems to be much turmoil and confusion, but these are soonest stilled by reminding ourselves that since Truth is eternal, and good infinite, we are not arrayed against an inherently powerful, much-to-be-dreaded, unavoidable evil, but only against our own mistaken acceptance of it as *bona fide*. Every foe is, so to speak, of our own making, and its only substantiality is our fear of it.

Spiritual understanding corrects false views and cancels their effects. Too often, mankind has attempted to fight evil with its own weapons; it has met wrong with revenge, self-will with despotism, crime with punishment. In Christian Science the "weapons of our warfare are not carnal," but spiritual, and the more evil rages, the more we should "stand in his holy place" and let it shed its calm around us. There is no discord, no violence in omnipresent Life, Truth, and Love. Then what are we fearing? Only what we are believing. By persistently turning away from the false and looking towards the real, we shall in time reach that stage of spiritual development in which mortal sense disappears and reality appears. In order to hasten this period of unfoldment, the student must scientifically guard his consciousness against all intruders; and one of the first demands that Christian Science makes upon its adherents is the all important one of time. Some people attend Christian Science services regularly, and go through one section of the Lesson-Sermon each day, but rest content with giving this meager amount of time to the study of the truth, while the rest is given over to material pursuits. Should we expect to master a foreign language without devoting regular time to it, and is the "new tongue" of Spirit so much more easily learned? We leave the answer to those who are not satisfied with the advance they are making. In the case of beginners, and business men, even one hour set aside for quiet reading and prayer each morning renders the day more harmonious, and another given at its close is a fitting rendering "to God the things that are God's." We must remember that mortal sense is always trying, under one pretext or another, to snatch the time we should give to spiritual work, or the realization of our true selves. First of all we study the basic elements of Christian Science, the activities of Life, Truth, Love; later the student learns something of their wondrous application, and expresses God more fluently in unselfishness, in brotherly kindness, in spiritual calm, in dominion over fear, in healing the sick and freeing the sinner. On the day of Pentecost the disciples received a wonderful illumination, and if we will but watch and obey, and abide in the "upper chamber" of Spirit as did they, the Holy Ghost, the Comforter, will bless our work and enlarge our sphere of action also. No matter into what dark alleys of human need divine Love may lead us, the mental attitude towards God must remain unclouded and undismayed by the shadows which we are called upon to dispel. Through striving to be "faithful over a few things," we shall be made "ruler over many."

Though numbers are ready to welcome the glad tidings of Christian Science, some are led to wonder why they do not progress more rapidly. By and by they discontinue their study, and are content to point others to this religion and remain more or less at a standstill themselves. What is the explanation of their failure to advance and follow up the quest of their early joy? It is this,—they have not heeded the fact that the weeds of wrong thinking demand daily watchfulness, lest they grow apace and, like convolvuli, twine themselves about the unfolding spiritual thought and prevent its development. Good stands alone; evil leans upon some prop, and when its prop—the human belief in it—is systematically withdrawn, it falls of its own weight. To "abide in me" means to abide in true thinking, to turn resolutely away from the contemplation and the discussion of the false, and to be mentally loyal to God and to His image and likeness. How frequently Jesus withdrew from those around him "and continued all night in prayer." Perhaps we can form some estimate of the sacredness of his thoughts while he did so. Like the Wayshower, every Christian Scientist must strengthen himself constantly on the mountain-top of spiritual understanding, and he must strive to ascend above all sense of discord into "his holy hill," where peace reigns eternal. Thus will he be better fitted to lend a helping hand to those in the valley below, and as the Master said, "My Father will love him, and we will . . . make our abode with him."

[Written for the *Sentinel*.]

THE LESSON OF PATMOS.

JOHN M. DEAN.

No dwelling-place in palace walls,
No cant of creed, no vain display,
No cushioned couch nor gilded halls
Could mark the Revelator's way;
But on a rock all drear and bare,
A wave-washed, desolate abode,—
The lone apostle praying there
Drew nearer to his loving God,
On Patmos.

So we, midst life's tempestuous days,
May brave the wrathful storms of hate,
May turn our cries to hymns of praise,
And open wide the heavenly gate;
If we but put our trust in God,
And cleanse our hearts of all but love,
Forget the mists of earth's abode,
And lift our eyes to skies above,
From Patmos.

Then things that to our blinded sense
Oft seem afflictions dark and drear,
Will always have their recompense
And banish every doubt and fear.
Oh, may we learn to murmur not
When night shuts down and waves beat high;
Let earth's heart-anguish be forgot,
Through cloud-rifts beams the radiant sky,
On Patmos!

"What she could"—not what she could not do—not what she thought might be done—not what she would like to do—not what she would do if she had more time—not what somebody else thought she ought to do—but "what she could."—W. D. SHIPMAN.

["A Brother Minister," in the *Worcester* (Mass.) *Telegram*.]

A MINISTER'S PROTEST.

Since your report of Dr. Crane's sermon which "raked Christian Science fore and aft" as a "gigantic humbug," many of us have been waiting for a reply from a Christian Scientist. Our sense of fair play demands both sides of the question. Perhaps they thought that such unargumentative severity would not injure them, perhaps that any adequate reply would require a similar spirit, and this their religion would not sanction. As no response has appeared, will you permit a few observations from one who writes, not as a Christian Scientist, but as a brother minister.

Dr. Crane lays down the proposition that Christian Science is a "form of insanity." To prove this, epithets seem to overbalance the argument. A few specimens are "epidemic, hysteria," "beatific selfishness," "moral stupor," "mental alienation," "miserable balderdash," "gigantic humbug." Then, speaking from a Christian pulpit, he calls attention to their "amazing antics," and says, "A sense of humor is the best safeguard of sanity." There are many other epithets, but we forbear,—let them sink into "innocuous desuetude." To call names and make faces is not argument. O'Hara says, "When the judgment is weak, then prejudice is strong." The weakest way to state a case is to overstate it.

If this spirit voices a sentiment in the churches, those who do not share it have the right to protest. Bitter attack from the pulpit or church against a new faith is not evidence, but presumption. The despised and "dangerous heretics" of yesterday are often the aureoled saints of to-morrow. Every new truth in the world's history has been assailed by the dominant religious powers whose crusted forms it has disturbed. The Founder of Christianity was said to be "beside himself;" his good works were but "by Beelzebub, the prince of devils"—even worse than the critic's suggestion of the good in Christian Science, "good in the same way that opium and coal-tar preparations are good."

Jesus was crucified, and his disciples were slain, save one, who was banished. The Emperor Diocletian began a state paper with these words, "Having extinguished the Christian religion." John Wesley was spurned by the Church and rotten-egged by the mob. The Independents (Congregationalists) were driven out of England. Roger Williams (Baptist) found shelter across the snows in Rhode Island. So the painful story of the persecution of every new truth goes on, and in proportion to its vitality has been the bitterness of attack.

Dr. Crane says, "If there be a devil, Christian Science is his last and most perfect handiwork;" but the prince of darkness is not so easily switched off from the old path. He prefers, as ever, a historic movement and the dominant Pharisaism as a field of operation.

What is the reason given for this charge of lunacy? They are "unbalanced" because the reality of matter and the external world is denied. "They bask in the idiotic assurance that the great open sore in the slums does not exist." They thus "violate common sense," often common ignorance. So did Columbus, when his contemporaries asked, "How would people look on the other side of the globe, with their heads hanging down?" So did Copernicus, when they said, "Poor fool, he thinks he can destroy the sacred doctrine of astronomy."

What concern there is for the slums in this criticism! Yet they have grown up in this country with the Church. What has it done for them? Moved out, and when they have come too near, moved again, uptown. Christian Science certainly cannot prove a greater failure with the slums. The thought comes to us that if Constantine had not laid his hand on the Church and said, "You are mine," making it a political machine; if the Church had retained the apostolic spirit and function of healing; if, indeed, it had been to this day obedient to the Master's command to preach the gospel to all nations, to heal the sick, and to cast out evil, might it not have a purchase, through its healing, to lift those in the slums out of gross sense and sin.

The Church has believed too much in the reality and power of materialism and too little in the supremacy of Spirit. Is there a supreme power, "in whom we live and move and have our being"? Is that power available for a sick man? Christian Science says yes, and appeals to the New Testament and the demonstration of the truth in the healing of the sick and the casting out of evil, which are inseparable.

Dr. Crane says this claim is "untested by any scientific sifting." What has scientific materialism to do with a question involving the supremacy of Spirit? There was a testing of the blind man, restored by Jesus, as given in the 9th chapter of John. All the man could say before this mass of material prejudice was, "Whereas I was blind, now I see." Christianity was judged a failure by the test of its time. The claim is "based on falsehood," says the critic; "that matter is unreal, is lunacy." Then many of the greatest minds of the ages have been similarly afflicted. Plato made the "idea" back of all, the reality; matter, the passing shadow. Let me give a few quotations from great thinkers:—

Leibnitz—"Spirit is the sole reality, and spirit is activity." Kant—"This world's life is only a sensuous image of the pure spiritual life, having no reality in itself." Grant Allen speaks of the "profounder fact that the universe, as known to us, consists wholly of mind, and that matter is a doubtful and uncertain inference of the human intelligence." Huxley asks, "After all, what do we know of this terrible matter, except as the name for the unknown hypothetical cause of states of our own consciousness?" and Professor Bowne of Boston University, one of the ablest living philosophers, says in his "Metaphysics," "On whatever line we approach the subject, we find thought able to save itself from contradiction and collapse, only as reality is taken up into mind." "In the fullest sense of the word, only the infinite exists, all else is relatively phenomenal and nonexistent."

Within fifty years the change in physical science has been marvelous. The atom, solidity and other properties of matter dissolve, and all converges toward Mind. Mrs. Eddy wrote Science and Health nearly half a century ago. She evidently little considered the great thinkers mentioned, yet she writes with unfaltering faith: "There is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All in all. Spirit is immortal Truth; matter is mortal error. Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness; hence, man is spiritual and not material" (Science and Health, p. 468).

The writer as a student of truth (his idea of a disciple of Christ) read Mrs. Eddy's Science and Health. Then he read all the works he could find in opposition, and then re-read Science and Health. To him it answered them all, making some pretentious critics look small. Its truths trouble the materialism of our time. It shows deep spiritual discernment. Its vision is clear. The reader's failure to follow is the seeming obscurity. Its language is fitted to illumine its theme. Pungent statement, striking epigram, clear illustration, suggestive symbolism, and splendor of imagination,—all go to make clear the perfect, ideal God, Christ, immortal man, and the spiritual universe. Such a book could not have been written save by one whose life had been touched by the light of the infinite. Yet the critic saw only a "tiresome jumble of involved sentences and cheap platitudes." (We read in John's Gospel that

Digitized by Google

when there came "a voice from heaven" some "said that it thundered.") Whence the idea mentioned, that "happiness is offered without forgiveness, and salvation without the aid of the man of sorrows"? Deliverance from sin, sickness, and death runs like a golden thread through the book. For example, see page 5. "Sin is forgiven, only as it is destroyed by Christ."

An editorial in *The Independent* (Nov. 22) says of Christian Science: "None can question the deep faith of its adherents in God, their true discipleship of Jesus Christ, and the religious vitality of their Church. They are unfaltering believers in the Christian religion. . . . Their faith shows itself in their works. . . . The cures cannot be denied. . . . [They] are capable of high ideals, and possess the potential of loyalty. They are of those who wish to look beneath the surface of things, and who can rise above the low levels of coarse matter into the higher spaces of spirituality."

In Mrs. Eddy's recent letter to *The Independent* are these words: "I thank God that for the past forty years I have returned good for evil, and that I can appeal to Him [God] as my witness to the truth of this statement. What we love determines what we are. I love the prosperity of Zion, be it promoted by Catholic, by Protestant, or by Christian Science, . . . I would no more quarrel with a man because of his religion than I would because of his art."

We have noticed that Mrs. Eddy's followers avoid unfriendly criticism of other churches and their neighbors. They are taught to think of the good and true; to cultivate the "mind of Christ," without which there can be no demonstration of religion in the health of the body. Is not their spirit a present necessity among the churches? In the late attack and reply their writers have been keenly alert, but kindly Christian; but if severe attacks from pulpits and churches are continued, the question will confront us, How much of the genuine religion of Christ is exemplified in our Christianity? Its moral supremacy is already being challenged among the nations. Lowell said, pungently, "The Church has corrupted Christianity; we are yet Huns and vandals, we have carved a cross upon our altars, but their smoke goes up to Thor and Odin still." If we live in glass houses we should be cautious about stone-throwing.

Recently the writer attended the Christian Science prayer meeting in Boston, and saw the usual audience of four thousand people. It was a simple devotional service. Some things were notable,—the concentrated interest of all the people; the large proportion of men; the unusual number and activity of young men. Never has he seen a great audience that seemed more sane, intelligent, fraternal, and devout. They are building great churches all over the country and paying for them. Their temples are everywhere *thronged*; their increase is the marvel of the age. They endanger only error and its creations.

As a Christian preacher and a friendly student and observer of the Christian Science movement, we will venture a word of advice to the critic; namely, the careful perusal of Acts. 5 : 38, 39, "Now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

From *The Toronto* (Ont.) *Globe*.]

[The *Toronto Globe*, in its Dec. 7 issue, says editorially, "The Court of Appeal by a non-committal verdict has properly refused to decide whether or not osteopaths and similar practitioners have a right to charge for their services. It is the duty of the Government to decide this matter, and if the law is uncertain it should be made clear and definite." The text of the question referred to the Court of Appeal, the answer of the Court, and the judgment of Chief Justice Moss, follows.]

"*Re* Ontario Medical Act.—Judgment (L.) upon a question referred to the Court of Appeal as to the construction of sec. 49 of the Ontario Medical Act. Ought it to be held upon the true interpretation of sec. 49 of R.S.O., 1897, ch. 176, that a person not registered under that Act, undertaking or attempting for reward to cure or alleviate disease, does not practise medicine within the meaning of that section, merely because the remedy advised, prescribed, or administered by him does not involve the use of or application of any drug or other substance which has or is supposed to have the property of curing or alleviating disease; that is to say, do the words 'to practise medicine' in that section mean to attempt to cure or alleviate disease by the use of drugs, etc., or do they include cases in which the remedy or treatment advised, prescribed, or administered does not involve the use of drugs or other substances which have or are supposed to have the property of curing or alleviating disease. The answer of the Court is, that each case must depend or be determined on its own circumstances; but, dependent upon the facts in each case, there may be a practising of medicine which does not involve the use of drugs or other substances having or supposed to have the property of curing or alleviating disease.

"Per Moss, C.J.O.:—The question asked is within the scope of the authority to refer conferred by the Act, and it is within the competency of the Court under R.S.O., 1897, ch. 84, to make answer to it. In considering the question regard must be had to the decided cases bearing upon it. Having regard to the way in which the second part of the question interprets the first part, we are asked to put a legal interpretation on the words 'to practise medicine' in sec. 49 of the Ontario Medical Act, which interpretation is to be applied to every possible kind of case that may arise. We are asked to say whether their meaning is to be confined to treatment of illness or disease, or whether their meaning extends to include treatment which does not involve the use of drugs or similar therapeutic agents. The generality of the question prevents a categorical answer. It would not be possible, even by attempting a process of exclusion, to cover all cases that might arise. It is possible to say, because it has been so decided by a Court of competent jurisdiction, that the defendant in Regina *v.* Stewart, 17 O.R. 4, in doing what he did in that instance was not practising medicine. But unless there is a concrete case with the facts proved or known, how is it possible to say whether or not the words of sec. 49 are applicable? If the answer given was that if it were shown that a person not registered under the Ontario Medical Act attempted to cure or alleviate disease by methods and courses of treatment known to medical science and adopted and used in their practice by medical practitioners registered under the Act, or advised or prescribed treatment for disease or illness such as would be advised or prescribed by the registered practitioner, then, although what was done, prescribed, or administered did not involve the use or application of any drug or other substance having or supposed to have the property of curing or alleviating disease, he might be held to be practising medicine within the meaning of sec. 49, it would still leave the matter to be dealt with in a concrete case, in which the ultimate decision must turn upon the facts found. Yet this is the only way in which the question is capable of being answered without endeavoring by some process of exclusion to imagine and provide for all possible cases. Reference to *re* Lord's Day Act, 1 O.W.R. 316 (1903), A.C. at p. 529. The question does not admit of an unqualified affirmative or negative answer, and no other answer can be framed to meet all the possible cases and facts that might occur. W. Nesbitt, K.C., and H. S. Osler, K.C., for the Medical Council of Ontario. S. H. Blake, K.C., and J. E. Day for the osteopaths. H. Cassels, K.C., and R. S. Cassels for First Church of Christ, Scientist. W. M. Hall for Second Church of Christ, Scientist."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[Editorial in the *Concord* (N. H.) *Daily Patriot*.]

MRS. EDDY AND MC CLURE'S.

BECAUSE of the wide circulation given *McClure's Magazine*, and the general concern manifested in its attempt to write the biography of the Founder of Christian Science and the history of the Christian Science religion, all will be interested in reading the communication that appears to-day in *The Patriot* and in the other papers of the State and of the country, from Rev. Mary Baker G. Eddy's own pen. The communication speaks for itself, and therein and thereby, more clearly and impressively than in any other way, is the fact revealed that Mrs. Eddy is in good health and that she is in full and complete possession of all her faculties.

No other person than Mrs. Eddy could have written the communication as it is written. The little details of early life, so clearly set forth, could not be chronicled by any other. The closest friend and associate of childhood days does not and cannot recall the many incidents in the life of another, trifling as they must necessarily seem to him or her, and yet these things stamp themselves indelibly on the mind and memory of the child itself. They cannot be found in books. They constitute no part of history or biography, and only when blind guesses and conjectures as to early habits are made by outsiders are they recalled even by those most interested.

In the light of this communication over Mrs. Eddy's own signature, obstinate or obtuse indeed is the mind that will longer give credence to the canard in the *New York World* or to the sensational exploitations of *McClure's*.

Whether Mrs. Eddy's father carried a cane is a matter of small moment, but at this time it is important that Mrs. Eddy can so readily go back in memory and recall every detail, thus correcting false statements.

Whether Mrs. Eddy was born in a hut or palace is immaterial,—she will not be remembered because of the place or manner of her birth, but because of what she has done, —but to the hundreds of thousands to whom her gospel has brought hope and happiness and heaven, it is important for them to know that she is qualified to speak as formerly, still qualified to counsel and direct and lead up and out to the light.

The communication from Mrs. Eddy so flatly contradicts *McClure's* in so many instances, that the public must be assured that from no view-point is *McClure's* attempted history reliable or worth even the reading; and the communication is valuable also in this, that true history and faithful biography, in the future as in the past, must be written by friends and acquaintances and not by enemies and strangers.

The truth of this is applicable to all men in all ages. When will the North write a true history of the South immediately before and during the great struggle? When will England write a true story of Ireland's greatness or even of her possibilities? Who would be interested in a biography of Washington or Lincoln or Grant or Garfield or McKinley written by their enemies?

Our enemies do not know us—they never see us as we are; they are not familiar with the motives that prompt us, with the passions that sway us, with the loves that bind us, with the hopes that impel us, with the zeal that buoys us, with the ambitions that stimulate us.

Our enemies have not sat by the hearth with us, lived with us in solitude, rambled through the fields and woods by our side. They have not seen us contend with trouble, meet sorrow, surmount difficulties; they know nothing of our sympathies, our anxieties, our cares, our fears, our aspirations—how can they tell the story of our lives?

THE WAY TO FREEDOM.

UPON the occasion of the recent dedication of the new buildings for Harvard Medical College one of the distinguished representatives of the institution spoke eloquently and at length respecting the relation of *materia medica* to chemistry, bacteriology, biology, etc., and of the advancing endeavor to seek the explanation of our physical ills in "the nature and conduct of primitive forms of life," and one often meets with those who express the most self-satisfied assurance as to the natural, causative relation of germs, bacilli, spores, etc., to our physical ills.

The desire to escape suffering can but prompt the many to give heed to the advice of those who have been pursuing this interminable quest for the physical origin of disease, and the agitation in this line can but tend to increase the amount of thought directed to disease with all its elaborated possibilities. But if it be true that human sense assimilates and brings into expression that upon which it feeds, thoughtful people will surely be led to wonder whether this procedure does not beget a receptivity to disease which will result in the multiplication of the very ills from which they would escape.

In considering this question it must be remembered that many undeniable facts go to show that human ills have not decreased in keeping with the asserted advance of *materia medica*. To cite a single illustration, it is probable that no body of men are subject to more careful medical and hygienic oversight and instruction than the sailors in our navy; and yet, according to the report of the surgeon-general for 1905, it appears that, despite the most scientific and extraordinary precautions, the increase of tuberculosis is alarming, being nearly three times as great as among the people at large, who have no such medical supervision and counsel.

More than this, the aggravation of the sense of fear, which can but attend general thought upon any dread disease, inevitably begets susceptibility to that disease, and this single, far-reaching fact is sufficient to condemn the exploitation of these material theories of disease in the public press and the public school, by which *materia medica* would find both its sustenance and its glory.

Evidently a keener vision than that of the microscope is needed to discover the origin of our physical ills. Christian Science re-emphasizes the sadly neglected teaching that sin is the source and explanation of sickness, and hence that the quest to which some are so enthusiastically devoted is a wholly mistaken one. If it be true that in the last analysis false belief and its sequent wrong doing are responsible for all human ills, then their origin is mental, and not physical, and they are to be removed through Mind, and not through matter. Over against the long-continued and hopelessly discouraging efforts of the medical profession, Christian Science declares that "we approach God, or Life, in the ratio of our spirituality, or fidelity to Truth and Love; and in that ratio we know all human need and are able to discern the thought of the sick and the sinful, in order to heal them" (Science and Health, p. 95).

He who would "have dominion" over "the primitive forms of life," and find escape from the disharmony and distress which are entailed because of belief in their power to harm, is counseled in Christian Science to fix his attention, not upon the "things that are seen," but upon the "things that are not seen," upon the truth about God and man.

JOHN B. WILLIS.

"SEARCH THE SCRIPTURES."

Ye search the scriptures, because ye think that in them ye have eternal life . . . and ye will not come to me that ye may have life.
John, 5 : 39, 40 (Revised Version).

MUCH interest has been expressed in the recent utterance of a professor of English literature at Yale, in which he advocates the use of the Bible for college entrance examinations. He says that "the ignorance of college students, of Biblical literature, is universal, profound, and complete," and he adds, "It is certainly unfortunate that the best book ever printed should be so little known, and that the frequent references to it in practically every author should be meaningless. I would therefore refuse to allow any candidate to enter a university until he had satisfactorily passed an examination on the Bible. The Bible has within its pages every single kind of literature that any proposed list of English classics contains. It has narrative, descriptive, poetical, dramatic, argumentative, and oratorical passages. . . . Priests, atheists, skeptics, devotees, agnostics, and evangelists are all agreed that the Authorized Version of the English Bible is the best example of English composition that the world has ever seen. It combines the noblest prose and poetry with the utmost simplicity of diction. . . . It is deplorable that college students should be so ignorant of the great classic in their mother-tongue."

The professor does not attempt to account for this ignorance of the Bible, which he deplores, nor offer any ethical reason for its greater study, it will be observed. It may be said, however, that many of the opinions concerning the Bible have been found to be so inconsistent with modern thought and discovery, that the Book itself has come to be regarded as of doubtful authority; while the trouble has been that people have carried into their study of the sacred writings their material misconceptions of being and law, and have, of course, been dissatisfied with the result. To all such it might be said, in the Master's words, "Ye do err, *not knowing* the scriptures nor the power of God."

According to the text quoted at the beginning there were *many in* Jesus' time who searched the Scriptures to find eternal life. Such a motive could not seem other than *praiseworthy*, yet it should be remembered that the Master said, "Ye will not come to me, that ye might have life." They blindly preferred their own material views to a spiritual and demonstrable understanding of Truth.

Our revered Leader says of the New Testament narratives, "Jesus illumines them, showing the poverty of mortal existence, but richly recompensing human want and woe with spiritual gain" (Science and Health, p. 501). She bids her followers "search the Scriptures," and this they gladly do and find therein the way to eternal Life. She insists that those who teach even the rudiments of Christian Science shall be good Bible scholars; indeed all who are truly interested in Christian Science devote much time daily to the study of the Bible, as illumined by their text-book, and gladly come to the ever-present Christ to find Life,—healing, all they need,—nor are they disappointed.

A good woman, to whom "the arm of the Lord" had been revealed in Christian Science, said of the Bible as thus opened up to her, "Why, there is nothing but Life in it; and to think that we have been so long blind to this fact!" Christian Scientists welcome the idea of devoting more time to the unbiased study of the Bible in all educational work, and they know that such study will of necessity send many to "our text-book" to find the divine Life that heals and saves.

ANNIE M. KNOTT.

THE WORLD TO-DAY.

WE are informed that the February number of *The World To-day* will contain an article on "Mrs. Eddy from the Christian Science View-point," which will be of much interest. Mrs. Burnham, its author, is well known through "The Right Princess," "Jewel," and her other books of wide circulation.

LETTERS TO OUR LEADER.

Cambridge, Mass., Jan. 6, 1907.

Beloved Leader:—As you know before this, all the leading papers of Boston—*Herald, Transcript, Globe, Post, Journal*, and *American*—have published your reply to *McClure's*, and the *Herald* this morning says (in referring to the article), "We would suggest that an autobiography is more authentic than a biography." My first thought on reading your answer was, When our Leader does anything, she does it! Every point was covered, and in that never-failing spirit of forbearance which leaves Truth to convict the wrong-doer. Let me thank you for this new-old lesson in love, and rejoice with you in this victory for Christian Science. Again the earth has "helped the woman."

How can I give you my heart's deep gratitude, my precious Teacher and friend, for the visit I had with you on Wednesday. It was the nearest I have ever been to God, and both before and after seeing you, and during our interview, I felt the Divine presence in a way I can only describe as a feeling that I was communing with God's idea. Since I came home my work has received a decided impulse, and the path has been made plain in ways for which I have waited a long time. I thank you earnestly, too, for permitting me to serve you on the Business Committee, and my hourly prayer to divine Love is that no resistance of materiality or personality can prevent my growth in your service, for I know that "this is the work of God," that we believe on (and help) her whom God hath sent. For "he that receiveth whomsoever I send receiveth me; and he that receiveth me receiveth him that sent me." Years ago you wrote me, "You were mine under the fig-tree." Those words have been at times the only star in the night of tempest, but steering by it, I have always reached the shore. Dear, dear Mother-in-Israel, may I be made ready and ever willing to do whatever you ask me to do to serve you. I appreciate more devoutly your life, your work, yourself, than ever before.

With reverent gratitude and love—a heart-offering—
I am your loving student,
DAISETTE D. S. MCKENZIE.

Ottawa, Ill., Dec. 20, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Because of the many blessings which have come to us through the study of the Bible, in the light of your book "Science and Health with Key to the Scriptures," and because of our deep appreciation of your wise Leadership and your invaluable example of loving patience, meekness, and forbearance, especially during this last (seeming) persecution and misrepresentation, our little Church desires this committee to assure you of its sincere gratitude, affection, and loyalty.

MRS. LOUIE C. HOOK, *First Reader.*
MRS. IDA A. HODKINSON, *Second Reader.*
MRS. CLARA E. SEIBERLING, *Director.*
MAE BLANCHARD, *Clerk.*
Committee for First Church of Christ, Scientist, Ottawa, Ill.

Chicago, Ill., Jan. 5, 1907.

My Dear Mrs. Eddy:—A more beautiful, straightforward, and all-convincing answer to a tirade against the truth I have never seen, than that which came from you in the daily press this morning. The last passage is like the song of the angels. It shows how near earth is to paradise, when Truth in the heart is ever uppermost. Even if everything that had been said of you in the *McClure's* were true, what would or could it mean, at the most, but that they are the things which come to the life of the "flesh" before the Spirit is uppermost. What awful "write-ups" —rather write-downs—could we make of all the Old Testa-

Digitized by Google

ment worthies, by the actual facts about them we possess. If the whole truth were known, the story of many of the best would be "as black as Egypt." And what could we say about the lives of the Galilean fishermen, and of John the best, before they were swept up into the all-controlling spirit of Jesus? If by their flesh fruits we should know them, we would doubtless hide our face from them, at the awfulness. But when we read in their lives what the redemption of the Spirit did, then they stand forth as "monuments of his grace," that alone bringeth salvation to the world lost and saved only through the wonders of the Spirit's new birth.

So the world will ever think of you—a child of God—not only as "born again" of the Spirit, but so borne along by it, with such a vision of the glory that awaiteth, that a new day has dawned,—the day when sects vanish before Science, as mist before the morning, a day when "one fold, and one shepherd" will not be far distant, a day when he who put death and hell under his feet not only shows us how we may do it, but so that we will do it.

I cannot tell you what a blessing your two personal letters have been. Mrs. Fredrickson, who is certainly one of the rarest souls, has become a very dear friend. Last night I took dinner at her home, and we talked over the Life wonderful, as the spirit of Science has made it to thousands so much more real, so heavenly, and so rich in all needed help. Believe me ever most sincerely yours,

[Rev.] F. N. Riale.

Miamisburg, O., December, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader and Friend:—At the Thanksgiving services of Second Church of Christ, Scientist, in Dayton, O., there were several testimonies expressive of thanks to you, and to God for you, as our Leader. One Scientist was thankful that out of the recent efforts of error to defame you and belittle your work, had come to her a realization of your place in the history of our Cause, and the significance of a woman Leader and Revelator. Another spoke of the bravery and faithfulness of the Pilgrim Fathers in their search for liberty; the war for the overthrow of slavery in our country; and the logical appearing of Christian Science and its message of freedom. Such was the feeling of appreciation of you, dear Mrs. Eddy, as the Leader whom infinite Love, Divine wisdom, has anointed for this work, that when a motion was made to send you an expression of love and loyalty, we gladly responded.

While we know that we comprehend only in a small degree what you are doing for humanity, yet we are thankful for the measure of understanding that has come to us, and for the appreciation and love found in our hearts.

We send this not because you, who know more of the presence of infinite Love than any one else to-day, need an expression of love from us, but because it is a privilege for us to love and acknowledge the womanhood you have revealed to us. Should this reach your eyes, we feel confident that your love will interpret and understand what our words have so inadequately expressed. The only proper expression of love for you must be our living the truth for which you stand, thus proving to the world the value of your contribution to humanity.

May we use your words and send back to you the sweet thought you sent to us not long ago, "If wishing were wise, I would say, God bless you."

Annie R. McCully, *Clerk.*

For the congregation of Second Church of Christ, Scientist, Dayton, O.

Edinburgh, Scotland, Nov. 21, 1906.

Surest of Leaders:—At a time when those who do not know you have been writing,—those whose reports only serve to prove their utter ignorance of you and your teaching,—it seems a special and fitting pleasure to those who do know you,—as do we who daily study the Bible with and through your writings,—respectfully and proudly to send you greetings. The deepest and most satisfying happiness I have ever known has come to me—along with health and strength—during the last four and a half years, through the study of Christian Science, and I have thus recognized God so clearly that I could never again mistake either His messages or His messengers. We do not need to see God's messengers, we know them indubitably through Him—"Love" being "reflected in love" (Science and Health, p. 17).

That you may or may not see these individual lines is of little moment, but I do rejoice to know that the wave of love, gratitude, and respect that so often fills my heart for you must long ere this have reached you from

Your student's student,

Alice Edmunds.

Philadelphia, Pa., Dec. 1, 1906.

To Our Beloved Leader:—We, the members of The Philadelphia Institute of Christian Science, assembled in annual meeting, are deeply cognizant of our blessings received through Christian Science, and we desire to send to you, our beloved and loving Leader, this expression of our earnest, deep, and abiding gratitude. We realize to some degree how void and blank would be our lives without your message which has made plain to this age the teachings of Christ Jesus. Without your consecrated love in listening to the Father's voice, without your courage and devotion in obedience thereto through the early years of discouragements and persecutions, and your continued obedience and meekness through the later years of success, mankind would not now be so richly blessed with this healing and uplifting truth. Lovingly,

Ceylon B. Taylor, S. Edward Way.
Mrs. M. Ella Randall, *Committee.*

Denver, Col., Nov. 20, 1906.

Beloved Leader:—The recent persecution by pulpit and press has fanned my love for you to such a degree that I feel impelled to express to you my endless gratitude. I am only a Jewess, touched by the divine breath of Christian Science, taught by one of your "seventy" faithful ones. The blessed truth revealed in your text-book, Science and Health, has lifted me from the depths of despair. What mechanical prayers, *materia medica*, change of climate, science (falsely so called), etc., had failed to do, the study of your inspired book has accomplished. It has transformed me from a helpless invalid into a useful member of the community. Thank you, beloved Leader, for your faithfulness, self-abnegation, wisdom, and purity, which have enabled you to give me the keys to the kingdom of heaven.

Humbly yours,

Claudia Marx.

[Telegram.]

New London, Conn., Nov. 29, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

In the sacred solitude of your communion with divine Love may the angels of His presence whisper to your loving heart the unbounded gratitude of this branch of your planting, First Church of Christ, Scientist, of New London, Conn., for the blessings which Christian Science has brought them, made possible only by your never-failing loyalty to Principle and your Christlike love. We rejoice that the ideal man has appeared through your demonstration of the truth, and we deeply desire to be worthy to follow you. Yours in tender love and loyalty,

First Church of Christ, Scientist.
Laura C. Tucker.
James E. Comstock,
Committee.

THE LECTURES.

DETROIT, MICH.

Mr. Edward A. Kimball delivered a lecture for First Church of Christ, Scientist, Detroit, Mich., at the Light Guard Armory on Dec. 11, and was introduced by Mr. Enoch Smith of the United States Savings Bank. Mr. Smith spoke in part as follows:—

We have gathered here this evening to listen to a lecture on a subject which has been much in public thought of late, and widely discussed by the press of our country. There is much misapprehension in the public mind as to what Christian Science really is. Many there are who have a great store of information which is not true, regarding this subject. Many have little or no knowledge concerning it. Since the beginning of history mankind have ceased not in their pursuit of the truth; and until perfection shall have been reached, profoundly is it to be hoped that men may never lose their divine dissatisfaction with what comes short of Truth. I understand Christian Science to be founded on the Bible, to be an interpretation of the Scriptures by the great and wise Leader of the movement; and that its tenets teach and instruct how best to follow in the footsteps taken on this earth nineteen centuries ago by the mighty Nazarene. I take it to be the genius of our country and the present temper of our people to give to every man and to all questions submitted to them a square deal. A movement which in thirty short years has attracted to itself thousands in our own country, and whose adherents are found in nearly every country of the world, and in the islands of the sea, is entitled to at least a fair hearing. In order that all who desire correct and authentic teaching on this subject may be reached, The First Church of Christ, Scientist, of Boston, has established a Board of Lectureship, and the member of this Board who will address us this evening is eminently fitted to do so by reason of his experience. He was for many years a successful business man. Nineteen years ago, when hope was dead within him and when he had prepared himself for the supposedly inevitable death which was impending, he was healed by Christian Science. Since that time, as Reader, practitioner, teacher, and lecturer, he has devoted his whole life to this great Cause.—*Correspondence.*

WASHINGTON, D. C.

An audience that filled the National Theater yesterday afternoon [Dec. 9] heard the Rev. William P. McKenzie, who lectured for First and Second Churches, on Christian Science. He was introduced by Brigadier-General Amos S. Kimball, U. S. A., retired, who said in part,—

I appreciate the honor of being selected to preside over this meeting and introduce to you a lecturer on Christian Science, for this is a subject that appeals to me strongly. During the winter of 1902–3, while suffering from a severe physical breakdown caused by official responsibilities incident to our war with Spain, Christian Science first came to my notice. The reading of the book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, completely regenerated me, physically, morally, and spiritually. It brought me to an understanding of God, and man as His image and likeness, showing me that I had been suffering from my ignorance of God and my relations to Him. This spiritual understanding was "the pearl of great price," and this Christian Science has been to me,—a key to the Scriptures, unfolding their precious teachings. I honor and respect the author of this great book, who, by her spirituality, consecration, and fidelity to divine Principle, has led with undaunted courage a great army of Christ's followers during this warfare between Truth and error, Spirit and matter.—*The Times.*

BRISTOL, ENGLAND.

"Christian Science, its Necessity and How to Make it Practical," was the title of a lecture which was delivered at the Lesser Colston Hall last evening [Dec. 13] by Mr. William N. Miller, K.C., C.S.B. There was a large attendance, and the lecturer's remarks were followed with a great deal of interest. Major E. E. Carter, C.M.G., M.V.O., was in the chair, and spoke of his attendance at the first Christian Science lecture held in Clifton some two and a half years ago. That interest in Christian Science had increased was evidenced by their attendance that night. These lectures were given by recognized local organizations that heartily welcomed the attendance of the general public, for they formed a very important part of the work of Christian Science. In their lecturer they had one who commanded their attention. A Canadian by birth, and English by descent, Mr. Miller had had the honor of being selected as a K.C. during his professional career as a barrister. As a Christian Scientist he had had the privilege of being a personal pupil of Mrs. Eddy. He was, therefore, competent to give them authentic information of the work.

The Bristol Mercury.

TEXARKANA, ARK.

A splendid audience greeted Bicknell Young at the Grand Opera House on Sunday afternoon [Nov. 18]. He was introduced by Rev. James Thomas, who said in part,—

While I am a loyal member of the Methodist Church, and it suits me, I appreciate and love all men, of whatever name or order, who are "to preach deliverance to the captives and recovering of sight to the blind, to set at liberty them that are bruised." As I understand it, the history of Christian Science dates back to 1866, the year of Mrs. Eddy's discovery, and the growth of the movement during subsequent years has been so rapid that the denomination now commands a position of wide influence and power. I do not understand it to be the purpose of Christian Science to interfere with those who are satisfied with their religious beliefs, nor do they seek to force their views upon those who do not agree with them. In a quiet, unostentatious way its adherents have gone about their tasks. There have been no sensational sermons such as attract vast metropolitan audiences. It does not grow by abusing other denominations or by criticising other beliefs. I do not understand its purpose to be to supplant primitive Christianity, but to render our understanding of it more practical. It is the claim of Christian Science that Jesus proved what man may do through absolute reliance upon God, and Mrs. Eddy teaches how it may be done.—*The Courier.*

LECTURES AT OTHER PLACES.

Belfast, Ireland.—Rev. Arthur R. Vosburgh, Oct. 28.
Hackensack, N. J.—Edward A. Kimball, Nov. 1.
Hull, England.—Rev. Arthur R. Vosburgh, Nov. 2.
Dublin, Ireland.—Rev. Arthur R. Vosburgh, Nov. 5.
Beaver Falls, Pa.—Edward A. Kimball, Nov. 5.
Plainfield, Ill.—Edward A. Kimball, Nov. 6.
Brighton, England.—Rev. Arthur R. Vosburgh, Nov. 12.
Constantine, Mich.—Edward A. Kimball, Nov. 16.

NEW PAMPHLETS.

Two new pamphlets have just been placed on sale,—"Christian Science: Humanity's Helper," a lecture by Prof. Hermann S. Hering, C.S.B., and "Christian Science: Its Nature and Purpose," a lecture by Bliss Knapp, C.S.B. Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

I was healed by reading Science and Health about eighteen years ago. I had quite a number of ailments, chief among them being throat trouble, from which I had suffered since childhood. If I was in the least exposed to the weather, or got my feet wet, I was sure to have a terrible time with my throat, so that I could neither speak nor swallow. Different physicians had been tried, but no relief—not even temporary—had been gained from any of them, although they did their best. Lancing was tried many times, but always failed to relieve me. It was after one of these awful experiences that Christian Science was presented to me in a very practical way. I came to know personally of the healing, and wanted it for myself. I got the Christian Science textbook, "Science and Health with Key to the Scriptures," and began to read it, and was healed perfectly, or rather I was born again, for it changed things for me entirely. The suffering and pain had passed away and I knew they could never have any power over me again. On the third day after the reading began I threw away all my medicines and remedies of every kind and have never had occasion to return to them.

MRS. FLORENCE P. LANHAM, Memphis, Tenn.

When I first heard of Christian Science I had suffered for twelve years from a severe pain in the side, which was diagnosed as kidney trouble and necessitated frequent lying down in order to get any relief. I was also a sufferer from heart disease, and as I was growing worse each year, in spite of all medical aid, I readily listened to a friend when told of the relief she had gained in Christian Science. I at once bought a copy of Science and Health, and began to read it. It seemed to me the most beautiful teaching I had ever read, and to be exactly what I had been looking for all my life. As I read all my sickness was healed, and I was a well woman; but with health came the necessity to devote myself to business, and gradually I neglected to read the literature. I lived thus for eighteen months, so immersed in business that I seemed to have no time for anything else. About this time I noticed two small growths, one in either breast, which grew rapidly. As a doctor was attending my husband at the time, I asked him to treat me also. I faithfully carried out his directions for months, even after he had pronounced an operation the only hope. It was at last borne in upon me that something else must be done, as I was growing rapidly worse, the pain preventing me from sleeping at night. I dreaded the knife, as two sisters had passed away through operations for the same trouble, and in this extremity I turned to Christian Science and took treatment. The first treatment relieved all pain, and with less than ten treatments I was entirely healed. That was two years ago, and I have had no return of the trouble. I have had many proofs of the power of Truth to save from the various troubles which beset us in daily experience, and I have proved that Truth is an efficient and efficacious remedy for error.—MRS. EVA GILMORE, Hamilton, Canada.

Prior to April, 1899, and while residing at Charlieville, La., I suffered four years' semi-invalidism from a complication of diseases, and was in a serious condition. Never having been strong, even as a child, my health grew steadily worse after the birth of my child, and although I had the best medical treatment and observed a strict adherence to the laws of hygiene, health foods, etc., I was only temporarily benefited by anything I tried.

I had never seen a Christian Scientist, or a copy of Science and Health, nor had I ever heard anything favorable of Christian Science; but I was searching for health, and striving for the higher life, and when a copy of the *Christian Science Sentinel* fell into my hands I was ready to investigate anything which seemed to offer me ground of hope. I at once ordered a copy of Science and Health, and after reading it almost constantly for about two weeks, I suddenly awakened to the realization of the fact that every physical ailment had disappeared except an abnormal growth, which did not entirely disappear until about three months after.

For this physical healing I feel very grateful, but for the spiritual uplifting, and the understanding of Life, Truth, and Love, words are inadequate to express my gratitude to God for what He has given us through our beloved Leader, Mrs. Eddy, in Christian Science.

MRS. LAURA M. FAULK, West Monroe, La.

Christian Science first came to our notice seven years ago. We had a boy six months old who had been suffering from a skin disease and bowel trouble for about four months. He was constantly under a doctor's care and received no help, but grew worse. We gave Christian Science a trial, and within a week he was perfectly well, his face having another look entirely. About one and a half years before this my wife began to feel sickly, and after an examination the doctor said she had serious lung trouble. She rapidly grew weaker, until we read Science and Health, and the baby was healed, then she took a new hold on life and was soon herself again. When attacked with fever at one time, I had my wife read to me from Science and Health, and I was soon better. Our boy was also healed of serious bowel trouble and of scarlet fever within a week. Our two children know of nothing but Christian Science, and it not only heals our diseases but casts out fear and gives us the quiet assurance that God is Love and God is everywhere.

MATTHEW MACKEY, Olyphant, Pa.

I feel it my duty to return thanks for the many blessings that have come to me in my three years' study of Christian Science. My work up to the present has been more in the overcoming of bad habits than in physical healing, although I have realized Truth's power in this direction also. I will mention one or two experiences which are to me as milestones in my journey from sense to Soul. The habit of smoking was the first to go. I had often tried to overcome it through will-power, but was never successful. After studying Christian Science for three months the habit completely left me. I think this expresses the situation, because I did not work against the habit at all, it simply vanished. The next to go was the habit of drinking. Although I was moderate, still the habit was there and such habits are like weeds, which grow very fast if not uprooted. I am, therefore, very thankful to say that this evil also has completely disappeared, and although my work as a traveler brings me in contact with those who drink, it is a pleasure for me to say "No," when it is offered me. These two experiences alone are to me a convincing proof of the saving power of Christian Science,—that it really cleanses the sinner as well as heals the sick. Another grand proof that Christian Science is of God, is the intense desire for spiritual things which it has given me. Before reading Science and Health I seldom read the Bible, and now it is my constant companion, my guide-book. I begin to understand what the Master meant when he said that "man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." Is it any wonder that we love Mrs. Eddy, the one who has brought us this practical seven-days-in-the-week religion?

WALTER J. MARSON, Beverley, Yorkshire, England.

Paul says, "I can do all things through Christ which strengtheneth me." Since coming into Science I have proven this statement true many times and in many ways. I could not begin to tell in a short testimony half the experiences I have had which have proven the power of good over evil. Before knowing anything about Christian Science I could not remember when I did not have trouble with my eyes. I was treated by different doctors, and was told that eventually I would become blind. When I first began reading Science and Health, if I attempted to read at night I experienced much trouble, but now I can read as much as I wish, night or day, without any inconvenience whatever.

Two or three years after coming into Science I awoke in the night and found such an alarming condition manifested in my little girl that it seemed to put me into a frenzy of fear. I asked my husband to go for a Christian Scientist. He said, "Oh, we do not want her to die;" and started from the house. He soon returned, and said that a *doctor* would shortly be there. I begged him to get a Scientist to help me, and he consented to do so. While he was gone I took my Bible and read, "Thou hast delivered my soul from the lowest hell." The doctor arrived soon after, and when told that a Christian Scientist had been sent for, he refused to prescribe for the child, but my husband persuaded him to examine her and tell what he thought of the case. He said that she was a very sick child, and that he could see just how it would end. It was evident that he did not think she would get better; but when the Scientist came, how changed everything seemed. In a very short time our little girl was free, and asked to be taken to bed. This happened about two o'clock Sunday morning, and the child was in her usual place in the Christian Science Sunday School that day. It seemed as though God himself had been with us, and I knew that indeed He had. Before this happened my husband had not been willing to have the *children* treated in Science, but now he never opposes and has had treatment for himself in a severe case.

Some time I hope to prove by deeds my gratitude, for words can never do it. Mrs. Eddy has set us the example of obedience, of faithfulness and loyalty to Truth. As we see this, even in the midst of oppression, in mortal sense, we know that because God is for us "the gates of hell" shall not prevail against us. May I be found worthy of the name Christian Scientist.

Mrs. Jessie A. Stanly, St. Johnsbury, Vt.

After taking three or four treatments in Christian Science, I lost all desire for the use of tobacco in any form. This meant a great deal to me, as two years ago I smoked a great many cigarettes daily, a habit which harmed me very much. I am indeed grateful that all craving for tobacco has vanished. After coming to Science I asked my practitioner if it would be sinful to attend horse-races, and he told me to let divine Love guide me. The result was that the desire to attend races has also left me. I also wish to say that previous to taking treatment I had not the least interest in the Bible; now I am happy to say that upon rising every morning I take great pleasure in going over the Lesson-Sermon, by which I have been greatly benefited, physically, mentally, and above all morally. It is my daily prayer to be able to prove my love for our great Leader by being a faithful and worthy follower.

James N. Lindsay, New York, N. Y.

When Christian Science came to me I was a chronic sufferer from rheumatic trouble, having had it from childhood in various forms; and I had never been free from pain any length of time, as physicians were able to give me only temporary relief. As I grew older the disease assumed more aggravated forms, finally seeming to affect the heart. For nearly two years the left hand and arm was almost helpless, and a continued use of it, even in sewing, would increase the heart trouble so that my life was threatened many times. I also had severe nervous and bowel troubles. I was, however, perfectly healed in two weeks, by Christian Science, and from that time on was able to do work and endure exposure that had never been possible to me before. I was healed in 1886 and still enjoy the best of health.

Viola E. Philliber, Elkhart, Ind.

I was treated by many reputable physicians in Indiana, and failing to receive aid, one doctor suggested my going to California, and although others opposed it as being useless, I came as a last resort to Los Angeles. Here I was again under the care of other physicians and specialists. According to them, I was afflicted with kidney, liver, and bladder trouble, which finally developed into a most serious disease. In addition to these difficulties I was afflicted with another severe ailment. I was advised to see a specialist, who said I was in the last stages of the disease; that it was liable to affect my reason, and would eventually cause my death. At this time Christian Science was brought to me, and fearing greatly the diagnosis of the last specialist, I turned to Truth and was healed of all my ailments in about fifteen treatments. Since being healed completely I have not only been able to keep well myself, but have been enabled to aid others. Christian Science has not only aided me physically, but has remedied a fretful and disagreeable disposition. It has given me a love for Bible study, and been a great educational factor. I can bring ample testimony to the truth of all these statements, if so desired.

Mrs. Ione S. Lockhart, Los Angeles, Cal.

I cannot remember the time since childhood when I could say I was well. I tried many physicians, paying as high as four hundred dollars to one,—sometimes fifty dollars for consultation; also tried different climates, but received no permanent relief. I hardly knew a day without pain, and finally came to think I must suffer this way through life. For a number of years I was troubled with severe pain in the eyes. Neither oculists, physicians, nor the wearing of glasses helped me, and I would lie for hours in a darkened room, very ill from the effects of the pain. I was also subject to rheumatic attacks, and was in a very miserable and dangerous condition from the effects of a two-months siege of this disease. An excellent physician diagnosed the case as a severe nervous condition, brought on by hearing in my weakened condition of two serious disasters. It was at this time that a friend who is a Christian Scientist called. I was too weak to sit up, and told her how ill I had been. She said, "Did you read the 'little book'?" A copy of Science and Health had been in my possession a year; I had tried once to read it but could not become interested, so did not try again, and I answered her in the negative. She spoke, however, with such assurance of the help to be had from reading the text-book, that I could not forget it, and thought I would try once more. I had not read long before I received mental relief. After reading about three weeks I was sure that I could be cured, so I called on a practitioner and stated my case to her. She had me stop all medicine and stimulants, and after about five weeks' treatment she advised my trying to do for myself. It is now over eighteen months and I have called upon her but once for help. The mental trouble has all been overcome and I suddenly realized that my eyes were not hurting me. I have taken no material remedies and can now say I am well, and at a cost of less than thirty dollars. I feel that this friend was sent to me by God, and my heart is full of gratitude to divine Love.

Words are inadequate to express my thanks to Mrs. Eddy for giving us Christian Science, and while I am truly thank-

Digitized by Google

ful for the physical relief, I prize above all else the spiritual uplifting, and the help which comes to me daily.

MRS. W. M. PERRY, Everett, Wash.

I write these lines in gratitude for what Christian Science has done for me after years of suffering. I was suddenly taken very ill one night, and two physicians were hurriedly called, one of whom had been attending me for some time, and had done for me all that *materia medica* could do. Their final verdict was that it would be weeks before I could expect to be even comfortably well; also that I was liable to another attack at any time, with the most serious results. My sister had been healed by Christian Science several years before, after all other remedies had failed, and she was now sent for. She arrived about three o'clock, and by nine o'clock I was asleep, the first time in many hours. About midnight I awoke, and to my joy found myself well. The second day the doctor, who had before this been coming at least twice a day, discharged himself, saying I was perfectly well, though he did not understand what had cured me.

My physical healing was quick, but it took months and even years for me to get a glimpse of the great spiritual truth that Christian Science is teaching the world. I have many times had to prove this truth, both for myself and others, and in this way have taken a few steps on the road along which our Leader is so far in advance. I have no words in which to express my gratitude to God, and to her for what she has done; but by works, not words, we are known.—JESSIE H. CARRICK, St. Johnsbury, Vt.

I have enjoyed the peace and happiness of Christian Science for over four years, and during that time have received many blessings. I have also had many beautiful demonstrations, both spiritual and physical. I became interested in Christian Science through a friend who had taken up its study, and she invited me to attend with her a Wednesday evening meeting in the Christian Science church. I knew very little of Christian Science at the time, but I shall never regret that I went to the meeting. I have learned since that time that the physical healing is not the only blessing in Christian Science, but that the greater blessing is the spiritual understanding which I have received, together with many convincing demonstrations that Science and Health teaches the true Christ-method of healing, for which I gladly give my sincere thanks to God, and to our dear Leader, Mrs. Eddy. I remember with heartfelt gratitude how lovingly I was welcomed in the church where I first heard those wonderful and most impressive words,—that God is Life, Truth, and Love,—the words that gave me the right idea of Christian Science and laid for me a foundation in the truth. I can truly say that Christian Science is the only religion in which I could gain an understanding of Christ's teachings. I am also most thankful for our helpful periodicals. To me each and every copy is stamped with the seal of divine Love. I trust that I may go on and be a staunch and loyal worker in the truth.—MINNA H. BADER, Detroit, Mich.

Before coming into Christian Science I suffered severely with stomach trouble for four years. I took every kind of medicine which I thought would help me, and while each one seemed to relieve me for a while it would soon lose its effect. I seemed worse than ever, could eat little or nothing, and was always in distress,—did not know what comfort was. Two weeks before I heard of Christian Science I felt I was slowly descending to the grave. A very serious bowel trouble had set in, and I experienced a feeling of terror. But just then, when I thought there was no help, a friend told me of his healing in Christian Science and advised me to see a practitioner; which I did, and took treatment. The practitioner told me to go home and eat whatever was set before me. I did so, and it did not hurt me. By degrees every ailment left me, and I was and am now in splendid health. I understand that God's power healed me.

MRS. ELIZA WHALEN, East Grand Forks, Minn.

During the year 1892, while living in Chadron, Neb., I was in such poor health that our family physician, after making a careful and thorough diagnosis of my case, pronounced it a serious disease of the kidneys, and said that its fatality was only a question of time, the verdict of *materia medica* being that the disease is incurable. I took the medicine prescribed for me for some time, the conditions continuing about the same, and any one who knows anything about this disease will readily understand what I suffered. Without hope and utterly discouraged, I decided to try Christian Science, and I can thankfully say that I was quickly healed and have enjoyed good health for a number of years. I am glad to be able to give my testimony in behalf of Christian Science.

MRS. MINNIE L. MARSHALL, Omaha, Neb.

For more than a year I was under the care of physicians all the time, six of the most prominent in the city being employed during this experience. I received only temporary relief, no two of them agreeing in their diagnosis of my case. I then had an acute attack, and the attending physician advised an operation; but having attended a Christian Science testimonial meeting the previous September, I decided to call upon a Christian Science practitioner for treatment. This was in March, 1905. After the first treatment there was a marked improvement, and in two weeks a complete recovery. During the year or more that I was under medical treatment my expense for doctors, medicines, and nurses amounted to between twelve and fifteen hundred dollars. For Christian Science treatment I paid ten dollars. I am at the present time in perfect health.—MRS. SUSIE A. JOYNER, Nashville, Tenn.

Twenty years ago a doctor told me that one of my lungs was in a serious condition. Eight years ago I seemed to reach the climax of suffering, and for one year expected to die. I consulted many physicians, but no two agreed. Baths were fully tried at a sanitarium. I also took massage treatment, and another physician told me he could not help me, and that I must go west. After two trips west I seemed somewhat better, so that I went back to my work at blacksmithing for a short time; but was soon taken ill and gave up work as I thought forever. I then asked my wife for Science help, and in three days' time was healed perfectly, for the aches and pains have never returned and I have done the hardest kind of work ever since. The best of it all is, that I was at the same time saved from the habit of drinking, which had been acquired at the age of fourteen years and indulged for thirty years.

BENJAMIN HAZCAL HAZEN, Owosso, Mich.

Fourteen years ago I was healed through Christian Science of a condition of the lungs which the family physician had pronounced incurable. My mother died of the same trouble when I was not yet four years old, and because I was a frail child the family always maintained that I had inherited pulmonary weakness. When the thing which I so greatly feared did come upon me, I felt absolutely hopeless, and knew that the physicians really could do nothing to save me; that while I might live three or four months, I could not hope for anything more.

When in the depths of grief at leaving a devoted hus-

Digitized by Google

band and two young children, I was told of Christian Science. I immediately sought help through its means and received treatment for about three weeks. I was so much benefited that I bought a copy of Science and Health and commenced reading. I soon saw that it was possible for me to be healed, but I seemed to feel that the healing must come through my own adherence to the truth. I was so desperate in my desire to live that I gave up everything to understand Christian Science. I would not read a newspaper or magazine for fear my thought would be disturbed. I read our text-book and the Bible constantly, and one day in reading the verse from Psalms, "I shall be satisfied, when I awake, with thy likeness," I had such a sense of man as His likeness that I knew I was healed. It was some weeks before I looked well, but I was healed in less than two months from the day I turned to the truth to find Life. I have never had a return of the disease and I am now a strong, well woman.

I cannot adequately express my gratitude in words, but I hope I may so live that I shall reflect this glorious healing truth to my fellow men and women and thereby show my love and gratitude to God and to our Leader for the blessings which have been bestowed upon me.

MRS. INA B. BROWN, Evanston, Ill.

About eight years ago I was healed, in four weeks' treatment in Christian Science, of ailments extending over a period of twenty-five years and as a result of which I had paid on an average one hundred dollars a year to physicians, without any good effect. I had been under the care of several physicians in my own town, and for twenty years under the care at different times of two prominent specialists of Philadelphia, who were treating me for abnormal growths. Finally the time came when I was told that I must undergo a surgical operation, as serious consequences would result if this were neglected. Then my courage gave way, and I was overwhelmed with distress because of my fear of the surgeon's knife, although I was assured by the attending physician that there was no danger worth considering; but this did not give me any comfort. At this time, and after I had consented to go to a hospital for the operation, Christian Science was spoken of to me by a dear friend as a possible way of escape from that which I so much feared. She could tell very little about it, but had heard that it cured disease; so I decided to ask help from a practitioner, and if I was not benefited soon, to go to the hospital as had been planned.

I cannot tell the joy I experienced in the freedom from the burden of suffering and haunting fear I had been under *all these* years, but I give unceasing thanks to God, who has given us, through our Leader, Mrs. Eddy, an understanding of the truths Jesus taught and proved so long ago and which are to-day blessing the whole world.

MRS. A. E. RAHM, Towanda, Pa.

I suffered for several years from uterine and ovarian troubles. I was seldom free from pain, and was frequently confined in bed two or three weeks at a time under a physician's care. At one time I was treated continuously for a period of nine months, after which I was better for a time, but soon relapsed into the former conditions. I employed in all eight of the best physicians in Worcester, Mass., and in Hartford, New London, and Bridgeport, Conn. It was finally decided that only by an operation could a cure be effected. While considering the advisability of the operation, I was told by a friend of the cures performed by Christian Science, and decided to try it. After three treatments and a few months' study of the Christian Science text-book, I was entirely cured. This occurred about seven years ago. Since that time I have been in excellent health, and have done much work, both at home and outside my home, requiring strength and endurance.

MRS. GLADYS L. HOTCHKISS, Stratford, Conn.

Five years ago I was healed of an abnormal growth, also of bowel trouble. Before coming to Christian Science for healing, I had tried many material methods,—*materia medica*, massage, electricity, etc.,—then I was told that I must have an operation. Thinking that this was the only thing to do, and being a widow, with no relatives to leave my children with here, I took my four little ones and started for California, to be with a sister who had offered to nurse me in the hospital at Los Angeles. I was going to leave the children with another sister, who lived at that time at Madeira, Cal. On the way there I stopped to see another sister, who lived near Denver, Col., and she urged me to try Christian Science. When I arrived at my sister's at Madeira, I went no farther. There I wrote to a Christian Science practitioner in Chicago. I had absent treatment, and was healed. I had left my home in South Dakota in September, and in the following March I returned a well woman. I can truthfully testify that I am a well woman. I can do all kinds of work with greater ease than ever before.

Words fail to express my thankfulness to God for this healing; also for the spiritual understanding of the Science of our being, that I have gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy.—MRS. LYDIA ARMSTRONG, Brookings, S. D.

I first heard of Christian Science in 1897. At that time I had been suffering from eye trouble for more than fifteen years, and had worn glasses most of that time. My glasses had been changed by an optician in 1895, but it gave me great pain to use my eyes for any length of time. I commenced taking Christian Science treatment in April, 1897, after I had read the text-book for a few weeks; and after the second treatment I laid aside my glasses and have used my eyes constantly since then with no bad effect whatever. In 1884 I had an illness which left my throat in a very weak condition, and from that time till 1897 I had periodical attacks each winter, which often kept me in bed for a week or more, and my throat seldom if ever felt perfectly well. I was also subject to attacks of stomach trouble, etc. I took treatment four weeks, and during that time I was relieved of the throat and stomach trouble, and felt that if I persevered with the study of Science and Health I would be perfectly healed, and so it has proved. In about one year's study I found myself entirely healed, and I have not lost one day through sickness since I first became interested in Christian Science.

Words cannot express the deep sense of gratitude which I feel to our beloved Leader, as Christian Science unfolds to me through the study of our literature.

ADELIA C. COLLINS, Washington, D. C.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

The world believes in God; never more than now. But its God is not contained in a formula. It believes in Christ, but its belief in Christ cannot be contained in any definition of his nature. It believes in the elemental, eternal, immutable things of everlasting righteousness, but it only smiles incredulously when some self-appointed vicar of the Almighty prepares his map of the everlasting years and denounces those as unbelievers who will not travel toward the forever on his schedule. Our souls have taken ship from ancient ports of thought. We have launched them on a trackless sea of unknown shores. Fearsome yet fearless are we. More than the priests does our age believe in God, but before the mystery of God it is too conscious of its limitations to assume an attitude of egotism or conceit. Its unbelief is in the claim of any set of men that they can set metes and bounds to the purposes and providence of the Infinite. Its real belief is in the sanity and solvency and wisdom of the universe itself. Its hope rests not on externalities. It reaches within the veil.

[*The Churchman.*]

Abroad and at home there is a demand more extensive and more intense than has been known in the history of human experience for a Christianity that represents Christ. It is also true that in spite of the damage and loss of power from its divisions, organized Christianity is doing more for the world than ever before. But when what is being done by all sorts and differing forms of Christianity has been frankly and generously recognized, the whole of it is as nothing in contrast with what the world needs, desires, and is ready for. The manifest power and influence of the Incarnation beyond the bounds of organized Christianity is an inspiring witness to the love of God and to the fact that He does not limit His love and grace to those who disuse and abuse the kingdom which He sent His Son into the world to establish. Divided Christendom increasingly dissatisfies Christians themselves, while it discourages and repels from membership in the Church those who, under the drawing power of the Incarnate Christ, have learned to desire salvation through him.

[*The Congregationalist.*]

The letter of Rev. A. S. Crapsey to his flock in Rochester, which he has decided to leave in obedience to the ruling of the church courts, contains these significant words: "No one but a minister can know how dangerous to his soul is the constant repetition of the acts of the ritual and the continual rehearsal of the words of the liturgy. Through continual use the words become dulled and actions mechanical." Such were the sentiments of the Pilgrim Fathers and the Puritans, such ever will be the experience of those who put form above content, uniformity above spontaneity.

[*The Independent.*]

We are entering on a new era. It shall be greater than the past. What great revelation from God is to be spoken? Who shall speak it? Not *that* man, be sure, who is the most self-confident; not even that man who is most learned; but that man who stands most open to the clear light of heaven—nearest to the divine Principle—and who in all sincerity is willing to be illumined, not by the light of old theories and out-lived faiths, but by that of the infinite Father to-day.

[*The Pacific Baptist.*]

Indeed most of the New Testament seems striving to teach mankind that all God's spiritual gifts are for practical ends, for ministering to life, since God also is wise. Some day the world will understand that holiness is the straightest line to triumphant life, that efficiency is possible only to righteousness.

[*Zion's Herald.*]

There is no such thing as pigeon-holing supplies of grace or hoarding mercies. Live to the full on to-day's grace, and believe that God will do as well, if not better, by you on the morrow.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 505 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By Bliss Knapp. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Special Agent Clark, in a letter from Japan dealing with the rapid development of that country, points out that the Japanese Government is striving to encourage the establishment of all necessary manufactures in order that the nation may be practically independent. In the same way the Government offers the remission of land taxes to those who will cultivate hillside lands, in order to increase the agricultural resources of the country. Great progress is being made in the establishment of textile factories, and Japan is already exporting coarse cotton cloths.

The Government announces that beginning April 1 there will be a rigid enforcement along new lines of the law, prohibiting the fencing of lands embraced in the public domain. Secretary Hitchcock has made public an order to the effect that on and after the date named all illegal enclosures and obstructions on the public domain will be summarily removed without notice and criminal prosecution instituted in the courts against persons who violate the law.

The Jamestown Exposition opens at noon, April 26, 1907. All States and countries, all cities and manufacturing centers, all professions and creeds, all arts and sciences, all callings and occupations will be represented and afford an opportunity to study the progress of the world in these first years of the twentieth century.

The army appropriation bill reported by the House Committee on Military Affairs carries an expenditure of approximately $73,000,000, a decrease in the estimate of the War Department of about $5,750,000, and a little more than $3,000,000 in excess of the appropriation for the current year.

In response to a request transmitted to other Governments by the State Department, at the instigation of the Navy Department, nearly all foreign countries have accepted the invitation of the Jamestown Exposition Company to be represented by a military or naval display.

Experiments with the system of submarine signaling have been so satisfactory to the Navy Department that steps are to be taken to equip most of the vessels of the navy with the proper devices for transmitting and receiving the bell signals under water.

First Assistant Postmaster General Hitchcock in his annual report proposes the increase of salaries of clerks in postoffices and the abandonment of the "backstamp" on letters and postal cards.

Drastic punishment for engineers and other employes who bring on railroad wrecks by disregarding rules for the operation of safety devices is the remedy proposed by the Chairman of the House Committee on Interstate Commerce.

Andrew Carnegie has given $750,000 for the construction of a building to be used by the Bureau of American Republics. Provision for the site already has been made by the United States and the South American Republics.

The use of specially equipped automobiles in the collection of mail matter in Baltimore has proved so successful that the Postal Department is now planning for a similar collection service in several other cities.

Boston's gross debt at the close of 1906, was $100,517,456, and the net debt at the same time was $68,300,702.

During the fiscal year ended June 30, 1906, the United States admitted 1,166,353 immigrants.

Foreign.

The White Star line announces that it has decided to transfer its Wednesday service from Liverpool to Southampton, beginning June 5 with the sailing of the new twenty-five thousand-ton steamer Adriatic. The other vessels involved in the change are the Oceanic, Majestic, and Teutonic. West bound, the steamers will call at Cherbourg and proceed to Queenstown, where they will embark mail as well as passengers, sailing without delay for New York. East bound, they will call at Plymouth and thence go to Cherbourg, ending the trip at Southampton. Wednesday sailings between New York and Liverpool, *via* Queenstown, are to be changed to Thursday and will be maintained by the steamers Baltic, Cedric, Celtic, and Arabic.

The Kaiser, it is reported, has decided to build a new armored cruiser that shall surpass anything already projected for 1907. The Government will ask the Reichstag to sanction a great increase in the proposed tonnage of the cruiser, giving it a displacement of twenty thousand tons. The vessel will be equipped with turbine engines, designed to give her a greater speed than that of any cruiser yet designed. She will be larger and more powerful than even the Dreadnought and Satsuma. Germany will also construct during the coming year two battleships, one armored cruiser, two small cruisers, and twelve torpedo boats. The total amount of the naval appropriation is $69,500,000.

The old Manila and Dagupan Railway has two hundred and ten miles of mileage in main line and branches. It is now proposed to built four hundred and twenty-five miles additional. The northern and southern districts will be connected by a well-equipped steamship line between Pagbilao and Pasacao. The lines will enter fertile and well populated districts that are now producing sugar, rice, hemp, copra, tobacco, corn, and other products. The southern district will traverse the territory which produces the finest hemp in the world. It is expected that better and cheaper means of transportation will greatly develop the resources of all the sections served by both lines.

The scheme for an all-British mail route from London to the Far East by way of Canada, as at present proposed, contemplates the establishment of a new port at Blacksod Bay, in the extreme northwest of County Mayo, and a railway ferry from Stranraer, Scotland, to Larne or Belfast, passengers and mails being carried from London to the steamer's side without change. It is claimed that the use of twenty-five-knot steamers will bring Halifax within four days of London, and that the voyage to Hong Kong and Australian ports will be materially shortened.

Almost immediately after the official announcement of the passing of the Shah of Persia, last week, Mohammed Ali Mirza, his successor, proceeded to the palace, where he was formally acknowledged as Shah by the Grand Vizier and other princes of the royal family and by a large number of high court and Government officials. The enthronement of the new Shah has been fixed for Feb. 2.

The French census shows that France has a population of 39,252,267, an increase of only 290,322 over that of 1901.

On Dec. 31 Cuba had on hand $14,117,000 in cash, of which $884,963 was unappropriated.

Industrial and Commercial.

The Metropolitan Life Insurance Company is to put up in New York a structure even higher than the 612-foot Singer Building. This is to be an annex in the form of a forty-six-story tower to their Madison Avenue block. This building will rise to a total height of 657 feet 5 inches above the curb level. The tower will be seventy-four feet square up to a height of 492 feet 9¾ inches. Above the main section will be a peaked dome ninety-four feet high, with an octagonal cupola, seventy additional feet high, decorated with Ionic columns and crowned with a glass globe four feet in diameter. The tower is to cost $2,000,000.

Forty-nine vessels, valued at $1,072,000, were lost on the Great Lakes during the season of navigation just closed. The aggregate tonnage of these vessels was 43,522, indicating a carrying capacity of about 75,000 tons. Their average age was twenty-five years and five months. Lake Erie had 137 casualties; Lake Michigan, 83; Lake Superior, 71; Lake Huron, 63; Soo passage, 56; Detroit-St. Clair Rivers, 105, and Lake Ontario 19.

The total shipments of shoes from Boston for 1906 were 5,179,543 cases.

General.

Doctors Grenfell and Hunt have returned to Egypt to make further excavations at Oxyrhynchus. The finds of last winter were the greatest that had fallen to the lot of excavators in Egypt. On one single day nine texts were discovered, several entirely new, including new odes of Pindar and parts of a lost tragedy of Euripides, the "Phaedrus" of Plato, of the "Panegyricus" of Isocrates, and the speech of Demosthenes against Boethius. The Pindar manuscript was about A. D. 100, and constitutes an addition of the first rank to Greek literature. The new Gospel fragment, found later, contains a complete dramatic episode: Jesus challenged by a Pharisee, who reproached him for entering the sanctuary without having performed the requisite ceremonies of purification. The Pharisee recounts the different cleansing rites which he has observed. Jesus replies by recalling the foulness of the pools below the Temple hill and by the striking contrast between the outward bathing prescribed by Jewish ritual and the inward cleansing of the waters of eternal life.

A process has been invented, involving electricity, by which peat can be freed from its moisture and rendered nearly as hard as coal at a cost of three or four shillings per ton. The successful and commercial solution of peat manufacture process, says the *London Mail*, is of great import to Ireland. It is estimated that about one-seventh of the total superficial area of the island is composed of peat bogs, aggregating some 2,800,000 acres.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A NEW YEAR GREETING.

Boston, Mass., Jan. 1, 1907.

Beloved Leader:—The chimes of The Mother Church rang out at midnight a salutation to the New Year, and listening to "O'er waiting harpstrings," by our Leader, and "The clanging bells of time," there wakened anew in my thought a welcome to the dawn of Christian Science. We have given special heed this year, in our home, to the unfoldment of the spiritual import of Christmas, as found in "Miscellaneous Writings," in "Christ and Christmas," and in "Christmas as in Christian Science" (*Christian Science Journal*, January, 1906),—all from your pen; and in proportion to the surrender of the material sense of the day, we have gained its true significance. Not by outward service, ritual, or gift-giving, but in the advent to human consciousness of divine sonship, is the Christ borne to earth. We find this teaching in no other author's writings, and in no book but the Bible. Increasingly do we rejoice that Immanuel—God with us—is revealed in Christian Science.

As a child it distressed me to read of the unjust and cruel treatment which Jesus, the Messenger of God, received, and I prayed that should Christ reappear during my stay on earth, I might know and follow him. Recognizing the healing power of God in your teachings, I felt assured that Christ, Truth, was again at hand, and I sought to follow the Christian Science movement. To my surprise I found history repeating itself, and that spiritual teachings were still unwelcome to the carnal mind.

The memory of my first interview with you still throws light upon this sad phase of Christian Science history. Some one mentioned to you that certain students, forsaking your instructions, refused to acknowledge their mistake, and were circulating cruel falsehoods to influence others against Science. You quietly responded that the love which was coming to the world through you was the greatest rebuke to such a condition of thought, adding, "Sometimes these unkind thoughts come about me like dark clouds, threatening to envelop me, but they never touch me, and why? Because my thoughts are going out in love to these students with a desire to do them good." That glimpse into a life motive, sustained by an unfailing love, satisfied me that the Cause of Christian Science was on a genuine and absolutely safe foundation; that it was out of a proved experience you had written,—"Clad in the panoply of Love, human hatred cannot reach you" (Science and Health, p. 571). No one unless inspired of God could meet so wisely and patiently the shortcomings of students, or present an undeviating adherence to Principle towards those who rise up against this truth.

In "Choose Ye," "Personal Contagion," and "Harvest," there is poured out more than there is room to receive; what wonder if some of the overfilled vessels are emptying themselves of error in consequence. As your reflection of the "charity that endureth all things" leavens the lump, there must follow less satisfaction in unkind criticism, ridicule, and malice, and more desire to know and do the will of God.

The day before Christmas I received a note from one tempest-tossed and struggling for peace. She wrote, "Oh, if God would only send His Word and heal me, what a blessed Christmas gift!" Quickly my heart responded, "God has sent His Word in Science and Health, and it does heal." *The help was immediate!* Jesus said, "I am the way." Those only who acknowledged his way found salvation. The Christ-way in Science proves itself the way of his appointing. A life-long desire to do good has been satisfied since I have had a spiritual interpretation of the Scriptures. I am fully persuaded that there is no more direct means of blessing others than by extending to them the knowledge of God, as revealed in Science and Health and established in the "Organizations Ample" of The First Church of Christ, Scientist. Herein divine Love meets every human need. (Science and Health, p. 494.)

With deep appreciation of your moral courage and consecration to God and humanity, which are winning the day for Truth, I am sincerely your student,

MARY ALICE DAYTON.

THE POINT OF DEPARTURE.

CLARENCE W. CHADWICK.

THIS thought has often found expression, "The theology of Christian Science is beautiful; but I do not understand the healing." Wherefore the failure to understand the healing power of divine Love? Is it not because the individual has not reached "the great point of departure for all true spiritual growth" referred to in Science and Health, p. 91? For centuries good earnest Christian people have claimed to believe in a God of Love, without knowing how to express or reflect His power sufficiently to heal the sick. They have believed that Jesus did the mighty healing works attributed to him in the New Testament, but they have not thought it possible for others to perform such works, despite his explicit promise that his followers should do so. Why? Because they have failed to discern the spiritual unity existing between God and man, which failure has seemingly obstructed the exercise or reflection of divine power, and relegated Christian healing to the realm of the supernatural or miraculous, instead of seeing in Jesus' healing works the natural, lawful, and orderly reflection of divine power. The belief that man has fallen from his spiritual estate, thereby establishing a gulf between himself and his Maker, has given rise to such expressions as this, recently reported in the daily press: "There can be no evangelism unless it springs out of the idea that men are lost and are condemned to eternal perdition."

Christian Science has come to establish the spiritual conviction and realization of man's unity with God, good; and the moment this recognition obtains in individual consciousness, the power of divine Love is made manifest in reflection, healing sickness and sin without the use of any material means. The healing of Jesus was the natural outcome of the theology which he taught. So it is to-day,—the healing of Christian Science is in harmonious accord with

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

its theology, and is inseparable from it. It is the divinely natural result of scientifically applying what is found to be true concerning God and man, to wit, that because God is holy, man is holy; and in no other way can the power and activity of divine Mind ever be understood. So long as the un-Christian belief is held to, that man is "lost" or "eternally damned," the one "great point of departure" is not recognized, and no healing will or can result. When the professing Christian will meekly and humbly accept the explanation of Christian Science, that man is created in the image and likeness of Spirit and is therefore spiritual and not mortal and material, he will no longer say that he does not understand the healing of Christian Science, but will joyfully prove for himself and for others that he has passed the point of departure where man is supposed to be separated from God. He will get so close to God, good, that he will find in Him everything that is rightfully his by virtue of man's divine inheritance. This will enable him to cross swords with the so-called law of material heredity, and to prove that man is not under any such law, but that he is governed wholly by spiritual law,—the law of perfection. Fear will then give place to a realizing sense of God's nearness, and both sin and disease will disappear under the operation of this same spiritual law. Malice and hatred will be supplanted by love and kindness, and the Golden Rule become the only rule of conduct. He will then comprehend the words of the Master, "None of them is lost, but the son of perdition,"—the false, material concept of man,—and the horrors of any future punishment or damnation will vanish. He will then be constantly occupied in contemplating the blessings which God has already bestowed upon His child. Knowing that there is no anger or vengeance in the divine Mind, he knows that these and kindred qualities cannot be expressed through God's child, and this understanding of man's oneness with his Maker gives him authority to enter a scientific mental protest against the intrusion of all such counterfeit thoughts into human consciousness; it also gives him divine authority to nullify in his own thinking the so-called reality and power of evil; and in no other way will he ever be able to overcome evil with good.

Is it any wonder that our Leader refers to this recognition of man's oneness with his creator as "the great point of departure for all true spiritual growth"? Certainly no more desirable or helpful point could possibly be reached in the experience of any Christian believer, for it means nothing less than the opening of the heavenly gates. How could the kingdom of heaven ever be realized so long as man is regarded as a poor miserable sinner, divorced from his Maker and lost or "condemned to eternal perdition"? The students of Christian Science will never be able to find words for an adequate expression of their gratitude for the revelation of that scientific knowledge which explains the divine oneness of God and man and enables them to approach the point of departure where all sense-testimony concerning man is corrected, and "the old man" of the flesh is exchanged for "the new man" in Christ, Truth. Until this point be reached in one's search for Truth, he will stumble and fall in the midst of conflicting theories and opinions, all predicated of the belief in a fallen man and in a God endowed with human attributes.

The miner does not find his gold until he works to the level of the gold-bearing stratum of rock. So is it with the seeker of Truth,—when he seeks the true idea, the image and likeness of God, he will find it, not upon the level of blind belief or sense knowledge, but in that stratum of spiritual understanding where God and man are acknowledged to be eternally inseparable. Any plane of consciousness that separates the two is a non-gold-bearing stratum, and will yield no returns to him who penetrates to no greater depths. God's likeness, like himself, "inhabiteth eternity," and cannot be found in any material stratum of thought; hence the great need of that point of mental departure where sense testimony will no longer be accepted, but spiritual sense and law will be recognized as the only avenues through which the divine goal can be gained.

The idea of Christian healing as made practical in Christian Science will no longer be misunderstood when this point of departure from human reasoning has once been reached. Drugs and all other material remedies will no longer appeal to human consciousness, for humanity will have found its God; the prodigal will have returned to his father's home in Mind; the divine unity of God and man will have been recognized, and all thoughts of sin, disease, and death will have been lost in the consuming fire of divine Love.

PROBLEM OF THE AVERAGE BUSINESS MAN.

C. W. JENNINGS.

THE question as to why the average business man is not reached by the regular orthodox doctrines is one that has troubled religious savants for a long time, and judging by recurring editorials in theological publications, it has not yet been solved. These objects of proselytism do not seem amenable to any of the ordinary influences that are exerted to secure converts, and in the main they have steadfastly and with evident contentment remained outside the fold.

The principal reason for the apparent hopelessness of the endeavor to reach these is that the evangelists do not seem to have acquired a rational comprehension of their attitude, and have nothing to offer them which appeals to their sense of the fitness of things. A business man is not elated over the promise of a heaven which consists largely of hymn-singing and idleness. His life is mentally active, and an existence which has no intellectual exercise, which offers no assured progress as the result of application and energy, seems distasteful to him, or at least is not anticipated with satisfaction. Then again, the man whose success in life depends upon the application of logical thought to daily problems, will not as a rule accept a proposition whose alleged benefits will come only as he accedes to numerous fundamental statements that must be accepted upon "blind faith." He has to know how, and why, and what, with certainty.

Presupposing, however, that the average man maintains an attitude of receptivity toward anything that may be had without changing this order of thought, which is demonstrable here and now, and which will give its great rewards in his present experience, without waiting until he has gone through the mysterious change called death, there is a way open to him. This way is now being traversed by thousands who a few years ago exactly represented the class under discussion; and their daily lives, experiences, and successes are constant proofs of the fact that in their business and out of it they are receiving more blessings than the most enthusiastic exhorter ever promised them for a much-talked-of hereafter.

This way is Christian Science, which presents a definite rule to apply to all the problems that confront him daily, and which ensures solutions as certain and correct as a perfect trial-balance,—a rule which he can apply at will; and, best of all, which will enable him to banish from his experience the untold vexations that harass every man who has many petty questions to solve and worries to overcome. It is these constantly recurring problems, not the more serious physical ailments, which concern the business man. He listens with mild curiosity to statements of the cure of cancer, paralysis, consumption, and the like; but show him that office worries, the disorders resulting from lack of time for eating, the fear of debts, the mental fatigue and nervousness supposed to come from exacting work, irritation, and the multifarious minor complaints and troubles that are the bane of human life,—that all these

Digitized by Google

may be destroyed easily and quickly and permanently, and you will command his attention at once.

My case is probably similar in the main to that of the class under consideration, who think they have no time for moral questions. Several cures that would ordinarily be considered marvelous, if not impossible, came under my direct observation; but as I had not suffered from other than common ailments, the knowledge of such cures did not impress me particularly, my only conclusion being that Christian Science must be a remarkable therapeutic agent, and so I decided to tell some ailing friends about it. I was living with a family of Christian Scientists about this time, and had read their text-book, absorbing in this way enough knowledge of the system to equip me for the pleasant pastime of demolishing the arguments of some theological acquaintances. Like others similarly molded, when I thought of the Bible and religion at all I looked upon them as things for women and effeminate men to go into hysterics over, having a feeling of contempt for all such "weak speculation." The only benefit I received from this haphazard thought was my mental evolution into a condition that I named my "What's the use?" philosophy, which resulted in the overcoming of a great deal of worry and other mental disorders. This philosophy was a sort of stoical, semi-fatalistic doctrine, with a little Christian Science, and some other elements; mostly, perhaps, sheer stubbornness and contrariness.

Then came physical troubles in my family, the failure of physicians and surgeons to give more than temporary relief, and the imperative necessity of turning to Christian Science. This brought health, and somehow there gradually came a climax in my home-made mentality, when I realized that its sole reward was the substitution of cynicism for happiness, a stubborn, forced contentment in conditions that were really unpleasant. After long preaching of contentment as the chief aim of man, I discovered that I was only deluding myself by thinking that my "What's the use?" philosophy could enable me to reach it myself. There followed a genuinely earnest study of Christian Science, the elimination of the links of error from my chain of philosophy, the welding together of the good ones, and with all this came such an unfolding that at last I can now report a real desire to be good for the sake of being good.

This last in particular has been of most importance to me; for I looked upon goodness (meaning the goodness that consisted in not encroaching upon another's visible rights) as a question of expediency rather than of ethics, and considered being good a condition admirable for women and Sunday School boys, but too trifling and effeminate for men. No ordinary man wants to give up his "little enjoyments"—"What's the use?" They do not seem evil to us of twenty-five to forty, nor does the old strait-laced argument that their indulgence will decrease longevity have any effect. We say, "In all probability these habits might be continued at will without any appreciable harm resulting." I have enjoyed these things as much as anybody, and in the midst of them would have scoffed at any one who told me that he could substitute pleasures more attractive than they, and which instead of leaving unpleasant after-affects would bring a prolonged and increasing exhilaration. Through the writings of our revered Leader, Mrs. Eddy, and the help of a dear Scientist who personally guided my faltering steps, I have reached this point myself; namely, thankfulness that for me and all others there is such a new and lasting pleasure. I did not give up a single one of these false pleasures; they gave me up, and so subtly and sweetly that I was almost unconscious of the influence at work and had not a regret. To reach this point of really wishing to be good for good's own sake, and to know that there is no sacrifice of man's real dignity by so wishing, has been a remarkable innovation in my experience.

Let me enumerate some of the benefits that I have derived from one year's earnest daily study of Christian Science: The ability to bring general harmony into my office and business relations. (I do not mean to say that all has become a paradise,—that all discord has vanished, and that harmonious, uninterrupted success reigns supreme,—but enough of the little annoyances—and some of the important ones—have disappeared, to convince me absolutely that as I pursue the study of Christian Science further, one by one they will all go.) The ability to destroy the irritation that comes daily from the thousand and one household vexations. The prompt overcoming of such minor physical ailments as are the pest of any otherwise well-organized physique,—colds, headaches, ordinary fatigue, the discomforts of bad air in the subway, and the finding of real enjoyment in a cold wind. The discovery that as I understand, I am able to prove; that the proving brings manifestations in common affairs. The discovery that God is not a far-off person for women and children to worship, but divine Principle, whose law and rule are to be studied and learned as one would work out a problem in mathematics. The certainty of safekeeping and welfare in daily life. A real joy in the knowledge that at last I have found a God who impresses me as only an absolute Principle can; One to whom I can appeal and can study impersonally, knowing that my own efforts for eternity will bring their reward here and now.

This is the testimony of one who has been through all the ups and downs of a man of the world; who has had all the experiences that are common to such men, and who has been an orthodox thinker, an infidel, a nothing, with an ordinarily good knowledge of all the religious and irreligious beliefs affected by such a class. I can say to every one, and with the utmost truthfulness, that Christian Science is a philosophy, a religion, a healing art,—physical, mental, moral,—the only one that can attract and hold a man of this class, and one that will not only interest him, but which he will be proud to acknowledge and glad to follow. The study of the Bible, in connection with Mrs. Eddy's book Science and Health, will not only be found exceedingly interesting, but it will bring an inward and outward satisfaction which makes it of pre-eminent value to the average business man.

[Written for the *Sentinel*.]

OMNIPRESENCE.

ADELLE E. BURCH.

I CANNOT doubt that Love attends
My every step, where'er I go;
No matter where the way may lead,
Thy presence, Lord, dispels each woe.

Though clouds may gather, and the way
Seem dark and lonely to my view,
Still, when I call, Thy answer sweet
Fills with a comfort, old, yet new.

Then sing, my heart; let joy shine forth
From happy face and love-lit eye;
Let the transforming presence speak
Its mighty message from on high.

With that great presence dwells no fear,
No sense of lack, no lingering pain;
While satisfaction, full, complete,
Stills all the restless search for gain.

Thou art my refuge, Thou my peace,
In safety dwells my soul with Thee;
For Thou art Love, and Thou art here,
And hallowed joy now proves me free.

LORD DUNMORE AND MRS. EDDY.

To the Editor of the *Daily Mail.*

Sir:—As you gave prominence a few weeks ago in the columns of the *Daily Mail* to a report copied from a New York journal respecting Mrs. Eddy's health and alleged approaching dissolution, which report was nothing more nor less than a tissue of astounding falsehoods, I now claim from you the right and the privilege of putting your readers in possession of the true facts of this case, being in a position to do so from personal knowledge.

First of all, let me say that it passes my comprehension to think that any newspaper, claiming to possess even a shred of respectability, could print and circulate the cruel and malicious falsehoods regarding Mrs. Eddy that were published in the New York newspaper referred to, knowing full well that every one of those statements was false, and had been concocted for a most unworthy purpose. It has always been understood that to attack a woman is the act of a coward, and to invade with vulgar inquisitiveness the privacy of her home a proceeding in the worst possible taste; but to deliberately misrepresent an interview with a lady and to garnish and dish up an account of that interview with false descriptions concerning her health and general appearance, descriptions which are too fantastic even seriously to contemplate, and almost too contemptible to refute, is a direct abuse of those privileges which—in a firm belief in the integrity of the Press—have always been accorded to journalists.

It seems, in my opinion, nothing short of an act of barbarism that a gentle, unoffending lady of culture and refinement, whose whole life has been spent in doing good to others, should be called upon to parade herself to satisfy the insolent curiosity of yellow journalism, in order to prove she is alive and well, and is neither dying of a malignant disease nor being impersonated by an impostor.

Mrs. Eddy's home is in Concord, New Hampshire, and having heard that I was in Boston, only two hours distant by rail, she kindly invited me over to visit her. I arrived at her home before she had returned from her daily drive, and so I was able to watch her getting out of her carriage unaided, and I noticed how firmly she walked up the steps into the hall, without the aid of a walking-stick or an arm.

When I was ushered into her study she arose to greet me without any effort, and I must confess I was perfectly astounded at the remarkable difference in her appearance, for she looked ten years younger than she did when I last saw her in the same place two or three years ago. She talked with me on various subjects, and I was as much struck with the extreme vigor of her mind and intellect as I was with her extraordinary memory, as she recalled to my remembrance incidents that took place seven or eight years ago, on the occasion of the first interview I had ever had with her.

Although eighty-six years of age, Mrs. Eddy is as vigorous and healthy as a woman of half that age, and she takes a keen and lively interest in the leading topics of the day. The amount of work she gets through in a day is almost incredible, writing, as she does, her own letters, without glasses, and yet finding time to go up and down stairs attending to her household arrangements. Indeed, her secretary (who has been with her since the year 1881) told me that often when he wanted her for something he would find her down in the kitchen. I mention this latter trivial fact to show you that not only is Mrs. Eddy in the most perfect health, but that she is as vigorous in body as she is in mind.

DUNMORE.

Boston, Massachusetts, U. S. A.

[Z. A. Pfile in a Thanksgiving symposium in *The Orator-Outburst*, Spokane, Wash.]

WHAT HAVE CHRISTIAN SCIENTISTS TO BE THANKFUL FOR?

THE natural tendencies of good citizenship prompt all men to gratitude, and Christian Scientists have reason to be truly thankful. For increased national prosperity and Divine protection which has preserved both nation and individuals from harm; for the fuller understanding of international peace and that wisdom which has maintained harmonious relationship in the great family of nations; for the clearer apprehension of the law of righteousness, increasingly operative in business and political integrity, and the more manifest courage of our public men to live up to their honest convictions as a result of this law applied to twentieth-century needs, contesting the avaricious tendencies of monopolistic evil or personal greed.

Christian Scientists are thankful for the better understanding of the gospel demand: "Let this mind be in you, which was also in Christ Jesus,"—the guiding, governing, and controlling intelligence of the universe, including man,—as exemplified by the Master in precept and practice, establishing the brotherhood of men and nations, and enabling mankind to serve the one good in that unity of purpose wherein there is neither "Greek nor Jew, . . . Barbarian, Scythian, bond nor free: but Christ is all, and in all."

They are grateful, too, for that nearer touch of the spiritual consciousness of "Immanuel" or "God with us," in all the lesser, as well as the greater problems of life—the daily, hourly guidance, protection, and salvation; for the larger grasp of the meaning of Life, a ministry of deeds, molding human existence into closer resemblance to Jesus' example through the living of his precepts.—"Blessed are the meek: . . . the merciful: . . . the pure in heart;" for that greater spiritual awakening in which is being found the answer to Pilate's question, "What is truth?" which has been echoed in all the experiences of suffering humanity throughout the doubts and fears of twenty centuries.

Christian Scientists are most deeply thankful for the unfoldment to the world of the spiritual and scientific import of the Bible through the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, wherein the unprejudiced thought may learn to prove, in the practical results of health and righteousness, the gospel of peace and good will to men; for the unselfish life, wise guidance, and loving counsel of their Leader, whose teaching and example has drawn them with greater confidence and reliance to God and His Christ, led them to anticipate the perfect and peaceful solution of all human difficulties,—the kingdom of heaven on earth,—and taught them to say to all mankind: "Let there be no strife, . . . between me and thee, . . . for we be brethren."

[A. Carter in *The Aldershot* (England) *News.*]

Your correspondent is evidently not well acquainted with the Christian Science movement, else he would realize that many of its adherents have been born and bred in homes which he would himself designate as "religious," though it is true that "very vague ideas about religion" are often to be met with in these homes. The writer, having made a close study of Christian Science for some years, is intimately acquainted with the movement, and is personally acquainted with a large number of its adherents. During this time she has observed that Christian Science is for "all nations and all kindreds;" for those who are hungry, thirsty, strangers, in prison, and sick; that it embraces all ranks and conditions of society, from the highest to the lowest, from the intellectual and scholarly to those whose simple faith, untrammeled by "the wisdom of men," has led them into the understanding of this new-old truth.

Among Christian Scientists are to be found clergymen of

Digitized by Google

the Church of England, who have given up their preferment in order to work in the "good pastures;" the wives and daughters of clergy, who were familiar with the letter of the Bible; men, once public schoolboys, who were duly prepared for confirmation and confirmed, who have regularly studied Divinity while at school, and who have attended chapel daily for many years; university men, who have attended chapel daily during their early manhood. How comes it that all these have strayed? Have they strayed? Are they heretics, or have they found the "green pastures" of which David spoke when he wrote the 23d Psalm? The writer for seven years of her girlhood was brought up in the homes of three different clergymen of the Church of England, and was duly instructed by them; but later her thought dwelt, year by year, upon the promises of Jesus, and nowhere did she see them fulfilled. Her eye constantly scanned the Bible page, and she searched the Revelation of John, but never, until she became a student of Christian Science, did she see the promise of Jesus fulfilled, or obtain any of the "light" for which she had been longing. How comes it that so many whose upbringing has been distinctly religious have been left so starved in mind and often sick in body? Is it reasonable to suppose that such people—thinking people—should for one moment be satisfied to "base their theories upon ignorant statements about the Almighty"? Upon the other hand, what statement could disclose a greater ignorance, *i.e.*, absence of knowledge, than that made repeatedly to the writer (and to many another earnest seeker after that knowledge which Jesus himself said "is life eternal") by educated churchmen, viz.,—"We cannot know these things, we must have faith"?

The critic says, "Mrs. Eddy arrogates to herself a position in some respects even greater than that of our Saviour." Does she? On page ix., in the preface of "Science and Health with Key to the Scriptures" (the Christian Science text-book), the author, Mrs. Eddy, says of herself: "To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ."

When speaking of sin and sickness, your correspondent says, "We inherit them from our first parents." Who and what are these first parents? Is not God the first and only parent of man? Do we not read that "in the beginning . . . God created man in his own image, in the image of God created he him; . . . and God saw every thing that he had made, and, behold, it was very good"? Do we not further read that "all things were made by him; and without him was not any thing made that was made"? Whence came these "first parents" with their foul possessions of sin, sickness, and death? He further says, "Sin, sickness, and death are the works of Satan." Whence came Satan, and who created him? God, good, could not have created evil, and presumably the gentleman will not admit the existence of a second creator.

If we are to regard the storm which Jesus, the "Prince of Peace," stilled as "part of the order of nature," and are furthermore to accept the statement that it was an instance of the "manner in which nature relieves her pent-up forces," and that "the world could not exist without them," we must suppose that Jesus the Christ came not to fulfil the law, but to reverse it; and we must further suppose that God, Spirit, who is wholly good, works through agencies which are not only material, but very evil, such as discord, disaster, and death; and yet we read in the Bible, "Doth a fountain send forth at the same place sweet water and bitter?" and again, "What concord hath Christ with Belial?" Christian Science demonstrates that harmony and law are one.

Are Christian Scientists mistaken, as it is averred, in believing that the Christ command to heal the sick was intended for universal application? In Mark 16 we read, "And these signs shall follow them [not ye] that believe." In Matthew we read that the disciples were told to "teach all nations, . . . Teaching them to observe all things whatsoever I have commanded you" (surely, the healing of the sick is here included). In James we read, "And the prayer of faith shall save the sick." In Luke we read, "And I say unto you, Ask, and it shall be given you." (Who would not ask for health?) In John we read, "Neither pray I for these alone, but for them also which shall believe on me through their word; that they all may be one; as thou, Father, art in me, and I in thee."

What is your correspondent's authority for supposing that the power to heal the sick through prayer alone was a special power given only to his chosen disciples and for a limited period? Can he support this view by a single statement in the New Testament? He says that these "miraculous powers ceased to exist in the Church." However that may be, history will inform him that the healing waters which issue out of the sanctuary (Ezekiel, 47 : 12) are a river which has never run dry throughout the ages, for authentic instances of healing through the power of prayer alone are on record throughout the Christian era, and in this the twentieth century there are thousands of Christian Scientists living who can testify to their healing from so-called incurable diseases through the power of prayer alone, after *materia medica* had failed to cure them.

That Christian Science is the "pearl of great price," "the Spirit of truth," "the Comforter," is no mere statement. It is a substantial and eternal truth and one which the waiting heart, the open mind, the weary and heavy laden——in fine, a once sinning, suffering multitude—are proving daily, nay, hourly, to be the literal fulfilment of the promises made by Jesus of Nazareth. These ever-increasing numbers are moreover proving their faith by their works in the manner which Jesus appointed, for it is no longer open to question that the promised "signs" do follow the student of Christian Science. This is admitted even by those who oppose its teachings.

[Gray Montgomery in the *Omaha* (Neb.) *Daily World Herald*.]

In your issue of Dec. 28, under the caption "Matter, Spirit, or Both," is published a communication from Rev. John Williams, inquiring whether the teachings of Christian Science are "the idealism of Berkeley, or the pantheism of Spinoza—if neither, what?" The following definition of Christian Science is given in Webster's Universal dictionary:—

"The religion discovered and founded by Mary Baker G. Eddy; it teaches that God, the infinite person, is Spirit, Mind, and Love; that creation is therefore spiritual; that matter is a false material concept of the spiritual universe—. . . that man being spiritual, the perfect likeness of God, cannot be, and is never sick. It also teaches that these arguments of truth understood and practised demand the abandonment of sin, and destroy sickness."

This is not the idealism of Berkeley. Berkeley seemed to catch a glimpse into the mental realm, but he failed to recognize that God was the great and only healing power, for he recommended tar-water, and wrote a treatise about its healing properties. It is no doubt true that Berkeley, as well as Huxley, Spencer, and other prominent philosophers, have said that things do not exist as matter. Probably statements from their writings could be found which would show that they taught that the trees, the fields, mountains, etc., which we see, are only mental representations of actuality; in other words, that these things exist only in human thought. But no one since the time of Jesus and about three hundred years thereafter, until Mrs. Eddy discovered it, has contended that all reality is God and His infinite manifestations, and that nothing is real which does not manifest God.

Prior to the discovery of Christian Science the statement that the universe is not material, but exists only in thought, was, as Father Williams says, merely "a petty question of definition." That conclusion was not from the

Digitized by Google

basis of God's allness and the consequent nothingness of His opposite, materiality. When Mrs. Eddy made her discovery Christian philosophy again became practical. Its scientific statements were capable of proof, and were proved by her before being promulgated to the world. Human philosophy has not healed the sick, nor can it do so. To compare human philosophy to Christian Science is like comparing darkness to light. Christian Science teaches that God is infinite and that His manifestations are perfect and real. Therefore, whatever manifests imperfection is not of God and is not real. It teaches us to correct the false, carnal, mortal sense of life, which represents man and all things as subject to discord, decay, and death. Paul said, "To be carnally minded is death; but to be spiritually minded is life and peace." Christian Science teaches us how to destroy carnal, imperfect thoughts and how to become spiritually minded, which is life and peace.

From the above it appears that Christian Science is neither the idealism of Berkeley nor the pantheism of Spinoza. Spinoza taught that God is in all things, therefore God is in evil, in human thought. He also taught that man is developed through matter. Christian Science follows the teaching of the Bible, that God is perfect and spiritual and that man is His perfect spiritual image and likeness. It denies that God ever created evil or that He is in any way responsible for it. Christian Science strongly insists that God is not in His creation; that Principle is not in its idea any more than the object in front of a mirror is in the mirror which reflects it, nor the sun is in the ray of light it produces. (See Science and Health, p. 301.) A study of the meaning of the term "reflection," as here given, should make clear the difference between Christian Science and pantheism.

A careful study of the text-book of Christian Science, and the application of the truths therein taught, will clear up the questions presented; will prove the truth of its teachings by making the student better in health, happier and more harmonious.

[From the *Flushing* (N. Y.) *Daily Times*.]

REAL HISTORY OR NONE.

The *Daily Times* prints to-day evidence which seems thoroughly trustworthy that in an effort to attract attention and enhance the sales of their magazine, the publishers of *McClure's* have stooped to small business.

Immense numbers of people are interested, all over the country, in Christian Science. Thousands of good people belong to that church and accept its teachings, which in this free country is their privilege. They are entitled to a "square deal." A real history, telling only facts, will be widely read, but one which introduces "fakes" is unworthy the reading.

[From the *Westfield* (Mass.) *Daily Times*.]

So inaccurate does she deem the statements made in the opening article of *McClure's Magazine* for January, in what purports to be a "history" of the Discoverer and Founder of Christian Science, and the movement as well, that Mrs. Eddy has replied to the attack in person, and it must be admitted that she riddles the statements so that little is left of them. *McClure's* started off with a bogus picture of Mrs. Eddy and now follows it up with misstatements about her. The series of articles is not likely to have any great value.

See that no day passes in which you do not make yourself a somewhat better creature; and, in order to do that, find out first what you are now. Try to get strength of heart enough to look yourself fairly in the face, in mind as well as in body.—JOHN RUSKIN.

THE LECTURES.

OLEAN, N. Y.

Hon. Clarence A. Buskirk delivered a lecture Sunday afternoon [Nov. 25] in the Olean Opera House on the subject of Christian Science. He was introduced by Mayor E. D. Westbrook, who spoke in part as follows:—

Whether or not we are believers in Christian Science, we cannot fail to note the rapid growth in the number of its followers, and to be impressed by the sincerity of its workers. These facts alone would indicate something interesting and righteous in its teachings. As the world broadens and gets farther away from creeds and denominations, the more do people desire to know the truth. Christian Science is no longer an experiment. It is to-day recognized as one of the leading religious movements, and it appears to be a good every-day religion—full of cheerfulness and sunshine.—*Olean Times*.

CEDAR RAPIDS, IA.

A very large audience listened to an interesting lecture by Mrs. Sue Harper Mims at Greene's Opera House Sunday afternoon [Dec. 2]. She was introduced by Mr. F. F. Dawley, who said in part,—

The quiet, kindly, and beautiful spirit in which Christian Scientists pursue their aims and aspirations deserves the respect and admiration of the world. If all people would emulate this spirit, most of the "bitterness of life would give way to sweetness," and this alone would be enough to justify the Christian Science movement. However much we may differ on points of belief, it is certain that this movement is one that makes for greater peacefulness and serenity and beauty of character, and therefore greater effectiveness in true life. It removes narrowness and bigotry and brings breadth and hospitality of mind. In its strong and quiet growth it is destined to accomplish results for good which are yet undreamed of by the most of mankind; like one of those silent changes within the earth whose progress is not considered and not noted until it has lifted an island or a continent.

The Times.

JOPLIN, MO

Bicknell Young lectured on Christian Science for Second Church Nov. 6. He was introduced by Judge Dabb of the Circuit Court, who said in part,—

The triumph or failure of Christian Science depends, not upon dogmatic assertions in its favor by its adherents, nor the cheap denunciation and criticism of its opponents, but upon the truth contained in its teachings and their effect for the betterment of the human race. This will be tried in the forum of reason. All reasonable minds must admit that Christian Science is accomplishing great good in the world. Throughout our country this organization numbers among its followers thousands of our purest, ablest, and best men and women, whose greatest object and desire in life are to alleviate pain and suffering and purify and make better and happier the lives of our people. Certainly an authorized lecturer and teacher of this army of faithful workers is entitled to our most careful attention and what he says should receive our most serious consideration. While I am not a believer in the teachings of Christian Science, yet with others who believe as I do, I am only too glad to take advantage of an opportunity to hear a representative of this organization who is qualified to discuss the fundamentals of Christian Science and give reasons for the faith that is his.

Correspondence.

ANDERSON, IND.

A large and intelligent audience greeted Edward A. Kimball of Chicago last evening [Dec. 3] at the Grand Opera House in his lecture on Christian Science. The introductory speech was made by Hon. M. M. Dunlap, ex-mayor, who said in part,—

Now, after almost two thousand years, followers of the same Master whose divine power, exercised by him and his disciples, caused the lame to walk, healed the sick, and gave sight to the blind, are demonstrating to the world that these infinite blessings are now as available to the afflicted of body and mind as when the Son of God and his chosen taught and wrought among men. It is not my province now, if I could, to discuss the belief and teachings of those who are known as Christian Scientists. There is one here whose mission it is to do that and who will perform that mission with rare talent and learning. To him it must be a comfort and help to know that neither here nor elsewhere is he voicing a friendless gospel, but one whose tenets are dear to multitudes wherever Christianity has reared its altars.

The truths of Christian Science, not new but newly practised, are filling the world with new light, new joys, and new hopes. To fast swelling hosts they have brought surcease of suffering, peace of soul, and a living knowledge of that love "which passeth all understanding." Christian Science takes nothing from the religion of other Christians, pulls down no pillar of belief based on the teachings of Jesus Christ, impairs no hope nurtured in love of God. If to these it can only add the strength of a completer understanding and a more fruitful faith, it will have fulfilled its exalted mission.—*Correspondence.*

ANN ARBOR, MICH.

Hon. Clarence A. Buskirk, who lectured at Frieze Memorial Hall, Dec. 3, was introduced by Hon. H. Wirt Newkirk, who said in part,—

I feel that in being present here to-night I shall learn something of a subject about which I know but very little; viz., Christian Science. Of course, like thousands of others, I have read more or less upon this subject, pro and con, and I have to a very limited extent conversed with members of your faith as to the claims made for your teachings; but I will say to you frankly that I have read of these claims and discussed these claims made by your adherents with a considerable degree of skepticism, based no doubt to a large extent upon ignorance of the tenets of your faith. As "one swallow maketh not summer," neither do the claims and professions of one or two individuals make a religion, and so, knowing that there are in existence about one thousand churches and congregations of your faith, and that your membership runs into the hundreds of thousands, I will say to you frankly that I am here to-night as an earnest, respectful, and attentive listener to words that I feel will be to me words of instruction, of education, and perhaps revelation; and words of hope, cheer, and encouragement to those who profess the faith and believe in Christian Science, based on the teachings of the Scriptures, which it claims to interpret, giving the Christ-principle in divine metaphysics, which heals the sick and the sinner alike.

Your professions have met the rebuffs and ridicule of the world since their inception. This you must have expected. It has been the history of all time that every new propaganda, whether of ethics, politics, or religion, has been obliged at first to overcome old established ideas and beliefs; each has been obliged to fight its way through a mass of ignorance, skepticism, and unbelief to a place and plane of its own. This your church has done. To this general rule your religion has been no exception.

You have accomplished these things by one characteristic that has seemed to fully dominate all your sayings and doings, and that is the intense faith you seem to have in what you profess; your unswerving loyalty to the tenets of your Mother Church, and your undying devotion to the teachings you advocate. This characteristic is commendable in all legitimate undertakings. It is the winning feature, the force that carries initiative through to completion. No better example of this sort of faith is found in the world's history than in the death of Jesus on Calvary's cross. All through his persecution, and to the time he spoke his last word, begging his Father to forgive those who were his assailants, he never surrendered at one single point the truths he had so long and so well taught among his fellow-men. He never relinquished in the slightest degree his unbounded faith in the promise of his Father in heaven, and became a martyr to that faith, to his belief in the truth, to the sincerity of conviction.

And so I say to you, my friends,—no matter what others may say or think,—you are engaged in the work of uplifting and bettering mankind. You may not follow the same course as others engaged in such work, but the ultimate results will be the same. The world will be the better; and with the faith you evidence, with the earnestness you have in the application of your teachings and belief, I see no reason why, in the near future,—actuated as I believe you are by the best of purposes and highest of aims,—urged on by this sense of duty and the enduring faith of true conviction to your cause and religion, you should not take your place on the high plane of ultimate success, and stand with the other great religious denominations known to the civilized world to-day.—*Ann Arbor Times.*

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

A CARD.

THE article in the January number of *The Arena* magazine, entitled "The Recent Reckless and Irresponsible Attacks on Christian Science and its Founder, with a Survey of the Christian Science Movement," by the scholarly editor, Mr. B. O. Flower, is a grand defense of our Cause and its Leader. Such a dignified, eloquent appeal to the press in behalf of common justice and truth demands public attention, defends human rights and the freedom of Christian sentiments, and tends to turn back the foaming torrents of ignorance, envy, and malice. I am pleased to find this "twentieth-century review of opinion" once more under Mr. Flower's able guardianship and manifesting its unbiased judgment by such sound appreciation of the rights of Christian Scientists and of all that is right.

MARY BAKER G. EDDY.

[We are glad to give prominence to this card from our Leader, and to express our appreciation of Mr. Flower's able article, which pleads so strongly for justice and fair play. We understand that many who wish to obtain this issue of *The Arena* have been unable to procure copies at news stands, therefore all orders should be sent to The Arena Company, Trenton, N. J. The price is 25 cents.—EDITOR.]

THE ARENA.

SEVERAL years ago, after Mr. B. O. Flower had been forced out of *The Arena* and it was in the hands of persons hostile to him and, as he says, to "all the interests that had founded the magazine," there appeared some articles in it against Christian Science and its distinguished Leader, therefore it is possible that some Christian Scientists are under the impression that the management of *The Arena* is the same at the present time as it was when the articles referred to were published, and it is proper to state to our readers that this is not so.

Mr. Flower returned to *The Arena* subsequent to the publication of these articles, and we are informed that "no one to-day who is in the least interested in *The Arena* had any hand whatever in the publication or circulation of the papers in question." We take pleasure in making this statement, in order that the present editor and managers of *The Arena* may be relieved from blame which should in no wise attach to them. Mr. Flower is conducting the magazine upon the lines of clean, high-class journalism and we wish him the success which he deserves.

ARCHIBALD MCLELLAN.

"RESTATED THEOLOGY."

WE have had frequent occasion to comment upon the marked change in religious views which has taken place in the past thirty or forty years, during which time Mrs. Eddy has been a pioneer in the reconstruction of Christian faith. It has been very interesting to note the growth in liberality and the departure from outgrown creed and dogma which has characterized the statements of theologians of note on both sides of the Atlantic, and as Rev. R. J. Campbell of the City Temple in London has recently expressed himself upon what he terms "restated theology," some excerpts from an interview with him, cabled to the newspapers of this country, where he is widely known, will be of interest. He is reported to have said,—

"We object to the formal statements of belief which have distinguished the theology of the past. We object to ecclesiastical labels. . . . The lines of divergence between the old and the new go down deep. The starting-point of the new theology is the belief in the immanence of God and the essential oneness of God and man. . . . We believe man to be revelative of God and that God stands for the infinite reality whence all things proceed. Every one, even the most uncompromising materialist, believes in this reality. . . . The new theology holds that human nature should be interpreted in terms of its own highest form, and therefore it reverences Jesus Christ. It looks upon Jesus as a perfect example of what humanity ought to be in the life. In our limited human experience, so far as we are able to see, the highest kind of life that can be lived is the life which is lived in terms of the whole as the life of Jesus. . . . The new theology looks upon evil as a negative rather than positive term. It is a shadow where light ought to be. It is the perceived privation of good, it belongs only to finiteness. . . . From all this it will surely be clear that the new theology brushes aside many of the most familiar dogmas still taught from the pulpit. We believe that the story of the fall of man in a literal sense is untrue; it is literature, not dogma, the romance of an early age used for ethical instruction of man. . . . We believe not in a final judgment, but in a judgment that is ever proceeding. Every sin involves suffering, suffering which cannot be remitted by any work of another."

While Dr. Campbell said many things in this interview which seem to us to be not so far advanced as what we have quoted, we are glad to note his progressive views.

ARCHIBALD MCLELLAN.

"THY WILL BE DONE."

IT is almost universally admitted at the present time that Christian Science does heal the sick and ennoble character, but an effort is made to attribute this good result to the human mind. People are urged to cultivate "will-power" in order to rise superior to physical ailments, and they are told that thus are the cures wrought in Christian Science, when the very opposite is true. In Science we quickly learn that "what causes disease cannot cure it" (Science and Health, p. 188), and it is now seldom denied that disease as well as sin springs from the so-called human mind. Our text-book says, "Human will is an animal propensity, not a faculty of Soul;" it also says that "Christian Science silences human will, . . . and illustrates the unlabored motion of the divine energy in healing the sick" (Science and Health, pp. 490, 445).

It should be remembered that Christian Science is ever in harmony with the teachings of Christ Jesus, and nowhere do we find that he advocated the exercise or the cultivation of will-power as a means of maintaining or restoring health. On the contrary, he taught by precept and example that the human will must at every point yield to the Divine, before perfect harmony can be established. Most people have struggled long and vainly, in their efforts to be healed or to overcome sin through "will-power," before they were ready to come to Christian Science, and ready to pray understandingly, "Thy will be done in earth, as it is in heaven." In this Science they learn that God's will is the perfection of His every child, and that nothing has power to resist the influence of divine Love. They then find that the recognition of this truth brings to them health, harmony, and prosperity. The continuous attempt to exercise human will-power only results in what has not inaptly been termed a "keyed-up" state—the very opposite to the calm-

Digitized by Google

ness and serenity which characterizes the true Christian Scientist, and which attracts so many to Christian Science.

Some very interesting testimony on this line appears in an Indiana newspaper, which tells the experience of a business man who had been forced into bankruptcy a few years ago despite his utmost efforts. The article goes on to say that in the following year he took up the study of Christian Science, and "from an aggressive, quick-tempered, and vindictive nature—a man who had given over the most of his life to an inherent desire to amass wealth . . . . he was transformed to calmer, better, and holier ideas." It is added that during the last five years he has paid in full the debts from which he had been legally released,—amounting to twenty thousand dollars,—having recently made the last payment. One of the firms to whom he had been indebted, wrote him, "We are very proud of your action—not so much on account of the money we are receiving as on account of the noble example you are setting to mankind in the discharge of a duty which should be considered as sacred between man and man."

The gentleman has, it seems, kept very silent respecting this demonstration of his understanding of the demands of Principle, but in a letter to one of these former creditors he says, "It is to be regretted that I cannot tell all mankind of the great peace and joy which have come to me through this act. If such were possible, I am sure the world would soon experience a decided commercial regeneration." The great Teacher of Christian ethics has said, "My yoke is easy, and my burden is light."

ANNIE M. KNOTT.

AN INCIDENT OF CHRISTIAN LIVING.

THE indifference of the great body of Christian believers to the healing significance of their faith grows more and more surprising as one comes to the realization that this indifference is maintained not only despite the Master's specific commands to his disciples,—which commands many have consented to believe were addressed to these individual followers alone,—but despite the fact that he distinctly represented his healing works to be the natural and inevitable fruitage of that ideal life of purity, right thinking, and aspiration, to the attainment of which every one will readily concede that he is called.

The universally accepted tenor of the Master's teaching affirms that the overcoming of sickness and sin is but the sequence of his consciousness of the Divine presence, power, and love, and none will deny that this God-consciousness is the very essence of true faith; that it constitutes religion, and that we are Christian only in so far as we exhibit such a loyalty to this Christ-ideal as makes our following of the Master apparent, a fact known and read of all men. Our Lord's thought respecting our exhibition of love and spiritual self-command, even under the most trying circumstances, is unmistakable, and its binding obligation upon all his followers has been unhesitatingly accepted by the unnumbered Christian teachers who have persistently tried to make it appear that the healing of the sick is not a reflex of faith and love, but of expert medical skill.

To illustrate: Jesus said, "Unto him that smiteth thee on the one cheek offer also the other; and him that taketh away thy cloke forbid not to take thy coat also." And later he added, "And nothing shall by any means hurt you." This can but mean that Jesus demands of all his followers a life which secures immunity from both physical injury and physical want; but who can even hope to measure up to these requirements in the matter of conduct, so long as he denies the possibility of annulling the asserted material laws respecting injury and want? Who can thus yield his other cheek to the smiter, his other coat to the highwayman, if he is not consciously able to demonstrate the power of Truth to heal both the sense of injury and the sense of need?

Christian Scientists have come to see how Paul, after having been stoned without the gates of Lystra until he was left for dead, could, through his understanding of Life as the present panacea for every human ill, rise up, walk into the city, and on the morrow set out again with Barnabas upon his world-ministry as if nothing had happened. They see, too, how, when suffering from the effects of "an injury that neither medicine nor surgery could reach," Mrs. Eddy, through her awakening sense of the availability of divine Truth, its power to break mortal fetters, could rise from the couch of invalidism well and strong. For them it has been made forever clear that thus, and thus only, is faith proved to be equal to human exigency. If we are not able thus to prove the nothingness of apparent injury and lack, how can we be indifferent to these things, as was Paul, "for Christ's sake"? The life of Christ Jesus could not have found its beauty and completeness apart from that spiritual apprehension which gave him lordship over the claims of material sense, and in his manifestation of authority over disease and every other expression of error he but illustrated the meaning and possibilities of the exalted life which it is certainly the business of every Christian man to live here and now.

We can never measure up to the requirements of this ideal life until we come to know Truth in a way which brings that freedom from the fetters of material sense which Jesus enjoyed and which he promised to all his disciples. The defeat of sickness and suffering is but an incident of the power which is to make for righteousness in the heart of every true believer,—this is the teaching of Christ Jesus which is again being declared and demonstrated in Christian Science.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Fitchburg, Mass., Dec. 31, 1906.

Beloved Leader:—In the *Christian Science Sentinel* of Jan. 6, 1906, you published a statement entitled "Christmas for the Children," reading in part as follows:—

"Methinks the loving parents and guardians of youth ofttimes query: How shall we cheer the children's Christmas and profit them withal? The wisdom of their elders, who seek wisdom of God, seems to have amply provided for this, according to the custom of the age and to the full supply of juvenile joy. Let it continue thus, with one exception: namely, the children should not be taught to believe that Santa Claus has aught to do with this pastime. A deceit or falsehood is never wise."

The wisdom of these words was very forcibly brought to my attention yesterday. A lady, not a Christian Scientist, was calling at my home, and related the following incident: "On Christmas eve, some friends of mine supposed their boy to be sound asleep upstairs, and were busying themselves preparing a Christmas tree in the parlor below. Suddenly the boy appeared beside them, and exclaimed: 'There! Now I have found out about this Santa Claus business! There is no Santa Claus! Now, then, I want to find out about this Jesus business!' " From these remarks it is easy to see that the boy's faith in the genuine wonders connected with Jesus was more than ready to depart with his discovery of the fictitious character of the reputed wonders connected with Santa Claus. It is also evident that, if they are taught to children, the Santa Claus myths become a part of their religious concept; and when these myths are proven false, their faith in the teachings of the Bible and in the trustworthiness of their elders also receives a severe wrench, that may ofttimes count for much in the wrong direction in later years. Then how apparent is the wisdom of the remainder of your words, inspired Leader, in the same statement: "Too much cannot be done towards guarding and guiding well the germinating and inclining thought of childhood. To mould aright the first

Digitized by Google

impressions of innocence aids in perpetuating purity and unfolding the immortal model, man in His image and likeness. St. Paul wrote, 'When I was a child, I spake as a child, I understood as a child, . . . but when I became a man, I put away childish things.' "

Your article on "The Significance of Christmas," first published in a New York paper, and republished in the *Sentinel* of Dec. 16, 1905, was read in a Wednesday evening meeting of our church three weeks before Christmas. As a result of this teaching and the timely reminder thereof, there was but little exchanging of gifts among the adult Scientists of this Field, and many expressed themselves in conversation, in the weeks following, as to what a burden of care had been lifted from them as a result of this courageous utterance from you, breaking in upon the crusted and conventional forms of society, and giving them the courage and adequate motive for discontinuing a practice that is becoming recognized everywhere as unduly burdensome. And there came to us the reminder of the eternity of the Christ, and the possibility of the enjoyment by us of an eternal Christmas, if we look for it not in materiality, but "in spirit and in truth."

Loyally yours,
G. A. KRATZER.

Antofagasta, Chile, Nov. 20, 1906.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—To-day more than ever before I feel such a sense of gratitude to you for your consecrated life, which has led me to Christian Science, that I must express it, however inadequately; although these words may never come to your personal notice. An experience which I should like to relate—during the past week, through all of which I had such a sense of peace and confidence—has led me to write this letter to you. My husband, who is employed as chief assistant engineer on the railway here, was obliged to make a trip into the interior of Chile and Bolivia. He was in a private coach, with one of his assistants and a porter. This coach was attached to the pay coach, which goes once a month to pay the men along the line. As they were nearing the end of a day's journey, at dusk the train was assaulted by bandits, whose object was to rob the pay coach. They were seven armed men, who succeeded in getting away with sixty thousand dollars (Chilean), but as was most unusual, we have since learned, there was no loss of life. As soon as Mr. Minturn realized the situation he immediately declared that God was his protector, and knew that he was safe in His loving care,—and said that at the time he had absolutely no fear. Word was brought to me at half past ten o'clock at night, and although I was assured that Mr. Minturn was perfectly safe, I know that without Christian Science I could not have had that calm trust which it gives one, nor could I have retired with such a sense of peace and assurance as I had and rested quietly through the night. It is for this peace and trust and confidence, and for the understanding of God, even in a degree, and myself as His child, that I owe you, dear Leader, a debt of unlimited gratitude.

Lovingly, from your student's student,
ALICE G. MINTURN.

The Hague, Holland, Dec. 12, 1906.

Dear Mrs. Eddy:—On Saturday evening, Nov. 17, 1906, the Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered the first Christian Science lecture in The Hague, Holland, in connection with our church here. About four hundred people were present in the Diligentia Hall, when the lecturer was introduced to his audience by a well-known barrister, who in very appropriate terms—for the one half in Dutch and the other in English—expressed his views on Christian Science and opened the evening. Mr. Vosburgh was listened to throughout with rapt attention during his clear and explicit statement expounding the teachings of Christian Science. The members of First Church of Christ, Scientist, in The Hague, rejoice in the uplifting which this their first lecture has been to them. From all parts of this little country they had come over to be present on the occasion. We all look forward with joy to the repetition of this new step, which has proved a most valuable aid to us all. With the new year we expect to enter upon our new quarters for the Sunday services, and also to commence the week evening testimony meetings. Our present meeting-place has become too small, our numbers having trebled themselves in the course of the last eighteen months.

With cordial greetings from the members of First Church of Christ, Scientist, The Hague,

I am, dear Madam, yours in truth,
I. I. HELSDON RIX.
Clerk of First Church of Christ, Scientist.

Asheville, N. C., Jan. 4, 1907.

Beloved Leader:—The postman has just brought in Mr. Farlow's letter and the package containing copies of your splendid, clear, concise, and wondrously Christian reply to the January *McClure's*. From the bottom of my heart I thank you for this. We knew that divine Love would meet the needs of this hour, and oh, how good God is, to have given us this from your own pen. It speaks volumes! It is in essence a complete and convincing refutation of all the silly falsehoods that have been hatched and printed of late. It shows your marvelous alertness, clear memory, and active mentality. It is an excellent literary production, and a model that I, as a State Publication Committee, am most grateful to have. My heart has gone out to you of late in unspeakable gratitude and love, and in deeper appreciation than ever before. Just think what it means to the world to have your example! It will lift the standard of mortals, clear the vision, disperse the mists, and reveal the greatest wonder of earth,—a consistent Christian Scientist.

This is a glorious hour. You are fast becoming recognized and appreciated as the greatest of religious reformers. We see in you divine Love blessing its enemies and reforming them. I can never be grateful enough for the privilege of following your wise, loving Leadership in this wonderful age. God bless and keep you.

With devoted love and gratitude,
ELIZABETH EARL JONES.

Scranton, Pa., Nov. 26, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The members of Second Church of Christ, Scientist, of Scranton, Pa., assembled for the purpose of taking the final steps previous to the union of First and Second Churches of this city, wish, as the last act of said Second Church, to express to you their love, loyalty, and gratitude for your priceless teachings and unparalleled example of devotion to divine Principle, which is illumining the world and has enabled us as humble followers to demonstrate in some degree that Mind "which was also in Christ Jesus," with signs following.

We thank you, dear Leader, for your loving humility and patient courage under persecution; and we praise God, who has raised you up to do His work. Our desire is that we may continue to be more obedient; more faithful in treading the path which you have trod before us, and which alone leads to divine harmony. God's choicest blessings be upon you.

Lovingly and gratefully yours,
LOUIS A. WATRES, REBIE E. WATRES,
SUSAN C. HOLLISTER, *Committee for the Church.*

AMONG THE CHURCHES.

NEW HAVEN, CONN.

Agitation and discussion promote and induce inquiry, and it is undoubtedly true that, more than ever before, this is so in regard to Christian Science. It is true beyond all question that within the last few years the number of believers in Christian Science has increased greatly, and the Scientists will tell you it is because they demonstrate the truth, and their witnesses are those who have suffered and been healed; those who have been cured, both of disease and sin.

One year ago last October a few earnest and aspiring Christian Scientists organized Second Church of Christ, Scientist, which is a branch of The Mother Church in Boston. The first service was held in the hall in Chase Block, Nov. 5, 1905. It is a suggestive fact that last Wednesday evening the last meeting was held in this hall. But a little more than a year had passed since the church was organized. Night after night new faces were seen at these meetings; night after night new voices were heard thanking God and Christian Science for health of body and soul. Last Wednesday evening many an eye was moist, many a voice trembled, as the last word was said in the little hall which is no longer large enough to accommodate the number that attend. In future the meetings are to be held at Warner Hall, at the usual hours.

One who attends a meeting of Christian Scientists will be disappointed if he goes there expecting noisy demonstration and blind fanaticism. The solemn hush of the moments devoted to silent prayer, the modest and plain statements of those who express gratitude for healing, after the trusted physician had turned from the bedside of the sufferer, leaving no hope behind, induces serious thought and a desire to understand more of Christian Science.

Those who are strangers, and have thought lightly of Christian Science, if they take up Mrs. Eddy's book "Science and Health with Key to the Scriptures," and start to read the preface, will pause and give a second reading to these lines: "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity. Contentment with the past and the cold conventionality of materialism are crumbling away. Ignorance of God is no longer the stepping-stone to faith."

New Haven Journal and Courier.

CLEVELAND, O.

Third Church of Christ, Scientist, W. 25th Street and Mapledale Avenue, S. W., was dedicated yesterday [Dec. 30]. There were three services, marked by a large attendance. The new structure has been built within six months. The afternoon address was in part as follows:—

Christian Science is a desirable factor in every community, for it heals the sick and teaches them how to carry this healing word to others, and destroys poverty. As a certain philosopher has said, "The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms."

Christian Science is absorbing the attention of cultured and thoughtful men and women throughout the world. It is a religion of love, the love that casteth out fear. Heretofore the Bible has beeen a sealed book to many of us who have tried to live its precepts, but we have lacked the understanding. We now have a realizing sense that God has placed in our hands the "golden key" with which to unlock and appropriate its precious promises, and to know God as omnipotent, omnipresent Love.

This Third Church work began, as almost all Christian Science churches have, in a private house, where the attendance increased in three years to seventy or more, when a hall was secured. After two years' experimental work there, a church was incorporated. Now, after three years of organized effort, we open this building, or church home. May it prove the "open door" through which many shall pass from sense to Soul and lay down their burdens, of whatsoever nature, at the feet of Him whom to know aright is life eternal. To our sister churches in this city we express our gratitude for loving assistance, and may each and all who have contributed to the erection of this edifice in thought and deed receive many fold.

To our Leader, Mary Baker G. Eddy, who by her wisdom has installed the Bible and "Science and Health with Key to the Scriptures" the impersonal Pastor of all Christian Science churches, and who has given us through the Church Manual the privilege of adding this branch to the parent vine,—The Mother Church of Christ, Scientist, in Boston, Mass.,—we reverently express our loving gratitude. May the apostolic Church, wherein healing the sick as well the sinful was the chief corner-stone, be again reinstated throughout the world, and these members prove themselves true disciples, that the blessings they have received through the spiritual illumination may be reflected to whomsoever shall receive their ministrations.—*Cleveland Leader.*

CARMEL-BY-THE-SEA, CAL.

Four years ago, with the inception of this town as a summer and winter resort for many visitors,—including a number of noted artists, authors, poets, and musicians,—a few faithful students of Christian Science held services in various meeting-places. So crowded did these become, especially in summer, that other quarters were absolutely necessary; and divine Love provided for our wants.

Our Methodist friends, in a spirit of brotherly love which we greatly appreciated, this year tendered us the use of their church edifice—the only one in the village—for our regular services Sunday afternoon and Wednesday evening. The largest congregation of the season numbered forty-seven, visitors from many parts of the country being present. Our Wednesday evening meetings were unusually interesting, and the time allotted for testimonials well filled. Some splendid cases of healing in and about Carmel have also been the means of attracting attention to Christian Science and inquiry into its teachings.

At the beginning of the winter the Scientists met for Sunday services in a private cottage, which is now frequently taxed to its utmost capacity. A most helpful Thanksgiving service was held, so impressive and tender that several in testifying were scarcely able to speak for tears. Nineteen persons were present and twelve testimonies given.

Last summer two lots were purchased in one of the finest locations of the town, with a broad vista of sea and background of pines. Here in the spring we hope to build a church edifice to accommodate our growing congregation. Our building fund is started, and although still largely dependent on outside contributions, it shows already an encouraging increase.

E. B. MABURY, *Secretary.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

Six years ago, simply through the reading of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I was healed of rheumatic and chronic bowel trouble, besides poor eyesight. I had also suffered a great deal from female trouble, which seemed to puzzle the doctors; for with all the different remedies that were tried nothing seemed to alleviate it. During a period of nineteen years I was treated by six different doctors, and was always told that I would never be strong and must take the greatest care of myself. My eyes had troubled me a great deal while at school and after; I did without glasses as long as I possibly could, then had to go to a specialist, who fitted me with glasses and warned me never to use my eyes by artificial light.

After reading Science and Health for about a month I was surprised to find that I did not need my glasses and that my eyes were perfectly healed. In two months' time every one of the other physical ills had completely left me and I felt like one new-born. At that time I had never heard of any one being benefited simply by reading this book, so that I had not expected to be healed. I merely wanted to find out for myself what Christian Science is. When I compare those years of suffering, and the anxiety and expense that I then was to my family, with the past six years of perfect health that came to me through the study of our wonderful text-book, it is needless to say that words are inadequate to express my thankfulness.

ELIZABETH M. MCLEAN, Winnipeg, Canada.

From early childhood my wife was afflicted with an eruptive disease for over thirty years, for which she tried *materia medica* without obtaining permanent relief. In October, 1900, through curiosity, we ventured into Second Church of Christ, Scientist, of this city, and found the First Reader to be a friend of many years gone by. Later my wife called on her and decided to take treatment for her various afflictions, including a chronic disease of twenty years' standing, besides the trouble already indicated. I am more than happy to say that she is thoroughly healed of all her diseases; and what is vastly more important, she has been led by Christianly loving-kindness and patience to know her relation to God, and to understand the life, teachings, and works of Christ Jesus as a comprehensible verity. During her treatment it was kindly suggested that the study of "Science and Health with Key to the Scriptures," and attendance at the church services would facilitate and hasten her healing. Of course, as every decent man should, I accompanied her, more as an act of American gallantry than from enjoyment of the services. Soon, however, I noticed a change; I saw that she was responding to the treatment. With the keenest anxiety I watched the improvement. She asked me to read the text-book. I glanced over it, replying that it was too deeply metaphysical for me to comprehend, busy as I was at the time. Later on I took up the study, anxious to know how my wife had been healed, and if it was by divine Mind.

While studying the text-book, attending the services, etc., I experienced the workings of Truth in my own body. I had served in General Grant's Army of the Tennessee from May 26, 1861, to the close of the war, and exposure and hardships developed rheumatic trouble. I have lived on this coast thirty-six years, suffering more or less with this disease, which was becoming more severe in its attacks. In February, 1900, I was suddenly prostrated with sciatic trouble of an acute type; was for three months confined to the house, and was six weeks in bed, experimenting with *materia medica*. When able to walk with a cane, my physician told me that my limb was in a serious condition; that if I were a young man it might possibly be restored, but at my advanced age it never would.

I am happy to say that although five years older, for over three years I have not had a pain; the attenuated limb has filled out, and my weight is one hundred and seventy-five pounds. Concerning my present health, I can say that it was never better. Although I am now seventy-two, I cannot realize it. When I meet friends who have not seen me for some years past, they remark that I am looking as young and vigorous as I did twenty years ago. After wearing glasses for nineteen years, I laid them aside four years ago, and have never used them since. I was not treated for my sight, so I suppose it was part of "the redemption of the body" of which Paul speaks, and which comes to us through the study of the Bible and our text-book. I am writing this without glasses on a cloudy day. My wife has been so rejuvenated that she looks the young woman I married over eighteen years ago. She has good health, as have also our two boys, aged ten and thirteen; and with increasing happiness we are striving "for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497).

FRANCIS W. FOX, Asst. Adjt. Genl., W. G. V., Houston, Tex.

I desire to express my gratitude for Christian Science, this wondrous truth. A little over two years ago, when seemingly a physical wreck, weighing only ninety-seven pounds, I turned to Christian Science as a last and only resort, and was healed. To the practitioners of *materia medica* in Los Angeles my healing was a source of great astonishment, and many have exclaimed, "Marvelous,—yes, miraculous!" About two years ago, being unable to get relief from material means, I turned in sore distress, and almost insane from the use of drugs, to God. I had for eight years suffered most severely from a complicated kidney disease and, as diagnosed by six of our most prominent physicians, after a thorough examination, a typical case of nervous trouble. For years I suffered without finding relief, and the last year, after losing all strength, I took morphine for the pain. The habit grew on me very strongly, in fact became my dependence. In connection with this drug I also used cocaine, and much as I desired to overcome this habit, my efforts were of no avail. In desperation my relatives made arrangements to send me to an insane asylum, even though they doubted if I would live through the ordeal.

Having been a trained nurse before my marriage, I knew that nothing material could remedy my condition. I, however, believed that all things are possible to God, and having heard that Christian Scientists healed through this knowledge, I determined to try the treatment. I consulted a practitioner and engaged a Christian Science nurse. I took my first Science treatment on the 22nd of June, 1904, and in one treatment all craving for the drugs was destroyed. The other few treatments given were to overcome the evil effects that follow the use of these drugs. For years I had been afraid to eat substantial food, but I gained twenty-nine pounds in twenty-eight days, and in less than three months I had gained forty-six pounds and was perfectly well. The trained nurse was discharged at the end of eight days, as I was then able to do anything required of me. I had used the drugs hypodermically, but practically every mark had disappeared in a year's time. The many doctors who had handled my case thought my healing marvelous, and I have received from three of them, who stand high in their profession, a signed certificate from each, testifying to the firm belief that I was healed through the application of Christian Science, from an apparently hopeless condition.

To me even this wonderful physical healing seems little in comparison to the spiritual uplifting which this truth has brought. In my former belief the Bible had been a closed book, and the sweet revelation of Truth was wonderful to me. I pray that my daily life may express the

Digitized by Google

sincere gratitude I feel to God, and to our revered Leader, whose pure life enabled me to drink from the waters of eternal Life, bringing me hope, health, happiness, and "peace that passeth all understanding."

JOSEPHINE HEBBARD, Los Angeles, Cal.

[The statement of Dr. Hitt which follows is one of the certificates referred to by Mrs. Hebbard.—EDITOR.]

Los Angeles, Cal., August, 1905.

Mrs. A. H. Hebbard was apparently in a hopeless condition and I believe her recovery due to Christian Science.

MERRITT HITT, M.D.

Over two years ago I was attacked with a severe eye trouble, which was not only very painful but which the physicians pronounced dangerous. My old family physician, whom we had employed before accepting Christian Science, told me that my eyes would be irreparably injured, even if I did not lose my sight, unless I took medical treatment and wore glasses. Another physician also advised me to wear dark glasses, at least, as I was in the sunlight a great deal. Both these men were good friends of mine and their advice was prompted by the best knowledge they had as well as by a kindly interest. About the following September, while I was in this terrible condition, I was preparing a Mexican edition of the *Los Angeles Times*, and had three stenographers at work. My eyes were then so bad I could not read ordinary print, and a printed page looked like a piece of gray paper. One of my assistants would read my own notes and I would dictate back to the others the subject-matter of this work, which took me three months, and during this time I seemingly became worse. Nine months dragged by, in which I suffered all day and got little or no sleep at night on account of the pain and the fear that was fastening upon me more and more. I was constantly under Christian Science treatment, and divine Love, meeting every need, gave me the daily strength and inspiration that was necessary for my work. I was able to finish my newspaper work, even ahead of time and in a manner satisfactory to my employers. My wife and daughter helped me in Christian Science, and I was treated by a fellow-practitioner, and I am thankful that I did not give up Christian Science. I have never known the truth to fail when faithfully applied, and it did succeed in my case. Gradually I was able to read and write, and during the last three days of my treatment my recovery was so rapid that it startled us all, while making us very grateful. The more gratitude I had the sooner the demonstration was made, proving that we cannot suffer while we are grateful.

Many have been the occasions in my Christian Science experience that I have thanked God because we live in a day when such healing is possible, even after the doctors give up a case. I have been healed, in Christian Science, from asthmatic and stomach trouble, etc. I had medical treatment for the asthmatic trouble, until I could not be doctored any more, and I suffered equally in Kansas City, Vera Cruz, and Mexico, thus disproving the laws of altitude. When I was healed, I also disproved the claim of heredity, as I was said to have inherited this trouble from my father. It is now over four years since I had my last attack, which the usual remedy could not even relieve, and which I was afraid would kill me. The truth has, indeed, made me free from this distressing disease, for which the doctors could prescribe nothing certain. About one year ago I had a severe touch of ague, exactly like the old-fashioned sickness I had in New Jersey many years before; but when the old enemy reappeared last summer, it did not frighten me. It was met on the basis of Christian Science, and therefore met successfully in less than one week. It has never appeared since, and I feel free from it, as it had not been healed by *materia medica*. Chronic stomach trouble was healed by Christian Science treatment just as effectually. So far back as I can remember I suffered from catarrhal trouble and headaches, and finally the remedies which I constantly carried in my pocket, on the advice of physicians, failed to remove the distressing conditions. They were all healed by Christian Science. As these diseases left me they bore away on their dark wings much of the irritability and other moral evils from which I had suffered as long as I can remember, and it is for these spiritual blessings that I am particularly grateful to God, and to our Leader, Mrs. Eddy.

E. C. BUTLER, Mexico City, Mexico.

Even as a child my health was not good, and three or four years prior to my marriage it became so impaired that I was seldom quite free from suffering. After the birth of my first child my health became more seriously impaired, and but very few days together would elapse without a physician being called in to minister to my ailments. I continued to decline, slowly but steadily, and after an examination for the purpose of definitely diagnosing my case, the physician informed me that my ailments were of such a character that a cure was practically impossible and that invalidism was my future portion. True, he said there was a certain operation which if successfully performed might alleviate my condition, but that the operation was dangerous in its nature and uncertain in its results, and he would not advise it. Neither my husband nor I were satisfied with this opinion, and it was arranged with him that a celebrated specialist in women's diseases should be called into consultation. The specialist made an examination, and concurred in every particular with the opinion of our own physician. Some four years passed by, during which period many remedies, both mechanical and otherwise, were tried, but without any benefit. During this period we changed our physician, and the new one spoke very hopefully of the benefit to be derived from a certain operation, claiming to have performed it successfully on several occasions, and at last we determined that I should submit to it. The operation was performed, but only ill resulted from it. It took me quite twelve months to recover from its effects; the first three or four were passed under the care of a trained nurse; the next three were spent in the East, away from all family cares and duties, and it was not until the twelfth month that my health was restored to the condition in which it was prior to the operation. At this point the restoration ceased, and was not resumed until some five years afterwards, when I became interested in Christian Science. From that time forward my health improved, until in the course of about two years I became, as I now am, a normally healthy woman. I had also been a great sufferer from rectal, ovarian, and kidney trouble, for each of which I received years of medical treatment without benefit, but Christian Science cured me of all. The medical bills were large and numerous, and the payment for nurses, drugs, and medical supplies was also very onerous. Restoration to health under Christian Science did not cost me anything, as my case was undertaken by a lady who was actuated solely by a deep sympathy for me in my hopeless condition and a desire to raise me out of it.

MARY LUELLA VIVIAN, Winnipeg, Man.

Over eight years ago I had a severe case of sunstroke, and for the following three months suffered terribly with my head, back, and stomach. I seemed to be on the verge of nervous prostration. At different times I was treated by three of our best physicians, but they could do nothing for me and gave little hope that I would ever get well. In the mean time I was growing weaker, slept but little, and was completely discouraged. At this time a friend advised me to try Christian Science. I scoffed at the idea, but to please this friend I did try it, and to my great surprise and joy I began to get better almost immediately. Each day some of the distressing symptoms disappeared, until at the

Digitized by Google

end of six weeks I had gained in weight and was thoroughly well. I have never had a symptom of the disease since; in fact I have had better health during the past eight years than ever before, and that without medicine. I give all the credit to Christian Science, and I consider it the greatest boon to humanity that has ever been discovered. God bless Mrs. Eddy for all that she has done.

F. T. Caughey, Detroit, Mich.

Over eight years ago I was healed by Christian Science of lung trouble in an advanced stage. For four or five months previous to my release from the disease I had rapidly been growing worse. The necessity of continuing the business in which I was engaged at the time, seemed so great that I put forth the utmost effort to keep up, but was finally unable to sit up at work the whole day, and grew so weak that it was difficult for me even to speak. We had called in no physician, having no faith in the ability of *materia medica* to meet the exigencies of this disease, as my father, who had gone with the same trouble, had tried every remedy known to medicine, as well as a change to a southern climate.

Early one morning I was awakened by what seemed a most alarming condition, and we felt the necessity of immediate action in some direction. While applying the simple remedies at hand, I overheard my mother give the order to call a Christian Science practitioner at once. I was surprised to hear her do so, but as I recovered from the attack, which was a very severe one, I began to feel that my mother had been wise in calling upon Christian Science for aid, for we had felt certain that material means were of no avail in the treatment of this dread disease.

The practitioner gave me treatment immediately, but did not call until two hours later. My first thought had been that I would be obliged to remain in bed the whole day, but contrary to my expectations, I felt so much stronger than usual that I arose at once and had been at work some time before the Scientist arrived. I continued to improve steadily, never experiencing any recurrence of the attack. I had always been considered delicate, but under Christian Science treatment, which extended over a couple of months, my health was built up in every way. In these eight years Christian Science has been to us all things in all ways, and I feel inexpressible gratitude for these many visible manifestations of Truth's power.

Mrs. Florence E. McGee, Alpena, Mich.

About six years ago I was a hopeless invalid. During the five years previous I had undergone a number of operations,—twelve, I think,—receiving lasting benefit from none. When Christian Science was brought to my notice I was very feeble, having been ill for some weeks, and it was without much hope that I decided to try it for one week before going again to the hospital. After three treatments every distressing symptom of disease had disappeared, though I was still quite weak. Treatment was continued two or three times a week for perhaps a little over a month, when I was told to come only when suffering. I did so at my next attack, and received immediate relief. This experience was repeated a number of times during the year; then for a year I was well, but finally had an attack. Another year of health and another spell of sickness followed, since which time—about four years ago—the old trouble has never appeared. My present good health is so apparent that only those who knew me during the years of suffering can appreciate the change.

M. A. Gale, Passaic, N. J.

In 1888 the premature birth of twins left me in a wretched physical condition, and from that time until August, 1900, I was never without pain. Sixteen years ago I was told by one of the physicians in Kentucky, then attending me, that while I might get along for a while without an operation, I could not avoid that ordeal at some time. For three years my sufferings were at times beyond description. Then I was told of a physician in Kansas City who was said to be an expert in cases such as mine, and the hope was held out to me that he might cure me. I came to Kansas City, and to my physical troubles other trials were added which prostrated me completely. I then put myself under this physician's care, and for one year he labored faithfully to restore me to health, that I might be in a position to be self-supporting and to carry on my chosen work,—that of nursing the sick. While I seemed to be much benefited by his treatments, he frankly stated that I could never be healed; and said I ought to be contented if I could give six months of the year to my work and nurse myself the other six. After a time my health began to deteriorate rapidly, until in the year 1900 I had lost all hope of ever being well, as at that time I was almost a nervous and physical wreck.

In March, 1900, I was told of Christian Science, but my ignorance and prejudice would not allow me to seek help from this source. In August, 1900, I sought the aid of another physician, who, after a thorough examination, informed me that an operation was not only imperative but must be performed at once; that the local conditions were of the very worst, and would produce fatal results, if the operation was delayed. He told me there was absolutely nothing that could give me any relief but the surgeon's knife; but my eight years' experience in nursing the sick had taught me that an operation of this character left the subject a nervous wreck, and this caused me to dread the operation. I longed for and desired health, and in my extremity I turned to Christian Science as my last hope, and in six months was a well woman. I was given two present treatments, the rest being absent.

Words are inadequate to tell of the wonderful peace that has come to me through my healing in Christian Science. I had never expected anything so good to come to me, and my heart is filled with gratitude to our revered Leader, Mrs. Eddy, for having been found faithful enough and pure enough to be made a channel through which God could speak to His people, and heal us of all our iniquities and of all our diseases. To-day I know, through my own personal experience, that Christian Science does heal the sick and reform the sinner.

Mrs. Anna P. Wilson, Kansas City, Mo.

When I was ten years old I had a large swelling on the side of my neck just under the ear. I was treated by an allopathic physician for over a year with no improvement. Internal as well as external remedies were used in the way of drugs, until finally the physician said that he would have to lance the swelling. This he did, but without beneficial results, so he lanced it a second time more deeply. This was equally unsuccessful, and he told my family that the only thing he could do was to perform a very serious operation, and that unless it was done the outcome would be serious. This proposed operation was questionable in two ways, for it was not a sure cure, and was also dangerous. My family would not consent to the operation, and at that time we heard of Christian Science. Two aunts of mine had been cured most wonderfully by it, and though it seemed vague and impossible then, my family decided to try it for me rather than submit to the operation. I was completely cured of that trouble, and during the sixteen years since I was first so wonderfully healed, the other members of my family as well as myself have been helped in countless ways and are rejoicing in the knowledge of Christian Science. I wish to say that my healing was slow. I was treated nearly a year in Christian Science before the cure was accomplished, but it was sure, and when compared

Digitized by Google

to the length of time I had been treated with material remedies it did not seem long.

AVERY TRASK, Minneapolis, Minn.

The fall of 1895 found me a hopeless sufferer from a severe nervous trouble supposed to be caused by female weakness and a general breaking down of the constitution. Only those who have suffered with the same trouble can know what I endured. The doctor that attended me said I would never be well again. I told him I would rather die than live as I then was, if it were not for my little children, although I could not have them around me, as the least noise caused me much suffering. I could not see a single ray of hope until one day—how well I remember it—when my sister came to see me and told me of some healing that was being done by Christian Science. I had never heard of Christian Science before, but was ready to grasp at anything for help, so we decided that my husband should see if the practitioner would come to me. She came, and after a short talk and a treatment, she told me to get ready and go back to town with her. I felt that I could, but had eaten nothing that day as everything had seemed to distress me. The practitioner told me to eat anything I wished; that it would not hurt me. I did so, and then got ready and rode a mile on a winter day, stayed all the afternoon, and came home happy and uplifted.

Words cannot describe my relief, and my husband and children rejoiced with me. Since that time I have not taken any medicine or employed a doctor, and am in perfect health. The healing was instantaneous. I did not take over seven treatments, as I bought a copy of Science and Health to study. I can never be thankful enough for the blessings that Christian Science has brought to me and mine, for I have had many demonstrations of the truth in my family. Not one of my old ailments has troubled me, and it sometimes seems impossible to think I could ever have been in such bondage. There are many people here who know of my wonderful healing, and that I have been in good health ever since. I am rejoicing every day that this blessed truth came to me, for I find it is a present help in all kinds of trouble.—EMMA WELCH, Hurley, S. D.

In November, 1901, I was suffering from lameness caused by a fall two years before, which had left me a hopeless cripple, so far as medical remedies were concerned. The doctors had pronounced the trouble incurable, and they also said the knee joint was in a very serious condition. I had to walk on crutches, the limb being entirely helpless, and I also suffered intense pain. Just before coming into Christian Science the limb began to discharge, and this was diagnosed by one physician as a malignant disease of the bone. I was in great fear and distress, and it was in this condition that I turned to Christian Science for healing. I was relieved with the first treatment; in two months' time I discarded the crutches and walked with a cane, and in five months more I was healed entirely. During this time I was healed of an organic trouble for which the doctor had advised me to have an operation, also of chronic headaches. I am indeed grateful to God for Christian Science, and to its Discoverer, Mrs. Eddy.

MRS. CLARA E. PHINNEY, Jonesville, Mich.

When I first came in contact with Christian Science I was very miserable, for afflictions had fallen fast around me and life seemed a failure. My health had been very poor for fifteen years. I had suffered from extreme nervousness and severe heart trouble, besides having had a paralytic attack. I lived in constant fear of this last trouble. All this time I was paying large sums for medical treatment, but was growing worse, and received very little encouragement from the three regular doctors and one specialist who had treated me. I had been a church member from childhood, and during my sorest afflictions I received the deepest sympathy of dear and loving friends in the church; but their prayers, as well as my own, failed to benefit me physically. In 1889, to add to my sense of sadness, I came with my husband and children to live in Oklahoma, at that time a lonely and unsettled country. One year from that time I had occasion to spend several weeks with a friend living near Guthrie, who was a Christian Scientist. She was cheerful, happy, and loving, and I was at once impressed with the change in her disposition since I had last met her, before either she or I knew anything about Christian Science. Thinking that there must be some power in Christian Science, I at once joined her in the study of Science and Health, and the Lesson-Sermons, and read some of the literature. In the course of our conversation I learned of many blessings she had received from Christian Science, and all this appealed to my saddened sense in a comforting way. I accepted the ideas readily, and am thankful to say that for the first time in all these years my fears were quieted, and after receiving one treatment I felt like a new creature. I can best explain my relief by comparing myself to one who awakes from a bad dream to find that his suffering had not been real, but only a dream. This was fifteen years ago, and the happiest time of my life has been during the years following. Besides my own healing, other members of my family have been benefited. Words cannot express my gratitude to Mrs. Eddy for Science and Health, which is my "daily strength for daily needs."

MRS. KATIE TRABAND, Guthrie, Okla.

I had been an invalid for more than twenty years when in the summer of 1897 my attention was directed to Christian Science. During all this time kind physicians had done everything in their power to help me, but their efforts resulted in only occasional and temporary relief. They said that the digestive organs were diseased, and in part paralyzed, so that in all these years there had been no natural action. I also had stomach trouble in an aggravated form, and was never free from suffering. Being in advanced years, no one expected me to recover and I myself had about abandoned hope. In the winter of 1896 it was thought I could not survive till spring; but God spared my life, and in the summer of that year I began to read Christian Science literature. I soon received some benefit, and later had a few weeks' treatment. I was very quickly healed of the bowel trouble, and gradually, with a little help from time to time, the other ailments yielded and my health improved in every way, much to the surprise of all my friends. For years I have enjoyed good health, and now, at the age of seventy-four, I am a happy and grateful follower of the blessed truth as taught by our beloved Leader, Mrs. Eddy. I have also been healed of another most distressing condition, from which I had suffered for over fifty-five years.—CYNTHIA MASON, Rutland, Vt.

Until I was healed in Christian Science I could not even imagine how one would feel to have no sense of pain or weakness, as I had not been well from my earliest recollection. To-day I thank God for the realization of the health and strength which I reflect. I am deeply grateful to Mrs. Eddy for the revelation of Truth to this age, also to the dear friend through whose understanding of God's loving-kindness I was healed.

LILLIAN FIELD, Bradford, Pa.

To work out our life-problems, we need to add love; subtract hate; multiply good, and divide between Truth and error.—JANET T. COLMAN.

FROM OUR EXCHANGES.

[*The British Congregationalist.*]

A new statement of the Christian verities was to be expected, because required. Those who thought that the old creedal conceptions would harmonize with the advancement of science, the knowledge of historical developments of philosophy and criticism, were living in a world of illusions. Religion and religious ideas cannot longer remain apart from the general thought of the age. The Church is no longer a garden, walled around to keep it from contact with the stream of human life, which flows through and thrills the hearts of men. Its teachings must be seen to harmonize with what is known to be true in science, history, and experience, and derive their authority largely from their meeting the deepest longings and most imperative needs of the human mind. So much may be taken for granted. A new theology is required, is being expounded and enforced, and it is for the leaders of theological thought, and, indeed, for all the followers of Christ, to seek to understand its postulates, truthfulness, and practical bearings.

[*The* (London) *Christian Life.*]

If we inquire what is the feeling which especially possesses the heart of Christ's true disciples when celebrating his nativity, the reply is, their profound consciousness that his religion is pre-eminently a religion of love. It inspires love of God and man, and in an eminent degree personal affection for himself. No other great teacher—Buddha, Zoroaster, Confucius, Socrates, or Plato—ever ventured to claim, or was able to excite, such warm love as the Saviour calls forth in the breasts of his devoted followers. This has been a marked peculiarity of his religion all through the centuries. Love is the very breath of its life. Remarkable, too, it is, that while it fills our minds with optimistic views of the universe and of human destiny, its optimism never degenerates into fatalism. It deepens our faith that all things are working together for good; and yet, so far from thereby making us indifferent or apathetic with regard to the evils or woes of the human lot, its quickening of philanthropic activity has no parallel beyond its own boundaries.

[Rev. W. H. Heppe in the *Pacific Christian Advocate.*]

Can men argue against the redeeming and transforming power of Jesus when they catch a vision of Christ in our lives? If we have nothing but an ecclesiastical Christ, a creedal Christ, a historical Christ, a theological Christ to offer, we shall mock the cry of the age and fail to win men for our Master. Men want to see the reincarnated Jesus. We must be able to say, "Come and see." We must represent—oh, how poorly at best—Christ. With profound humility we must be able to say: "Come, and see; in my spirit doth his spirit shine, as shines the sunbeam in a drop of dew." Paul says, "We are unto God a sweet savour of Christ."

[*The Universalist Leader.*]

What is needed at this time especially is the Christian religion lived out, Christianity in the practical life. Life is the great redemptive force of the world, and each of our lives is a constituent part of the lever with which the world shall be lifted up. If we would be truly Christian we must seek for a practical definition of religious working. There ought to be no distinction between things religious and things secular, for the spirit of religion ought to sanctify all our doings. Christ is best served, not by those who leave that state of life in which God placed them, but by those who endeavor to do each duty as ever in the Great Taskmaster's sight.

[*The Congregationalist.*]

Sin is the consciousness of the distance between one's ideal and what he knows he is, and it is keen in proportion to his longing to realize his ideal. Repentance grows deep and keen as we see in one whom we love what in our best moments we want to be, and learn that he loves us for what we can be, and that he would give us strength to be what he would have us be. Personal religion is realizing one's best possibilities. Christianity is finding one's ideal in Jesus Christ and doing his will in loyal devotion and clinging to him in growing love.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

MR. KIMBALL'S LECTURE. 31 pages.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00

Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00

Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00

Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid 2.25

Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00

Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices. prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Canal Commission on the 12th opened bids from private contractors for the completion of the Panama Canal. Only four were received. The basis on which the contract will be awarded is a percentage of the cost of completing the work. Bidders are required to accompany their proposals with a certified check of $200,000, and the successful bidder is required to give a bond of $2,000,000. The Government expressly reserved to itself the control of sanitation and engineering, the right of rigid supervision of quarters and the subsistence departments and the department of materials and supplies, and, so far as the Panama Railroad is concerned, it expressly is declared that it could not wisely be turned over to the contractor. The work to be done by the contractors, therefore, has been confined to construction. W. J. Oliver of Nashville, Tenn., and Anson M. Bangs of 5 Nassau Street, New York, associated together, were the lowest bidders for the construction of the canal. They propose to do the work for 6.75 per centum upon the estimated cost. The other bidders were George Peirce & Co. of Frankfort, Me., and New York City, who offered to do the work for 7.19 per centum upon the estimated cost; the North American Dredging Company of Los Angeles, Cal., who offered to do the work for 8.2 per centum of the estimated cost, and the McArthur, Gillespie Company of New Jersey, whose bid was 12.5 per centum.

The question is before the Attorney General to determine whether the Government shall proceed in the courts under the provisions of the Sherman anti-trust law against a combination that is alleged to regulate the supply and control the price of coal in nearly every Middle Western State. Evidence in the case has been collected by the Interstate Commerce Commission, which first secured information in the matter in the progress of its inquiry into the causes for the shortage in the supply of cars on railroads in the Northwest. In his report following the investigation Franklin K. Lane declared that indisputable evidence has been found showing the existence of a coal combination; that it controlled the price of the product at some central agency, that it regulated the output and declined to supply dealers who refused to allow the price-lists made at the principal offices of the combination.

When the January Grand Jury of Hancock County, Ohio, came into court with its report last week the foreman handed down 939 separate indictments against the Standard Oil Company of New Jersey, the Standard Oil Company of Ohio, the Ohio Oil Company, the Buckeye Pipe Line Company, the Solar Refinery Company, the Manhattan Oil Company, and seven prominent officials. They are formally charged with being members of a trust for conspiracy against trade.

An extensive plan for the reclamation of swamp and overflowed lands will be considered at an early meeting of the Senate Committee on Public Lands. The scheme is advanced in a bill which provides for the establishment of a "drainage fund" from all moneys received from the sale of public lands in Alabama, Arkansas, Florida, Illinois, Indiana, Iowa, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Ohio, and Wisconsin, except the five per cent set aside by law for educational and other purposes.

The story that the packing companies are to combine has been revived. It is said that the National Packing Company, organized four years ago as a holding company, will take over Armour, Morris, Swift, and Cudahy. Swartzchild & Sulzberger refused to enter the combine. The National Packing Company has already taken over the Omaha Packing Company, the two Hammond companies, the Lipton and Continental companies. A tentative capital of $500,000,000 will be subscribed for the combine.

The Interstate Commerce Commission has finished the taking of testimony in Chicago in the case of the Harriman System of Railroads. The rest of the testimony concerning the operations of the Harriman lines is to be taken at Seattle, Portland, and possibly San Francisco and New York. On account of the engagements of some of the members of the Commission it will not be possible for the whole body to meet in New York until the last week in February.

There are now in Maine 119 banking institutions with combined assets of $126,058,038, classified as follows: Savings banks, $89,681,144; trust and banking companies, $33,542,166; loan and building associations, $3,434,728. The gain in total assets over the previous year was $9,890,600.

The Ohio River recently cut a channel across the Big Horseshoe Bend between Evansville and Anderson and is now flowing through there. Evansville confronts the serious danger of being left five miles from the Ohio River.

A preliminary estimate of the production of gold and silver in the United States during the calendar year 1906 shows that gold reached a value of $96,101,400; silver, $56,183,500.

Foreign.

Enrique C. Creel, the new Ambassador to the United States from Mexico, has to his credit the inauguration of one of the most radical and effective saloon laws ever known in that country. The new law went into effect Jan. 1, and it has already worked a great benefit in the matter of effacing the low drinking places, closing up more than five thousand saloons in the State of Chihuahua on the very day it went into operation. One provision of the law prohibits intoxicating liquors being sold in grocery stores or other places which are visited by women. It is also provided that there shall not be more than one saloon for every three hundred and fifty inhabitants. No saloon shall be located within a certain distance of public schools and churches. All saloons must close their doors promptly at 10 P.M., and not reopen again until 6 A.M. They must close at 2 P.M. on Sundays and holidays. Governor Creel banished all forms of gambling from Chihuahua about two years ago. In former time and until Governor Creel took charge of State affairs all forms of gambling were conducted openly in every town and city in the State.

It is declared that Japan favors the submission of the question of disarmament to The Hague Peace Conference. Baron Jikuci, a Japanese scientist, asked about the sentiment in Japan on the San Francisco school question, said: "You can rest assured there is no danger whatever of war, as my countrymen would not be foolish enough to declare war with such a country as the United States over such an unimportant question. Believe me, we have more important economic problems to solve in Japan than the San Francisco question."

The contracts for the four additional battleships included in the French naval program for 1906, which were authorized just before the first of the year, have been placed and France now has six large battleships under construction. The new battleships will all be of 18,350 tons displacement and provided with turbine engines of 22,500 horse-power, capable of developing a speed of nineteen knots. They will mount the most powerful guns and be heavily armored.

At the ceremonies attending the recent opening of the new cotton exchange at Liverpool, the feeling of speakers was that the efforts already put forth for the cultivation of cotton in the British Colonies would ultimately make the British factors partially, if not wholly, independent of cotton produced in foreign countries, and the principal speakers seemed to have been satisfied with the progress already achieved in that direction.

Santo Domingo has reached agreements with all its creditor nations for the liquidation of the foreign debt. Similar arrangements have been made with domestic creditors. The total Dominican debt, the face value of which was $40,270,000, has been scaled down to $17,000,000. As adjusted, the foreign debt stands at $12,000,000.

Industrial and Commercial.

Skunks net an annual revenue to the State of Maine, so it is stated, of over $125,000. Nearly twenty-five thousand gallons of skunk oil are produced every year, the wholesale price now being $5 a gallon. A pure black skin is worth from $1 to $2, according to quality; striped skins bring from twenty-five to forty cents, while those with a part stripe bring from fifty to seventy-five cents. Striped skins are dyed and blended to make coats and boas and the black skins are used for muffs.

Professors Parker and Clark in their Columbia University laboratory last week explained the workings of the incandescent lamp which they have invented. The light has created a sensation in scientific circles and promises to revolutionize incandescent lighting. The invention consists merely of a new filament or coil to replace the carbon coil now in use in all incandescent lamps. It gives a lamp two or three times the length of life of the present standard lamp and gives the same amount of light with a third of the power.

The shareholders in the British Westinghouse Electric and Manufacturing Company, of Manchester, England, have consented to a reduction of capital to the amount of over $5,000,000. The losses are said to be due to the fact that the works at Manchester were laid out in the expectation of a great electrical development in Great Britain, which has not taken place, and so the works have been found too large. The works at Manchester are said to be nearly as large as those of the firm at East Pittsburg, Pa.

Plans are rapidly reaching completion for the formation of a new trust merger to be known as the American Silk Company. It is proposed to have a capital stock of $22,500,000 and to control a large percentage of the domestic output of dress silk.

A Philadelphian recently paid in Paris $9,000 for a 1722 Stradivarius violin.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[From the *Cosmopolitan*.]

CHRISTIAN SCIENCE: AN IMPARTIAL ESTIMATE.

CHARLES KLEIN.

EDITORIAL NOTE.—While it is never an easy matter to arrive at an impartial, unprejudiced opinion upon any subject, the case of Christian Science presents some peculiar difficulties. Its beliefs are continually attacked and ridiculed by some species of humorists as well as by those whose interests are affected by the spread of its doctrines. The writings of its adherents have a quality that is undoubtedly obscure and confusing to the mind of the "outsider." The isolation of its Founder has furnished much striking "copy" for the daily press. Assertions and denials fill column after column, until it is impossible to feel that few, if any, real facts have been established.

From all the controversy, however, there stands out one fact which even the bitterest enemies of its doctrines cannot in fairness deny, and this is that Christian Science has unquestionably lessened the tragedy of life for many thousands of persons. A matter with so important a bearing upon human happiness can neither be lightly brushed aside with ridicule nor in other ways ignored. It is not the purpose of the *Cosmopolitan* to assist in the propaganda of Christian Science, but in the face of recent attacks upon its Leader and its beliefs, we feel that an impartial estimate from one who has experienced benefit from the practice of its principles may not be unwelcome to those who are willing and anxious to give a free and open mind to the judgment of its claims.

Mr. Klein, the distinguished author of the greatest successes of the past two theatrical seasons, who contributes the following article, has adopted the principles of Christian Science for his own health and happiness. He has related elsewhere his experience with Christian Science. Speaking of his attitude toward life and the consequences of that attitude before he investigated this Science, he says:—

"My highest ideals, my gods, were success, fame, wealth, beauty in externalized forms (art). I nourished anger, revenge, and envy, was easily offended, and brooded over supposed injury. According to the world's standards, I was rated a fairly good fellow, for I lived well within the pale of the civil and social laws—in short, I lived a conventional life. Thus I went on, and life was one round of mingled pleasure, pain, work, play, enjoyment, misery, health, and sickness—making existence a chaos, a self-evident contradiction, a burden. I often asked myself what was the object of my existence, what it meant. Theology, philosophy, and science had spoken in answer to my questions, but their replies had only increased my perplexity, and I endeavored to solve the problem of existence myself by plunging deeper and deeper into the game of mortal life.

"I was fairly successful in my profession (that of writing for the stage), and had no financial worries, but my health began to give way, my nervous system broke down, and in a very short time I counted among my assets liver complaint, insomnia, dyspepsia, nervous irritability, and a constant dread of some impending danger, an almost absolute hopelessness, which state made not only me but my family exceedingly unhappy. I consulted physicians, specialists, alienists, even druggists, as to the possible remedies for my multifarious diseases. I took nearly all their advice, and as much of their medicine as my stomach would stand. . . . Life was a living death, and death seemed to offer the only hope. Incipient melancholia set in, and I took a saddening pleasure, a morbid interest, in thinking of the joys of oblivion. Life had completely lost its interest for me."

In this despair a friend recommended Christian Science, and Mr. Klein consented to visit a practitioner, but he did not believe that he could be cured. The practitioner's first statements seemed arrant nonsense, but Mr. Klein resolved to listen, and then,

"with a marvelous exhibition of patience, the practitioner gently explained that God did not create evil, and has no consciousness of evil, for God is Love, Life, and Truth, infinite Mind, and that the recognition of this infinite Mind would destroy the false mental pictures that were manifesting themselves on my body, destroying my peace and happiness, and thus creating all my apparent woes. The word 'apparent' annoyed me. Why apparent? Was I not to believe the testimony of my own senses? To my utter astonishment he replied, 'No.' I asked him to explain, and he showed me a book, the title of which was 'Science and Health with Key to the Scriptures,' by Mary Baker G. Eddy. I looked it over, and thought it was a sort of ethical culture handbook. I said I would investigate it, and I did!"

As a result of treatment and a study of Science and Health,

"I gradually, indeed almost immediately, recovered my health, my peace of mind, professional and financial success, and happiness far beyond my wildest dreams, and I have never taken a drug nor consulted a physician since that hour."

This change in Mr. Klein's mental and physical condition is not a matter of opinion, for an overwhelming amount of testimony can be brought forward to substantiate it. He believes, and from his own experience he has every reason to believe, that thousands of unhappy fellow-sufferers may be benefited as he has been. Mr. Klein is not wanting in gratitude to Christian Science and its Founder:—

"When I see the depth of the pit of human belief and worldly knowledge, and then get a glimpse of the vast distance we have to travel in our journey from the material to the spiritual, a faint sense of the meaning of infinity is unfolded to me. When I think of myself as I was, in all my falsity (ignorance of my real self), trying to separate myself from God and from my fellow-man by imbedding myself in sense; when I think of the selfish motives and their inevitable punishments from which I have been rescued, I no longer wonder that Christian Scientists are so profuse in their expressions of gratitude to Mrs. Eddy. In fact, when I think of what Christian Science has done for me, and that it is through her we have received this truth, I feel that her great work for mankind is underrated rather than overrated, even by Christian Scientists themselves. I know that I have not yet sufficient understanding either to realize or appreciate its greatness."

THE generally accepted definition of "truth" is "conformity to a fixed principle—that which is true concerning any matter." It is safe to say that "the truth depends on or is arrived at by a legitimate deduction from all the facts which are truly material."

A comprehensive question that seems to be agitating the public mind to-day is, What is the relationship of truth to Christian Science, in what degree is that Science a true science, and how have the facts which appertain to that Science been arrived at?

The articles on Christian Science which are appearing from day to day in the public journals, magazines, etc., throw very little light on the subject because, for the most part, these articles are written by persons who have made only a superficial investigation of that Science or have submitted it to no personal test, relying largely on one-sided

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

testimony, casual, critical observation, or on the say-so of members of other religious denominations, schools of medicine, etc., who may or may not be more or less prejudiced against it.

It is a fact that in the realms of journalism and literature, the fine and plastic arts, the sciences and professions, any person who undertakes to criticise or investigate, or to issue polemics of any nature in regard. to, the aforesaid subjects is expected to have some intimate knowledge of the subject he discusses, criticises, condemns, or praises. And yet it is a curious fact that not more than one person out of a hundred who write their opinions of Christian Science for the newspapers, magazines, or journals has submitted that Science to any practical test of any description by which he might be enabled to know its intrinsic value; when the hundredth person, who has tested Christian Science, writes, he invariably acknowledges it to be founded on Truth, and endorses all its claims. What should we say of an art critic who had never studied art, of a dramatic critic who had never studied the drama, of an essayist who knew nothing of ethics, morals, or economics, or of a psychologist who knew nothing of the relation of the mind to the body? Yet not one of the persons who have adversely criticised Christian Science has investigated that Science by the test of a personal application to himself or herself, or, indeed, by any practical tests of any nature whatever, but in almost every instance they have relied on a superficial examination of the facts of the case.

So, for the most part, the public reads merely the opinions, beliefs, and surmises of those who are in no position to judge whether Christian Science be true or false. How can we in the very nature of things deny the power of Mind to heal the body when we have successfully submitted our bodies to the test of metaphysical healing? I admit the position of the agnostic who acknowledges that he doesn't know, but I cannot see any logic or justice in the position of the man who denies because he cannot see, or hopes that it is not so because he thinks it is.

I must confess that I was in the position of the man who denies, until my health compelled me to put Christian Science to the test; and since then I have invariably found that good thoughts produce good effects, that the more I understand of the nature of God the more good comes into my life. Good thought is a vitalizing energy, and evil thought is a devitalizing reaction. Would I be in a position to write convincingly on the subject of Christian Science if I had not put it to as thorough a test as I did? Could I descant on its Principle if I did not apply that Principle to my own particular case? Could I deny the testimony of thousands of persons in favor of Christian Science unless I was in a position to state that I knew their testimony was false? What does it prove that I merely think it false? I must know, and how can I know unless I prove? To be honest to others you must be honest to yourself. So when I realized that evil thoughts produce evil effects the questions naturally arose: What is good and what is evil? What is true and what is false? And these are precisely the questions that Christian Science answers, and answers fully and completely, to the man who asks the questions honestly and not merely out of idle curiosity or for the purpose of carping criticism.

Nine tenths of the evil of the world comes through ignorance or false beliefs. A study of Christian Science removes this ignorance and destroys these false beliefs. The trouble with the world is not that it has too little faith, but that it has too much faith in the wrong direction. The world believes too much in the power of evil and not enough in the power of good. It believes in the power of money, in physical force, in self-will, in self-love, in the survival of the strongest and the consequent destruction of the weak. It believes in the power of hate, of cunning, of subtlety, and in the futility of love as a force or energy. As a consequence, evil predominates. Christian Science teaches the power of good and good only, the power of Mind and Mind only. It does not ignore disease, but teaches us to lessen the power of disease, and not to be afraid of it. It teaches us the health-restoring quality of sound thought, the antitoxic quality of Love and Truth, the dynamic energy of pure, hopeful thought unadulterated by fear of the poisonous germs of sin, disease, and death. Christian Science gives us hope, and it gives us health. How, then, can he who has never been to Christian Science for hope or for health, judge of its power in this or any other direction? A clean, unprejudiced view of that Science should at least enable one to realize that its objects are noble and elevating and fraught with infinite good to the human race.

It is not my intention in this article to bring to bear every argument for, nor to consider any particular argument against, Christian Science; but I cannot refrain from calling to mind at this point the barriers that the world always erects to stay the march of truth. People instinctively rebel against the overthrow of established conditions, because the world as a whole is mentally lazy, and refuses to think in any direction different from the one in which it operates. From time immemorial leaders of truth have been crucified, stoned, imprisoned, or otherwise maltreated. The prophets and leaders of thought mentioned in the canonical writings were hated, stoned, and murdered. Pathfinders, like Columbus, Galileo, Dr. Harvey, Morse, were threatened, jeered at, and imprisoned. The greater the truth the greater the unbelief, for the world adopts the line of least mental resistance. It prefers to believe what it already knows rather than what it does not yet know, and so, from a popular point of view, the truth remains untrue until time and custom have developed it into accepted truth. But it too often happens that the mob spirit which controls the unthinking world seeks to sacrifice the original thinker. After the sacrifice they think it over and adopt the reform, solacing themselves with the comforting idea that it was always true. In one sense, the world is right; truth is never invented. It is discovered or rediscovered; and at this point I should like to speak of Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science. I have seen Mrs. Eddy, and have heard her speak. In appearance she seems to be rather tall and dignified, almost stately. As a matter of fact, she is not very tall, but she has the most impressive manner of any person I have ever met. It is an innate, dominating, spiritual individuality that asserts itself almost without effort. Her voice is the voice of one who knows, and not of one who merely believes. There is no hysterical gush, no fanatic spirit of ecstasy, but a calm, self-possessed, well-poised mental equilibrium that is remarkable in a woman of her years.

Whatever may have been the mistaken attitude of some of her followers in times past, there is no gainsaying the fact that Mrs. Eddy is sincere and earnest in the effort to do mankind the greatest service any individual can do; that is, to relieve it from the oppression of its daily existence, to found a system of ethics and rules of conduct that shall not only be a religion for Sundays and holidays, but for every second of existence from the moment of birth to maturity and beyond the grave—for all time.

Mrs. Eddy is enjoying the best of health, and is in excellent spirits, while her mental strength and her reasoning faculties are clear and as sound as a bell. I know her handwriting very well, and was really surprised only a few days ago, on seeing a letter from her, to note that her handwriting showed that she had a fine grasp, not only of the subject-matter in the letter, but also of her pen. Remarkable indeed, when we think of the busy life she is leading and the tremendous amount of mental work she has done and is doing! That one endowed with such extraordinary executive ability in organization, the most resourceful writer of the day on metaphysical questions, should still retain her mental grasp on the world's affairs is in itself a tribute to the efficacy of the Science she has discovered.

Digitized by Google

especially if we remember that some forty odd years ago Mrs. Eddy was given up by *materia medica* as incurable.

Mrs. Eddy seeks seclusion, and for a good reason. Like all thinkers, she must spend a great deal of time in meditation; that is, in mental work. There is nothing mystical or mysterious about her solitude. She is really no more inaccessible than the head of any big enterprise. It will readily be seen that she is held in such great esteem by Christian Scientists that were the line not drawn rigidly, she would simply be inundated with visitors. Her simple home at Concord, New Hampshire, would be overrun not only by Scientists and those interested in Science, but also by multitudes of sight-seers and curiosity-seekers. She would have no time to attend to the multifarious duties of leadership, much less to the task of working out her own salvation. Christian Science is growing so rapidly, so many thousands are being added to the already large body, that new problems arise daily, and it is the consideration of these problems that calls for seclusion.

It may be interesting to note that Mrs. Eddy has no income except the royalty that accrues from the sale of her books. She receives nothing from The Mother Church, The First Church of Christ, Scientist, or from any of the branch churches. Her leadership is spiritual in every sense of the word; it is by no means political, and under no circumstances does she assume personal control. Her book, Science and Health, has made its own history. Through the ideas conveyed in that work thousands have been healed of various diseases, both functional and organic. I know personally hundreds of people who have been healed of various diseases by realizing and observing the truths written in "Science and Health with Key to the Scriptures," and many of my own immediate family have been healed of various ailments, and have otherwise benefited thereby. Every form of disease known to *materia medica* has been either destroyed or removed by the application of the Principle of Christian Science, and there is no doubt in my mind that a knowledge of this truth will elevate one's mental perspective to such an extent that, no matter what his position in life may be, it will increase his business or professional capacities and stimulate him to higher endeavor. Be his position high or low, he will receive a mental impetus, an elevation that will enable him to scale obstacles that at first sight appear almost insurmountable.

It is a mistake to suppose that Christian Scientists have no organized forms of charity, simply because their methods do not follow the conventional ruts. Christian Science enables one to obtain and hold positions that prevent the necessity for charity. It is real, it is permanent charity to enable the poor to avoid the necessity of asking alms. To enable the poor to help themselves is the most practical form of charity. That the healing in Christian Science should appear miraculous is one of the mistakes of the age. The rising of the sun is a miracle, but as it happens every day it does not appear miraculous. Wireless telegraphy is a miracle, but as the operation is understood it does not appear miraculous. If the Principle of Christian Science were better understood, the healing of disease through the dynamic energy of Mind would not seem miraculous. Those who criticise the truth do so because they do not understand it. The world's ignorance of the truth has always created a resistance to progress, and will continue to do so until universal consciousness is prepared to receive it.

The world is slowly beginning to realize that a Science of right thinking and right acting, a Science of happiness and of divine Love, a Science of Life and Truth, is the fundamental of a universal religion that blesses, that will continue to bless, that cannot help blessing, all mankind. The world will some day realize that Christian Science applies with equal force to all beings, races, and nations; that it is hampered by no creeds, dogmas, or rituals: that it subscribes to no particular schools of medicine, isms, ologies, or osophies; that it is a universal truth that will bring mankind together in the bonds of brotherhood. But this can never be until men agree as to a standard of good, until men have one ideal, one God or good, one source of inspiration, one hope, one great Principle. This sounds like idealism, but it is practical idealism; it applies to the individual, to the nation. The uplifting of the unit is the uplifting of all, for what is eternally true for one must be eternally true for all. And this is what Christian Science is trying to teach and is teaching—good for all.

HOW CHRISTIAN SCIENCE AIDS IN BUSINESS.

JUDGE JOHN D. WORKS.

An intelligent, observant business man, and his equally intelligent and discerning wife, who knew practically nothing of Christian Science, visited one of our Wednesday evening meetings for the first time. The wife was in need of physical help which she could not get from medical practitioners. It had been suggested to her, and to her husband, that she could get relief through Christian Science. They went to the meeting for the purpose of learning something about it, but came away disappointed and took no further interest in the subject. It so happened that on that evening the testimonies ran mostly on the advantages resulting in business from the application of Christian Science, and from the visitors' point of view this seemed a very sordid and mercenary use to make of religion, hence their disappointment. Let it be understood that Christian Scientists look at this subject quite differently; nevertheless, the view taken by another intelligent and conscientious listener, not a Christian Scientist, may lead us to a more careful and Scientific consideration of the basis of our claim that the business man does find Christian Science a great benefit in his business, and at the same time teach us additional wisdom in the giving of testimonials of this kind, which are liable to be thus misconstrued.

To many, if not most people of the day, success in business results mainly from opportunity and ability to secure an advantage over the party with whom the business man is dealing, or over a competitor. From this standpoint the use of a religion, or any power it may give, to bring about greater success in business, would be to misuse and degrade the religion and subject the party guilty of the offense to the just charge of hypocrisy, meanness, and dishonesty. A profession of religion that could by any possibility be degraded to any such base purposes, would be entitled to no respect whatever; indeed the religionist, or pretended religionist, who parades his religion in his business and assumes the "holier than thou" atitude therein, is always subject to criticism and suspicion. But let us see if any such construction can justly be placed upon the uses made by Christian Scientists in the furtherance of their worldly interests and the successful conduct of their business affairs, or their attitude towards others in their business relations.

We cannot shut our eyes to the fact that in this day and age business is conducted largely on the theory of the survival of the fittest, involving necessarily the business right of the strong to oppress the weak, and often the assumed right to overreach and take every advantage, short of actual crime, in the effort to succeed. This reduces the rule of business to a merciless competition and bitter struggle, one with another, resulting in the success of one at the expense, often by the ruin, of another. It is a sad commentary on the business methods of a Christian people; and one cannot be surprised that any conscientious man should resent the attempt to bring religion into such a conflict. But Christian Scientists believe that business should not be conducted on any such basis. They believe that it should not be a conflict between men to gain advantage, the one over another. They believe that every attempt of a business man to gain an undue advantage, or to oppress or drive out of business his competitor, is unchristian and

Digitized by Google

wholly unwarranted, under any rules of right and justice; therefore the aim and purpose of Christian Science is not to enter and participate in such a conflict as a party to it, but to avoid and overcome such methods, and to bring harmony and peace instead of discord and conflict into the business relations of men, as in all their other relations. It also tends to relieve business men of the cares and worries that beset them in a strenuous business life. It teaches that harmony and strict honesty and fairness in the conduct of a man's business superinduces freedom from care and worry, elevates the business itself, and commands success as a just reward for right living in the business world, just as right thoughts and conduct bring the just reward of peace, harmony, and health on the physical plane.

Our Leader says, "Honesty is spiritual power. Dishonesty is human weakness, which forfeits Divine help" (Science and Health, p. 453). If dishonesty forfeits Divine help, the spiritual power that comes from honesty of thought and purpose in business life just as certainly secures that help. It is a trite but wise saying that honesty is the best policy. This is one of the things that Christian Science is trying to teach the world. It is true as applied to every relation of life. Then what does it mean when a Christian Scientist says that his religion has helped him in his business? Certainly he does not mean that he is or has been divinely aided to succeed at the expense or to the detriment of his fellow-man, but that he has secured the Divine help by dealing justly and fairly with all men. One of two things has come about; namely, his knowledge of the teachings of Christian Science, rightly applied, has freed him from worry, fear, and discontent, enabled him to see with clearer vision, think more accurately, and act more wisely, thus meeting and overcoming the problems and difficulties that come to him, and assuring success; or, better still, it has elevated his moral standard of business duties and obligations to his customers, patrons, and competitors, thus bringing harmonious relations between him and them, elevating and improving his mental and moral condition, helping him to succeed as his just reward, involving increased confidence and trust in his honesty and justice, which is a sure road to success. Such business standards and practices must bring success, or we must confess that dishonesty and unfair dealing in business are at a premium.

More than all this, however, Christian Science emphasizes the fact that in the divine law there is no limitation, no lack of all that is justly and rightly due to mankind. God did not create man incapable of success. He did not create man to suffer want or privation. The sense of limitation which brings failure and want is of mortal man's making, and from this false sense comes ills of all kinds, including sickness and disease, which are certainly not of God's making. It must be conceded that if from the beginning of time the divine laws had been strictly obeyed, there never would have been any sickness or death, because these are beyond a doubt the result of ignorance of God's law and the violation of it. It is equally certain that if for all time business had been conducted in accordance with divine law, no such standards of business morals and success as that above mentioned would ever have obtained, and there would have been no conflicts, no oppression, no unjust competition, no dishonesty, and consequently no inharmony or discord, no worry, nor ruin of one to build up another; but all would have found success. It may be said that this is Utopian. Yes, it is, looking at it from the basis of the moral standards and business methods of the day, but not when viewed from the standard of true Christianity. It is Utopian in the sense that all things which stand for the absolute perfection of man and things are Utopian. But we do believe and understand that the true man is perfect, divinely created so, and that this perfection will ultimately be made manifest through Science.

There can be no reasonable doubt that wrong business methods have been one of the most potent causes of the poverty and want that should be looked upon as a disgrace to our civilization. Rightly distributed and used, nature has abundant supplies for all human needs. Therefore, Christian Scientists believe that poverty or failure is a disease which comes from wrong thought, and wrong conduct following the thought, just as sickness and other ills result from wrong thinking. If this be so, the remedy is simple. It is to restore the right thought; to teach mankind that God's children are not created to suffer from any cause whatever; that the one Father is the source of supply and that it is unlimited; that it is their divine right to have and possess all that is right and reasonable for them to have, if they live the true life and keep His commandments; and that no one else can deprive them of that right. This must be so, if the teachings of Jesus are to be believed. He says, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." In the beginning man was given dominion over all the earth; and that dominion may be exercised by every one who lives the right life and keeps the commandments.

Whenever the Christian Scientist can reach that mental and moral condition which knows no evil, no inharmony, no limitation in business, the problems of his business will be solved and his success be assured, and by the same Principle and means that his physical diseases and discords are removed, namely, the understanding of the allness of God, good, and the nothingness of evil. There is no discord, there are no failures in the divine method and economy. These are all the result of mortal man's ignorance and disregard of the divine methods and laws, and the errors resulting therefrom. These overcome, there will be no discords or failures in business any more than there will be sin, sickness, or death. Christian Scientists are working for this overcoming; and just to the extent that they succeed individually or collectively in the business affairs of men, just so far will business difficulties, worries, and failures be overcome. And to this end and purpose, and none other, can they expect or receive Divine help.

SELF OR SCIENCE.

GEORGE H. MOORE.

In response to an evangel so comprehensive as that of Christian Science, offering cure for every human ill whatever its kind, it is natural that men should ask relief first of all for their most insistent need; that the sick should seek health, the maimed to be made whole, the mentally discomfited for wisdom and comfort, and the sinner to find pardon. This is indeed the purpose and fruitage of true law, that our woes should turn us back from lawlessness and its calamities to invoke the control of law and its resultant harmony. To this extent our first steps in Christian Science are selfish. We seek its good for ourselves primarily, because we are weary of the husks of material life, and must have health and peace in order to work well, or to work at all, for ourselves or for others.

Our next step is greater than the first, if thereby we perceive that all healing in Christian Science is but incidental to a larger purpose: that the coming of the Christ to us, as at the first, is primarily to establish righteousness on the earth, and health as a result and reward of rightness. Learning this lesson, we for the first time approach the crisis of our faith, in that, having attained healing for ourselves, we must then rise above self through readjustment of our desires to the divine point of view, thus bringing them into accord with the larger purpose of God.

The crime of Constantine in the third century was that "having tired of fighting Christianity, he decided to use it," —to appropriate it as an instrument of state, to serve his own selfish end. The lesson of his mistake has tremendous import to-day. The world is tired of fighting against God,

Digitized by Google

is sick of its desperate straits, is nauseated with its drugs and its dregs of life, and signs of capitulation are frequent. Unnumbered people eagerly crave the fruitage of Christian Science, though as yet unwilling to render due honor to her whose insight and effort have brought this fruitage to harvest, and though as yet they refuse to accept the message sent in the way of God's own sending. The Cause of Truth, when perceived as such, should command instant allegiance in an honest thought, and the question is therefore inevitable, What should be the next step, and what our part in it? Every such question propounded by Truth is urgent, in that it must be answered not only by us as individuals, but by every tribe and nation as well.

No stronger phrasing of to-day's issue or more dramatic setting and enforcement of its lesson can be drawn, than the one Mrs. Eddy has so effectively used in the story of Simon the Pharisee's dinner to Jesus the Prophet of Nazareth. (Science and Health, p. 362.) The self-sufficient Pharisee, willing to patronize but not to follow Jesus, and seeking him, as our Leader has said, "through material conservatism and for personal homage" (p. 364), unfolds a type of thought of singular interest to-day because of its current popularity. Self-seeking tolerance, feeding its insatiable curiosity as to the messenger of Truth, but ignoring or rejecting the message, deserves always the rebuke which the intruding Magdalene brought upon Simon. Meekness, humility, eager self-abnegation, and persistent searching for righteousness, brings to-day, as it did to Mary, the divine forgiveness. The simple dignity of Jesus, conscious of his spiritual integrity and of his right to honor as God's Messenger, commands our perpetual reverence and should incite our like regard for every divinely accredited witness to the same healing Truth.

The ensuing parable of the debtors, and Jesus' question, "Which of them will love him most?" brings the Pharisee's problem to us for our own solution. The sin of Simon the individual and of Constantine the emperor was the same, and this is the sin which sorely besets us to-day, if it tempt us ever to put self before Science; if it persuade us to restrict our application of humanity's best hope to service as a mere panacea for our personal ills or as subject-matter for our own mental delectation; if pride in our questionably rare discernment of Truth supplants what should be an eager longing to know and live more of Truth; if in a word it please us merely to conserve self rather than to serve God and His cause.

Material conservatism is the desire to conserve materiality, and its very warp and woof is fear. We have found it easy in our almost hopeless misery to trust God for our own uses. Are we also trusting Him to use us? Material conservatism is the very "tenacity of error" waging desperate defense of its own existence; it is holding to the old for fear of loss with the new, it is loving one's life but to lose it.

The desire for personal homage springs from pride, and all pride is the child of self-love. This misconceived sense of personal worth impairs our effort in service of the truth which has healed us, through fear lest we be misunderstood, underestimated, or rebuffed; for fear lest we lose our friends or position. It would cheat us of our full measure of gratitude and loyalty to our Leader, for fear lest we lose mental independence or our liking to drink at all founts, be they pure or defiled. At times, as perhaps with Simon, it puffs itself up in a shallow, patronizing tolerance for the sake of being thought modern, or feeds itself on intellectual curiosity which is not born of love of Truth and which leads one no farther than to the limits of personal advantage. Self-adulation no more befits the possessor of ten talents than it does him to whom was given but one; rather does the greater gift impose the greater debt of gratitude, of love, and of service.

We cannot read this material self into Science any more than we can make the kingdom of God a vassal state in the realm of our own selfish interests. The healing of Christian Science has attested to us the divinity of its service to mankind; this is its usual introduction and its inevitable fruitage, and will continue so to be and to increase mightily in power and in promptitude with those who worthily serve its behest; but it will not thus wax mighty with us as individuals unless we indorse in our lives its more significantly divine warrant, its impulsion to spiritual purity of life and thought, to fearless devotion to God and His cause, to the spirit of giving and of "loving much."

One quality possessed by Jesus and shared by the outcast Magdalene, but apparently lacking in Simon, was a deep and simple sincerity. Mrs. Eddy writes, "The purpose and motive to live aright can be gained to-day. These points won, you have started as you should. You have begun at the numeration-table of Christian Science, and nothing but wrong intention can hinder your advancement" (Science and Health, p. 326). Sincerity is a quality most admirable because it is expressed chiefly in deeds. It is a quality which dignifies and gives force to any intellectual equipment, be it otherwise rich or poor; a quality which takes us from where we first join hands with Truth and straightway leads us "into all truth." True sincerity is purity of thought and motive, which so leavens the life that it too becomes pure. It is honest devotion unmixed with selfish policy. It is the crucial test of a Christian Scientist.

If our consecration to Truth be directed by this straightforward sincerity, our every activity will echo the same spirit and power; we shall truly recognize God's place in His universe and no false sense of ownership, of authority, or of responsibility can harass or mislead us. Our times are in His hands and we shall realize our own place and work by making His thoughts our thoughts and His ways our ways. True sincerity, thus informed, leads us out of the narrow confines in which we contentedly aspire to enjoy but seldom or never to serve Science. It teaches us the vast difference between using God in our business and being used by God in His business. Even though for a time our daily routine of work may continue the same, the spirit in which we do it will be transformed, and it is the spirit rather than the external circumstance of our work that avails.

We can, if we wish, begin at once this more effective life by thinking more often of the influence of our words and deeds on the Cause to which we are debtors. We shall treat more lovingly the timid, doubting hesitancy of those uninformed of the realities of this Science. We shall never make display of our freedom from fear and disease, nor shall we inflame hostile mentality by what may seem to it to be cant phrase or presumptuous statement. In short, we shall make it no longer possible to include among the foes of our Cause the unwise and the selfseeking members of its own household; but shall live our lives and do our work in a quiet and confident helpfulness, trusting the Cause of Truth to God who guides and protects it.

On this plane of effort we shall learn that we have conserved our own welfare by serving the universal good which includes and secures our own; we shall individually grow as our great Cause is growing, and shall express in our lives the spiritual dignity and power which so characterized Jesus in all his work, and which is so wonderfully exemplified to-day in the steadfast and resolute fidelity of our great Leader. "The ways of Christianity have not changed. Meekness, selflessness, and love are the paths of His testimony and 'the footsteps of His flock'" (Rudimental Divine Science, p. 31).

Never mind whereabouts your work is. Never mind whether your name is associated with it. You may never see the issues of your toils. You are working for eternity. If you cannot see the results in the hot working day, the cool evening hours are drawing near, when you may rest from your labors. Do your duty, and trust God to give the seed you sow "a body as it hath pleased him."

CHRISTMAS.

Truth is eternal. It is inconceivable that the event which the Christian world celebrates, the anniversary of joy and gladness, was one which changed in any particular the facts of being. Truth was as real and as true before the birth of Jesus as it has been since. This must be so. With more or less clearness of vision the prophets and patriarchs of old were able to discern the truth. But through all the writings which we call the Old Testament, it is evident that the thinking men were looking forward to the coming of a day when Truth should be revealed more clearly to mankind. That day came when the son of Mary began his ministry. His coming changed no fact in the relation of God to men. The inspired writer says that in God "is no variableness, neither shadow of turning." If change was to be wrought by the mission of the Saviour, that change must be made in men. They must come to know Truth, a knowledge which it is promised shall make them free.

The world has been seeking after, groping for an answer to Pilate's question for all time. The Founder of the Christian religion made the answer plain, but the inconsistent minds of mortal men have sought to put interpretations upon his teachings to suit their own ideas, inclinations, and desires, until the religious world is mixed with isms and doctrines and creeds almost beyond disentanglement. Before men can get back to the plain, unvarished truth which Jesus taught, they must get rid of a lot of rubbish that has been gathering for centuries in their mental storehouses, and accept, in their simplicity and grandeur, the tenets of the Nazarene. They must learn to put into practice, in every-day life, the single sermon which he is known to have delivered, must learn to obey the First Commandment, to know that one true God and to follow none other, and to love their neighbors as themselves. Alas, that this should seem so difficult!

Through the long centuries that have elapsed, as men reckon time, since the revelation of Truth, it has passed through varying periods of obscurity in the consciousness of men. At times it seems to have been almost lost. But the dawn of better years is here. "Truth is unfolding." The spiritual idea is gaining ground. Men are learning that God is Spirit, and "they that worship him must worship him in spirit and in truth." The recent great religious awakening in this city is a helpful sign of the times.

[From the *Fairhaven* (Mass.) *Star*.]

LIBERTY.

At the Unitarian Memorial Church Sunday, Dec. 9, Rev. Frank L. Phalen, the pastor, preached a sermon on Christian Science, in which he sought to give the belief a "square deal." Mr. Phalen was for seven years located at Concord, N. H., as pastor of the Unitarian church there. He is personally acquainted with Mrs. Eddy, has held conversation with her, and holds letters he has received from her. . . . Mr. Phalen took his text from Luke, 4 : 18, 19. He said,—

There are many persons who forget that this is a land of liberty. There are many persons who know this is a land of liberty, but act and speak as if their thoughts, feelings, and conduct exhausted the entire scope of religious liberty. In short, we are constantly amused by the air and tone of the persons who appear to think that religious liberty in America was born to encourage their notions and to condemn the notions of everybody beyond their parish. Now I take great satisfaction in pricking that bubble of ignorance, and in calling attention to the fact that religious liberty in Massachusetts, in New England, in this republic, means liberty for every one,—liberty for the Hebrew, liberty for the Catholic, liberty for the agnostic, liberty for the free thinker, liberty for the orthodox, liberty for the heterodox, liberty for the aristocrat, liberty for the democrat, liberty to worship, liberty not to worship, liberty to be a Christian, liberty not to be a Christian. . . .

Now, I believe in liberty—and this morning I propose to defend very frankly the liberty of our Christian Science friends and neighbors. . . . I am glad they have these rights, supported by the courts, supported by the Bible, supported besides by every true American and every true Christian in this republic. I am not a disciple of Christian Science. There are times when I allow myself the liberty to criticise very freely both the doctrines and the conduct of my friends in that church. . . .

It is not necessary nor desirable for me to be a Christian Scientist; but it is necessary for me and for you and for every lover of liberty to stand for fair play, for equal rights, for Christian Science as for Unitarianism, or Episcopacy, or any other form of religion. In the act of denying liberty to our friends in the Christian Science church we deny liberty to everybody. . . .

I know Mrs. Eddy, and I do not know one single fact against her. I have read a lot of rumors, a bushel of lies, a ton of nonsense; but I will be just to her—I do not know one solitary thing against her womanhood, or her evidently serious and noble purpose to do good to humanity. I have never met, or seen, or heard of anybody who could prove in a court of law anything against her purity, her honesty, her spirituality.

I have observed with increasing admiration that though she is slandered and vilified in the Christian pulpit and in the public press, she has invariably maintained a gentle and a Christian spirit. Under the lash of tongue and pen she maintains a Christian womanliness. She practises what she preaches. This confirms my opinion that Mrs. Eddy, to speak very moderately and with a careful conservatism, is a remarkable woman. She is the most remarkable woman I know anything about in Europe or America at this moment. She is the best known woman. She has impressed her personality and teachings upon the world more than any other woman; and judged by the growth, the quality, and the influence of her disciples, her name will live longer in history than that of any other woman of this century. When her malicious slanderers are forgotten her name and fame will remain.

I say again, this is not the utterance of a disciple; but it is an attempt to be fair, to give a square deal, to show a Christian spirit; the same kind of spirit we would like our friends in other churches to show toward us. . . .

It is our business as honest, fair men, as Christians, as Unitarians, to see that our Christian Science friends have justice, have their rights, are upheld in the religion they prefer. In short, it is a part of our business to make clear that Christian Scientists shall be allowed to do as they please, —in spite of the minister, in spite of the creed,—just as long as they observe the law and a decent respect for the equal rights of others. Any Christian or citizen who takes any other attitude shows by his act that he ought to study both the Bible and the laws of these United States. I tell you the minister or the deacon, the pulpit or the newspaper, the street loafer or the shallow parlor butterfly who attempts to crush Mrs. Eddy or to stop the progress of Christian Science, might as well try to dam up Niagara with the five points of Calvin or the theology of Jonathan Edwards!

[Frederick Dixon in *The Times*, London, England.]

The letter of "F. E. H." contains an argument definitely advanced. I should be very pleased to answer him point by point, but as his objection traverses the field of Chris-

Digitized by Google

tian Science and idealism in general, I am afraid my reply would demand more space than I could fairly expect. If, however, our critic will forgive me for putting it a little bluntly, the sections of his letter dealing with the influence of mind on matter are founded on a complete misunderstanding of the Christian Science teaching on this subject, a misunderstanding so complete indeed that a Christian Scientist might almost agree with his presentation of the facts. This comes out very clearly in the sentence in which he sums up this part of his argument, for no Christian Scientist ever spoke, or thought, or dreamed of charming away a tumor by a suggestion. It is just as much a misrepresentation of Christian Science to affirm this, as it would be a misrepresentation of Berkeleyism to insist that it taught that tumors could be charmed away by tar-water.

When he turns to the law of God in support of his arguments he opens up another enormous vista of thought. The Christian Scientist is every whit as insistent as is he, that a transgression of a law of God has its inevitable and natural sequence. Before, however, you can argue such a question you must first define law. "F. E. H." claims that God's law includes all physical law, but Jesus declared that any one with the faith of a grain of mustard seed could root up a sycamine tree, and replant it in the sea; and that any one who believed in him could do all his works—that is, walk upon the sea. If, then, the critic's definition is a sound one, Jesus taught that a man could break the physical law, which the critic assumes to be God's law, and the natural sequence would not inevitably follow.

Finally, it is not the purpose of Christian Science to persuade any one who has faith in medical science to eschew it. With that great race of men who have devoted their lives to the incessant struggle with disease on a material plane, they have no quarrel; but for themselves they conceive that they have found a higher and better way, —a way that leads not merely to the conquest of sickness, but to the conquest of sin; a way that binds up not only the maimed, but the broken-hearted; a way that leads out of the darkness of the valley of doubts and fears to the mountain-tops gilded with "the sun of righteousness."

[From the *Daily Times*, Stroudsburg, Pa.]

A most remarkable cure of rheumatism has come to light in this town, one which is unequaled perhaps in the history of non-remedy treatment, such as this appears to be. The subject in this case is Mrs. John Thomas, Jr., who with her husband has been visiting for several months at the residence of their son, Mr. John F. Thomas, the insurance man on Scott Street. Mrs. Thomas was almost a confirmed invalid when she came to Stroudsburg, was suffering intensely almost all the time, and unable to go about without crutches, indeed at times was bedfast.

A friend suggested that the Christian Scientists in this community would be glad to send a representative to visit with her, and after some time, more out of courtesy to a friend than anything else, a lady of this new faith was asked to call at the Thomas home. From that time on there were repeated visitations, and the Christian Scientist was closeted with her patient evening after evening, alone. They read the Bible together, and discussed many of the deeper things connected with their belief and theme. The tiny faith of the sick woman grew and grew, until finally she was able to move about, from chair to chair, without crutches. At last she could go out on the porch, and now walks all around without the aid of the crutches, which have been entirely discarded.

The cure has been widely discussed among the friends of the lady, and of course in the Christian Science Society, numbering many strong believers, the cure is clearly understood and is readily believed to have been the direct result of faith and an answer to prayer. Mr. and Mrs. Thomas and their son and his wife are happy, nevertheless, that the good mother has been relieved, and will willingly give credit where credit is due.

[Frank W. Gale in the *Santa Barbara* (Cal.) *Daily News*.]

It is a significant sign of the times that ministers of the great Episcopal Church are publicly acknowledging that Christian Scientists "manifest more faith in the power of the Christ than many who profess to be of the true Israel of God;" that they are now admitting what Christian Science has always taught, that the whole gospel of Christ includes healing the sick as well as the sinner; and that they are urging the revival of healing in the Church as a means of preventing their communicants from seeking for it and finding it in Christian Science.

It will not hurt Christian Science to have healing revived in the other churches, for it practically vindicates the teachings of Christian Science, which have always contended that the power of Christ is as able to heal now as it was when Jesus and his early disciples healed the sick and raised the dead. While other churches still cling to a material ceremony in their attempts to heal, Christian Science is proving daily that the power of God alone, without the aid of any material means, is sufficient through faith and spiritual understanding to heal and save humanity. Christian Scientists rejoice in any movement which will restore Christian healing in the churches, for they will then be fulfilling the great commission given them by Christ Jesus, "To preach the kingdom of God, and to heal the sick," even as Christian Scientists are doing to-day.

[George Shaw Cook in the *Kewanee* (Ill.) *Star-Courier*.]

It may be of interest to your readers to know that while Christian Science repudiates the belief that evil is the outcome of God or that He permits it to exist, or makes use of it in His plan of salvation of man, nevertheless evil does exist to material sense and must be overcome and destroyed by recognizing its true nature and thereby forsaking it. Christian Scientists understand evil to be an awful mistake, which will punish the individual so long as he entertains it, but which will become nothing when seen to be a worthless imposition and abandoned as such. What do you think would become of the human belief in sin if every one on earth could be induced to cease sinning?

[From *Vogue*.]

Although one may not be an adherent of the Christian Science Church, he must admit, as a matter of justice, that that institution has demonstrated in thousands of instances the helpfulness ethically to the individual of getting away from the total depravity ideal. And in this particular of minimizing the evil in life, the world at large cannot do better than to follow a wholesome system of encouraging latent good by expressing belief in it. How much happier the world would be if each one of us should take for his day's motto: Here's to the good that is in others, and the joy that I can bring them.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From *The Evening Post*, Charleston, S. C.]

MAJOR GLOVER IN CHARLESTON.

[Our readers will recall that Mrs. Eddy spent a short period of her early life in Charleston, S. C., and they will be interested in the following item from a late issue of one of the newspapers of that city.—Editor *Sentinel.*]

The series of articles appearing in a leading magazine on the life of Mrs. Mary Baker G. Eddy, the head of Christian Science, has stirred the people of this sect to devote attention to the history of the Founder of the Church, and the Charleston Scientists have shown themselves no exception in the matter of study and research.

As a result of the efforts of a local committee the fact has been established that Mrs. Eddy's first husband, Mr. G. W. Glover, was a resident of Charleston for some years, his name appearing in the directories of that time, extending over a period from 1839 to 1842. The local committee has investigated the subject fully, and it developed that Mr. Glover came to Charleston from Boston in the later thirties, returned to Boston and married Miss Mary Baker, and with her came to Charleston, where Mr. Glover engaged in his profession as a building contractor.

Reports have been printed that Mr. Glover was a bricklayer by trade. He might have known how to lay bricks, and probably did, which should be a quality of every contractor, but Mr. Glover occupied a position of some prominence in the community at the time that he lived here, as evidenced by the records which the local committee discovered and reviewed, in their report of the life of Mr. Glover and their contribution to a much written of matter. During the time that the city directories showed Mr. Glover to have been a resident of Charleston, the records of the office of the register of mesne conveyance carry the name of Mr. Glover in two conveyances of real estate to him and thirteen from him to other parties. Mr. Glover owned a piece of property on Wentworth, near East Bay Street, among his holdings, and this was the place where he had his office during his residence in Charleston.

Mr. Glover was a Mason, being a member of the now defunct St. Andrew's Lodge, No. 10. He joined the lodge in 1840, and the records of the lodge, now in the archives of the Grand Lodge, show that Mr. Glover held an office in his lodge. This research among the records was made by a prominent Mason, interested in the subject, in company with Mr. John Harleston, who has the records in his keeping at the Masonic Temple. It was also shown that Mr. Glover was a Royal Arch Mason.

In the early forties Mr. Glover, who was known as "Major" Glover about this time, having probably been appointed on a gubernatorial staff, or otherwise given the title, left here to contract on some building work in Wilmington, N. C., and there he contracted yellow fever and died of the disease. He was buried at Wilmington, as the laws did not permit the transportation of the body of one who had died of this disease.

Much erroneous matter has been printed about Major Glover, and the research of the local committee is considered very interesting and pertinent at this time.

MR. KLEIN IN THE COSMOPOLITAN.

We are glad to publish on pages 371 to 373 of this issue, with permission of the *Cosmopolitan*, the splendid article by Mr. Charles Klein which appears in the February number of that magazine. The article is, as it purports to be, an impartial estimate of Christian Science, and Mr. Klein, by reason of his experience both before and after embracing this faith, is well qualified to write upon the subject. Christian Scientists should read this article, and we commend to them the advisability of giving a wide circulation among their friends to this number of the *Cosmopolitan*.

It is as necessary for the person who attempts to write about Christian Science to have a working knowledge of the subject as it is for the person who writes about wireless telegraphy, electric lighting, chemistry, or any other technical subject to have a working knowledge of his theme, and as Mr. Klein is possessed of this knowledge, his article is a valuable contribution to the current discussion of this much-discussed subject. The time when parties to a lawsuit were barred from testifying in their own behalf has long since gone by, and that such a rule ever existed is now a matter for wonderment. The chief trouble with the modern jury system is the exaggerated effort in many cases to find an impartial jury by selecting only those who know nothing of the case in hand, thus obtaining, in many instances, jurymen of less than average intelligence. It has been demonstrated to the satisfaction of most lawyers that the impartiality of witnesses and jurymen depends not upon their ignorance of the subject under consideration, but upon the mental and moral equipment of the individual. Mr. Klein has proved his competency not only as a witness, but also as a member of the great jury of public opinion.

Again, the person who assumes to impart information upon so important a subject as Christian Science should have at least one qualification for this task; viz., a demonstrable knowledge of its teachings sufficient to heal the sick and reform the sinful. This knowledge Mr. Klein possesses through several years of diligent and successful study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and his statement is worthy of the utmost consideration.

Mr. Klein's article is illustrated with a portrait of Mrs. Eddy, engraved from a photograph taken in 1887, and heretofore unpublished, which will be valued by Christian Scientists.

Archibald McLellan.

THE ONE THING NEEDFUL.

It is deeply interesting to read the many promises to the poor and needy which are to be found in the Old Testament, and when we come to the New, we have the assurance of the Master, "Your Father knoweth what things ye have need of, before ye ask him." To many, however, this implies that although the heavenly Father knows the need of His every child, He is not always ready to supply that need, a belief which is contrary to what is taught in Christian Science. According to Christ Jesus, our Father knows our need, but it is doubtful whether mortals themselves know what they really need. Jesus said to one who was "careful and troubled about many things," "But one thing is needful," and no earnest student of Christian Science would question for a moment the truth of this statement, or that the understanding of God was the "one thing" to which the Great Teacher referred. He knew beyond all doubt that the Father—"my Father and your Father"—was more ready to give than they were to receive, and his work was to open wide the channels through which the divine bounty might flow into the needy human sense. He knew that as God is Spirit the supply which comes from such a source must

Digitized by Google

of necessity be spiritual, but he found the needy looking away from Spirit and spiritual things, and then as now, wondering why God did not hear their cries or answer their prayers.

Philip's confident assertion, "Show us the Father, and it sufficeth us," is often echoed at the present day, by those who, like this disciple, fail to see the Father in the very works to which Jesus pointed Philip. Had not the Master fed the hungry thousands by revealing Spirit, not matter, as the source of supply? Had he not met the even greater need of the sick, the sinful, the lame, the deaf, and the blind? Had not "women received their dead raised to life again"? All this Philip must have known, yet he prayed, "Show us the Father." Well might the Master say to all such as he, "But one thing is needful."

And this is the message of Christian Science to all mankind to-day—that our need is to know God, good, and to know Him for what He is, not as human belief has wrongly represented Him. There are many who ask, Why should God answer the prayer of a Christian Scientist when He has failed to answer mine,—has failed to supply my dire need of health or even hope? To this it may be answered that God waits to bless all without any exception, but this is a question of receptivity. Whatever be the human need, it can and will be met if we follow the wise counsel of our revered Leader, "Look away from the body, into Truth and Love, the Principle of all happiness, harmony, and immortality. Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionately to their occupancy of your thoughts" (Science and Health, p. 261). No one can deny that this is strictly in line with the Master's teaching, for he said, "Take no thought for the body." Our supreme need is to know God, and to "hold thought steadfastly," as our Leader has said, to the Divine source of all good. Unnumbered thousands who have been lifted out of hopeless suffering through Christian Science, rejoice in knowing that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). Knowing this, we have but to turn to Divine Love, or as one has so beautifully expressed it:—

To Thee, then, with a bursting heart I turn,
And at Thy fountain stand, and hold my urn,
As aye I stood.

ANNIE M. KNOTT.

THE DEMAND FOR A SCIENTIFIC RELIGION.

IN an article appearing in the current *Homiletic Monthly*, a distinguished British scientist refers to a forthcoming "age of religion . . . when, divorced from superstition and allied with progressive knowledge, it will no longer remain for the solace of the few but will be recognized as a genuine power by the many, and become a vivifying influence among the masses of humanity."

Assuming that the phrase "progressive knowledge" stands for the outcome of the application of the scientific spirit to religious inquiry, we have in the above quotation a statement that but repeats that essential teaching of Christian Science which forty years ago was prefaced by Mrs. Eddy with the awakening words, "The time for thinkers has come. Truth, independent of doctrines and time-honored systems, knocks at the portal of humanity" (Science and Health, Pref. p. vii.).

Gradually, but surely, the world is coming to see that individual and organized religious progress is to be realized only as we escape from superstition and are loyal to the requirements of scientific demonstration as a test of truth, and when we remember to what extent considerations for tradition and for personality—the mesmeric influences of venerated beliefs and sectarian shibboleths—have shaped the course of religious history; when we recall what heresies and horrors have grown out of human pride and lust for power; when all the foolish and frightful apparitions of the Christian past array themselves before our thought, then we begin to understand what it would mean to have a church, a Christian life, and an individual conviction which is undistorted by superstition and which is established by scientific demonstration, and how great will be the revolution in thought which effects this end.

It is apparent that as Truth dispels error in human consciousness Science will supplant sophistry; and since Truth is one and its manifestations are orderly and demonstrable, it will ultimately be seen that this Science is universal and all-inclusive. To this stupendous and far-reaching conclusion the teaching of Christian Science inevitably leads its every sincere and faithful student. It is only as we seek this truth—not that we may buttress a creed or make good an argument, but for Truth's sake alone—that we prove ourselves worthy of the Christian name and in harmony with Christian ideals. Undemonstrated belief inevitably comes to be but a derelict upon the great seaway of spiritual progress,—a drifting menace to the innocent, the unthinking, and the illogical.

While, however, Christian Science is entirely in sympathy with the demand for a scientific Christianity, it is entirely at variance with the methods of those who are hoping to reach it through the channels of material investigation. The crucible and the test-tube have made invaluable contributions to humanity's advance, but the study of the physical sciences has not led men to righteous living and to God; on the contrary it has led many of its devotees into the agnosticism of irreligion. In bringing his students to an apprehension of spiritual things, the greatest of teachers guided them by an entirely different course. It was in the revelation of spiritual truth respecting God and His universe, including man, and in the demonstration of our possible spiritual sovereignty over sin, sickness, and death, that Jesus disclosed the philosophy of true living, the true way of mankind's advance. He thus established a religion which was to be saving because scientific: and this Christ-idea is identified to-day in Christian Science.

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Colorado State Prison, Canon City, Dec. 30, 1906.

Beloved Teacher and Leader:—I consider it a pleasure as well as a duty to give to the world my feeble testimony in addition to the many already given in behalf of Christian Science, remembering the words of Scripture, "With the heart man believeth unto righteousness; and with the mouth confession is made unto salvation." Let me say in the beginning that I took up the study of Christian Science not because I was subjected to any physical ailments, but rather because I felt the need of a spiritual help, having come to the conclusion that my former life had been utterly useless and wasted. Up to a year ago I was considered by the world at large not only a degenerate but a criminal as well, living in the illusion, now to me very foolish, that life was not worth living except in sin and pleasure. This illusion and the stress of circumstances placed me behind prison bars for a long term of years; but if I understand aright the teachings of Christian Science, the errors of mortal mind are necessarily subjected to punishment and even confinement.

The study of Science and Health has convinced me, or better said, I now fully understand, that "it is our ignorance of God, the divine Principle, which produces apparent discord, and the right understanding of Him restores harmony" (Science and Health, p. 390). I also understand now the true meaning of the last line on page 391: "You can master sin through divine Mind," because divine Mind knows nothing of sin. Whilst I candidly admit that there

Digitized by Google

is as yet a great deal of materialism in me, I can, nevertheless, feel myself drawing nearer the chemicalization spoken of on page 168, line 31: "The process which mortal mind and body undergo in the change of belief from a material to a spiritual basis." Poor mortal mind can never realize what Science and Health has done for me and the world, and I shall always believe that you must have been inspired by divine Mind when you wrote the same. I can honestly say that many of the vices which heretofore have seemed to give me pleasure, are now positively repugnant; and surely the religion which can do that much for one who has been depraved and steeped in crime as I have been, must be a true religion, based on God, good. I say it not as a boast, but rather in shame, that I do not think it possible for any one to have been more corrupt than the writer of this testimony, but I thank God—Life, Truth, Love—that it is now impossible for me to fall into like errors again.

I shall never cease to thank the great divine Mind for the light which He has shed on poor humanity, and from the bottom of my poor heart I thank you for the great help which you have given to all who realize that they have been in need of spiritual help. Allow me to say in conclusion that in the future I shall always bear in mind the beautiful words of number 37 of our Hymnal:—

Be true and list the voice within,
Be true unto thy high ideal,
Thy perfect self, that knows no sin—
That self that is the only real.

Humbly and respectfully,
RUDOLPH KNUR, No. 6228.

New York, N. Y.

Beloved Teacher:—I am so glad you answered that article in *McClure's Magazine*. All sensible, peaceful people, who love truth and justice are delighted with your straightforward statement of facts. It is an awful thing that a prominent magazine like *McClure's* should publish what purports to be your history without first submitting the manuscript to you. It is past belief that they could give prominence in their columns to what is so plainly and unmistakably the work of your enemies. I should like to tell the world what I know of your disposition,—the sweetest, most loving, gentle, tender, and forgiving,—the most Christlike nature; always ready to succor the needy, raise the fallen, given hope to the oppressed, and bring comfort to the sorrowing. Oh, if I could only tell half what I know and feel concerning this matter, those who would misrepresent and traduce you would hang their heads in shame. Have you not forgiven more than "seventy times seven" those who would malign you! But God and those who love you know who and what you are, and will carry the light of that knowledge to all who love the truth and want it. Your loving and loyal student,

ANNE DODGE.

Leavenworth, Kan., Oct. 13, 1906.

Dear Mrs. Eddy:—In reading again your article, "Reformers" (Miscellaneous Writings, p. 237), I noted the words, "What has not unselfed love achieved for the race?" I thought, How true; there are people now, all over the world, testifying of benefits obtained through the unselfed love of Mrs. Eddy. We also know, dear Leader, it was you who labored for the establishment of the Cause which is filling our lives with infinite blessings,—health, virtue, and heaven. I am one of the many who are rejoicing in the truth that has been revealed to this age; knowing that it is the same truth which Jesus taught, and of which he said, "Ye shall know the truth, and the truth shall make you free." My heart goes out daily in thankfulness to our Father-Mother God, for giving us you, our beloved Leader, and I am earnestly striving for more of that Mind to be in me "which was also in Christ Jesus."

Lovingly your student's student,
LILLIE D. STORM.

Chicago, Ill., Nov. 26, 1906.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—At this season when the thought turns to God, in gratitude for His manifold blessings during the year past, mine would turn reverently and lovingly to His greatest of all gifts to this generation,—Christian Science,—as given to us by you, His chosen Leader. As memory dwells on the years filled with blessings which have come to me through our loved text-book, "Science and Health with Key to the Scriptures," I can but bow my head and thank our "Father-Mother God" for the unspeakable gift. Your pure, patient, loving, dignified life-work stands high above that of all other leaders, pointing the true way to know our God by a living example.

Very gratefully your humble follower,
BONNIBEL REYNOLDS.

Gunston, Va., Nov. 5, 1906.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—"How beautiful upon the mountains are the feet of him that bringeth good tidings, . . . that bringeth good tidings of good, that publisheth salvation." The love and gratitude for all you have done in your unselfish and devoted effort to bring us into the understanding of Truth can never be expressed in words. For eight years, though slow to apprehend the truth, Science and Health, "Miscellaneous Writings," and your hymns have been a never-failing source of encouragement and help,—mentally, morally, and spiritually,—and have enabled me many, many times to overcome sickness and sin.

I am most thankful.

Very faithfully,
JESSIE JENNINGS KESTER.

Baltimore, Md., Dec. 10, 1906.

Beloved Leader:—I turn to you to-day with loving gratitude for the unfoldment that has come to me during the last year through your treasured messages of Dec. 16, 1905, *Sentinel*,—"A Question," and "The Significance of Christmas." In the light of these, your heartfelt poem, "Christ and Christmas," has been illumined as never before; and a clear abiding sense is with me that Christ and Christmas cannot be separated. For all that has come to me I am grateful, and a deep sense of joy is with me, as I have seen you, under recent trials, bring out so perfectly the fruits spoken of in "The Significance of Christmas," also the meaning of the words from Revelation quoted in your "Christ and Christmas," "And I will give him the morning star."

Lovingly, gratefully yours,
ALINA PORTER.

San Francisco, Cal., Dec. 10, 1906.

Dear Mrs. Eddy:—In answer to my first appeal to God for help, in a desperate hour, Science and Health was handed to me by a lady who was practically a stranger to me. I had not known before that such a book existed. Through its study I am being delivered from my "destructions." I do not know how to express my feelings, but with eyes full of tears and heart struggling to be grateful, I thank you. God bless you. C. S. ROGERS.

THE LECTURES.

NEW YORK, N. Y.

On Jan. 4 Hon. Clarence A. Buskirk delivered a lecture in First Church of Christ, Scientist. The attendance was unusually large. There were perhaps two hundred and fifty standing, in addition to the twenty-one hundred seated, and to an extent unusual the audience was composed of non-Scientists, probably eighty per cent. The introduction by Hayne Davis was in part as follows:—

Since men began to communicate thought to each other, the supreme question has been, What is Truth? Nineteen centuries ago the perfect embodiment of Truth, in the person of Jesus the Christ, appeared before the judgment-seat of the Roman empire to answer charges preferred by those who esteemed themselves as the chief personalities of their time. During the examination by Pilate, the prisoner said,—

"To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth. Every one that is of the truth heareth my voice." Pilate replied by asking, "What is truth?" But he did not wait to hear the answer from him who had come to make answer to precisely that question. He turned to hear and to effectuate the voices of envy and ignorance. And, though Pilate gave sentence that Jesus should be crucified, he was compelled to admit that he found no fault in him.

Among other things, this prisoner had said, "Heaven and earth shall pass away, but my words shall not pass away." He never recorded any of his words, and all the power of the world seemed then to be embodied in the Roman empire; but that empire has vanished away, while everything that he foretold has been, and still is, coming to pass, in due order and at the punctual time.

The heaven and earth, as seen by the people of that era, are passing away, but his words are not passing away. They defied the centuries; they stretch away to the past; they will control those who reach forward into the future. The hour has already struck when the Christ cannot be crucified; when the truth declared by the Christ cannot be ignored; when no one can safely teach, in the name of Christ, that which the Christ did not and cannot utter, because it is not true.—*Correspondence.*

KANSAS CITY, MO.

An audience of sixteen hundred people entirely filled the church edifice of First Church of Christ, Scientist, Friday evening, Dec. 14, to hear the address of Bicknell Young, the third lecture of the series given under the auspices of First, Second, and Third Churches of Kansas City, Mo., on the 11th, 13th, and 14th dates. The speaker was introduced by John H. Wheeler, who said in part,—

Jesus said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." This perfection was our Saviour's key, and it is the only key that mentally unlocks the problem of life, making plain the simple rule of daily conduct. As a bugle call to thought and action, it is echoing down the ages, voicing that gentle love of Christ Jesus which is ever touching human hearts, healing the multitudes of their distresses, and binding up the broken-hearted with the balm of holy compassion.

The world has called these results miracles, but Jesus accomplished them by the mental exercise of a deep, holy faith. He was controlled in thought and action by Truth, the Christ, or "God with us." He said, "I can of mine own self do nothing. . . . The Father that dwelleth in me, he doeth the works;" and this he said in loving humility, because he was fully controlled by God's laws. His novel proof was the results this holy thought has upon blind eyes, deaf ears, and all the other ills of human life; and he referred to these results as an object-lesson, frequently declaring that all who imitated him in sincerity and truth could and should go and do likewise.

In the first chapter of St. John's Gospel we read: "He [our Saviour] came unto his own, and his own received him not. But as many as received him, to them gave he power to become the sons of God." The mission of Christian Science is to demonstrate to humanity how the fulfilling of this promise may be realized, and to educate them in the propaganda of its method. This transforming influence of the Holy Ghost upon the lives of mortals gives them a practical spiritual ideal, a simple rule of conduct that, if applied to the every-day life, would thereby enable all obedient ones to become the sons of God, in the sense that they become more spiritually minded each day, and satisfied only when they awake in God's likeness.—*Correspondence.*

THE LESSON-SERMONS.

A correspondent writes as follows: "May I suggest that you call the attention of the Field to the help to be received through the study of the reprint, 'The Lesson-Sermons.' I find there are many who are not at all familiar with this leaflet, consequently are deprived of much intelligent study of our Sermons."

We are glad to comply with this request. Our Leader speaks of the Lesson-Sermon as "a lesson on which the prosperity of Christian Science largely depends" (Church Manual, Art. IV., Sect. 1); and this being true, it is important that the Lessons be most carefully studied and that the best method of study be employed. A great many students have found this reprint to be of particular value to them in this study.

TESTIMONIES OF HEALING.

After doctoring about a year, I was obliged to give up school and was under medical care for two years; but grew worse instead of better. I was then taken to specialists, who pronounced my case incurable, saying I was in the last stages of kidney disease and could live only a short time. Shortly afterward my uncle gave me a copy of "Science and Health with Key to the Scriptures," and asked me to study it. After studying a short time I was able to walk a distance of several miles, which I had not been able to do for three years. I also laid aside glasses which I had worn seven years, having been told I would become blind if my eyes did not receive proper care. It is over a year since I received God's blessing, and I am now enjoying perfect health and happiness. Many trials and temptations have crossed my pathway, but knowing that "with God all things are possible," I have been able to overcome them all. I am teaching school, and have waded through water over my shoetops, and had to remain in the schoolroom all day with my wet clothing, but never felt any ill effects. I have never had my glasses on since I first began reading Science and Health, and I have not used any medicine.

LAURA RAABE, Spring Valley, Minn.

About eleven years ago this fall I was healed by Christian Science of what a doctor had called the worst case of kidney disease that ever had come under his observation. I had taken all the medicines which I thought would relieve my pain or cure the trouble, but without effect, and at length the doctor said he could hold out but little hope of a cure for me, though he kept on giving me medicine. He remarked that I might last a year, or I might go in a week, and that I had better put my house in order. I had taken so much medicine that I was suffering from its effects, and I really began to believe the doctor was right in his conclusions, when Christian Science found me. My wife—may God bless her—had been reading Christian Science literature unknown to me, and now spoke to me about the healing. I had never heard anything of the subject, and thought my wife had lost her reason; but she insisted, and finally brought out a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I looked the book over, and then told my wife I was ready to try the treatment. She went out, and soon came back with a practitioner. During her visit all pain left me, and after four or five days I went to my office to attend to business. In a few weeks I was perfectly well, and have had no return of the complaint. Besides the physical healing, the moral uplifting which followed the study of the Bible and Science and Health could never be paid for with money. My heart overflows with gratitude to our dear Leader for bringing us this wondrous truth in a form that it can easily be understood and applied. There is a great difference between Christian Science and *materia medica*, both as to expense and in moral and physical results. The doctor said I had to die; the Scientist said I should live. I am satisfied with Christian Science, and would not return to my former way of thinking and believing for all the wealth there is in this world.—MAX BAUMEISTER, Walla Walla, Wash.

I am glad to write of my healing by Christian Science, which occurred over six years ago. I had never been a really healthy girl and consequently had received the most tender care. Weakened conditions increased, and resulted in eight years of semi-invalidism; then I was confined to my bed for three months. This was in January, 1898. Besides being a nervous wreck, I was obliged to wear spectacles, and I had a serious bowel trouble. I had been under the care of one of our city's most excellent homeopathic physicians for three years, and as I came out of the three-months siege in the same old semi-invalid condition, and had heard of a new medical treatment, I tried this for nine months. Discouraged with this, I had magnetic massage and electrical treatment. During the last year of my illness, when I was again confined to my bed, another homeopathic physician was called; but at the end of a second three-months siege there was no improvement, though the physician had been most kind and conscientious. Just at this time the wife of a physician paid a friendly call at our home, and seeing the miserable condition I was in, she begged me to call in an allopathic physician, and if his diagnosis agreed with the homeopath's, she suggested that I then try Christian Science, citing a case of healing in her own family by Christian Science some years before.

The homeopathic physician was dismissed, and this friend's husband, who is one of Portland's foremost allopathic physicians, was called. After two hours' examination he refused to take the case, and ordered me to be taken to a well-known Philadelphia specialist. As it required a few days' preparation for one as ill as I to travel, and as the homeopathic medicines were exhausted and the allopath left none, my mother went to the Christian Science practitioner recommended by our friend. This Christian Scientist was a stranger to us all, and my mother told her frankly that she had no faith in Christian Science and intended to take me to Philadelphia at the end of the following week. A practitioner came to me Saturday morning, April 1, talked to me about the Christian Science concept of God and man's relationship to God, then gave me a treatment. That night I suggested to my mother that she give me an alcohol bath, a nightly service which she had done for me for the last eighteen months in the hope that I might secure sleep. My mother replied, "When we had *materia medica* we went according to the physician's orders; now let us go by this Christian Scientist's directions, and she said 'to rely entirely on the power of God to heal you.'" I answered, "I've had many a sleepless night, I fancy I can pull through another;" but instead of this I slept peacefully through the entire night, waking at seven in the morning. I had my breakfast served in bed, after which, with entire forgetfulness of body as to physical discomfort, I got up, dressed, and went to church that glorious Easter morning. I went to the practitioner's home the next day for treatment, and also on Tuesday, when she told me not to come again but to buy a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I bought a copy of the book, but went for Christian Science treatment every day of that week. On Saturday I realized that I was really well and had no fear of a relapse; so I discontinued the treatments, and here I am to-day in better health than I have ever been,—a well woman. Ever since this instantaneous healing in Christian Science, over six years ago, I have relied upon Truth in every emergency.

ELIZABETH M. CADWELL, Portland, Ore.

It was through my mother's healing, which took place about nine years ago, that we became interested in Christian Science. She was an invalid for years, suffering with severe nervous trouble, besides many other ailments. Her condition was so bad that for two years she never smiled and could only move her eyes with difficulty. At times she was unable to speak or to walk, and at night had to be carried to her room. Her body was very much distorted, and for five years she suffered constantly. Besides the regular doctors she had had magnetic rubbing, massage, and electric treatment, the last being tried more or less for years, even to spending months in an electrical institute; but she did not improve, her eyesight becoming even worse, with all the symptoms of blindness. In short, we tried all the remedies known to us at that time, but were unable to find anything that would bring about the

Digitized by Google

desired healing until we investigated Christian Science and had treatment for her from a practitioner.

After a few treatments in Christian Science she was healed of the trouble in her face and was able to see, smile, and speak with perfect ease. This gave us great encouragement, and we then felt sure that the other troubles would also disappear. The rest of her healing came gradually, until she had completely recovered and could stand and walk perfectly erect. From this time she has been able to perform all the household and other necessary duties. My father, who had suffered with catarrhal trouble for many years, was healed simply by studying the Christian Science Lesson-Sermons, and my brother was cured of a severe nervous disease in a very few treatments. We have had a great many demonstrations, proving to us the efficacy of Christian Science to heal different forms of disease, and we feel that we never can express too much gratitude for the many benefits we have derived from our knowledge of this truth.—MURIEL GLENDENNING, Toronto, Ontario.

I was healed by Christian Science treatment after many years of sickness and suffering from which the earnest efforts of kindly physicians and dear friends could not deliver me. For five years previous to my healing I was constantly under the care of one of the best physicians of our city, who took the deepest interest in my case and did everything he could to help me. He finally told my sister that he could do no more, and even mentioned to her the possibility of my finding some relief through Christian Science. However, as we knew nothing of Christian Science and feared that its influence might not be good, we did not investigate the subject, but sought help from osteopathy and other material means for a year or more without gaining relief. My case was diagnosed by my physicians as nervous derangement and spinal trouble. I was almost constantly in pain and could neither walk nor ride without suffering. My eyes also were seriously affected, and for a period of two years I was not able to read, write, or sew. During this time I was obliged to wear glasses of deepest black, and my time was spent mostly in a darkened room. If I ventured out at all for a walk of a block or two, I was obliged to go after the sun had set and had even then to wear my black glasses. I had the best medical advice and care obtainable in this locality, but neither the physicians nor the oculists gave me encouragement as to a better physical condition, since, as they said, I had nothing to build upon.

As a last resort, and with little hope and less faith, I went to a Christian Science practitioner and asked for treatment, on the last day of May, 1898. My healing was not immediate, though I obtained relief from the first and continued to improve each day. Early in September I was able to lay aside the dark glasses and go out into the bright sunlight without pain, and since then I have laid off my other glasses. My complete healing came gradually, but within a year and a half I was able to pronounce myself a well woman, could walk without any of the old torture and as much as I pleased, and was also able to work, —to read, to write, and to sew. It is now six years since my healing was effected, and I have better health than ever before in my life. After so many years of invalidism and suffering I am deeply grateful to Christian Science for my deliverance, and glad of this opportunity to glorify God by giving my testimony. Since my healing I have steadily gained in physical health and strength, also slowly in the understanding of the great truth which set me free.

MRS. CLARA G. BOONE, Lents, Ore.

In April, 1882, immediately following the birth of one of my children, I was stricken with a severe illness, and in the years that followed there were weeks, and often months, in which I was utterly unable even to wait on myself, there being no time during almost twenty-two years in which I was free from pain for even a single day. About fifteen years ago, after consulting almost every physician in our city (I was then living at Anderson, Ind.), I was told that an operation for ovarian trouble was all that would save my life, but I refused to submit to this ordeal. At this time a growth made its appearance in my right side, and in a few months we were again consulting with physicians, who said there would necessarily have to be an operation. In 1901 I had another serious illness, being confined to my bed for several weeks, the physician telling my husband that he did not think there was much chance, if any, of my recovery. At that time I had about two weeks' treatment from a Christian Scientist. Later, when I had an attack of another trouble, the family physician was again called, and he kept the case for seven months. I got somewhat better, but he said that if I had a relapse it would be fatal, as I had been afflicted for years with heart trouble. During the last month of his treatment I did have a relapse, and kept getting worse until I asked for help of a Christian Scientist. I was then unable to sit up for more than a very few minutes at a time, but in three days after receiving the first treatment I walked about a mile,—something I had been unable to do for months,—and in about three months the entire disorder—heart trouble, growth in side, and all —had disappeared, and I am now perfectly well.

JULIA E. MOON, Frankfort, Ind.

I feel that I have already waited too long before expressing my gratitude for what Christian Science has done for me. For five years I was a constant sufferer from a complication of diseases,—in fact it seems to me I was afflicted with all that flesh is heir to. I often prayed to die; yet death was a great fear, a dread unspeakable. I was treated by some of the most prominent physicians of Meridian and Jackson, Miss. They did all that human power could do, and their kindness could not be exceeded. I also tried magnetism, and one prominent physician said I would have to undergo an operation, but could never stand it as I then was. I had undergone a serious one before, and this made my fear greater. Thus I drifted on from day to day, sometimes being confined to my bed four and five weeks. Finally I had about given up, as I had been taught it was God's will that we should suffer and be afflicted, and I thought I must bear it patiently. I tried to do this, but somehow there always lingered a hope that God would hear my prayers, as I prayed so fervently all the time. One day a gentleman came into my house, and when I spoke of my poor health he suggested Christian Science to me. I had read a few copies of the *Sentinel*, and decided to investigate the subject, but I neglected it and soon after was laid up with rheumatic trouble and for three weeks had a physician in attendance every day. One afternoon like a flash the thought struck me, Why not try Christian Science? I had my daughter telephone to a practitioner, who came to the house and gave me a treatment. When she left I walked to the door with her, and have never had the trouble since, but I took treatment for about two weeks. I procured a copy of Science and Health and fairly devoured its contents—drank in every word of its truth. I gave up glasses which I had worn for fourteen years, and have never needed them since, finding out that in God is my sight. On several occasions some former ailment has made itself manifest, but by reading Science and Health and with some help from the faithful practitioner the trouble has been overcome, and now I can do as hard a day's work as any one, and my friends think my cure marvelous.

I have had some seemingly hard trials to meet, but with the realization of an ever-present God,—one who supplies all need,—they have been met and overcome. I read the

Digitized by Google

Lesson-Sermon with a friend and have gained much thereby. I have had the pleasure of attending one Christian Science service, and enjoyed it more than any other service I ever attended. Were I to tell all the blessings I have received it would take too much space, and I will close my feeble words of gratitude with a prayer for God's blessing upon dear Mrs. Eddy, through whom we have found this blessed truth. I trust my testimony may be of help to some poor mortal who is having an experience like mine. When temptations and trials come to me, I find comfort in the 91st Psalm, and know that its promises are for me; and after reading over the Lesson each day I feel uplifted and know that I have gained a little more understanding. I am learning to overcome error more and more, and while only a babe in Science I have made some good demonstrations. I was healed over three years ago, and have not been confined to the bed since. I wish to acknowledge the great help received from our periodicals. The remarkable life of our dear Leader fills me with gratitude as I daily study and try to live the truth she teaches.

MRS. C. R. EARLY, Gulfport, Miss.

I first heard of Christian Science in 1897. Having been a sufferer for years, I submitted to a medical examination in Canton, Miss., in the above year. The doctor who made the examination said that one of the abdominal organs was almost destroyed, and that no benefit would be derived from an operation. I was sad indeed when I was told I could never lead an active life again. I was also informed that the doctor did not think I would live six months, and surely could not live more than a year. Shortly after my return home, a Christian Scientist said to me, "Do not listen to what the doctor or any one else says; God can heal you. I want you to read Science and Health." She read to me from this book, and left, saying she would return that night. I read but very little, as it seemed Greek to me, and it was hard to see anything in it to suit my case. Every night the Scientist would come and read the Lesson-Sermon with me. Each time on leaving, she would say, "Have no fear, you are not going to die."

The morning after the first reading I felt better, and continued to improve so that I was soon able to look after my household affairs. I was so much better that I was able to make another visit to Canton, and the doctor there who had previously examined me, said to my daughter, "Your mother's case certainly is a puzzle to me." I enjoyed better health than I had for years, when suddenly I was attacked with what the doctor pronounced asthmatic trouble. I used material remedies for several weeks, but was getting no better, so I called in another doctor, who said there was no cure for the trouble. I continued to grow worse, and my friends insisted that I try still another doctor. This one certainly did all in his power for me, but no good seemed to come of it, and after several experiments with different remedies there came a seemingly fatal turn. The doctor sent telegrams to different parts of the State for my children to come at once, if they wished to see me alive, and he said to a friend that I could live but a short time. I, however, rallied, arose once more to be with my family still a little longer, as the doctor said it was only a matter of time.

I had found there was nothing in medicine for me, but I had some of the Christian Science literature, and I read several testimonies in the *Sentinel* that seemed to open my eyes to the fact that there was something in Christian Science. I then asked a Scientist if she could heal me. She said she could not, but that God could. She then asked if I was willing to give up all material remedies and let God do the work. I was, so she gave me one treatment. She said that I might eat anything I wished; that God did not make food to hurt me. She also said she expected me to awake in the morning and find myself well. I eagerly drank in these words, for even then a radiant hope of renewed health was springing up in my consciousness. I did as I was told, and awoke early with a glad song in my heart, telling me that God was Love, Life, and Truth, that He loved me, and that I was well. The Scientist had told me that I needed no more treatment, but having been sick for so long I thought it impossible to be perfectly healed of a very serious illness so quickly, so I insisted on having a week's treatment. Thousands of dollars had been spent for medicines and medical attendance, and after years of suffering I was healed of a supposedly incurable disease at a cost of only five dollars. At the time of my healing I was wearing two pairs of glasses, but I put them away, feeling that if God was my Life, and the source of my health and strength, He was also of my sight. I have not taken any medicine since the day that I was healed. I am now sixty-two years old, and feel as young as I did at thirty. I now know that it was Christian Science which healed me of the first terrible disease.

I want to thank the dear editors and contributors to our *Sentinel* and *Journal* for their faithful work. Every week the *Sentinel* brings us something that cheers and helps us onward in our journey from sense to Soul. I love Mrs. Eddy for her pure life, that enabled her to bring to the world this wondrous truth. My earnest desire is to be able to do the work our Master taught, to obey our dear Leader, and to be worthy to be called a Christian Scientist.

MRS. M. MALLIE THORNHILL, Hattiesburg, Miss.

I am pleased to be able to say that I have been healed by Christian Science of several ailments declared by doctors to be chronic. When quite young the veins in my leg became enlarged, and for over twenty years troubled me very much. As I had to be on my feet a great deal, this condition caused me much suffering, and when I consulted a doctor he said that the only thing to be done was to have an operation. This was over five years ago, and that fall I had Christian Science treatment. I am most thankful to say that I have never had the slightest return of the trouble. I also had treatment for bronchial trouble, which was becoming so bad that I could not go outside the house in wet weather without taking cold and losing my voice, besides suffering severely. I had no hope of ever being rid of it, for my father had passed away that fall from the same disease. I was, however, healed in Christian Science, and for the last three years have been perfectly free from the disease, and I owe my freedom to Truth as declared in Christian Science. I also have been healed of a very weak back and ever-recurring headaches. For all this healing I am very grateful to Christian Science, and am humbly trying to learn more of this great truth.

CATHERINE E. DEE, Toronto, Ontario.

For two years I was in poor health, suffering from kidney and stomach trouble, etc., until I became very much emaciated, and in this low state a throat trouble developed which was finally diagnosed by a specialist as of a very serious nature. A little later another physician told me that the same trouble had affected one of my lungs. Change of climate was recommended, and within a few weeks I went to Denver, Colorado, where I placed myself under a physician's care. In a short time I also employed a specialist, who advised me to arrange for spending the remainder of my days on a Colorado ranch. Soon after receiving this advice, a man told me something about Christian Science and invited me to attend a Wednesday night meeting. I accepted his invitation, and was so impressed by the testimonies given at the meeting that I continued to attend the services until I had faith enough to try Christian Science for myself. I began taking treatment, and within a few weeks I returned to my home in this city somewhat im-

Digitized by Google

proved. I then began taking Christian Science treatment from a practitioner here, and continued until I was healed. The moral regeneration which Christian Science has brought about has made me in every sense "a new creature." This occurred in 1902, since which time I have had no return of these troubles, and have been strong and healthy.

W. P. HANDLY, Nashville, Tenn.

From childhood, until after gaining some understanding of Christian Science, I had suffered from frequent attacks of bronchial trouble in an aggravated form. For a few years, after coming to Colorado from the East through the advice of physicians, there seemed to be an improvement, but it did not last. After beginning the study of Christian Science, my healing was slow, owing to beliefs which were not outgrown, but after one long, hard struggle, in which discouragement seemed to play a prominent part, the disease vanished, and for ten years I have been a well woman, with no fear that the winter must be spent in sickness. I have also been relieved through Christian Science of an abnormal growth, regarded as hereditary. This experience has proved to me the truth of St. Paul's declaration in Romans, 8 : 2. In both cases of healing much time was spent in the overcoming of a sense of discouragement, but when the enslaving mental condition which bound me was uncovered, it vanished quickly and completely. To this saving truth brought to us by our dearly loved Leader, do I ascribe my healing.—CLARA FRANCK, Canon City, Col.

It is with pleasure and gratitude that I give my testimony to what Christian Science did for me. During the period from 1888 to 1892 I was proprietor of a hotel in New York City. In the late fall of 1890 I took a severe cold, which developed into acute lung trouble, and I called in a doctor who was well known to me and had been the hotel physician. He called twice daily to see me, as he was more than ordinarily interested in the case; but I gradually grew worse, and got so low that I did not wish to recover and only longed for the end to come. At the end of two weeks the doctor told my wife that he considered the case hopeless and wished she would call some one in consultation or to take the case. As she had as much confidence in him as in any physician, she decided to seek other help, and went to see a Christian Science practitioner. My wife called upon the Scientist in the forenoon, but she was so busy with regular patients that she could not get away to see me until about five in the afternoon. The practitioner treated me for an hour, and then told me I could lie down, which I had before been unable to do, but she and my wife assisted me to the lounge, and in a few minutes I was asleep and slept all night with scarcely an awakening. The practitioner came again in the morning, and continued the treatments, but my recovery was so rapid that in ten days she left me as not needing any further help. I have never had any trouble with my lungs since, and am a hearty, well man to-day.—W. M. HAIGHT, Monroe, N. Y.

Up to the time I turned to Christian Science for help, I had been for thirty years a sufferer from so-called stomach trouble and periodical headaches. I should be afraid to say how many physicians and prescriptions I had tried for help in that time. For four years before turning to Christian Science I had suffered from the veins in my left leg, so that I had to keep it bandaged and was in constant pain. The right leg was also becoming affected, and I had the depressing assurance from three physicians whom I consulted that it would soon be worse than the other. I was induced to turn to Christian Science for help because of the healing of my wife, and I was completely healed of all three troubles. The pain in my leg was overcome in the first treatment, and after six weeks' treatment I was free from the enlarged veins and from the stomach trouble. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and about six months after beginning its study I went to a little meeting in the parlor of the lady who had been my practitioner, and I had, as it seemed, one of the worst headaches I had ever had. I had not up to this time risen above them. After the meeting was over I asked her for treatment, and much to my surprise, for she had always been so patient with and kind to me, she told me to help myself. I felt as if I had been thrown overboard into deep water; and asked her: "How?" She gave me some helpful thoughts, telling me to realize the allness of God. I went to my room on my return home and began to try to realize the allness of divine Love, as that was the way I liked to think of God. At first there seemed to be nothing but pain; but I persevered, and gradually there came into my consciousness a sense of Love, and the infinity of Love blotted out all else. I do not know how long I retained this consciousness, as for a while time was not, but when I came back to the ordinary sense of things there was no sense of headache and there has not been since, and that was ten years ago. Paul speaks of one who was "caught up to the third heaven." I have felt sometimes that I have had a similar experience. Since that time I have helped myself and many others, and the things which I have seen accomplished through this wonderful truth, if I should tell about them, would fill many books.

I wish to express my gratitude to Mrs. Eddy for the knowledge of Truth and Love that she has brought to us, which has made all this healing and regenerating work possible. Above all, I am thankful to the good God who has so wonderfully, as the time is ripe, opened the eyes of her understanding to make her a Mother-in-Israel and a Leader of men.—W. T. KILGROVE, San Francisco, Cal.

[Translated from the German.]

I have indeed great reason to be grateful and glad for my healing from physical diseases of many years' standing, including severe rectal and bowel trouble, besides a disease of the nerves; yet all this seems small in comparison to the feeling of heavenly joy, the abiding in the consciousness of constant safety, the understanding which has come to me through Christian Science. Much earnest study of the writings of our dear Leader, Mrs. Eddy, and patient instruction, was needed to lead me into the path of Truth. For years I battled with doubt, until the overwhelming assurance of man's oneness with God opened up to me. But now my life is a psalm of praise, and my only aim is the desire to become worthy of the blessings already received.

FRAU M. WALLIN, Berlin, Germany.

Seven years ago I was doomed by the medical profession to undergo an operation for an abdominal growth, but finding that my husband's sister had been healed of cataract in both eyes through Christian Science treatment, I canceled my engagement with the physician who was to take me to the hospital, and placed my case in the hands of a Christian Science practitioner. In a few months I was perfectly healed, and have been well ever since.

MRS. N. A. PLEASANTS, Petersburg, Va.

I was healed of throat and lung trouble by Christian Science fourteen years ago. A physician who cared for my mother during the illness from which she passed away, said that I had become affected by the disease from nursing my mother, and that I would follow her to an early grave. This, however, has been proven a mistake, as I now have strong and healthy lungs and not a trace of the old trouble, for which I am very grateful to God, and to Mrs. Eddy, who has revealed the truth about Him to this age.

MRS. ELIZABETH CONNELL, Toronto, Ontario.

FROM OUR EXCHANGES.

[*The Outlook.*]

Religion is aspiration looking for a model of character, and reverence looking for an object of worship. Neither is to be found in nature. The wind, the earthquake, and the fire may awake our awe, but never our reverence nor our love. These look for ideals to follow and objects to worship in the statesman creating a nation, in the patriot giving his life to its preservation, in the martyr scattering the seeds of a new revealing of truth through the ashes of his martyrdom, in the mother laying down her life in unrecognized service to her child; and back of all such deeds of heroism, and the type of them all, reverence and love find an ideal to follow and an object to reverence in the life of Jesus of Nazareth, and in the after-life of Jesus the Christ, manifested in the Christly lives of thousands who call themselves by his name and of other thousands who follow him without knowing that they do so; and back even of him and of the humanity he has inspired, inspiring their common life and guiding them to a common end, reverence and love dimly perceive the Spirit of purity and goodness and truth, and find in this figure, dimly as they perceive it, undefined and even undefinable though it be, the object of their quest, the One, interpreted to them by the life of idealized humanity but greater than all humanity, interpreted to them by Jesus Christ, the supreme object they have sought. Reverence and love have found God.

[Rev. Walter Dole, D. D., in *The Universalist Leader.*]

Who was first to see and know the eternal type of divine manhood? All nations were eagerly looking for him, though they knew not what he would be like; the prophets foretold his glorious appearing, but they knew not when nor where. He who sees him must be born into a highly spiritualized condition; the whole age and nation must have been a preparation for him. He must also prepare himself. At last, when he has climbed the height of life where flesh becomes transparent and melts into Spirit, then for the first time, in the person of Jesus, there bursts upon human eyes the glory of manhood, in the beauty of the spiritual and only begotten Son of God. For the first time man knows what God is like, for the image of God is expressed in the image of man. So far as we know, Jesus of Nazareth is the first and only man who has climbed the sublime height of humanity where the body becomes so transparent as to permit a clear and undimmed vision of the Spirit of God in His eternal offspring, the perfect man.

[William Allen White in *Collier's.*]

It is a lamentable commentary upon organized religion in this country that the moral awakening of the nation apparently has been unaided by the churches. Lawyers, doctors, reporters, farmers, merchants, laborers, and brokers have become public leaders in the new cause; but although the cause is essentially moral, appealing to quickening consciences, no preacher has become a national leader in it. . . . So, in spite of the lack of encouragement from any church as a church, the people have moved on, impelled by the school and the press, and are making their fight for righteousness and for the establishment between men of that justice which must come before there may be an honorable peace on earth.

[*The New York Observer.*]

A church of Christ in a community is like a great central ganglion, or aggregation of spiritual nerve-cells, both receiving and sending forth helpful impulses, and stimulating moral action in the social organism about it. A church that realizes its high Biblical ideal has its ramifications in all the intellectual and social life of a neighborhood in which it is situated. Unless a church makes its influence felt by society in some way, it is no church at all.

[Bishop Doane in *The Church Standard.*]

Deeper and richer meanings will unfold themselves as new sidelights are thrown upon the Scriptures and the creeds, or as the Holy Ghost reveals more and more their wealth of revelation to the reverent student's eye.

THE CHRISTIAN SCIENCE TEXT-BOOK.—"Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

MR. KIMBALL'S LECTURE. 31 pages.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The car pool voluntarily organized by Western roads, says the New York *Commercial*, and with which the Erie, Pennsylvania System and New York Central lines have since allied themselves, has been christened the American Railway Clearing House, in place of the original title, Car Efficiency Bureau. The purpose for which it has been formed is officially defined as follows: "To demonstrate the practicability of clearing-house and car-pooling agreements, in order that the car efficiency committee may be able to base its conclusions upon practical experience." The car efficiency committee referred to is that of the American Railway Association, appointed Oct. 24. The work to be undertaken by the clearing house comprises the selection of statistics, the keeping of clearing house records for freight cars, and the administration of freight car pools, of which three had been proposed; viz., box cars, gondola cars, and coal cars. Each of these pools will be formed by the voluntary association of certain roads, each of which will contribute a specified number of cars. The cars pooled will be considered at home when on the lines of any of the roads that are parties to the pool agreement.

More than $1,000,000 for the purchase of proper quarters for American consulates in China, Japan, and Korea is asked by Secretary Root in a communication sent to Congress. The request is in line with the policy of the Secretary of State to make American consuls more respected and to establish them so they will be able to render better service in extending American trade. The amounts asked are: Amoy, $8,350; Canton, $115,000; Chefoo, $40,000; Chungking, $11,500; Foochow, $6,312; Hankow, $60,000; Hong Kong, $155,000; Nanking, $44,000; New Chwang, $50,000; Shanghai, $241,000; Tien-Tsin, $65,000; Kobé, $120,000; Nagasaki, $55,000; Tamsui, $27,300; Yokohama, $104,493, and Seoul, $10,000.

The River and Harbor Bill reported to the House carried an appropriation of eighty million dollars. The committee recommended that enough be applied to complete a number of large projects already under construction, including $4,400,000 for the deep sea channel at Boston. The Naval Appropriation Bill as reported to the House carried between $95,000,000 and $96,000,000 and a recommendation that two new battleships of 21,000 tons each displacement be authorized. The Diplomatic and Consular Appropriation Bill carried a total of $3,138,000.

Sealed bids to the number of more than three hundred thousand were received for the sale of 375,000 acres of pasture lands of the Kiowa, Comanche, and Apache Indian Reservation in Southern Oklahoma. The average price received for the land is $12.19 an acre. The Indians will realize from the sale $4,574,000, or an average of about $12 for each Indian interested. A surplus of 130,000 acres yet remains to be disposed of.

Public Printer Stillings has issued a general order in which he says that the day of hand composition is fast coming to a close. The order was issued to call attention to the Government Printing Office's night school of instruction on typesetting machines. The instruction will be free, but no pay is given for the work accomplished. Should the force of printers be reduced the public printer says those who can operate machines will be given preference.

The work of rebuilding the frigate Constitution and replacing her as nearly as possible in the condition in which she was at the time of her battle with the Guerrière on Aug. 19, 1812, is going ahead without interruption at the Charlestown Navy Yard, and it is expected that the ship will be fully restored and ready to receive visitors by July 1.

The race to Bermuda this year for sail craft, for which Rear Commodore Frank Maier has offered a $1,000 cup, is expected to be a much more interesting event than last year's. The conditions this year allow boats of any rig up to ninety feet in length to start.

Boston proposes to appropriate $40,000 to change the lines of Copley Square. The design to be followed is one of many competitive designs. Surrounding the Square are the Public Library, Art Museum, Trinity Church, and the New Old South Church.

The battalion of three hundred and sixty engineers now at Fort Riley, Kan., will leave that post Feb. 28 and go to Cuba to make a survey of the coast line and a topographical map of the island.

The resignation of Theodore P. Shonts, chief of the Panama Canal Commission, has been accepted. He will become President of the Interborough Metropolitan Company of New York City.

Foreign.

The court in Hamburg in deciding that insurance companies must pay losses incurred in San Francisco held that the earthquake clause in the policy was too ambiguous to justify the company seeking to escape liability. The court also ordered the Transatlantic Fire Insurance Company to reimburse two English companies which had reinsured San Francisco risks with it for losses already settled. The case against the North German Fire Insurance Company was won by San Francisco lawyers, who came to Germany in the autumn for the purpose of pressing the claim. The company had risks of $4,500,000, but denied all liability on the ground of an earthquake clause in its policies and paid no claims. The suit in the German court was to test the validity of this particular clause.

In the presence of a great throng, among whom were most of the notables in the official and private life of the Republic, President Diaz of Mexico, on the 23d ult., inaugurated the Tehuantepec National Railroad. The chief executive, by touching a lever, set in motion a steam winch, which was used to carry the first load of cargo from the steamship Arizonian to a specially decorated freight car. One presidential train and three accompanying specials crossed the Isthmus, following the freight car in which the President placed the cargo. Arriving at Coatzacoalcos, the Atlantic terminus of the road, the President broke the seal on the car and placed the cargo in the steamer Louis Luckenbach, thus personally superintending the transfer of the first bit of freight.

Industrial and Commercial.

Professor Moissan, the eminent Paris chemist, has been explaining his method of making real diamonds in his laboratory. He takes absolutely pure iron, freed from sulphur, silicon, and phosphorus, and packs it in a carbon crucible with pure charcoal obtained from sugar. This is heated in an electric furnace, the invention of which alone makes possible the production of the pure gem. The furnace heats the crucible above seven thousand degrees Fahrenheit, at which temperature the iron melts like wax and saturates itself into the carbon. The crucible is then lifted out and plunged into cold water. The sudden cooling solidifies the outer skin, while the iron in the center is still liquid. The process of solidification exerts a tremendous pressure on this central mass and the result is that the carbon which was soaked up by the molten iron is squeezed out again like water from a sponge and crystallizes into diamonds.

The *Manufacturers' Record* says: "Prevailing activity in construction indicates that 1907 will be prolific of new electric railway trackage in the South. Ever since it was demonstrated that electric interurban railways could be operated with satisfaction to the public and with profit to the companies, the South has been active in promoting them, and the success of the lines between Augusta, Ga., and Aiken, S. C., and between Fort Worth and Dallas, Tex., constitutes tangible evidence that such enterprises will meet with success in this section when they are judiciously and properly built and efficiently managed. There are now about fifty electric interurban railway plans in various stages of progress in the South, and some of them are to be completed within the next few months."

It is estimated that more than seven million acres of timber land in Mexico passed into the hands of American investors during the year 1906. Some of the timber tracts are situated far remote from railroad transportation facilities, but they will be held for the coming of railroads. A New York company purchased a solid tract of three million acres of timber land in the heart of the Sierra Madres and a railroad has already been built and an outlet afforded for the lumber product now being turned out by the mills, which have an aggregate capacity of two hundred million feet per annum. Storage buildings are being erected which will have a total capacity of forty million feet of sawed lumber.

It is reported from Galveston, Tex., that the Gulf Coast oil fields have decreased their production over forty-five per cent within the last week, and the cause is attributed to the earthquake in Jamaica. The sudden drop was noticed the second day after the Jamaica earthquake, and seventeen wells in Texas and Louisiana went dry entirely. After the Valparaiso earthquake many wells ceased to flow, while an immense oil lake appeared out in the Gulf. The North Texas oil fields have increased one hundred per cent since the Jamaica shocks, and the product is much lighter in color.

The pottery "trust," into which were merged most of the pottery interests of the country, and which once promised to revolutionize the trade, has by recent action of stockholders been dissolved.

Meat and dairy products exported from the United States in 1906 exceeded $200,000,000 in value; and if to this is added the value of food animals exported, the total would aggregate $250,000,000.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"THE BIRTH OF A NEW FAITH."

Chicago, Ill., Jan. 6, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Beloved Leader:—Day by day the greatness of your work for mankind and the magnitude of the Christian Science movement are growing upon my consciousness. Not long since I listened to a lecture delivered by a distinguished professor of one of the large eastern universities. His subject was "The Birth of a New Faith." After reviewing the religious development of mankind, touching briefly on the world's great religions and schools of philosophy, and the influences which from prehistoric times had prepared their way, he said in substance that the world was on the eve of the greatest spiritual advancement it had yet known, and that all thinking men could feel the leaven of this coming religion already at work. He then went on to say what the characteristics of this religion would undoubtedly be. In the first place, he said, it must be universal and not fettered by ceremonials; that it must be natural, not supernatural; again, it would be reasonable, for reason and revelation must coincide, and science and art must be reconciled with it. In concluding he said that this religion would be the understanding of the infinite realities of things as here and now, not afar off, and the enthroning of Love in the hearts of mankind.

How I did long to say to him and to the audience, "Behold, this prophecy is fulfilled, even here in our midst today. Christian Science embodies all that you are looking for!" I think I realized as never before how your great self-sacrificing labor of love for mankind, in presenting Christian Science to the world, is placing its stamp on the world's thought, though the world does not always recognize it. I thank God for this great truth of Christian Science, and rejoice that I am seeing the light and trying to follow it.

Faithfully yours,

IRENE C. FRANCIS.

THE HEALING MOTIVE OF CHRISTIAN SCIENCE.

W. D. MC CRACKAN, M.A.

CHRISTIAN SCIENCE heals the sick and reforms the sinner. This is an incontestable fact. It has been rendering this service to mankind for over forty years; it is rendering it to-day on a greater scale than ever, both with an increased momentum and in an ever-widening circle of action. Many people owe their lives to its timely interposition; multitudes are better, healthier, and happier by reason of its ministrations, enjoying improved mental, moral, and physical conditions as a result of its advent into the world. For over forty years since its discovery by Mrs. Eddy in 1866, it has been making better Christians, better Bible students, better fathers and mothers, husbands, wives, and children, better friends and citizens, better employers and employes. It has thus made many friends; and for good and valid reasons, since it has not only filled lives with sunshine, taken burdens from weary shoulders, and destroyed bad habits, but has brought to many supposed to be incurably sick the healing which the Gospel records show formed a necessary part of primitive Christianity.

Christian Science has placed the world of thought under obligations. Current theology, medicine, philosophy, and science, and indeed the arts themselves, are indebted to it for the stimulating vigor of its unwavering stand in behalf of the supremacy of Spirit. Every thinker who keeps abreast of the times must recognize this. The practical success of Christian Science has meant the disproval of many harassing and haunting theories which have beset mankind from time to time and been accepted because of a popular lack of understanding of the fundamental laws of God as Mind. Christian Science has registered an effective protest against these enslaving theories. It has been the harbinger of freedom from ill-advised fears and bugbears conjured up by the general human consciousness for its own destruction, and it has pointed out the Christian and truly scientific way to health and reform. It has proved its capabilities by actual works, tests, and achievements, in demonstration that it is not a mere theory; and in return for the incomparable boon it is conferring upon mankind, it asks nothing but fair play.

The healing motive underlies every phase of Christian Science activity. It was present at the discovery of Christian Science itself, and has led to every step which has since been taken in the founding and organization of the Christian Science Church. It would be as futile to try to understand the teaching of Christian Science or the life of its Discoverer and Founder, without giving due consideration to the healing, as it would be to attempt to estimate the character of Jesus while deliberately excluding what are commonly called his miracles. Indeed, Jesus himself referred questioners to his works, evidently considering them the essential factor of his life-work. It must be patent to every one that but for this very healing Christian Science would not have attracted world-wide attention nor be at this time the cherished faith of earnest Christians in all quarters of the globe. The healing motive alone can explain Mrs. Eddy's career. It is inextricably interwoven with her trials, her successes, her patience with friend and foe, and her very manner of living. As the healing is part of the fabric of her discovery, so it is inseparable from the steps taken to make that discovery available for mankind at large. It is beside the mark even to essay an expression of opinion concerning Mrs. Eddy as a woman and Leader, while disregarding the mainspring of her character, the object of her constant prayer and her most sacred hope; namely, the regeneration of mankind by Christianly scientific means.

Even well-meant criticism of Mrs. Eddy's writings, if it seeks to brush aside their therapeutic effect, can have no value. The very essence of these works, that which colors the style and arrangement of sentences and paragraphs, which determines the choice of words and largely also their capitalization, is the simple fact that the thought they convey heals. An innumerable host of grateful men and women are on record as attesting that they have been healed and reformed by the perusal and study of Mrs. Eddy's writings. Hence these writings cannot be understood except from the standpoint of the good they have accomplished, nor

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

their value estimated except in the light of their effect in destroying evil and in magnifying righteousness. The qualifications demanded of a critic of Mrs. Eddy's writings are not ordinary. He is confronted by a literature which is active and dynamic in character. It accomplishes results. In order to criticise even the literary style, he must feel sure that he understands the meaning; and how can he prove his understanding of the meaning except by practising what Mrs. Eddy teaches, and by healing the sick as she has done? It is obvious that the critic who does not understand the idea of the writer is not competent to criticise the words in which the idea is clothed. He cannot be certain of the proper literary expression unless he knows the idea which is to be expressed.

Thus it happens that every verdict rendered concerning Mrs. Eddy's writings, whether from a purely literary standpoint or from some wider aspect, must be hopelessly incorrect, or at least fall far short of the mark, if it neglects the healing motive which runs through these writings like a musical motif through one of Wagner's operas. As though to emphasize the healing motive of her writings, Mrs. Eddy has added a chapter entitled "Fruitage" to her principal work, the Christian Science text-book, "Science and Health with Key to the Scriptures." This chapter contains many letters from "people who have been reformed and healed through the perusal or study" of this book. A similar chapter is attached to Mrs. Eddy's "Miscellaneous Writings." Furthermore, every Wednesday evening in every Christian Science church or society spontaneous testimonies of reformation and healing through Christian Science are given, and every issue of the weekly and monthly publications of the Christian Science denomination likewise contains such testimonies.

Again, in the matter of the Christian Science Church organization, with its multifarious activities and its ways and means of making Christian Science accessible to the public,—all these branches of the work spring from the healing motive. The very originality of the methods chosen can be accounted for in no other manner. Every consideration is subordinated to the paramount aim and object; namely, to fight the common enemies of all mankind, —the sins, the miseries, sicknesses, disabilities, and limitations which hold humanity in bondage and hide from it the consciousness of heaven on earth. Christian Science is making possible a present realization of the promise in the Apocalypse: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

The very form and structure of the Christian Science church edifices is influenced by the necessity for auditoriums wherein those who testify on Wednesday evenings to the healing may be conveniently heard from all sides. The free Reading Rooms to be found in most cities and towns have been instituted with the object of dispensing this healing gospel. The same may be said of the periodicals, the lectures, and the work of the Committee on Publication, all of which have resulted in bringing the good news to many who feel the need of it.

From whatever standpoint Christian Science may be viewed, there is nothing sensational about it, unless one choose to call the natural and normal fruits of the Spirit sensational. Its work is considered wonderful only because the general human consciousness has persistently denied the obvious teachings of the Bible. Christian Science takes the ordinary material available among us all and proves by its means that good is to be expected and is altogether likely, while evil in its various forms is a bald imposition upon mortals. Christian Science is equipped, strengthened, and fortified with healing, and marches to its inevitable benefactions by the road of healing; and no one who feels unable to account for those works among the early Christians which are generally styled miracles, is competent to controvert the teachings and practice of Christian Science in our day. Mrs. Eddy's labors have resulted in the accomplishment of a vast amount of actual good, and it is only by these fruits that her life and the movement she leads can be correctly understood. The public is well aware that a process of readjustment and rearrangement has overtaken modern institutions and beliefs. Christian Science provides a safe and solid rock of conviction in our day, because its teachings are based on experience and are capable of proof by any one who is willing to comply with its rules and requirements.

It is inconceivable that any one should wish to hinder those whose condition has been declared hopeless, according to material theories, from finding cure or comfort in Christian Science. It is part of the general stock of world experience that justice to ourselves presupposes justice to others. The very instinct of self-preservation demands fair play, and in the end it is found to be the soundest policy for all concerned.

MONOPOLISTIC TENDENCIES.

CLARENCE W. CHADWICK.

THE healing work of Christian Science has taken such a firm hold upon the thinking classes that the envy of opposing systems has been aroused to the utmost. Some of our medical friends in particular seem determined that certain laws restricting the practice of Christian Science shall be passed by the different State legislatures. Their efforts have in the main proven unavailing, and with the growing confidence of the people in the efficacy of Christian Science healing, it is not at all probable that any of the States will accede to the selfish demands of any one class of practitioners. In the first place, it is admitted that the people themselves are not asking for any such legislation. In fact, many broad-minded physicians are not in favor of it. They see and honestly acknowledge the good that is being accomplished by Christian Science, oftentimes in cases they themselves had failed to cure, and some go so far as to recommend patients they have not been able to relieve, to try Christian Science. Here is evidence of that true Christian spirit which characterizes the work of every genuine humanitarian. He who loves his fellow-man will try in every way possible to render him aid in time of need. If his own method fails, he will gladly recommend some other, and will rejoice if that one succeeds. If this charity and courtesy were extended by the medical profession generally, the mortuary record of our land would soon appreciably decrease.

Christian Science practice is founded upon no material belief, theory, or opinion, but upon the recognition of divine Mind as the sole power and healing influence in the universe. It is not the hypnotic or mesmeric influence of one erring mind over other minds. It is in no way related to nor associated with so-called "suggestive therapeutics." Neither is it the exercise of human will-power. Its ability to heal is not dependent upon knowledge of physical anatomy, physiology, or hygiene. It is not based upon any physical diagnosis of disease. What the patient is *thinking* is the important thing to be made acquainted with in the healing work of Christian Science, and when such thinking is thoroughly corrected through divine influence, which means the operation of God's law, the patient is healed mentally and physically.

The practitioner deals with mental causation from start to finish. He knows that the only method of dispensing with a shadow on the wall is to remove that which is casting the shadow. Disease is thought shadowed on the body, and when the discordant thought is corrected the disease disappears. It is not his knowledge of disease that enables him to heal, but instead his knowledge of health. It is not the watchmaker's knowledge of broken watches that enables him to repair a broken watch, but instead his

Digitized by Google

knowledge of the perfect mechanism. It is not the bank-teller's knowledge of counterfeit bills that protects him against counterfeits, but instead his knowledge of the genuine bills. The Christian Science practitioner has a perfect model to work from; and, with all due respect for the medical fraternity, let it here be stated that those who have not honestly sought to know the truth of Christian Science so as to be able to prove in some degree its Principle true in the healing of disease, know practically nothing of this perfect working basis of the Scientist; and because this most important point is not understood, they insist that it is fraught with danger to the public health, and that laws must be enacted to compel the mental practitioner to adjust himself to the standard of material practice. Neither reason nor justice support this contention. Had the knowledge of various material studies been essential to success in their practice, Christian Scientists would have adopted them long ago, whereas the fact is that their marked success in healing has resulted from their having forsaken these various subjects, and learned in their place the truth about God and man. Too long have mortals held to that which is untrue and unreal concerning God and man, and by accepting the Christ-teaching Christian Scientists have not only been healed themselves but have been enabled to make others whole. It is a knowledge of right that corrects a wrong. A knowledge of disease is a knowledge of something that is positively and undeniably wrong, and only a right understanding of health can scientifically correct or heal the disease. The consciousness that heals and blesses is one that is filled with moral and spiritual knowledge or understanding, and not with thoughts of disease or sin.

Christian Science practice has long since passed the experimental stage. It is here by virtue of its divine right to be and to do, and it will continue to express the activity of right thoughts, which is prayer in the truest sense of the word. Knowing the truth of this claim, the Scientist makes no vain boast of monopolizing the truth, but earnestly, and for the sake of suffering humanity, asks that those who do not understand the Principle of Christian Science, carefully and impartially investigate its teaching before presuming to enact laws to regulate something which they do not and cannot comprehend until they are generous enough to look beyond and above their own material theories for an explanation of this Principle and practice.

The argument of the framers of recently proposed medical bills, whose principal object is to establish a monopoly of the healing art in the hands of the medical fraternity, might justly be stated in the following paraphrase: "Because we have faith in matter, we insist that you shall have, and unless you do, we shall enact a law to compel you to comply with our way of thinking, regardless of the fact that you claim to have been healed through Christian Science after our treatment had failed to cure you, and regardless of the fact that you are remarkably successful in healing others who voluntarily come to you for help, oftentimes after being given up by medical practitioners. We will, notwithstanding the great good that Christian Science is evidently accomplishing, and which we cannot help witnessing, enact a law that will compel you to be examined in various material subjects (no one of which has any direct bearing upon Christian healing), and unless you can pass a thorough examination in these subjects, and can present a certificate signed by the secretaries of a State Board of Health, who understand nothing of the Principle of Mind-healing, certifying that you have passed these various examinations satisfactorily to an examining board of medical practitioners, you shall have no right to pray to God for the deliverance of any sick people, whether you do or do not receive any pay for your services. Regardless of the fact that the Bible gives you ample authority to exercise your religious belief, and the Constitution both of the State and of the United States vouchsafes to every individual the right of perfect religious freedom and worship, we deem it necessary for the preservation of the public health and peace (although the people are not asking for any such laws) to legislate against any further attempt to heal by any other than material means.

"Notwithstanding the fact that there is a great conflict of opinion and practice among physicians themselves as to means and methods of treatment, we claim the right to dictate to the people what means they shall employ for the cure of disease. No matter how general may be the demand for Christian Science treatment,—and we are told that the treatment makes people better morally and spiritually,—we propose to make it unlawful and even impossible for them to have any such kind of help, by demanding that Christian Science practitioners do something which we well know their practice will not allow them to do, something which would not make them better practitioners.

"We therefore ask the members of the legislature to vote in favor of a bill that will effectually prevent them, their families, and their friends from ever receiving help from any Christian Science practitioner in the State without making that practitioner a criminal in the eyes of the law, because of his failure to pass an examination in subjects that do not appertain to the Science which he practises. We admit that in all probability the Christian Scientist loves his child and will do everything in his power to save him, but he must not be allowed to let his child get well without receiving medical aid. That would be 'irregular,' and although Christian Science has been successful in healing the diseases of children, the law should compel the Christian Scientist to show his love for his child by resorting to our methods. Christian Scientists may be good moral people, they may be honest and pay their bills promptly, and they certainly are good neighbors and citizens, but they all need regulating because they do not hold to the practice of medicine, and if Jesus himself were here in person he would need to procure a license, under our proposed law, from the State Board of Health before being allowed to pray for the sick. Christians in general pray for the recovery of the sick and then send for the doctor. We do not object to this, because it is customary and 'regular.'"

A prominent newspaper speaks editorially of certain proposed medical bills in the following language: "Each should be entitled, 'A bill for an act to put the practice of Christian Science into the hands of its enemies.'"

[Written for the *Sentinel*.]

DISCIPLESHIP.

KATHARINE J. SMITH.

If thou should'st look about thee in the sunlight
And see a shaft of white within thy door,—
One with a store
Of peace upon a brow transfigured, white;
Christ's footfall too would thrill thy wakened ear,
And by his omnipresence, and one dear,
Would thy bare room be graced and glorified.

If thou should'st look up from the embers' splendor
And see one drawing near thee thro' the gloom
Of thy drear room,
The Christ-host's voice would welcome, sweet and tender,
His hands would bless the loaf of love you share,
And heart and hearth would swept and garnished be,
All graced and glorified by Christ with thee.

If thou should'st look upon Golgotha's sorrow,
And see a fainting figure pass thy door,
In sin's black war,
Thy bless'd Redeemer needs thee on no morrow,
Lift thou thy fallen brother's grief to-day;
For now some dread ensanguined cross may be
Stainless and glorified by Christ with thee.

A QUESTION OF DOCTORS.

The people of Pennsylvania may be expected to observe with no little interest the fate of the bill, introduced to the Legislature the other day, for the rigid limitation of their opportunities to enjoy the consolations and the renewing influences of medical practitioners. This remarkable measure, which is urged by a Representative from Cumberland county, proposes to give a complete monopoly of the business of "doctoring" to physicians of three schools, the allopathic, so called, the homeopathic, and the eclectic. All others are forbidden to engage in "the healing art" under penalty of punishment for misdemeanor.

It will be observed, of course, that under this arrangement the door is shut upon osteopathists and Christian Scientists, and even upon the persons who pledge themselves to the restoration of health through the medium of what are called patent medicines. These persons are thrust back into the ranks of quacks and impostors, and have imposed upon them the ignominy and discredit usually accorded to men who pow-wow and conjure, who claim natural gifts as healers because they are seventh sons of seventh sons, or have learned from Indians the medicinal virtues of certain mysterious herbs. It is an unkind fate.

One interesting fact is developed by the introduction of this bill. It is that the allopaths, homeopaths, and eclectics are apparently standing together in their purpose to assert an exclusive right to the fees. It was not always so. There was a time when the intolerant allopath claimed everything in sight. His arrogant notion was that his method of dealing with disease was the only enlightened and respectable method, and that all other practice than his own was arrant humbug. Particularly did the allopath look with derision, if not with malignant animosity, upon the homeopath; and both contemplated the eclectic with scorn as a man who was surely half wrong either way. When, however, the homeopath had contrived to get firmly upon his feet, so that he could be neither laughed down nor outlawed, when the eclectic had forced recognition for himself upon the ground that he used the truths of both schools and rejected the errors, then all hands began to fight the woman doctor. It has not been fifty years since a woman who wanted to study medicine had to encounter the certainty that society would regard her as a crank, and the assurance that no reputable male physician would take counsel with her. This seems really amusing in the light of the circumstance that women ought manifestly to have a better right than men to deal with women's maladies, and of the experience which has proved that a woman may reach the highest places in the profession.

However, the time has come when allopaths and homeopaths and eclectics, having failed to annihilate one another, are ready to bury the hatchet and to join hands against all newcomers. If we understand the matter, there are still formidable rules which forbid the allopath to hearken while the homeopath explains his notions about a particular case. The ancient Jew was not less resolute to avoid eating meat with a Gentile than is the allopath to escape meeting with, and appearing to give countenance to, a homeopath. Whether the woman doctor is still shut out from the high privilege of talking with a man who probably does not know as much as she does, we have not learned. Perhaps the woman doctor is really in a happier case if she is still compelled to go it alone. The patient's chances may be better, at any rate. To the impartial layman, whose life is necessarily sometimes placed in jeopardy by these warring disciples of the various schools, it seems really curious how intense is the belief of each doctor that his school has all the serviceable knowledge, while facts developed every day prove conclusively that the range of his information is narrowly limited. There must be terrible secrets locked in the breasts of doctors who pass for repositories of encyclopedic wisdom.

Many persons, to their sorrow, have learned that the commonest practice in the profession is to guess, and the frequent result is to guess wrong. The smallest inquiry would develop information of cases where the homeopath has corrected the mistakes of the allopath, and *vice versa*, and where the eclectic or osteopath has guessed correctly when both homeopath and allopath have gone wide of the facts. These are grounds for humility, not for arrogance. The physician who remembers how often he has diagnosed one disease and dosed for it, only to have a doctor of another school discover that he missed the truth and gave the wrong poison, might be expected at least to exercise a little charity in regarding his rival in the business. There are no available statistics, but no doubt the practitioners of each school can fairly prove that, man for man, the doctors of his faith hit the facts and make cures about as often as the doctors of other faiths. However, exclusive proofs in this business are not easy to get. Many of them, probably, are under ground.

This act now urged upon the Legislature undertakes to determine for a free American citizen in what particular manner his maladies may be treated. It might be a somewhat nice question, perhaps, just in what degree such a man is entitled to have control of such a matter. On the surface it looks as if an intelligent human being, living in a land of liberty, has an indisputable right to declare if his own interior department shall be drenched by a draught or assailed by a pilule, or whether he shall be cured from the outside by squeezing or by prayer. Suppose there should be a majority in a Legislature composed of perfectly untrained and uninformed persons who should make up their minds that homeopathy is pure quackery, and that nobody should be suffered to practise it; how many of us would patiently endure that, or, on the other hand, the outlawry of allopathy?

But, if these law-framing persons may reach such conclusions about osteopathy or the Christian Science practices, why may they not some day reach them about the allopathic, homeopathic, and eclectic practices? Everybody knows that they have no original equipment for dealing with such subjects at all. This bill must have been prepared for the Representative who introduced it, and, of course, by practitioners of one of the three favored schools of medicine. We hear no little clamor against trusts and combines, but here, indeed, is a proposition to legalize a combine, not to run railroads, or to manufacture pig iron, or to refine sugar, but to deal with the lives of men and women.

For all we know, osteopathy may be a humbug, and Christian Science a delusion and a snare; but there are multitudes of men of quite the intelligence of the ordinary legislator who believe in osteopathy, and millions to whom Christian Science has the flavor of religion. The legislator stretches his authority very far who undertakes to say that one man shall not be allowed to rub and squeeze and manipulate another man for the cure, say, of rheumatism, without peril of a prison cell. The legislator appears to us to trespass in a measure upon sacred rights who tries to make it unlawful for a patient, weary of conjecture and nauseous drugs, to summon a good man or woman to try what prayer will do.

It is to be admitted that to force one system or another upon a helpless and protesting invalid, or even upon an ignorant child, is an act which the law may properly forbid. We may go farther and admit that there are some maladies which osteopathy certainly cannot cure, and Christain Science certainly does not. But let us remember that both those accusations may with equal assurance be brought against allopaths, homeopaths, and eclectics. Under the circumstances, and in view of all the facts, there would

Digitized by Google

seem to be sound reason why the bill alluded to should not pass. At any rate, it should not be permitted to pass until some of the people at whom it is aimed and whom it proposes to suppress shall have had a chance to make themselves heard.

[From *The Register*, Minneapolis, Minn.]

Thus far we must say in all candor the "life" [of Mrs. Eddy, as given in *McClure's*] is of little interest and no value. The next instalment, however, must deal with Mrs. Eddy as the most prominent woman of the age, and of course the writer will not be obliged to rely upon unreliable data as to her "life," but when she strikes out on her "history" she will be in a sea of mud. If, as is alleged by *McClure's*, "no information can be obtained from Scientists," the writer is dealing in pure fiction, for there is no other source of reliable information as to what Christian Science really is. The non-Scientist in reading the Christian Science text-book considers it nonsense, and so it really is when judged by the standards of non-Science. It is the dross of lead to the metallurgist of anti-Christian Science. It becomes pure gold, however, when the mind of the reader has been opened to the great truths upon which the doctrine is securely based. These truths are diametrically opposed to generally accepted alleged facts, and are therefore at first unbelievable. They can never be accepted by an unfriendly mind, and it is because of knowing this, that the Scientist regards it as worse than wasting time to attempt explanations to one who seeks them for the purpose of criticising them. If interested in the truth and disposed to study it for good, the doors of Christian Science are open wide, and no one is so rich nor so poor, so high nor so low, but therein he may learn his true status with God and his fellow-man. That the believers in Christian Science tenderly love Mrs. Eddy they could not deny if they would, but neither the personality of Mrs. Eddy nor the affection of her followers can affect the truth of what is contained in her works. Christian Science as promulgated by Mrs. Eddy has already made its impress upon the world. The worst that can be said of it is that it makes the desolate home a happy one, the drunken man sober, and the sick man well. It is not clamoring for recognition, but it instantly answers the call of distress. If there are means of remuneration, it is well. If the sufferer is destitute, the attention is no less earnest and unremitting. It blesses him who gives and him who receives. Is it too much to assume that so beneficent a thing must in time regenerate the world?

[From the *Pasadena* (Cal.) *Daily News*.]

The persistency with which the recognized Leader of Christian Science is followed into her home and into her private life, is thoroughly discreditable to those engaged in it, and up to this time has revealed nothing aside from the malignity which inspires it. The latest and most unworthy expression of it is the attack in *McClure's Magazine*, not on Mrs. Eddy alone, who is more than eighty years of age, and is entitled to the retirement she seeks, but an attack on her deceased father, which she in a spirited way declares to be utterly false.

The intelligence and sincerity and remarkable increase of the Christian Science denomination is evidence enough that this healing, purifying, and harmonizing form of religious truth has taken a firm hold upon the English-speaking race, and the American love of fair play protects this as well as every other form of belief from criticism based on falsehood or malice.

The only criticism directed against any religious faith capable of affecting its standing with intelligent people who love justice and respect sincerity, is that directed against its errors or weaknesses, and such criticism must eventually result in a benefit to its adherents and to society generally. But malignant effort to abuse the dead, who are unable to be heard in their own defense, in order to wound the living, is a method of warfare which can only recoil on its authors.

Christian Scientists have a perfect right to worship God according to the dictates of their own conscience, and they are not a people who endeavor to force their belief or practice on others. They claim to heal the sick through the agency of the same divine Truth which all religious people admit healed the sick centuries ago. Their Leader is the author of a book which they accept, not in any sense as a substitute for the Bible, but as a key to or a spiritual interpretation of Bible truth, which they claim will, if accepted, heal not alone sin and discord, but sickness also.

Most of the criticism directed against Christian Science emanates from those who claim to be followers of him who centuries ago did heal human infirmities by means of spiritual truth and who commanded his followers to do likewise. The testimonies heard in the mid-week meetings of these people, which are open to all who desire to understand their teachings, testify to the healing of disease and of habits of immorality. Inasmuch as all fair critics agree that this religion has no other purpose than the relief of suffering, and the moral and spiritual uplifting of humanity, the ungenerous treatment accorded it in certain quarters only serves to interest men and women in it. There is not a community in the United States in which there is not some one to testify to its uplifting service in relieving physical and mental suffering.

That an elderly lady of refinement more than eighty years of age should be persecuted even to the libeling of the reputation of her deceased father, and thus be forced to his defense in the public prints, is one of the most disgraceful things chargeable to sensational magazine enterprise. One feature of this thoroughly discreditable attack has been that it has provoked no intemperate, ungenerous, or bitter resentment from those toward whom it was directed, and this is the highest possible evidence of the quality of the truth they stand for.

[From the *Lockport* (N. Y.) *Journal*.]

The *Journal* believes that a great injustice has been done to Mrs. Mary Baker Eddy, the Founder of Christian Science, in an article in a recent magazine, and in deference to our sense of fair play we will publish Mrs. Eddy's reply in full in Tuesday's issue.

The *Journal* does not believe in Christian Science, but it does believe in giving Mrs. Eddy credit for having founded a cult or sect, the members of which are numbered by the thousands, who find great consolation and peace of mind in her teachings.

The Christian Scientists, at least those we have met, are cultured, talented, enterprising, and law-abiding citizens, and if in its teachings they can find that help and consolation which drives away despair and depression and makes darkness into light, as is evidently the case by their devotion to the Cause, then the *Journal* asks for them the same religious liberty of thought and freedom as is accorded other denominations.

[Editorial in *The Progress*, Minneapolis, Minn.]

The growth and prominence of the Christian Science movement and the consequent public importance of its Founder and Leader, Mrs. Mary Baker G. Eddy, has led to several recent sensational newspaper and magazine articles concerning Mrs. Eddy's life and character, even her present personal identity and existence being questioned. The falsity of these abusive articles has been made evident, and the fair-minded press of the country has been quick to protest against the unfairness of the attacks.

The dissection of Mrs. Eddy's personal character has but

Digitized by Google

remote bearing upon the fundamentals of Christian Science, a belief which now numbers its adherents by the million or more. . . . Reliable information as to the movement or to its Leader would undoubtedly have wide public interest, but it is to be hoped that such subjects will in the future be avoided by the sensation mongers. The merits or demerits of Christian Science need not enter into the question.

[Royal D. Stearns, *Nebraska State Journal*, Lincoln, Neb.]

Only as Christian Scientists have a clear apprehension of the great spiritual law developed and taught by Jesus, can they hope to accomplish anything along the lines of remedial work for mankind. One has little comprehension of the teaching of the Christian Science text-book, Science and Health by Mrs. Eddy, who does not know that it is wholly founded upon the Bible and the teaching and work of Jesus.

A Christian Scientist knows that sickness to the false, frightened consciousness of the afflicted is a positive reality, but he does not believe it has entity as a part of God's creation. The Scientist does not believe that sickness is any part of that "good" which God created. It would seem to be foolishly inconsistent to hold that omnipotent power and infinite wisdom could create conflicting forces which would result in discord in God's kingdom throughout eternity. The Scientist knows when he fails to bring relief to the afflicted through the ministrations of Christian Science, that it is not the fault of the Principle that he is endeavoring to demonstrate, but rather his failure, at the time, to get a proper realization of its truth. Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do;" thus by his teaching he clearly evidenced that this remedial power was to be perpetuated; and in fact it was continued in practice for about three hundred years after the time of Christ. Christian Science has now passed the experimental stage. It has become fully established as a remedial system of merit, and hundreds and thousands of people daily attest its beneficent results.

[Charles K. Skinner in *The Citizen Press*, Jackson, Mich.]

The teaching that "God is All" is Scriptural, and, when understood, does not mean that God is in the objects of His creation, but that they are reflections of His thought, care, and wisdom. Christian Science does not deny the personality of God, but declares it in the infinite sense, not, however, as including corporeality.

The belief in a personal devil with hoofs and horns is fast losing its hold on thinking humanity. Christian Science does deny such teaching. It does not, however, on that account, deny that evil thoughts have to be met and overcome by the understanding of God. In taking this stand, Christian Scientists are certainly following Christ's footsteps. The careful, conscientious reader of Science and Health needs no guardian, for it directs him to God, the one Mind, for his understanding; even as the prophet speaks, "They shall all know me, from the least of them unto the greatest of them, saith the Lord."

[John L. Rendall in *The Denison* (Ia.) *Review*.]

Christianity, briefly defined, is the daily living of the teachings of Jesus Christ. Any religious teaching which conforms to the essential and fundamental precepts of our Master might properly be termed Christian, and cannot therefore justly be stigmatized as "unchristian and shockingly infidel." Christian Science is Christian in predicate and postulate, in premise and conclusion, in theory and in practice, and it is scientific because demonstrable. . . . The repudiation of Christian healing includes the repudiation of the essential teachings of Scripture. In fact, it means the complete ignoring of an integral part of Jesus' mission.

THE LECTURES.

CINCINNATI, O.

Rev. George M. Hammell, formerly pastor of the Mt. Lookout M. E. Church, who divorced himself from the pulpit to devote his endeavors to Christian Science, introduced Bicknell Young of The Mother Church in Boston to an audience in Music Hall Tuesday night [Dec. 4]. Incidentally he paid a glowing tribute to Mrs. Eddy, referring to her as "by far the most powerful woman of the time." Speaking of his withdrawal from the Methodist Church, he said: "Hungering for self-consistent truth which should demonstrate itself in all the attributes of the Christ's own truth, seeking for a Principle of interpretation which would relieve the Bible of difficulties which contradict the theory of its verbal inspiration and which made it impossible for me longer to repeat the creeds extracted from it,—or, rather, imposed upon it,—until at last, scarcely knowing whither to go, I withdrew from the membership and ministry of a church which from my youth I had sincerely endeavored to serve. But my knowledge of church history, my knowledge of the history of Christian doctrine, prepared me to see that the New England woman, brooding so passionately over the problems of life, had found the solution, not only for herself, but for me."—*Times-Star*.

WAUKESHA, WIS.

Edward A. Kimball lectured on Christian Science in the Congregational church Dec. 8. He was introduced by the pastor, Rev. I. L. Cory, who said in part,—

Why should not I welcome you to this our Congregational church home in Waukesha to hear a teacher of your faith expound your understanding of a gospel of Christ and spiritual health? You have grown in the past quarter century to be one of the recognized Christian forces of our Christian land. Your faith, in its great essential features, is the same as ours. You have not retreated from faith in God, but have placed emphasis upon the spiritual and immanent, and we as Congregationalists are with you in that emphasis. We have been saying through our leaders, "Back to Christ," and you are placing emphasis upon the fact that Jesus came to suffering humanity with a message to its miseries. We may look back and see Jesus from somewhat different points of view, but the same "name above every name" is upon your banner and ours. We each alike go to the Bible with a profound reverence for the God it reveals. We may not get at the heart of it with exactly the same key, but nevertheless at the heart of it we have all found our common loving Father, our Saviour, our spiritual redemption.

Why, then, should we shut our church door when you as Christian Scientists come courteously to us and ask an entrance for a special service? We are of the same great household of faith and the same eternal Spirit fathers all our spirits and touches them into newness of life in loving fellowship. I am glad to welcome you here to-night and to wish for you God's blessing in your efforts to carry the glad tidings of the Christ to all in need.

Correspondence.

LOS ANGELES, CAL.

Before an audience of at least one thousand Clarence C. Eaton lectured on Christian Science, under the auspices of First Church of Christ, Scientist, at the new Auditorium, Dec. 11. In introducing the lecturer, S. B. Reynolds, First Reader, spoke in part as follows:—

The lecturer this evening represents a thought that is attracting the attention of many of the brightest and most intellectual people in the world to-day,—men and women

Digitized by Google

who do not accept a doctrine because their ancestors believed it, but who are disposed to do their own thinking and to choose for themselves. There are thousands of good people in the churches who oppose Christian Science because all they know of it they have learned from some one who has never studied Christian Science. Is that the way you learned mathematics? Christian Science never made a truth, it only voices what always was true and what always will be true.

Christian Science does not change your Bible, nor your faith in the grand and glorious truths it teaches, but only makes them clearer and more easily understood. When your blinds are down on a bright day, your room is dark. Remove these and it is filled with light. This is no miracle. Christian Science gives such an insight into these truths that it becomes easy and natural to abide under the shadow of the Almighty. Christian Science comes to heal the world of all evil and all discord, and teaches the scientific relation of God to man. The message of Christian Science is simply God's message to man; Mrs. Eddy, the Discoverer and Founder of Christian Science, teaches and insists on the everlasting fact that God's love and care for man are available here and now, and are demonstrably true here and now.—*Correspondence.*

ROCK VALLEY, IA.

Bicknell Young lectured on Christian Science at the Opera House, Dec. 21. He was introduced by Dr. E. O. Plumbe, mayor of Rock Valley, who said in part,—

If there is anything in this broad land of ours for which we should be thankful it is that absolute neutrality that exists in regard to matters of individual opinion, that freedom of speech and of pen which next to the Christian religion is the palladium of our liberty and the guarantee of our free institutions. We are all, I trust, seekers after truth, no matter where it may be found, whether in the Bible, as the fountain-head of all religion, morality, and law; the utterances of the pulpit or the lecture platform; the literature of the past and present, or even, perhaps, the columns of the daily press. I know, indeed I am convinced, that we are all seekers after truth or we would not be here to-night, and I am satisfied, from my own personal research and observation, that we will not only hear truth, but a vast amount of truth from the lips of our speaker to-night.

Correspondence.

WAUSAU, WIS.

The Christian Science lecture delivered by Mr. Edward A. Kimball at the Opera House, last Friday evening [Dec. 21], was well attended. Mr. S. B. Toby, superintendent of the city schools, introduced the lecturer, saying in part,—

No one need fear the truth, no matter from what source it comes. The mission of truth is to heal, not to hurt; to lead men from the pathway of error and to plant their feet firmly in the right road. No one can destroy a single atom of truth. Truth is eternal in endurance. Once set a great truth free upon earth and it will work revolution. Confine it, chain it down, and it will burst its chains and will ultimately free itself and work its divine mission.

Every church has its fundamental basis in truth. No church can endure on a foundation of falsehood. The wasting fires of time will burn out that which is perishable. Every church deserves a respectful hearing. Its doctrines may run counter to my beliefs or yours. They may cut across our preconceived notions of the truth; but it is just (whether we believe them or not) to give them a fair hearing, a careful examination. If after thorough examination we come to believe a doctrine true, we should accept it with gladness and give to it our hearty and loyal support.

Wausau Pilot.

MORRIS, ILL.

A fair-sized audience assembled in Hull's Hall on Sunday afternoon [Dec. 23] to listen to Mr. Edward A. Kimball of Chicago, who lectured on Christian Science. Rev. T. S. Oadams, who had been invited to introduce the lecturer, said that the religious instinct was deep seated in every human heart; and at this significant period of our history, when the religious world seemed to be ready for another of those great upheavals resulting in the demolition of humanly imposed barriers, that God's purpose in universal man should be made manifest in larger blessing to the greatest number. It was but natural that so many should gather in the attitude of students to listen to one who was a recognized authority on this subject. He had pleasure in acceding to the invitation of the local friends of this movement, for he could bear testimony to courtesy received at their hands and many evidences of their consistency with their profession as regards the daily life of Christian Scientists, which was to speak ill of no man and to manifest Christ's law of love. The aim and purpose of Christian Science was to bless and uplift humanity. This alone should enlist our attention and ensure that all our criticisms be tempered with charity.—*Morris Herald.*

WILLMAR, MINN.

Judge William G. Ewing of Chicago lectured last Sunday afternoon [Jan. 6] on the subject of Christian Science before a large audience at the Opera House. The lecturer was introduced by Mr. C. W. Odell, who spoke in part as follows:—

People have at all times been slow to give up old, cherished beliefs, and great truths as they have been discovered and given to the world have always met with opposition. When Jesus came declaring that the kingdom of heaven was at hand, and was preaching his gospel of love, he met with opposition and ridicule and was put to death, because his teaching was contrary to the belief generally held at that time. After the command of the Master to heal the sick as well as to preach the gospel has for centuries been left out of the Church, God has again revealed to the world that the same Christ-truth heals the sick now as in Jesus' time, when rightly understood and applied. This has been revealed to this age through Mary Baker G. Eddy, who has given it to the world through her book "Science and Health with Key to the Scriptures."—*The Republican Gazette.*

LECTURES AT OTHER PLACES.

Rice Lake, Wis.—Hon. Clarence A. Buskirk, Dec. 13.
Pasadena, Cal.—Clarence C. Eaton, Dec. 14.
Glens Falls, N. Y.—Rev. William P. McKenzie, Dec. 16.
Hornell, N. Y.—Francis J. Fluno, M.D., Dec. 16.
La Grange, Ill.—Judge William G. Ewing, Jan. 3.
Evanston, Ill.—Edward A. Kimball, Dec. 17 and 18.
Havana, Ill.—Bicknell Young, Dec. 18.
Beloit, Kan.—Hon. Clarence A. Buskirk, Dec. 21.
Hyde Park, Mass.—Bliss Knapp, Jan. 6.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

"AN EXCELLENT EXAMPLE."

Pleasant View, Concord, N. H., Jan. 28, 1907.

Dear Mr. McLellan:—You will be interested to know that Mrs. Eddy was much pleased with your editorial recommendation that the Christian Scientists circulate freely the February number of the *Cosmopolitan* magazine, which contains Mr. Charles Klein's splendid defense of our Cause and its revered Leader.

Mrs. Eddy herself is an excellent example for the Scientists to follow in this respect, for by her direction and from a list of names prepared by her we are distributing from Pleasant View fifty copies of the *Cosmopolitan* containing Mr. Klein's article. These magazines are going to persons who are not Christian Scientists and who would not be likely to see the article as reprinted in the *Sentinel.*

Sincerely yours,

LEWIS C. STRANG.

A NEW EDITION OF SCIENCE AND HEALTH.

ATTENTION is called to the publisher's announcement on page 406 of this issue of a new edition of the Christian Science text-book which is now on sale. This edition is printed from new plates, and contains a number of important changes and additions, which have been made by Mrs. Eddy in keeping with her statement on page 361 of this book, viz., "I have revised Science and Health only to give a clearer and fuller expression of its original meaning. Spiritual ideas unfold as we advance. A human perception of divine Science, however limited, must be correct in order to be Science and subject to demonstration. A germ of infinite Truth, though least in the kingdom of heaven, is the higher hope on earth, but it will be rejected and reviled until God prepares the soil for the seed. That which when sown bears immortal fruit, enriches mankind only when it is understood,—hence the many readings given the Scriptures, and the requisite revisions of Science and Health with Key to the Scriptures."

The changes which have been made from time to time in Science and Health are evidences of Mrs. Eddy's desire to have this book flawless in its statement of the Science which she has discovered, and this without regard to the great amount of work involved. Rev. James Henry Wiggin, from his personal knowledge of her work on the early editions of Science and Health, has thrown light upon this desire, which has always inspired the author. We quote from Mr. Wiggin's book, "Christian Science and the Bible," as follows: "Whatever is to be Mrs. Eddy's future reputation, time will show. Little cares she, if only through her work Truth may be glorified. More than once, in her eagerness, she has reached her bottom dollar, but the interest of the world to hear her words has filled her coffers anew. Within a few months she has made sacrifices from which most authors would have shrunk, to ensure the moral rightness of her book. Day after day flew by, and weeks lengthened into months; from every quarter came importunate missives of inquiry and mercantile reproach; hundreds of dollars were sunk in a bottomless sea of corrections; yet not till the authoress was satisfied that her duty was wholly done, would she allow printer and binder to send forth her book to the world."

Christian Scientists appreciate Mrs. Eddy's labors in this direction and are grateful for them.

ARCHIBALD MCLELLAN.

"ALL THINGS NEW."

IN the vision of the Apocalypse St. John represents himself as having been caught up above the plane of material sense into the realm of reality, where he "heard a great voice out of heaven saying, Behold, the tabernacle of God is with men . . . And he that sat upon the throne said, Behold, I make all things new." This declaration conveys a suggestion of the tense of all creative acts, and the quality of all created things, which is of the most illuminating significance.

For the most part theological thought respecting creation has been both materialistic and self-contradictory, in that it has practically subjected the concept of God to the limitations of time and space, while asserting His infinity or non-subjection to these limitations. Its view of the relation of the divine activity to the universe involves a sense of separation between the Maker and the thing made which readily lends itself to the philosophy of a material substance. It removes the products of activity from the actor, and begets the habit of thinking of God's creations as no longer dependent upon Him for their being,—a habit which eventuates in all the ills of fundamental misconception.

In contrast with all this, Christian Science affirms that creation is a fact of the eternal now, that the universe is the continuous going forth of omnipresent Spirit, whose works are indeed "finished," in the sense of their completeness and perfection, but not in the sense that their continuance is no longer dependent upon the divine activity. This concept shapes thought in its every latitude and projection. It makes clear the fact that in the kingdom of Spirit there is nothing old. The irrepressible spontaneity of the divine Life, the nature and naturalness of revelation as the vitalizing, nourishing outflow of this Life, the relation of every human heart to Truth, and the present and eternal freshness of things,—all this begins to appear.

Strange as it may seem, the sense of antiquity, rather than of newness, has attached itself to revealed truth in Christian thought, and the value of its given statements has not infrequently been determined with respect to their age. To-day, however, as a philosopher has recently said, "there is a growing disinclination to regard mere antiquity as in itself a guarantee of value." Truth knows no age, and for the reason that it is ever and immediately "from above," in fulfilment of the word, "Every good gift and every perfect gift . . . cometh down from the Father of lights." It is bedewed with the freshness of Life's eternal morn. "Behold, I make all things new,"—life, selfhood, opportunity, supply, freedom, joy,—all are of God, and forever new. They are unstinted and untarnished as the light, hence in lamenting the past there is neither reason nor profit. It is ours, moment by moment, to enter into all the fulness of Life. The truth and good of the past abide, not because of their past, but because they have been untouched by the past.

Under the dominion of this thought none of us can fail to realize a keener, more stimulating, more gladdening sense of God's nearness, and of the safety and immortality of all that is thus linked to Him. It enables us to experience a sensible escape from that superstitious veneration for the old as such, which in many natures expresses itself in opposition to everything that does not bear the imprint of a particular authority, sect, caste, or party.

Our Leader has referred to this opposition as a serious hindrance to the advance of Christian Science. It is the

Digitized by Google

mental attitude of the man who frankly says, "The religion of my fathers is good enough for me," and "I am no friend of new notions," the man who is ready to build the tombs of the dead prophets, and equally ready to stone the living. This habit of holding on to the past, at the dictum of sentiment or prejudice, receives a vigorous and illuminating rebuke from Christian Science. As men come to see that there is no archaic truth, that it springs an ever-living stream from beneath the throne of God, they become more and more free and receptive; and as this nobler concept permeates religious thought, and there is added that imperative test of truth, namely, demonstration, —which is so insistently demanded of us in the teaching of Christ Jesus,—both the individual and the race enter upon an era which can but prove no less blessed than new.

JOHN B. WILLIS.

"THE TRUE ORIGIN."

ONE of the questions often asked by those who are looking into Christian Science is this, How did evil originate? and in some cases the inquirer feels that until it is answered his progress is barred—a mistaken conclusion, by the way. Speaking strictly and scientifically, evil never did originate, for in the true sense there is no causation apart from Principle, with its perfect law and order. Every earnest student of Science and Health discovers almost at once that sin, disease, and death—all the manifestations of evil—have no Principle, hence no reality, for they do not express law and order. It is, therefore, impossible to discuss what is lawless, unreal, as we would consider or discuss that which expresses Principle, law, and order; to regard that which only seemeth to be as we regard that which really is.

In endeavoring to explain this to a beginner, a more advanced student of Christian Science employed the familiar illustration, that although a schoolboy may make mistakes, two plus two always equals four, and that any other statement of this fact must be untrue, hence unreal. This the beginner admitted, of course, but contended that the "mind" of the boy had made the mistake, and wished to know why. It was easy to show that this assumption was wrong; that intelligence, as reflected by the teacher of arithmetic, did not for a moment entertain the mistake, but knew the truth as to this mathematical fact; and not only so, but when the boy's sense of intelligence, or "mind," was appealed to, he too saw this truth, and it displaced the error, which never had been real, although temporarily believed by him. This helped the student of Christian Science to see that to the awakened sense of spiritual reality all truth is self-evident, and that Mind forever witnesses to the truth of being,—forever witnesses to the reality of that which expresses intelligence, God.

In Christian Science we learn the utter folly of seeking to find causation apart from God, good; therefore, if we are wise, we bend all our energies to the nobler task of knowing divine Principle, the only cause of all reality; and here, as in mathematics, we find that the greater knowledge one has of the truth, the more readily will he detect and correct any error which presents itself in the working out of his life-problems. We never find that the great Teacher attempted to explain the origin of evil; he was too busy in correcting it with truth, whether it was manifested as sin or sickness, and St. Paul's words about "forgetting the things that are behind," are really the best advice that can be given on this subject.

The very fact that the tendency of the so-called human mind is ever to attribute causation to error, and to seek after its supposititious origin, shows the need of cutting loose from this tendency and devoting our entire time and energy to the study and demonstration of the truth, —that which makes free,—especially since by so doing we can gain results which are impossible so long as we contend in any wise for the origin or reality of evil. Our Leader says, "Matter cannot connect mortals with the true origin and facts of being, in which all must end;" and she adds, "It is only by acknowledging the supremacy of Spirit . . . that mortals can lay off mortality" (Science and Health, p. 491). This acknowledgment leaves no place for any cause or effect separate from God; it admits Him to be "Alpha and Omega, the first and the last," and brings to us in a greater or less degree the results which all desire, namely, health and harmony.

ANNIE M. KNOTT.

"THE PROGRESS OF CHRISTIAN SCIENCE IN ENGLAND."

The Onlooker of London, England, prints in its issue of Jan. 19 the article by Lady Alice Houblon which appeared in the *Sentinel* of Aug. 4, 1906. Commenting editorially on this article, *The Onlooker* says,—

A CHRISTIAN SCIENCE CURE.—Lady Alice Houblon, who this week contributes an article on "The Progress of Christian Science in England," is the eldest sister of the Earl of Crawford. She is a very ardent follower of Mrs. Eddy, and it was after the restoration to health of one of her daughters, who had been unsuccessfully treated in the ordinary way for three years, that four members of her family became converts to Christian Science.

LETTERS TO OUR LEADER.

New York, N. Y., Jan. 15, 1907.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved and Revered Leader:—The world does not yet know you, but your steadfast, loyal, and watchful followers, the members of this church, together with your loving students and followers throughout the world, do know you. We are continually praising God for Christian Science, His great gift to us through you, its Discoverer and Founder.

At this annual meeting of First Church of Christ, Scientist, New York City, we beg to lay our treasures and our honors at your feet. We delight in striving to emulate your holy example and teaching, through "evil as well as good report;" ever trusting Truth and Love to enable us to follow you up the rugged heights of Christian Science, beyond the clouds and the thunderings of personal sense, into the calm, pure atmosphere of Mind, the sunlight of Love's presence. We have much reason to be humbly grateful for the prosperity in Truth which has attended our flock during the past year. Christian Science Mind-healing has been demonstrated over all manner of sin and sickness, and many new members, who at our last annual meeting knew nothing of Christian Science, are rising to call you blessed. Jesus fed the hungry multitude. He blessed and brake the bread, and gave to his disciples to give to the hungry, which they did. Dearly beloved Leader, have you not prepared and broken the bread of God, and given to your disciples, and have you not bidden them distribute to the multitude? We have been fed with the bread which you have broken with your own dear hands and given to us through your disciple.

You tell us that this is the harvest hour. Indeed, so it seems to us. Blessings innumerable have been bestowed upon us as a church. Not one of the promises of the Bible has failed us, when we have followed your teachings in "Science and Health with Key to the Scriptures," and your other writings. The beauty and affluence of the divine Mind is manifest in health, and in the unity of the

Digitized by Google

good and the true. Love for God and our brother man must increase, as we near the white Christ. Who will be able to gather and care for the bountiful harvest which God has prepared for His anointed and her followers? "The harvest truly is plenteous, but the laborers are few."

We rejoice in the triumph of Truth over the late attacks made upon you. Our Master said, "If it be possible, let this cup pass from me: nevertheless not as I will, but as thou wilt." In this century the call to meet the enemy of Christ has been met by you, and throughout the world the cry has rung out, "Mary Baker Eddy lives, and loves, and conquers hate and the haters, with 'Father, forgive them; for they know not what they do.'"

We bow in humble acknowledgment of your Christian spirit and your divine power to reflect omnipotent Love, which shuts the lion's mouth, and is enabling you to pass through the furnace seven times heated, with no evidence of the experience, save a purer love, exalting you to Horeb heights of spiritual supremacy over the material world, the flesh, and all the claims of evil.

We are mute before such unparalleled meekness and might, and rejoicingly follow, with devoted obedience and love, one whom we delight to serve and honor as God's chosen Messenger to draw us to "Immanuel, or God with us:" to reveal to us the invisible Christ, who is "Lord of lords, and King of kings."

Lovingly and faithfully,
First Church of Christ, Scientist, New York City.
E. F. HATFIELD, *First Reader.*

Boston, Mass., Jan. 14, 1907.

Dear Mrs. Eddy:—I think it would gratify you to take a look at your old home here and see how spick-and-span it is with new paint and varnish. Under the charge of our good Directors, the plumbers and masons and carpenters have been overhauling and renovating the house from cellar to roof. They have left us feeling much cleaned up and brushed up. We have also recently secured the services of an out-door man, Charles, a Norwegian, who tells us that he worked for you when you were here. He is happy to speak of this, and his work is exceptionally faithful and exact. The front door-handle always gleams bright and polished under his daily rubbing. Mrs. McCrackan and I are enjoying our stay under your hospitable roof more and more, and are able to show some kindness in this house to your loyal workers here.

The reading becomes more wonderful to me as I learn how to repent and surrender more of self. Mrs. Conant said to me a few Sundays ago, as we stepped off from the platform, "What wonderful preachers we have!" I am profoundly grateful for your wisdom in instituting this means of bringing Spirit to the flesh. We frequently hear of cases of healing during the services and meetings.

We send love to our brave Leader.

Yours faithfully,
W. D. MCCRACKAN.

Orange, N. J., Jan. 10, 1907.

Dear Leader and Teacher:—At a quarterly meeting of our church held Tuesday evening, Jan. 8, the expressions of loyalty to and love for you were sincere, deep-toned, and beautiful. The spiritual power of these must have reached you with their warmth and glow to comfort and strengthen you, and to illumine your steep but glorious ascent Godward. This church—this "Christ's little one"—is blessing you and rewarding your patient watch and toil and prayers. The healing within its sacred walls is not as uniformly quick as you are longing to see, but the quality of its work is what your loving heart desires—the unveiling of the Christ in individual consciousness, and the awakening to be in accord with the Father; to know and do His will, and to go forth to heal the sick, to give bread to the hungry, and the inspiration of Love to the thirsty. On this foundation of your teaching the church is growing and prospering, glorifying God through His Christ, and loving and following you "unto the perfect day" of divine consciousness.

I know so well that this dear, holy branch church is the fruit of your wonderful understanding of Mind. You never before were so near, so dear to us as now. We are getting clearer views of God's spiritual idea, and we are being divinely driven to the zenith of demonstration with you. The Almighty enfolds you and yours.

With tender love,

Gratefully your student,
NEMI ROBERTSON.

New York, N. Y., Jan. 4, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—As a German I feel that I must give expression most reverently to the hearty gratitude I feel to you, loved Leader, the gratitude of those who long to see Christian Science, the Christ-truth, established all over the world. I thank you for giving us so many of your life-giving articles in the German language, through *Der Herold*, thus enabling so many who cannot read one word of English to get the benefit of your writings, which are healing and saving all nations. One reference in our Thanksgiving service (Luke, 18 : 43) said that all the people praised God when they saw the works which Jesus did; so I want to give thanks to God for all the good that Christian Science is doing all over the world, through you, our faithful, steadfast, and wise Leader, chosen of God.

With loving respect and gratitude,
M. M. MENK.

Minneapolis, Minn., Dec. 15, 1906.

Mrs. Mary Baker G. Eddy.

Revered Leader:—Third Church of Christ, Scientist, Minneapolis, Minnesota, at its annual meeting in December, appointed a committee to express to you, the Discoverer and Founder of Christian Science, sincere and heartfelt love and gratitude for the blessings that have come through your unselfed, continuous labors, your humility, universal love, and purity; to record the desire to be gladly and quickly obedient to the Church government as sent out in the Manual of The Mother Church, and to be doing that work which all those who have found the Science which you teach have the privilege of doing.

Lovingly,
MISS ANNA MAGARETHE KRUDOP,
MISS OLIVE I. MCBRIDE,
MRS. WINNIFRED J. MATTSON,
Committee.

Bangor, Me., Jan. 21, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Pardon me if I try to express to you my thanks for the great revelation of Truth that has brightened my life. For years I have had the desire for an understanding of God that would solve the problems of theology and blot out human doubt, fear, and opinion. I worked aimlessly, trying to preach the gospel of an omnipotent, ever-present God and yet fearing to trust God's power. With gratefulness I can say that Science has supplied the need, therefore I can gladly give up my position as a clergyman and mingle my thanks with the many thousands who day by day look to you as Leader because you follow Christ.

Ever faithfully yours,
REV. T. M. PATTERSON.

AMONG THE CHURCHES.

[From the *Aldershot* (England) *News*.]

THE MOVEMENT IN ALDERSHOT, ENGLAND.

A chance reference in the columns of the *Aldershot News* a few weeks ago, was my first intimation that the Christian Science movement had any active followers in Aldershot. Learning that services were held on Sundays in the Masonic Hall, I decided to ascertain how and by whom this new cult, which is gradually gaining ground in England, was being promulgated. The result was something of a surprise. I arrived some time before the service began, and was courteously invited to take a place in the large room set apart for the service. A portion of it was curtained off, and in the ante-room so formed, large cards were displayed requesting silence. Rows of chairs, on which were placed the special hymn-books used, faced a large reading-desk. This was beautifully decorated with boughs of autumn-tinted leaves and berries and gorgeous sunflowers, and elsewhere graceful sprays of foliage and trails of creepers were arranged with much artistic skill, giving an aspect of brightness and beauty to the sunlit room, with its rich crimson walls. For some considerable time there was absolute stillness, although several persons were in the room. They remained seated, as though in quiet meditation. It was interesting, meanwhile, to note what manner of men and women they were. The men were mostly officers, the women either wives of officers or belonging to the same class. They were well-dressed people, with nothing about them that distinguished them from ordinary church-goers, except, perhaps, an air of serenity and detachment that, with the harmonious surroundings, contributed to the atmosphere of peace and pleasantness that pervaded the place. Presently some children, who had been at the Sunday School class, which preceded the service, came in, and with other people took their places.

Mrs. Carter, the wife of Major Carter, Professor at the School of Instruction, Army Service Corps, took her place, as Reader, at one end of the reading-desk, and one of the officers present stood near, on the platform, to take part also in the service. They read alternately portions of Scripture, Mrs. Carter beginning. She read from Genesis in a clear and melodious voice, giving to the wondrous story told there of the creation much interest and beauty by her effective reading. Chapters from Corinthians and other books of the Bible, with excerpts from the writings of Mrs. Eddy, the Founder of the Christian Science movement, followed. At times, when the importance of truth and kindliness were laid stress on, one almost imagined that they were the words of Ruskin, and that it was his teaching that was being expounded, but then came a call to the deeper imagination. Soul, Spirit, or whatever it may be, that, it is claimed, can dominate and make seem as of no account the consciousness of all human pain, sorrow, and suffering. There was no sermon, the written word from the sources mentioned alone being used. Hymns were sung, these being of a special nature, all breathing the spirit of divine Love and the potency of prayer to cure all ills. As the sunshine played on the scene, burnishing the delicate leaves arranged on the reading-desk and mantelpieces to a coppery crimson, and making the berries glow like rubies, one realized the bounteousness of the gifts of the good giver, who made every herb of the field for the use and delight of man; and as the faces of the stalwart men and the gracious women were irradiated, one wondered if, perchance, they held the secret of the supreme gift, the power of healing human suffering and woe. In an hour or less the service had ended, and the little band of believers left the room. In the hall there was an interchange of friendly chat, literature was selected from the library, and the gathering dispersed. For about ten months these services have been going on quietly, but not secretly, and few outside those who actually profess Christian Science know of them. The followers in Aldershot and Farnborough are at present almost confined to a few officers and their friends. The chief work is that of healing, and of this they say, "That you do not need to take medicine in order to be healed; that there is a better way to heal one than by giving him medicine." They realize that the true way of healing the sick is the mental process. They are trying to prove to the invalid that this is the better way. Just so soon as he comes to see and depend on this method rather than on medicine, just so soon as he sees that it is something valuable, he will find that it is a better way; he will find that he is not only being healed, but he stays well longer—he does not get sick so often; he gets rid of sickness sooner when he is sick, and so on. "We are not here to quarrel with medicine," they say, "and especially with people who do not understand these things. People are all depending too much on medicine—a thing which most of them know so little about."

OGDEN, UTAH

At the close of the Sunday School on Dec. 23, a presentation of seven books, including a pocket edition of Science and Health, was made to this Society by our Sunday School. This was a surprise planned by the little ones, after being told by their teachers that there was an opportunity to do some good with the money which has accrued since the completion of The Mother Church edifice. Members and friends of the Society had commenced the purchase of the standard works on Christian Science for Reading Room purposes, and the little ones joyfully profited by the opportunity to help complete this undertaking.

Infinite blessings are ever ours as we endeavor to prove God's allness and nearness, as revealed to us through Christian Science, and we are thankful for the inspiring thought of our beloved Leader, the substance of which we hope to prove: "What a glorious inheritance is given to us through the understanding of omnipresent Love! More we cannot ask: more we do not want: more we cannot have. This sweet assurance is the 'Peace, be still' to all human fears, to suffering of every sort" (Miscellaneous Writings, p. 307).—*Correspondence.*

[Written for the *Sentinel*.]

SPIRITUAL SENSES.

JACOB ANDREW HENRY.

I SEE the God-thought in the tiny flower
That peeps thro' grassy bed its timid face;
And in th' emblazoned sun that hour by hour
Trails countless satellites thro' boundless space.

I hear the God-voiced harmonies, alike,
Of happy bird-song thrilling soft and low,
And of the wind-lashed ocean-waves which strike
The rock-ribbed shore with loud resounding blow.

I taste God's bounty in the simple crust
Made from the grain His Father-care bestows;
And in the richer fruitage of eternal trust
Fresh from the land where milk and honey flows.

I scent the dainty petals of a rose,
And apprehend its fragrance; yet no art,
Nor human understanding can disclose
The finger-prints where God has touched its heart.

I feel—ah, yes!—I feel the God-nursed growth,
Not with the finger-tips of mortal sense,
But with the vast intelligence of truth
Which reaches Love,—divine omnipotence!

TESTIMONIES OF HEALING.

Twelve years ago I was suffering from a complication of diseases which neither medicine, hygienic treatment, baths, nor climate could cure or even relieve. This finally ended in a nervous condition, rendering sleep impossible, and as I feared insanity I contemplated suicide. All my husband's salary was used to procure material means of relief,—table delicacies, and expensive remedies, some brought from Europe at the suggestion of a physician then in charge of my case. Then a Christian Scientist on a visit here loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and when, at the end of less than two weeks, I had finished reading it I was well. When this book was loaned me I was a confirmed atheist, hating the very name of religion, and I had never heard that any one could be healed by its teaching. Had I been told that it gave the true definition of God, I should probably have refused it with scorn. The fact that it healed me under such an abnormal mental state as that mentioned, proves it to be divinely inspired. For twelve years I have not lost one day from sickness, and my husband has not lost three weeks from work during the same period. His income, instead of being needed for doctors' and druggists' bills, travel, etc., has been devoted to paying off a debt; buying a cozy home, and starting a bank account; besides which we have been able to help those in need when called upon to do so. This change from sickness, misery, and debt, to health and comfort, is literally due to my first copy of Science and Health, as my husband's income has not increased in point of salary. This case is but one out of the thousands that have proved the moral, mental, physical, and economic value of Mrs. Eddy's marvelous discovery. We are only two of the great army who call down blessings upon this saintly woman every day and hour.

MRS. CLARA DREYER, De Funiak Springs, Fla.

In the early part of the year 1895 my physician said I must undergo a surgical operation in order ever to be well. While in great fear, and dreading the operation, a kind neighbor called, and after telling me of Christian Science gave me a copy of Science and Health. She said I must put aside all medicine, and by reading faithfully she knew I could be healed. The book became my constant companion, and in a short time I was healed. Besides the relief from an operation, I was completely healed of severe headaches and stomach trouble. Physicians could give me no help for either of these ailments. For ten years I have not used medicine of any kind, and have not missed a Christian Science service on account of sickness during this period. I am perfectly well. To say that I am grateful to God for all this does not express my feelings. The physical healing was wonderful, but the understanding given me of God, and the ability to help others, outweigh all else. I also love our dear Leader.

MRS. VIOLA I. BOUTWELL, Concord, N. H.

My attention was directed to Christian Science when my pathway was neither paved with happiness nor bordered with flowers, when hope seemed a cheat and sorrow and unhappiness the reality. A very dear relative was receiving substantial aid from its teaching, and was well on the way to recovery from a disease which had been pronounced incurable by the very best physicians in this country. This healing challenged my attention and respect. Soon after this I was obliged to give up all thought of business, and visited Florida for a short period. I purchased a copy of Science and Health, and resolved to read it carefully. After locating on the peninsula opposite the little village of Ormond, on the Halifax River, far from the "busy haunts of men," I began the investigation. A minister who was filling the pulpit of the little union church in Ormond became interested, and together we read the book. Neither of us understood its teaching very well, but I caught enough of its sweet concord to effect a positive and absolute healing of a serious kidney trouble and an aggravated case of stomach trouble which had made existence a burden for nearly three years; and there has been no return of either. At this time, however, I was not ready to accept the theology of Christian Science; was not willing to give up the world and its so-called pleasures, and it seemed a great sacrifice to abandon the worldly ways I had followed all my life. As a natural consequence I soon drifted away from Christian Science and returned to *materia medica*.

This condition prevailed until 1900, when I was led to approach the subject in a different attitude. With humble heart I resolved to make every effort in my power to learn all I could of this great truth, and to gain all that earnest, patient, faithful, persistent endeavor could accomplish. I found, however, that it now demanded far more of me than it had in the beginning; lessons that seemed easy before, now were hard for me to comprehend; that which had formerly appealed to me as being a self-evident fact, now appeared very obscure. But my efforts have borne good fruit; and the light shines bright, clear, and effulgent, bringing within my range of vision this great fact that "God is all," and is Spirit; that being "All in all," there is no room for anything but good; the grand Cause being perfect, the effect, man, is, must be perfect; this is man's inheritance, his birthright. Since 1900 I have been healed of severe rheumatic trouble, and have discontinued, without experiencing any inconvenience whatever, the use of a support I had worn twenty-five years or more. I have also overcome many lesser evils, and am happy to say I have been of assistance to others in many ways. The spiritual understanding obtained has done more for me than words can express, and language seems to lose its significance when I approach this subject. I am very grateful for all Christian Science has done and is constantly doing for me, grateful to God, and to our dear Leader, Mrs. Eddy, through whom we have gained the understanding of this great truth.

FRANKLIN B. BORT, Omaha, Neb.

We sometimes hear it said, "Oh, I have tried Christian Science, but it did not help me." I would like to tell how I had to try Science four times, before I received the blessings and help that it always brings to an honest seeker. It was only by loving care that I grew to womanhood, and it was thought that I would always be delicate. I heard of Christian Science some seven or eight years ago, and at that time had some treatment for headaches. For several reasons I did not receive much if any benefit from the treatment, and was finally taken so ill with lung trouble that things were taken out of my hands and the doctor called, my family being opposed to Science at the time. My mother took the disease and died, and I was so ill that there seemed little chance of recovery. I shall always remember with gratitude the loving care given me then and after by doctors and nurses. After some months I recovered in a measure, only to have stomach and other troubles develop, the former supposed to be inherited. Then a long struggle commenced—rest, diet, and change were all tried, and finally more strenuous measures were resorted to. I would improve for a time, then go back again. In this way I existed for two or three years, when an operation was suggested; so in February I was taken to one of the large hospitals and was operated on. The operation was called successful, but the stomach trouble became very serious and the suffering and depression were great. After three weeks at home I was again taken ill, and there was doubt of my ever getting up again, but I was spared to know that we are free if we but learn to claim our rightful heritage. Before being ill my work had been art work, and the four years had drawn heavily on our means,

Digitized by Google

for my sister spared no expense. I felt I wanted to take the work up again, for I loved it, but was told I would not be able to make it pay as I would never be able to do as others did. This was in the spring. After six months spent in the country, I decided to try my work again, and took a studio. At first I did not have much work, and when I did I was in fear that I would not be able to do it. This went on until March, when I had a severe attack of illness and went to the doctor; he gave me a prescription that I knew would never cure me, and I again turned to Science, this time, I am happy and grateful to say, not in vain. I received the address of a practitioner and called on her that evening. Treatment was commenced, and I can to-day testify that the truth does make us free.

Should there be any who read this testimony with whom the healing is slow, I would say, Do not be discouraged. It was so with me, but I am thankful for it, for with the healing came the spiritual awakening. I found I had to help do my own work, and it was in proportion as I was faithful that healing and freedom came.

I want to tell of two experiences that came to me. In 1 Thessalonians, 5th chapter, we read, "Prove all things; hold fast that which is good." Last summer, in planning for my vacation, I wished to go where I could have all the time I wanted for the study of the Bible and Science and Health by Mrs. Eddy, and I declined all invitations to join friends. I selected a place that I knew was quiet, but when I reached it I seemed to find everything that I did not want, and I had to prove that the truth was what I wanted more than anything else. The temptation to leave and go where I would find friends and pleasure was great, but I stayed. One of the difficulties was the food. The first few days the fear of suffering if I ate the food was great. One morning in studying the Lesson for the week I came to this verse from the Bible, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." When I commenced to understand the meaning, I knew I could not fear that food or any other, and I now eat what is set before me, "asking no question for conscience sake," as Paul says. The other experience was with poisoning. I had occasion to use a solution of hydrofluoric acid in my work. I took the common-sense precautions that I had always taken in using the acid, and had completed the work. In about half an hour I felt a pain in the right hand, and at once took up the thought that God's child has dominion, while I denied the error. After an hour the pain was still intense and the appearance alarming, so I telephoned for help. Later I called on a practitioner. After returning home I retired, but could not sleep as the pain was intense and extended up into the shoulder. Towards morning my sister was reading to me from Science and Health, when I saw a frightened expression on her face. I told her to go to the telephone and tell the practitioner, which she did, and I fell asleep. I was able to get up and go to the practitioner next morning. That day I read in Science and Health almost all day, and on Tuesday I was able to be at the studio and handle a brush. I went to see the practitioner once more on Thursday. The poison was neutralized by Truth, and the healing was complete; not even the nail came off.

I am very grateful to Mrs. Eddy for bringing us this saving apprehension of Truth. I can likewise say that I have proved Science to be the only help I need in business.

FRANCES MARQUARD, New York, N. Y.

With a heart overflowing with gratitude I wish to give my testimony to what Christian Science has done for me. My first introduction to it was in March, 1904, at which time I was a physical wreck. I had been under a doctor's care for nearly a year, and previous to that time had not been well for a number of years. We moved to Akron over five years ago, and every fall I had to call a doctor. The first one said I would very likely have to move away, as I could not get rid of the trouble there. Another doctor said I had a complication of diseases, and my heart was very bad; that it would be three months before I would be much better, and I must not do any hard work for at least two years. I was very faithful to his instructions, but was worse at the end of the three months. My eyes also failed me, and an oculist told me I must have glasses,—the sooner the better. The glasses relieved me but very little, and it seemed as if the more remedies I tried the worse I became.

Finally a friend asked me to try Christian Science, and I am very happy to say that I did. After the first treatment I laid off my glasses without difficulty, and in three weeks I was completely healed. Never before have I enjoyed such good health as I have since my healing in Christian Science, and there has been no return of any of the diseases which the doctors said I had. If money could buy what little knowledge I have of Christian Science, there is not enough in this whole world to do it. I know that "man's extremity is God's opportunity," and that when Jesus said, "Ye shall know the truth, and the truth shall make you free," he meant it for every one, and this has been proven to me and my family in a great many ways. Words cannot express our gratitude to God, and to our dear Leader for making so plain to humanity this truth which Jesus taught.—MRS. VENA ALGER, Akron, O.

Four and a half years ago I had an attack of illness which resulted in incapacitating me for business or pleasure. I am in the employ at Portland of one of the large transportation companies, whose interest in me was so kind and loving that I was enabled to receive the best of care. I put myself under the direction of a good physician, who gave me a tonic and recommended a change of climate. I went to the coast for several months, but returned very little better. My employer interested himself in my behalf, and went with me to two physicians to talk over my case, and said that everything that might hasten my return to employment should be done, but no assurance was given us that I might soon regain health. I continued always hopeful, however, and felt that I needed but a few months to put me on my feet again. Not improving, I had osteopathic treatment, which did not benefit me. I then tried the water cure and massage, with like result; I also practised physical culture exercises. I would add, too, that at the outset of my illness I had some experience in a sanitarium with electrical appliances, baths, etc., which convinced me of their inability to reach my own case. If what is known as ordinary faith would have cured me, any one of the above methods would have done so, for when I took up anything new I thought I had found the ideal curative agency. Then I went to the mountains for several months, but was no better at the end of that time. Thus for two years I battled for health, but without effect. It being our damp winter months, I then went to the seacoast of southern California, feeling that the change would help me, but soon after my arrival I had another attack of illness, which discouraged me somewhat, for my kind physicians had nothing in their profession to meet my need and were honest enough to tell me so.

I had been advised by friends to try Christian Science, but was cautious for fear there was something about it that was not good for me. A day or two before this last attack I had visited for the first time a Christian Science Reading Room, and was there told that if I found no help in *materia medica* that there was yet hope through Christian Science; but I still held back, and had a physician treat me through this illness. As I lay in bed, too sick to be up, the remembrance of the kindness shown me at the Christian

Digitized by Google

Science Reading Room was such a cheer to me that I decided to investigate the subject as soon as I was able to leave my room. Accordingly I went to the Reading Room, and while there I read a publication containing some court testimony relative to Christian Science and the sworn statements of some local business men on its benefits and reliability, among which was one by an official of our company. This helped to reassure me, and I went to see him, with the result that I returned to where I was staying, consulted with a Christian Science practitioner and took a treatment the same day. My recovery was slow, but each day brought its added strength with the accompanying happiness and joy consequent upon returning health; and they were days of thankfulness to me, for in less than four months from the time I took my first treatment I returned to work. This was two years ago and I have since been working steadily, a well man, and continue to grow in strength, feeling thankful that there is in this day the means at hand for the destruction of every form of sickness and sin through the gospel of Christian Science.

W. F. D. MERCER, Portland, Ore.

I gladly give an account of my healing in Christian Science, hoping that it may help some poor sufferer who is a stranger to me, as it has helped many who have known personally what Christian Science did for me. When a young woman I fell downstairs, injuring my spine, and soon after had a severe attack of bowel trouble, which terminated in most serious and alarming conditions. The pain and soreness at times caused the greatest distress, and there was also much suffering from the spinal trouble. For more than twenty years I was unable to walk on the street. I tried all systems of medicine, employing more than a dozen physicians; I was taken to a sanitarium, to White Sulphur Springs, and to the mountains in North Carolina, all to no purpose. Beside all these physicians, I was examined by several eminent surgeons, who gave me no hope, one of world-wide reputation saying very emphatically that nothing could be done for me, that I "must carry the spinal trouble to the grave." Then I came to Florida, searching for health in this beautiful climate. While I loved the perpetual summer, yet I was still doomed to disappointment. Then came a disease of the eyes, and I was compelled to wear a dark shade for two years, while the suffering in my head at times was intense. Though physicians and oculists did not say that the eye trouble was incurable, yet they failed to bring me any relief.

In November, 1897, I went to New York to see a noted German oculist; but soon after seeing him, a friend told me of some wonderful experiences he had had in Christian Science, and urged me to try it. I decided at once to do so, and although my healing was slow,—I took treatment over a year,—yet to me and to all my friends it seems marvelous. I only accepted it for my eyes, supposing there could be no help for the two so-called incurable diseases, especially for the bowel trouble, as a similar disease had proved fatal with several of my family. When my eyes began to improve, I also gained in strength, and to my joy found that I was improving in every way. All these years I had been subject to sudden attacks of excruciating pain in the bowels, keeping me in bed for days, and sometimes weeks, but after commencing Christian Science treatment several months passed without one of these attacks, and the soreness began to grow less. Then one night I awoke with the dreadful pain, which rapidly grew worse, as it always had. I tried to help myself, but with my limited understanding of Christian Science I felt that I did not know how, and the practitioner who was treating me was in a distant city. For a minute I felt tempted to use the remedy I had kept by me for years, then I said firmly, "I have given this up to God, and I know He is able to heal me. I will not touch medicine, even if I die before morning." In an instant, before I could realize that the pain had ceased, I fell asleep. When I awoke there was nothing to remind me that the dreadful suffering had been with me only a few hours before, and I felt that the disease which had threatened my life for so many years had been healed that night. The spinal trouble gradually wore away, as did other ills which had afflicted me from infancy. I have never taken a drop of medicine, or been sick in bed a day since I took my first treatment in Christian Science, and I do whatever I wish to do, for duty or pleasure, and often walk two miles in a day. We have had many beautiful demonstrations in our family and among our friends.

While my old religion was a comfort to me during all those years of suffering, yet I so often wondered why my prayers were not answered, and why God afflicted me so. I thank God for Christian Science, which assures us that we may be healed of all our diseases, as well as of all our fear and worry; and that we can joyfully say, "Thy will be done in earth, as it is in heaven."

MRS. M. C. SAWTELLE, Miami, Fla.

It is with a deep sense of love to God, of gratitude to the Discoverer and Founder of Christian Science, and of responsibility to my fellow-men that I undertake to write this testimony of the healing presence and power of God, verifying the Scriptural promise, "Ye shall seek me, and find me, when ye shall search for me with all your heart." I was a great sufferer for many years from a severe internal trouble. I was treated for this difficulty by a very able, kind, and much respected physician of Decatur, Ill., where I was then making my home. When I was examined the trouble was pronounced an abnormal growth, but when I refused to be operated upon, a more careful examination proved it to be a rupture. A truss was fitted to it, but this brought no relief from the continuous, distressing pain, which was making life burdensome.

In the year 1887 a member of the family became interested in Christian Science, and urged me to try it. I did so, eventually, and did not readily respond to treatment; but on catching the thought of God's presence and power, a flood of light swept over me. I took off the truss, and was immediately healed. I have had no return of this trouble nor of its distressing accompaniments since, and am endeavoring to express my gratitude to God by striving to bring this truth to others; viz., that "God is a very present help in trouble," when understood as explained in Christian Science.

MRS. MIRA H. SMITH, Meadville, Pa.

It is now six years since I first came into Christian Science. I had suffered for ten years with neuralgic or rheumatic trouble, and grew worse all the time, though I was treated by three doctors. Our family physician, who treated me for about five years, said I had spinal trouble; that he had done all he could for me, and advised me to go to some springs. While there, and afterwards, I suffered more than ever, and finally became almost helpless, and had to use crutches for three years or more. I spent a great deal of money for doctors and medicine, but nothing did me any good. I am so thankful that at last I found the right and only way to health,—the way that leads to the Divine healer, God.

A Scientist has treated me several times, and through her kindness and by the help of God I have always been relieved. I am getting better all the time, and now can walk without crutches and am able to attend to my business. Christian Science has been of great benefit to my whole family. Our youngest child, who is three years old, has never taken any medicine, and it is nearly five years since we have had a doctor for any of our family. I am thankful that there are so many who are taking such a great interest in this healing, and that the truth is known in their

Digitized by Google

lives. I am sure that if mothers only knew of the help they could render their little ones, they would seek to understand this blessed Science, and thank God for the faith of her through whom He has restored to us the knowledge of His healing gospel. I am now enjoying the best of health.

MARTIN LUTHER HENDRIX, Whistler, Ala.

I very gladly bear witness to the power of Truth to heal, as I owe a debt of gratitude for the wonderful healing that has come to me through Christian Science which never can be fully paid. From childhood I suffered more or less all the time, and was attended by physicians at frequent intervals during all these years. While there is no doubt that they worked to their highest understanding to try to heal me, they failed to do so, and after my diseases had become chronic and the physicians stated that they could not be healed, I turned as a last resort to Christian Science. I then found the truth of the testimony in the Holy Scriptures, that God is a present help in every hour of need. One of the diseases from which I suffered, and of which I was healed by Christian Science, was severe uterine trouble; another was a chronic sore in the lower part of my limb which caused me constant suffering, the pain at times being almost unbearable. Besides these was an affection of the heart, which the doctors claimed had existed from infancy; also liver and kidney trouble, one of the doctors stating that the latter was very serious. I had been subject to fainting-spells, but this too was entirely healed through Christian Science, nor has there been any return of the trouble.

It is now about fourteen years since I turned to Christian Science for healing and experienced the bliss of emancipation from the bondage in which I had been held. I have not only experienced this blessed freedom, but have witnessed many other cases of healing. It has been a joy to meet with others of my acquaintance and listen to their expressions of gratitude for the wonderful healing that has come to them, and for the moral and spiritual uplifting which they have experienced through this blessed truth that was demonstrated to the world nineteen hundred years ago by Christ Jesus, and which has been discovered in this age by Mrs. Eddy and given to the world in the text-book, "Science and Health with Key to the Scriptures." I am also grateful for the wisdom that directed her in opening a college and instructing students in it who have gone out into the world and have put into practice the truth that was taught them by our revered Leader; and for the sweet Christian lives that are being lived by these practitioners of Christian Science. I long for the day when the whole world will have become acquainted with the interpretation of God's law as given through Christian Science, for it will indeed bring a realization of God's kingdom come on earth as in heaven. Hoping that this simple testimony may be of benefit to some one who is groping in the darkness,—seeking rest and finding none, as I was,—I hereby submit it.—MRS. MARY HOULDEN, Hamilton, Ontario.

From my early schooldays it was a regular occurrence for me to have a bilious attack, a tendency supposedly inherited, followed by headaches which generally lasted from two to four days and sometimes a week. Along with this was a stomach trouble, which had lasted for several years. I tried doctors, medicines, and diet without any permanent relief, and always carried a drug in my pocket to be used in cases of emergency. This illness was a heavy drawback in my employment, as it was the cause of my having to remain at home quite often. It is now about fourteen years since I first took up the study of Christian Science, and it came to my notice without rousing very much prejudice on my part. I was ready to try it, and was completely healed of all the troubles previously mentioned. I have been able to attend to my duties without any ill effects following, and gladly recommend Christian Science to others, as it has been the means whereby I was healed. It is helping me in my daily life to know a God who is loving, and not one who punishes or destroys.

FRANK J. BROWN, Toronto, Ontario.

In September, 1903, I began to study Christian Science, and in six weeks' time, with the help of a practitioner, I was entirely cured of lung, throat, and stomach trouble. One of my sisters had died of tubercular disease, and I was supposed to have taken it, in another form, from her. One of the very best physicians in our city was employed, and he did all that any one could possibly do to relieve me. Whenever he examined my lungs he would say nothing, but would shake his head sadly, and walk away. My mother was a great sufferer from heart trouble, and we worried considerably about her, but our physician always said that my case troubled him much more than my mother's. I suffered severe pain from any exercise, and was cautioned constantly by my physician to be very careful as to what I ate. I took medicine regularly for a year and a half, at the same time putting myself under osteopathic treatment, and after all this was much worse. I became extremely thin, and this, together with my intense suffering, proved to me that *materia medica* could not cure me, nor could I live many months longer in that dreadful condition.

My mother was persuaded to try Christian Science, and when I saw her healed in a very short time, I consented to take treatment, and began to improve from the very first. I had been under medical treatment for a year and a half, without any good results, and at considerable expense, but I had Christian Science treatment for only a month and a half and was entirely healed of every one of my troubles. I was healed two years ago, and began studying vocal music, my throat being in perfect condition. To-day I weigh over one hundred and forty pounds, do not have to be careful of what I eat, and can run upstairs without any trouble. I am well, and best of all I now have an ever-present Physician who has surely healed all my diseases.

My case seems a very remarkable one to our family and to friends who have known me all my life. To me it is so natural now to be well, that I almost forget how I used to suffer. I have the deepest gratitude to God for Christian Science.—ETHEL MAY SYMMES, Hamilton, O.

In August, 1897, while living in Denver, after about ten years of great physical suffering from bowel trouble with its attendant train of ills, I turned in despair and as a last resort, without hope or faith, to Christian Science for relief. I suffered almost constantly and was unable to attend to business a great deal of the time. I had tried numerous remedies, dieting, etc., and also took a regular course of exercises at a gymnasium, besides undergoing two surgical operations, but all in vain. When I finally turned to Christian Science, my physician had told me he could do nothing more; and he fully realized that although he had treated me for fifteen months I was worse, not better, than when he began. He also declared mine to be the worst organic case that had come into his medical practice of twenty-six years. I had previously been treated by several well-known and reputable physicians, but they had diagnosed the case differently, and the only result of their treatment was increased suffering. From the day of my first treatment in Christian Science, Aug. 27, 1897, I have resorted to no other means of healing for physical ills. All material remedies were discontinued on that day, and have never been resumed. I am to-day a living witness of the healing power of Christian Science, and were it not for this life-giving truth, I sincerely believe I should not be here to give this testimony. To all of the above I can most solemnly testify.

O. B. BARROWS, St. Louis, Mo.

FROM OUR EXCHANGES.

[Rev. R. J. Campbell in *The British Congregationalist.*]

Faith in Christ is faith in love, the love of man wedded to the love of God. Nothing in the long run can prevail against that love in this world or the next. I believe that the mere crossing of the mysterious gulf called physical death matters very little. It only means a change of lights. The wicked man finds that he has been living by false values, and the good man finds how much more has yet to be learned and how many richer depths of the divine nature are yet to be plumbed. One thing we shall all find, and that is that the truest life is the life that Jesus lived. That is the eternal life, whether here or beyond, this side or the further side of the tomb. Live it we must by the redeeming power of God. We shall make our bed in pain until we do; and the nearer a man approaches to the stature of a perfect man in Christ Jesus, the more he will yearn over the failure of the lost, the more he will long to lift up and heal and save. How can Christhood ever be content with anything else?

[Arthur Chamberlain in *The Christian Register.*]

Man is eternally the child of God,—God, who is eternal good. Because man is of God, man cannot be happy save in goodness; because God is Supreme good, good alone is real and eternal. All efforts to rest in something other than good are futile. It is an effort to rest in a mortal misapprehension of the real condition wherein alone is rest, and every such attempt starts in discord and ends in defeat. Is there a hell? Indeed, yes. Hell is in the consciousness of every one who strives against the law of his own being,—the immutable, inexorable, eternal law of good. This law of good is all the law there is. Man vainly attempts to formulate a law of evil and to adjust himself thereto; for man can but discover the law that God has made, and God has made no law for evil. Neither can man add aught to the works of the Infinite One. There are those who "imagine mischief as a law," and their imaginations are vain.

[From *The Presbyterian Banner.*]

We think it is not claiming too much to say that in our day we study our Scriptures in a less partisan and more scientific spirit. In our interpretation of a passage of Scripture we try to find the practical purpose its writer had in mind. Every book and passage of Scripture was written in view of a condition that confronted the writer, and he was aiming to meet that condition. This practical purpose of the inspired writer or speaker is often something very different from the abstract theological theory that the exegetical or systematic theologian of a later century imputes to him and injects into his Scripture.

[Rev. Willard H. Hinkley in the *New-Church Messenger.*]

It is a mistake to think of heaven as only a future state of happiness attainable after the cares and trials of this life are ended. It is a present state as well as a future one. "The kingdom of God is within you." The Lord is ever standing at the door of our hearts, knocking for admission, that he may come in unto us and sup with us and we with him. This idea of the actual presence of the Lord with man, at all times, and his willingness to give him the bread of life, or the good of his Divine love, is expressed in the invitation: "Come; for all things are now ready."

[*The Congregationalist.*]

Christ is best manifested when we are most ourselves: not our present marred and undeveloped selves, but the ideal selves which every hour of consecrated life must help to bring to light.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

MR. KIMBALL'S LECTURE. 31 pages.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3.18

Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each prepaid . . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2.25
Twelve or more books to one address, each, prepaid 2.00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Interstate Commerce Commission, which has just transmitted to Congress its first report on its investigation on discriminations and monopolies, concludes with these recommendations for legislative action:

First—That every common carrier engaged in interstate transportation of coal be required to make public the system of car distribution in effect upon its railway and the several divisions thereof, showing how the equipment for coal service is divided between the several divisions of its road and how the same in times when the supply of equipment does not equal the demand is divided among the several mining operations along such road, and that the carrier further be required to publish at stated periods and at each divisional headquarters upon its line of road the system of car distribution in effect and the actual distribution made to each mining operation under such system.

Second—That where capacity of the mines is the basis for the distribution of equipment, a fair, just, and equitable rating of the mines be required, and that provision be made for the representations of owners of the mines at the rating thereof.

Third—That after reasonable time carriers engaged in interstate commerce be prohibited from using "individual" or "private cars" for the handling of coal traffic.

Fourth—That carriers engaged in interstate commerce be forbidden after reasonable time to own or have interest, directly or indirectly, in any operated coal properties, except such as are exclusively for their own fuel supply, and that ownership either directly or indirectly, by officers or employes of common carriers, of any coal properties or any of the stock of coal companies along the line of road by which they are employed, be forbidden.

The Interstate Commerce Commission, in its report of the investigations made by it concerning the relation of common carriers by rail to the production and distribution of oil, covering the distribution of petroleum and its products east of the Mississippi River, and, incidentally, the Kansas and Texas fields, says, "The ruin of its competitors has been a distinct part of the policy of the Standard Oil Company in the past, systematically and persistently pursued. . . .

"The Standard Oil Company largely monopolizes the handling of petroleum, from the mouth of the well until it is sold to the retailers, and sometimes to the consumer, and under ordinary circumstances its margin of profit is very large. Estimates made in the report show a profit on refined oil from the Sugar Creek refinery at Kansas City of from five to eight cents per gallon. A much higher profit is indicated for gasoline. . . .

"The evidence shows little basis for the contention that the enormous dividends of the Standard Oil Company are the legitimate result of its economies. Except for its pipe lines, the Standard has but little egitimate advantage over the independent refiner. . . .

"Possession of the pipe lines enables the Standard to absolutely control the price of crude petroleum and the price which its competitors in a given locality shall pay. It can raise the price in one locality and obtain its own oil from another, and reverse the process when it desires to do so. Whoever controls the avenues of transportation of the raw material or of the refined product can speedily drive his competitors out of existence, and the production and distribution of petroleum is no exception to the rule."

Government officials have had a conference with attorneys for the Central and South American Telegraph Company in regard to the laying of a cable from Sandy Hook, N. J., to Guantanamo and thence to Colon and across the Isthmus of Panama, connecting with the Pacific Cable line. The purpose of the Government is to secure a cable, the terminals of which shall be under the control of the United States. It is also understood that the conditions are substantially the same as those with the Pacific Cable Company.

Only seventeen towns in New Hampshire have no summer boarders, while two hundred and eighteen have. Over twenty-two millions of dollars are invested in hotels of one kind or another. Nearly eight millions of dollars were spent last year by the transient visitors, and nearly two millions were laid out in new hotels, residences, and improvements. These figures give weight to the feeling that the bill before Congress to preserve the White Mountain district as a park ought to pass.

The grand jury of Allegheny County, Pennsylvania, has returned six true bills against the Pullman Palace Car Company alleging the sale of impure milk and cream to its patrons. Over thirty dealers have been indicted for selling adulterated food.

As a result of the recent operations much of the flow of the Colorado River, which has been flowing into the Salton Sink, has been turned to the old channel.

The Senate has passed a bill to establish an immigration station in New Orleans.

Foreign.

British merchants are seeking indemnity from the Chinese Government for losses they will sustain under the operation of the new anti-opium law. They say that the export of opium from India amounts to seventy-five thousand chests annually, valued at $38,050,000, and that enormous stocks are on hand at Shanghai and Hong Kong.

The new Russian budget will contain continuing appropriations for two 21,000-ton battleships to have a speed of twenty-one knots per hour, and ten 12,000-ton battleships. They will all be built in Russia, but it has not yet been decided whether they will be fitted with turbine or with horizontal engines.

The Japanese camphor trade is a Government monopoly, under the strict control of Government officials, and whoever cuts a tree down to get the camphor by a process of steaming the chips, is required to plant a new one to replace it.

Industrial and Commercial.

E. A. Sterling, formerly assistant forester in the Department of Agriculture at Washington, has been appointed forester of the Pennsylvania Railroad. The action of the Pennsylvania Railroad in taking up forestry is for the purpose of planting trees systematically to furnish a cross-tie supply in future years and follows experiments which the company has been making in the last five years. During this time a million and a half trees have been planted on land owned by the company. A Government forestry expert was engaged last spring to assist the management in planning its forestry work, which is now to be undertaken officially by the company. Six hundred and eighty-one acres of land near Altoona, Pa., will, in the springs of 1907 and 1908, be planted with chestnut and red oak seedlings. The railroads of the country are using about 110,000,000 cross-ties every year, of which number the Pennsylvania uses about 5,500,000.

Exhaustive practical experiments have recently been conducted by a Kentucky railroad with a telephone device, the complete success of which is of much importance, says *Harper's Weekly*. By means of this system a moving train may communicate with any city having telephone connections, and, in the trials, under adverse weather conditions for the most part, conversation was held with parties in New York, while the Kentucky train was moving at a speed of from fifteen to thirty-five miles per hour. By means of the new system train despatchers can at any time give orders to a train crew, thus absolutely eliminating all danger of collisions, and passengers may call up any one with whom they wish to speak, just as over an ordinary long-distance wire. Trains traveling in the same or in opposite directions may also communicate with each other. By many prominent railroad officials the device is said to be second in importance as a safety appliance only to the air-brake.

A report issued by the Census Bureau says the total number of breadwinners ten to fifteen years of age employed in continental United States, according to the census of 1900, was 1,750,178. In popular discussion this number has sometimes been cited as representing the number of children working in factory and mine and sweat-shop. By far the most important occupation for children is that of agricultural laborers, the number so employed being 1,054,446.

Tabulations for 1906 show that the grand total expended in building during the year throughout the United States reaches $604,960,000.

General.

Professor John Milne, the English seismic authority, has advanced a theory, says the *Scientific American*, to account for recent disturbances of this character manifested in various parts of the world, which has been held tenable by Sir Norman Lockyer and Professor Archenbold. Professor Milne declares that the disturbances are due not to a merely normal adjustment of the earth's strata or to the shifting of the surface to meet a gradual contraction in the size of the globe, but are caused by displacement of the globe itself from its true axis and are really due to the jar incident to the subsequent swing back of the earth upon that true axis. It is conceivable that such a return movement to the axis as well as the original distortion would cause a tremendous strain upon the crust, and could easily account for the most terrific seismic convulsions imaginable. Sir Norman Lockyer declares further that the deviation from the true axis, a fact which, by the way, can be scientifically proven, is due to the great sunspots which recently sent more energy to the earth than at any other time during the thirty-five year sunspot period, and which, through the great differences in the corresponding temperatures, caused the formation of vast ice-masses at one or the other of the poles, of such weight that the distortion takes place, to be subsequently remedied by other variations.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHRISTIAN SCIENCE FAVORABLY REGARDED.

San Francisco, Cal., Jan. 18, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Dear Leader:—Although you are aware of the rapid spread of Christian Science throughout the civilized world, I thought it might please you to hear of a trip recently made by me through Southern California. As chairman of the executive committee of an extensive association of merchants and manufacturers, I was appointed a delegate to attend a conference at San Diego to consider the subject of improving the harbors of California. I left on the evening train, together with our civil engineer. Shortly after the train started, the subject of Christian Science came up, and the gentleman accompanying me said that his wife had been healed by Christian Science, years before, of what was pronounced by the physicians incurable. Several people in our car participated in the conversation, and all were friendly and spoke in the highest praise of you and of what you are doing towards enlightening mankind. No one was antagonistic, even in the slightest degree. On our arrival the next day at the convention, we found gathered there as delegates some of the most prominent men from all parts of California. After the deliberations were at an end several excursions were planned, and on one of these (a steamer ride on the beautiful bay of San Diego) the subject of Christian Science was the general topic of conversation. Among those who participated was a former State Senator, now frequently mentioned for United States Senator, also a recent candidate for Congress, a school superintendent, two prominent lawyers, and several others representing large commercial and financial interests. The excursion almost took on the phase of a Christian Science testimony meeting, as every one had something good to say as to what he knew about Christian Science. The Senator made the statement that he knew so many level-headed, practical business men who were interested, that this alone indicated to him its great value. Every one had something similar to say, and many told of cases of healing, either in their own families or among their acquaintances. It must be borne in mind that these men, gathered together from different parts of our State, were mostly strangers to each other, and but few had ever attended a Christian Science service or meeting.

During my trip I had the pleasure of meeting in Southern California a Superior Court judge, and a former judge of the Supreme Court of our State, both enthusiastic adherents of Christian Science. On my way home I met at Los Angeles a number of leading Christian Scientists, and attended a Wednesday evening meeting at which upwards of twelve hundred people were present. I heard, as usual at such meetings, many additional strong proofs of the work of Christian Science in the healing of all manner of diseases. At this meeting several attorneys gave very strong testimonies to the benefits derived from the understanding and proper application of your teaching.

Surely the whole civilized world has reason to feel grateful to you for what you have done and are daily doing for the benefit of mankind. Personally I have received many, many benefits from Christian Science, particularly in the trying times here since last April.

With heartfelt gratitude and love,

I am yours in the truth,

ISIDOR JACOBS.

THE WORK OF THE DAY.

BLANCHE H. HOGUE.

Two human tendencies which beset the effort of the average individual in any line of study or endeavor, may be defined as follows: One is the common inclination to look so far into the future for achievement that the consequent visionary restlessness leads to neglect of the necessary work for to-day; and the other, a kindred temptation to grant evil the power sufficient to withhold, until some future season, the good which has really been earned for to-day. In either event to-day is left barren of blossom or fruition. For generations popular teaching has trained mortals into the expectation of a future salvation or a future punishment. It has said, "These things are not for us to understand," and thus encouraged the mental stagnation which waits upon future enlightenment and effort, or the pessimistic spirit which fails to appropriate the immediate good resulting from a present knowledge and activity. This habit of mortal mind has been so woven into individual and general experience that the Christian Scientist must give earnest attention to its removal if he would free himself and his work from its imposed limitations. Unless such currents of thought are recognized and handled intelligently, they measure and cramp, through undetected force of habit, many efforts toward accomplishing the triumph of good in the present hour, and for this reason every patient and every practitioner needs to watch that he is not thus hindered in his expectation of to-day's demonstration of Truth.

One phase of the error suggests, "You are sick, or sinful, to-day, but you may be better to-morrow, next week, or next year." The other whispers, "You are doing the very best you can, and yet continue to suffer or to fail." In both arguments we recognize the mistaken theology which says that salvation dwells in the future, and that saintliness is synonymous with martyrdom and can expect only suffering in the present. Concerning the former, it is better to discern a coming deliverance than to remain without hope; but the lingering belief that this good, although existent in the future, is not yet here, certainly hinders in a degree that instantaneous destruction of sin and pain which is the ideal of the Christian Scientist. In regard to the latter, while it is admitted that suffering has its place so long as sin endures, and that evil claims it can impose upon the right-doer, it should be understood that the sentimental or self-condemning perpetuation of suffering after its causative sin has been quenched, or the argument that evil has any power to torment him who actually and without reservation

commits his way to God, are thrusts of the enemy which Christian Scientists are called upon to prove impotent.

These conditions of human thought cannot be ignored, but must be recognized and dealt with intelligently to insure progress. To know what work must be done to-day, to do it, and to understand what may be expected as the immediate result of to-day's work well done, demands a clear grasp of the possibilities of right thinking, and a broad outlook upon the problems of humanity. Science and Health, the text-book of Christian Science, by Mrs. Eddy, in its elucidation of Scriptural teaching unveils to the world of thought a perfect model for daily thinking and living, and uncovers to its students the myriad forms of ignorant and sinful thinking which would prevent that perfection from being manifested. Furthermore, it makes plain the way in which, day by day, hour by hour, the present situation may be transformed, and the law of God dominate here, there, and eventually everywhere in individual affairs.

While the individual worker should expect immediate results from faithful work, and while he must set his face resolutely against believing that discord can endure after all necessary steps have been taken to insure its destruction, yet on the other hand he must measure so broadly and intelligently the work necessary to the task in hand, that he asks not too much reward for the labor bestowed. A failure to perceive the amount of "prayer and fasting" necessary to obliterate a given evil, gives birth to an ignorant and over-large expectation, which fosters ingratitude and discouragement. As thought expands to grasp the situation of to-day, expectation gains a better balance. Little or nothing is looked for from a careless or theoretical desire for right thinking, but it is seen that showers of blessing may descend upon that industry and patience which persist in right thinking at any cost to self-ease. In a word, the standard before the Christian Scientist is a spiritual and perfect manhood, in the likeness and image of a perfect God, Spirit. To-day's work should be the best possible effort toward the demonstration of this ideal, and to-day's measure of reward can be no greater than is justly earned, nor will it be less than is rightly deserved. God's gracious law provides that man's inheritance shall be constantly and consciously with him, and Christian Science awakens thought to present possession of this inheritance as the modes of false thinking which have so long obscured the real are intelligently abandoned.

Unquestionably to-day's work well done is the only logical stepping-stone toward better work and richer reward to-morrow. To-day stands like a grim sentinel, forbidding progress until its full measure be accomplished, but yielding its severity and bending smilingly to support the upward tread of him who rightly fulfils its demand for work and growth. To accept no less than to-day's faithful work has earned, and to expect no more than justly crowns its labor, brings a mental adjustment to the whole question of salvation from sin and distress which establishes great peace of mind at every stage of the work. Contentment in work well done is not to be confounded with stagnation nor with undue complacency. Spiritual awakening surely brings a growing discontent with all evil, but a normal contentment in the good which may be accomplished to-day belongs to an intelligently adjusted vision and overrules the impatience which a more limited view might impose.

John Ruskin, in his first lecture on "Architecture and Painting," wrote a very valuable paragraph bearing upon the work of to-day, which it may be permissible to quote here, as it upholds the necessity for the right ideal, and the industry which will eventually establish it in experience. It reads as follows: "Quixotism, or Utopianism: that is another of the devil's pet words. I believe the quiet admission that because things have long been wrong it is impossible they should ever be right, is one of the most fatal sources of misery and crime from which this world suffers. Whenever you hear a man dissuading you from attempting to do well, on the ground that perfection is 'Utopian,' beware of that man. Cast the word out of your dictionary altogether. There is no need for it. Things are either possible or impossible—you can easily determine which in any given state of human science. If the thing is impossible, you need not trouble yourselves about it; if possible, try for it. It is very Utopian to hope for the entire doing away with drunkenness and misery out of the Canongate; but the Utopianism is not our business—the work is. It is Utopian to hope to give every child in the kingdom the knowledge of God from its youth; but the Utopianism is not our business—the work is."

The student of Christian Science who grasps somewhat of its teaching, has been well convinced that the power of God, good, is supreme, that this power must dominate all his affairs to bring about peace of mind, and that this peace comes to him in the degree that he forsakes evil and cleaves to all that is good. Because his faith in the availability of God has been quickened, he grows to expect a natural improvement in his condition, which will be in exact proportion to his individual appropriation, in thought and deed, of that Mind which is good, that Mind "which was also in Christ Jesus." He is learning to detect the mistaken human sense of good, which is often but thinly disguised selfishness, pride, or love of approbation, and reject it for that one good which knows no self, and which discriminates not as to person, position, or condition in its bestowals. In all this readjustment of thought and life the Christian Scientist is called upon to prove each moment the presence of that God to whom he strives to render constant obedience, and in the myriad phases of human experience which call for this hourly and momentary re-moulding, he finds his work for to-day.

The Christian Scientist, given the conviction that good is provably supreme, has before him each day the task of demonstrating this conviction to be true. He ceases to look upon experience as disaster, sorrow, or temptation, and begins to regard everything which confronts him as a demand that the government of good be consciously expressed, to the utter destruction of evil. He considers discord of any nature a misstatement of fact, and knows, therefore, that his immediate duty is to treat the matter as a problem to be solved, and to solve it. A calamity, a disease, or a disappointment, accepted as fact and bewailed, certainly means stagnation, or perhaps that which is worse, a cultivation of the selfish and self-pitying qualities which are so prone to wail over misfortune. But a supposedly unfortunate matter courageously faced, or an undesirable trait in one's own human nature resolutely detected, disciplined, and denied, means a righteous activity which has its place in to-day's work for the final and complete solution of the whole problem. How many invalids might find themselves suddenly recovered, did they turn thought from the contemplation of disease to the right adjustment of the larger questions which involve their daily relationships with mankind! And how many sinners, so called, might forget to sin, or fail to find time for it, would they but cease to think temptation and engage in a simple performance, to-day, of the good they already know! Manifestly each individual must work, and work faithfully, to escape the pangs of mortality; and undue speculation about to-morrow's work must give way to to-day's work contentedly done and justly rewarded, if actual deliverance is to be accomplished.

The work which this Science of Christianity requires of its student is as simple as it is effectual. To be a scientific Christian, the Christian must learn that the God he loves and strives to obey is an active, working God, governing His universe in absolute, unswerving law and order; and he must, by declaration and logical expectation, bear constant witness to the demonstrable presence of this God. To be a Christian Scientist, the Scientist must watch well

Digitized by Google

that his knowledge of metaphysics be coupled with that sweet and unselfish spirit of self-surrender which Christianizes all his motives, impulses, and desires. Mrs. Eddy's book, Science and Health, has brought to the Christian the Science of Life, which gives him an exact rule by which his Christianity can be definitely applied to his needs, aiding him to set all his thoughts in orderly obedience to divine good as he proceeds to apply this rule; and it has brought to the scientist, the thinker, the experimenter, a provable righteousness without which his exploration of material phenomena is a lifeless, fruitless effort. Christian Science reveals the Spirit of Christ pervading all science, and the truth about God and His universe enlightening all Christianity. With such a foundation, the work of to-day must be both intelligent and pure, and cannot fail to bring forth good fruit in abundance. Contentment in each stage of work will prevail, industry will speed its activity, and a just expectation of righteous results will crown it with joy and peace.

The linking of Science with Christianity may be seen in the life of Mrs. Eddy,—in the conquest of matter and its laws already accomplished by her, and in her lifelong endeavor to bring righteousness actively into all the affairs of the world's to-day. Discerning something of her well-poised expectation that the dear Father will care for His own, and her rich content in the sum of human labor which complains not of toil and knows no surrender till work is done, thousands of earth's weary ones have caught a gleam from her brightening light, and under its inspiration are striving to unite with her each day in work for God and man successfully and contentedly accomplished.

Despite the misunderstanding of much of the world at large, despite the many mistakes of students which foster such misunderstanding, despite the trials besetting the pathway of many faithful workers, and the tedious lapses of time often consumed in righting wrongs and in setting aside obstacles to progress, this ideal achievement is what the Christian Science movement, guarded through its dauntless Leader, really stands for, and this ideal achievement is what the Christian Science movement day by day is in ever-enlarging degree accomplishing.

SINCERITY.

REV. GUSTAVE HAAS.

THE art of sculpture was at its height with the Greeks at the time of the Roman conquest. The victors were greatly impressed by the evidences of Grecian culture and refinement, more especially by the lofty ideals carved in marble. Some, perceiving the commercial value of this art, saw in it primarily an opportunity for material gain, many who were proficient in stone-cutting aspiring at once to become sculptors, but their copies of the Grecian models were, in the main, crude and unsatisfactory. Frequently, in handling the statues, a graceful finger, an ear, or the tip of the nose would be broken. In order to hide such a defect, the missing member would be replaced with white wax, which would stick and could not be detected easily on account of its close resemblance to the marble; but in very warm or severe weather the wax would either melt or break off, thus exposing the fraud. As a consequence, those who intended to beautify their palaces and gardens with statuary, stipulated in their contracts that no wax should be used on any of the work. The Latin words employed were *sine cera*—without wax. Such is the accepted derivation of our English word "sincerity."

This suggestive term is peculiarly applicable to our work in Christian Science, for in it no pretensions are admissible. Our Leader says in her "Message to The Mother Church, June, 1901" (p. 4), "To attempt to twist the fatal magnetic element of human will into harmony with Divine power, or to substitute good words for good deeds, a fair seeming for right being, may suit the weak or the worldly who find the standard of Christ's healing too high for them. Absolute certainty in the practice of Divine Metaphysics constitutes its utility, since it has a divine and demonstrable Principle and rule;—if some fall short of Truth, others will attain it, and these are they who will adhere to it." No human concept of anything, however close in appearance to the real, or however lofty, pure, and good, according to its own standard, can take or fill the place of the Divine concept, and any deceptive endeavor to pass it off as such will readily be exposed under the blaze of Truth. If deception in the material representation of grace, beauty, and purity was a matter of offence to the materialistic thought of pagan Rome, how much more offensive and unbearable ought it to be to the purified scientific thought.

In the spiritual idea there never was nor can be any defect, change, decay, or misrepresentation. In the realm of metaphysics (beyond physics) all remains eternally perfect. All work in Christian Science is the expression or true indicator of one's consciousness. The worker in God's vineyard must shut out from his thought the temptation to misrepresent or to assume in his work. We cannot safely lower the standard God has set. Any defection in our thought, and consequently in our work, is not due to Science, but to a lack of conformity to it. Paul strikes the keynote of spiritual work when he speaks of our warfare as "casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ." Incomplete or defective work in Science can neither be completed nor patched up with the deceptive and pliable wax of hypocrisy or boastful assertion. There is no substitute for God's reflection, since "He is at once the center and circumference of being" (Science and Health, p. 204). Working for material results is the striving for appearances, which, however close the resemblance to the real, are deceptive and disappointing,—a mixture of truth and error, not Science,—and will be found wanting when weighed in the balances of Truth. Wax can never be marble, nor can matter ever be Spirit. Since a divine, demonstrable Principle is the basis of all being and action, the standard of work in truth necessarily includes sincerity, purity, genuineness.

Our Leader says in her "Message to The Mother Church, June, 1900" (p. 15), "Sincerity is more successful than genius or talent." What a true judgment; how crushing to vanity, but how sweet and full of hope and inspiration to honesty. Paul urges this same truth upon the followers of Christ, Truth, in his day, when he says, "Therefore let us keep the feast, not with old leaven, neither with the leaven of malice and wickedness; but with the unleavened bread of sincerity and truth." Sincerity is innate with each and every idea of God, and is therefore an essential characteristic of all true Christian effort. The true image is fashioned by the Divine hand. Sincerity, without an attempt at show or affectation, is one of the unmistakable manifestations of the worker in truth, and may well serve as a watchword.

A SIMILE.

IDA DOWNS YATES.

ONE day, soon after following my husband to our new home in San Francisco, I journeyed to the top of Mt. Tamalpias, a lofty peak which rises very near the coast line and some few miles from the city, that I might be shown the glories of this wonderful country as viewed from this rocky pinnacle. It chanced, however, to be an extremely foggy day, so that, as we wound through the dark dampness of the canyon over the most serpentine railroad in the world and emerged into the blinding sunlight which bathed the summit in grateful warmth, we could see nothing beyond a few feet below us, where the

Digitized by Google

vapory mist lay like an immense billowy sea, rolling, tumbling, and ever changing in space. As I stood peering into its impenetrable depths, I seemed to see weird forms, deep caverns, dark abysses, and frowning mountain peaks. It was wonderfully interesting, but unsatisfying; for we wished to see the beautiful panorama that lay at our feet, if only the misty mantle were removed.

We were told that if we would remain until the sun had absorbed the mist we would be richly rewarded; so we waited patiently, as the clouds sank lower and lower down the mountain-side, until they finally disappeared, and there at our feet lay the whole glorious picture in nature's incomparable coloring.—San Francisco, looking like a white city in the bright light; the beautiful bay, with its ships of every name and nation anchored safely on its quiet bosom; the Golden Gate, opening out to the broad Pacific, which bore in its caressing arms the Farallones Islands, dimly visible as silent sentinels on the everlasting rock in a dreary waste. There were the cities of Oakland, Alameda, and Berkeley, their countless windows reflecting the light like so many flashing jewels, with many other towns and villages nestling in their emerald glades, and in the distance Mt. Diablo and Mt. Hamilton with their snowy crowns.

As I stood in silent admiration, my thought went out in unspeakable gratitude to our beloved Leader; for once, not many years ago, I stood on the brink of a lonely precipice, gazing into a rolling, tumbling, seething sea of mortal beliefs. I saw an open grave, and in it lay my fairest earthly treasure. I saw buried hopes and broken hearts. I saw another loved one bound fast in the fetters of sin and disobedience; I saw human love crushed and flung aside; I saw a home shattered and possessions swept away; I saw grief and separation everywhere, and a dark yawning gulf, across whose blackness I could read only despair. And then a dear one whispered, "It is not true. Wait; the sunlight of Truth is risen again, and it will dispel these dark shadows; you will see the city of our God near at hand, and 'there is no night there,' no death, no sin, no pain, no loss, no separation, for you will see man in his rightful place in Mind,—sinless and immortal, the perfect child of God and heir to all the riches of his Father's kingdom, which is here, though hidden by the mists. Just beyond you is the land of Christian Science. Follow Truth, and you shall go down and possess the land which the Lord our God has given us."

Eagerly I followed, and as we journeyed on from sense to Soul this true friend gave me a little book to be my guide through the gate and out into this promised land, and as the shadows fled I, too, saw that there is no death, no grave for man, who is immortal, who dwells forever within the shelter of Love divine—and I was comforted. I saw that the fetters of sin and disobedience are but mortal illusions, and I found that other one free, happy, loving, and his way established. I found that love was not dead, but a living, palpitating reality. I found a home, loving friends, and increasing riches; these were all mine—the gift of Love. My weary eyes now beheld the spiritual creation as revealed in the first chapter of Genesis, where we are told that "God saw every thing that he had made, and, behold, it was very good."

In the second chapter of Genesis we read, "But there went up a mist from the earth," and our guide-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, says that from this mist or mystification arises all the false claims of the material sense of creation (see p. 523). When the whole world was befogged in a sense of sin and fear, there was one whose spiritual discernment was clear enough to pierce the darkness, to see the true creation as it lay in all its immortal glory at the feet of its perfect creator, and in loving service to mankind she lighted anew the torch of Truth and has unflinchingly borne it aloft, bidding all mankind to follow this light, which will guide them safely through the storms and over the dark places until the Sun of righteousness—of Life and Truth and Love—has dispelled all the mists of mortal sense, and we are safe in "the land of Christian Science, where fetters fall, and the rights of man are fully known and acknowledged" (Science and Health, p. 226). Do we love this brave Leader for her service? Are we grateful for the light? Love knows!

THE RIGHT WAY.

WILLET G. RANNEY.

SEVERAL years ago the writer and a friend started from a small town in western Colorado and traveled over seven hundred miles on horseback to the Yellowstone National Park. We crossed alkali deserts; toiled up mountain-sides; followed narrow trails along the shelving sides of canyons, and were tangled up in fallen timber, where our progress was very slow. Each day that we followed the right road was so much accomplished, and we did not have to do it over again; but sometimes we took the wrong trail, and then our efforts counted for nothing; we had to retrace our steps and find the right way again. The park seemed a long way off at first, and some people whom we met smiled rather incredulously when we told them our destination; but by keeping our objective point in thought and by moving in the right direction at least a little each day, we finally reached the wonderful place for which we had set out.

On our journey in Christian Science our faithful Leader and Guide, Mrs. Eddy, has gone before us every step of the way, and again made plain the right path, so that we have no excuse for not following steadily on. The right way is that of Christ Jesus.—God's way. Any divergent path is that of error. The paths of human opinion and philosophy, the belief in the reality and power of the mortal mind and its outgrowths,—material sense, animal magnetism, sin, sickness, and "whatsoever worketh abomination, or maketh a lie,"—all these are divergences from the way of Truth, but if we always remember that these are not of Truth they will have no power to mislead us.

On our mental journey from physical sense to the promised land, our daily effort should be to keep to the right way; to discern quickly the erroneous, divergent thoughts which cross our pathway, and to avoid them. This we can do with the aid of the Bible and Science and Health, and by seeking the guidance of the one Mind. Inasmuch as each step in the right direction is effective in advancing us on our way more than all our wanderings off the right track, so is the smallest realization of the truth more powerful than all error. "The path of the just is as the shining light, that shineth more and more unto the perfect day."

[Written for the *Sentinel*.]

THE VOICE OF TRUTH.

MARY J. ELMENDORF.

THY guiding Voice, O Truth, in thought I hear,
Rebuking error, stilling grief and fear!
My heart its healing benediction shrines:
And lo, like sun-surf purpling hillside vines,
A rush of radiance ripens power and cheer—
Thy guiding Voice.

Awakened faith brings to my waiting ear,
Soft as the murmur of some distant mere
Yet mighty as the wind that rends the pines,
Thy guiding Voice.

Thought, volant, free, transcends this finite sphere,
Knowing the unseen things of Spirit near,
And up the thistly way that peaceward twines,
The open gate of harmony divines,
When through its hush, O Truth, rings rich and clear
Thy guiding Voice.

MISREPRESENTATIONS REFUTED.

Mrs. Mary Baker G. Eddy, the author of Science and Health, and Founder of the Christian Science movement, has departed from her usual custom about replying to criticisms, and has given out a statement in which she refutes the misrepresentations as to her family and herself which figured in a recent magazine article, purporting to deal with the facts of her early home and her life. It looks as though her enemies had been hard pressed for material with which to try to detract from the honor and influence of Mrs. Eddy when they resorted to these methods. Such attacks only serve to injure those who resort to them.

[Editorial in the *Portsmouth* (Ohio) *Times*.]

ONE STRONG POINT.

How much basic truth there is in Christian Science, the *Times* is not prepared either to assert or deny. Of a truth it is not deeply concerned either way, for its platform is to let people believe in peace what they choose, so long as they lead orderly lives and do not menace the public good or morals. There is one thing, however, it does greatly admire in the new faith, and that is its zeal in correcting misstatements about itself and the sweet and gentle spirit in which it proceeds to this work. No matter how obscure the paper that makes any animadversions upon this faith, it is certain to be asked the privilege of showing their falsity. The request is so politely put and the answer so surely one that turneth away wrath, that no editor half way fit to be one can refuse it. . . .

While we do not believe any of the preachments of this church or religion, we think we are able to account for its rather remarkable growth in its practice of liberality and consideration, it apparently being willing to let every other man work out his salvation according to his own light if he does not disturb it.

[Charles K. Skinner in *The Evening News*, Saginaw, Mich.]

A REPLY TO REV. MR. BRADLEY.

I read with interest the excerpt from the sermon of Rev. M. S. Bradley, which appeared in your Monday issue. While the speaker takes exceptions to some positions of Christian Science (and I am sure it is because he has a misapprehension of its real teaching), his courteous language throughout, as reported, is appreciated by all. Every one has a right to his individual opinion, but if expressed in public there will be some one to question it.

Our critic takes issue with the Christian Science position respecting the unreality of matter, in these words: "Modern Christianity also makes much of the seen; we all have to assume the reality of the external order." Do we? That depends on our understanding of what "reality" means. The definition of this word according to some of the best authorities is "immobility, permanency, fixity." Thus St. Paul said, "We look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." The Master's words along this line were, "It is the spirit that quickeneth; the flesh profiteth nothing."

Christian Science in no sense denies the reality of the universe and man as God's creation, but it takes issue with materialists as to what that creation is. It begins with the spiritual creation as revealed in Genesis, 1st chapter, wherein it is stated that God created man in His own image and likeness; "God saw every thing that he had made, and, behold, it was very good." The Scripture also teaches that all God's works are eternal. No mention is made of matter in this creation, hence the only position that can be accepted is that God as Spirit created a spiritual universe and this universe is real and eternal. Having created absolute perfection, He would not stultify His work with imperfection.

To gain the true sense of Christian Science it should be understood that it is not attempting to work along material lines. Christian Science grants that to the mortal man sickness is very real, and that he suffers in accordance with his belief in the laws of matter, but it shows by actual proofs that when the mental condition is changed from discord to harmony, the physical will manifest the same change. The appeal to Christian Scientists "not to deny the existence of evil and suffering," shows that the speaker did not understand the Principle through which Christian Science is daily destroying "evil and suffering." It is the unceasing work of the Christian Scientist to bring the light of Truth into the consciousness of mankind and thus help them to realize man's birthright of dominion" by which we may overcome by the power of God these same evils.

[From the *London* (England) *News*.]

A CHRISTIAN SCIENTIST VIEW.

The Committee on Publication of the Christian Science churches in London writes: "At this season of the year many engage in festivities, nominally to commemorate the birth of Jesus, the Christ, but in reality with little idea of the wonderful birth and career of the most spiritual thought that ever appeared to mankind. The birth of Jesus was the appearing of the spiritual idea seen humanly as a babe. Referring to human relationship, when the name mother is mentioned what a flood of memory it brings to those who have experienced the unselfish love and tender care of a devoted mother! . . .

"The thought of Jesus should bring to every one some understanding of what lies behind the name—a deeper, higher consciousness of the self-abnegation and wondrous love for mankind, coupled with the knowledge of God as perfect good, which qualified Jesus to do his mighty works. He stilled the tempest, walked the waves, healed the sick, and raised the dead, in defiance of material laws, and taught his disciples to do likewise. . . .

"What was it that enabled Jesus to accomplish such wonders? It was the understanding of God as Love that gave him the power to overcome sin, sickness, and death. It is the spiritual idea again born in consciousness that enables Christian Scientists to obey the command, 'Heal the sick,' as well as the accompanying one, 'Preach the gospel.' . . .

"Jesus by the power of the Spirit overcame 'the world, the flesh, and the devil,' and to-day Christian Scientists rejoice in understanding in some degree the Principle which actuated him. This is their festival of Spirit, their feast of good things. Christian Scientists are deeply grateful to God that in this age one pure in heart and life has been raised up to impart the Christ knowledge to the world."

[A. W. Mainland in the *Free Press News-Bulletin*, Winnipeg, Man.]

Christian Scientists do not assert that no results have been obtained in the past through prayer, as it is known that during the first few centuries of the Christian Church healing was recognized as a regular part of the Church work, and there has probably been no time since during which numbers of faithful adherents of Christianity have not obtained marvelous results from the prayer of faith. Instead of belittling prayer the Christian Scientists are emphasizing the need for the unceasing use of the prayer of faith and understanding.

It is true that Paul is represented as having a "thorn in the flesh" which was not at once removed through his prayers, but it is well to note that this thorn is described as a messenger of Satan, not of God, sent to him lest he should

Digitized by Google

become too proud. This is a good illustration of the teaching of Christian Science on the subject of sickness and its removal by prayer. Christian Science teaches that all sickness is the result of a misapprehension of God and His laws, and that the true method of removing sickness is through gaining a right apprehension of God and His laws. If Paul had not risen to a point where he could enjoy the great good that came to him from his wonderful conversion without becoming too proud, the correct way of gaining his freedom from his "thorn in the flesh" would have been to have overcome the sense of pride through meekness. If sickness, as our critic declares, is, under certain circumstances, good, it is surely wrong for us to try to get rid of sickness through the use of drugs or surgery. The correct method would seem to be to try to overcome the sin or error of which the sickness is an outgrowth, and thus radically destroy the sickness.

Jesus in his work seems to have healed readily all who came to him for healing, but he frequently gave the parting injunction to those healed to "go, and sin no more," thus recognizing sin as the cause of sickness in these cases. The statement that Jesus is healing the sick to-day through the medical profession, is a rather astonishing one in the face of the fact that we have no record that he used any material means in his work when he was on earth. Paul speaks of Christ Jesus as "the same yesterday, and to-day, and forever." If this is true, he would not change his method of healing if he were with us to-day, and any system that he would not use cannot be rightly called a divine system of healing.

It is not claimed that to-day all those who come to Christian Science are healed. While we believe that Christian Science, or divine Truth, operating in the human consciousness, will destroy every form of sin or sickness, the followers of Christian Science do not claim to have grown to such a perfect understanding of it as to be able to heal every case of sickness or sin that comes to them. The true method of establishing the value of different systems of healing is only attained through a comparison of both the successes and failures of each system. It is not right to judge one system that may be old and long established solely by its successes, and another, which is new and has not yet gained popular approval, by its failures.

It is true that Christian Scientists sometimes figure in the law courts because of failure to heal some case of sickness, but if the same criterion were applied to the drugging system of healing, would there not be several inquests every day in a city of the size of Winnipeg? It seems to be such a remarkable thing that a patient should die under Christian Science treatment that it is necessary to have an inquest and order the friends and practitioner to be arrested, but this action is not carried out when patients die under medical treatment, even if the death results, as sometimes happens, from a mistake on the part of the physician in making the diagnosis or in prescribing the drug. As a very large percentage of the cases that come to Christian Science for treatment have already tried all other known systems of healing before applying to it, why should the Christian Scientists alone be held responsible for the failure to save the patient?

[A. G. Frisbie in the *Janesville* (O.) *Courier*.]

I am not aware that any of the articles of the church to which the reverend critic belongs teaches that the power of Jesus was hypnotic, nor that such an explanation of the wonderful works of the Master would be accepted by any Protestant church in Ohio, but I do know that the reverend gentleman errs most completely when he announces soberly, in addressing a class of religious seekers after truth, that "this is the way Christian Scientists perform their cures." In the Christian Science text-book, "Science and Health with Key to the Scriptures," written by the Discoverer and Founder of Christian Science, Mary Baker G. Eddy, is the very plain statement (p. 101): "The author's own observations of the workings of animal magnetism convince her that it is not a remedial agent, and that its effects upon those who practise it, and upon their subjects who do not resist it, lead to moral and to physical death. . . . In no instance is the effect of animal magnetism, recently called hypnotism, other than the effect of illusion. Any seeming benefit derived from it is proportional to one's faith in esoteric magic." On page 102 of the same book, Mrs. Eddy says: "In Science animal magnetism, mesmerism, or hypnotism is a mere negation, possessing neither intelligence, power, nor reality, and in sense it is an unreal concept of the so-called mortal mind." Is it at all likely that students of Christian Science would employ in their religious healing work an agency which is so thoroughly exposed in the teaching of their Leader? The reverend doctor had not far to go in Boston to have ascertained the truth about Christian Science, and his scholars have not far to go to ascertain that their teacher is inaccurate in his summary of the healing power of Jesus of Nazareth, Christ Jesus, who said of himself and of his works, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise." "I can of mine own self do nothing: . . . I seek not mine own will, but the will of the Father which hath sent me." That power to which Jesus referred so constantly as "the Father" was not hypnotic, but divine; Jesus healed by the power of Spirit, which he knew to be spiritual, even as he said to the woman at the well: "God is a Spirit: and they that worship him must worship him in spirit and in truth."

[James Phelps in *The Northwestern*, Oshkosh, Wis.]

I see by your good paper of the 4th, that the Emmanuel Episcopal Church of Boston is to teach a class in "faith healing," and that the pastor has stated in this connection that Christian Scientists work their cures through hypnotism, and even Christ Jesus is charged with being nothing more than a very successful hypnotist. To my mind this is simply a reiteration of the charge of the enemies of Jesus, that "he casteth out devils through the prince of the devils." Christian Scientists would gladly welcome the re-establishment of true Christian healing in any denomination of the church; but to go from drugs to hypnotism is no advance, and Christian Scientists most strenuously object to any attempt to impute the results of their treatment to hypnotism. Why are those who know practically nothing about Christian Science so ready to tell all about it? Surely no one is as capable of telling just what Christian Science is as the one who has studied it and shown his practical understanding of the subject by the application of its teachings in healing the sick, reforming the sinner, and reclaiming the infidel. Christian Science and hypnotism are in no way related, and it is my private opinion that the reverend doctor understands neither the one nor the other; for if he understood Christian Science he would be practising it as well as talking about it, and if he knew what hypnotism is he would not be teaching it or trying to introduce it into the Christian Church.

[From the *Manchester* (England) *Daily Dispatch*.]

A congregation, consisting of about one hundred Manchester adherents of Christian Science, assembled at the annual thanksgiving service at the Victoria Park Church, last night [Dec. 31]. Gratitude was fervently expressed for the benefits, moral and physical, which their faith had brought them during the past twelve months, and dignified rebukes were administered to the skeptics who have been exploiting the alleged collapse of Mrs Eddy, the Founder of the Church.

Some remarkable testimonies of cures effected by Chris-

Digitized by Google

tian Science were also forthcoming. One gentleman, who declared he had never been strong and always broke down after any extra exertion, said that as the result of an internal injury four years ago he endured a long illness. Every sort of treatment was tried, but he grew steadily worse. When Christian Science was first suggested he scoffed at the idea, but ultimately in despair he tried it. After the first treatment he was able to run upstairs quite easily, and to-day his health is better than it ever was before.

A lady then got up to give expression to her gratitude to God, and to Mrs. Eddy, not only for healing her physically, but for healing her feelings of anxiety. Other testimonies followed. A lady expressed her gratitude for the fact that joy and peace and perfect health had been hers for the last eight years. Another lady testified that three years ago she had been cured of curvature of the spine by Christian Science. A lady who had suffered for five years from neuralgia, and never had twenty-four hours' ease during that period, declared that from the day she entered the church up to the present she has never suffered from the pain. A gentleman was full of gratitude for the effect of his faith on the success of his business. Christian Science, he declared, had helped him in every way in his business, and when he looked back on the result of the year's work he had reason to be thankful. Testimony was given by a lady of the effect of Mrs. Eddy's teaching in soothing and allaying the anxieties and irritations of a mother in dealing with her children.

Lady Victoria Murray contributed her share to the general testimony. She expressed her gratitude for the progress the Church has made in Manchester during the last six years, and was thankful for a number of Christmas boxes in the form of contributions to the building fund. Referring to Mrs. Eddy, she said they could not be too grateful to her for what she had done for them all. She had had the pleasure of receiving a letter from her father, [Lord Dunmore] after seeing Mrs. Eddy on Dec. 18, and he declared that she looked happier and younger than when he met her a few years ago.

[Editorial in the *Reading* (Pa.) *Herald*.]

The man who stood and thanked a kindly Providence for the raging of his enemies was a good deal of a philosopher. Christian Science has much to be thankful for, and most especially for the mad way in which it has been attacked of late. Not of very late, but of moderately late. That is to say, during the last fortnight or so the attacks have been wonderfully mute. Six weeks ago they were thunderous, but they have died away like the reverberating echoes of a thunderbolt. They are heard no longer, and they were as effectless as is most rumbling thunder. It is marvelous, by the way, what a mighty noise a thunder storm makes, and how very rarely the lightning strikes.

The *Herald* is no defender of Christian Science, except that it is a defender of free speech and free thought and original ideas of every sort. Nor is the *Herald* an apologist for Mrs. Eddy, save as it believes that everybody has a right to his or her own individuality, and that a maligned and abused individual, maligned and abused without apparent reason or justice, should arouse sympathy, while the maligner should arouse contempt.

There evidently has been little cause for the attacks made by the New York *World* upon Mrs. Eddy. If all that was said was true, it would have been well worth the saying and more. But, as future events go far to show that much that was said was absolutely false, we can see no reason whatsoever for its saying. Whether it was said for sensational effect or for whatsoever cause, the *World* has lost dignity and respect by its anti-Eddy warfare. Christian Science, so far as we can see, has lost naught, and Mrs. Eddy has come through it all unscathed.

If Mrs. Eddy were really deluding a multitude, as the World has alleged,—or, to put it more emphatically, if Mrs. Eddy has deluded a multitude,—it would be a worthy work to set that delusion forth, to unveil the deluder, to disabuse the deluded, to overturn a gigantic fraud, and nail a stupendous lie. But there must be a much better show of facts than the *World* has presented to bring all this to pass. And the attempt of the *World* to prove a mighty delusion has been a dismal failure.

["Live and Let Live," in the *Jamestown* (N. Y.) *Journal*.]

The people at large are just practical enough to want what is best. In the minds of the vast majority of men it is a question as to what is best. With all the tumbling about of medicine in each of its schools and in every decade, and its division into several warring schools, are the medical professions ready to say that they are right? If so, which school of medicine is right? Would it not be better for the schools of medicine to first agree among themselves before they arrange a campaign against religious sects that practise healing?

The writer personally knows of many cases of diseases that are regularly scheduled by physicians as incurable, that have been healed by Christian Science where the doctors have unqualifiedly given them up; and the writer knows that certain local physicians know all about the final healing of some of those cases, and that was why it was indicated in a former part of this article that some physicians would know that they would not be acting commendably if they endeavored to secure legislation to cut off healing by religious methods. What would the doctors have to say to a legislative committee when confronted by the facts of these religious successes after medical failures? . . . If the medical men think they can show that the "practices" of Christian Scientists are inconsistent with the peace and safety of the State, they may stand some chance of getting a "corner" on the treating business, but probably not before the time when the several schools of medicine get into one fold and heal cases such as the spiritual healers cannot cure.

Will not people be better pleased to hear no more of movements on the part of physicians to legislate on this subject of healing? Every person should be free—and he is free—to choose how he will treat, if he practise healing, and each person should be left free to choose—and he is left free to choose—which treatment he will have when he is ill or in anywise suffering.

[Editorial in the *Pasadena* (Cal.) *Evening Star*.]

It is difficult to make out what good purpose is served by the alleged "exposes" of Mrs. Mary Baker G. Eddy. These "disclosures" do not shake the confidence of Mrs. Eddy's followers in her and they are not needed by those who do not accept the teachings of Mrs. Eddy on Christian Science. Whether or not the mass of the people believe in Mrs. Eddy's teachings, all must admit that thousands of intelligent, conscientious, reputable people throughout the land do believe in Christian Science and its Founder, and that belief is entitled to respect. Mere chivalry would also dictate that Mrs. Eddy should be proof against the rude personal assaults made upon her by men who should be better employed.

All sins are mistaken ways; hence plain mistakes. God never makes mistakes; hence mortal mind makes its own mistakes, and God is not the author of sin or evil. Mistakes are not true, so not real, and therefore destructible. Knowledge of the truth removes mistakes. "Ye shall know the truth, and the truth shall make you free."

REV. G. A. KRATZER.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Concord* (N. H.) *Daily Patriot.*]

THE PUBLIC WANTS THE TRUTH.

Pleasant View, Concord, N. H., Feb. 5, 1907.

To the Editor of the Patriot:—I am reliably informed that the February number of the *Cosmopolitan* magazine, containing an excellent article by Mr. Charles Klein, the prominent dramatist, in defense of Christian Science and Mrs. Eddy, has had the greatest sale ever recorded by this publication. Four hundred and fifty thousand copies of this magazine were sent out, and the business manager is reported as saying that he believed he could have disposed of seventy-five thousand additional copies if he had had them.

I am sure that your readers will be interested to learn of these figures, which show so conclusively that what the public wants is the truth about Christian Science.

Sincerely yours,

LEWIS C. STRANG,
Associate Secretary.

A TYPICAL EXPERIENCE.

ON reading Mrs. Burnham's article in *The World To-Day*, one is again reminded that the present believers in Christian Science are largely those who formerly were strongly opposed to its teachings, and in some cases it may be said that this opposition assumed such bitterness as to verge upon persecution. Mrs. Burnham says of her former and latter views on this subject, "I, too, was once among the critics of Christian Science, and that knowledge causes me to ruminate rather than to be indignant. I, too, covered valuable paper with exhortations to misguided relatives and friends who had been inexplicably caught in the meshes of what I hotly detested as a false transcendentalism. Yet I loved the Gospels then. Why could I not see that Christian Science meant only a living faith in them, a realization in the present of something I had until then hoped to attain in another and a better world? It was physical misery which faithful physicians could not relieve that forced me to turn to Christian Science. Despite the sense of condescension and patronage with which I at first permitted its ministrations, I was healed; and the help came so suddenly that it shocked me out of my intention to withdraw at the first possible moment from its influence. Under the permeating goodness, purity, and truth of the new teaching, one after another of the conditions which hampered my life slipped away, and I stood forth a free being."

Mrs. Burnham's experience in seeking health and happiness, and the final realization of both in Christian Science, is typical of the experience of many thousands, and it is because of this seeking and finding that they are now firm in their faith. The truth of Christian Science has been proved to them by demonstration, and they in turn are able to demonstrate it for others. They have received "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness; that they might be called trees of righteousness, the planting of the Lord, that he might be glorified." Upon such people neither misrepresentations nor buffoonery can have the slightest effect.

ARCHIBALD MCLELLAN.

THE FORCE OF DENIAL.

AMONG those who frankly recognize the dignity and value of the Christian Science movement, and the sanity and integrity of its representatives, one often meets with a reserve criticism of its teachings, to the effect that while strong and convincing in its affirmations it is weak in its denials,—that the assertion of the unreality of material phenomena, sin, sickness and death, and of the unreliability of the testimony of the physical senses, is the one vulnerable feaure of its teaching. Criticism of this kind indicates not only a surprising failure to understand the teaching of Christian Science, but a yet more surprising failure rightly to estimate the significance of the metaphysical distinction between reality and unreality, and to perceive that every positive declaration includes the denial of all its negatives. The merest tyro in mathematics, who understands the statements that the sum of equals is equal, and that the shortest distance between any two points is a straight line, knows that they deny all statements that are contradictory thereto. This is their necessary content and meaning. The realization of this fundamental point is essential to all clear thinking, and Mrs. Eddy has directed attention to it in her epigrammatic statement that "Life, God, omnipotent good, deny death, evil, sin, disease.—Disease, sin, evil, death, deny good, omnipotent God, Life" (Science and Health, p. 113). Whether thought be appealed to by the positive averment of truth, or be startled by the denial of its opposite, in either case the entire content of the statement must be understood and accepted. Christian believers as a whole have always admitted that God is infinite Spirit; that He is absolute in wisdom, holiness, and power, and that He is the creator and supporter of all being; hence, in denying those beliefs which are at war with these fundamental Christian teachings, Christian Science is evidencing its loyalty to them, and is logically consistent therewith.

An unnamed assumption enters into this reasoning, namely, that all which goes forth from the divine nature partakes of and is in harmony with that nature,—that like produces like; but it would seem that among Christian believers this could hardly be a debatable proposition, for if infinite Life can produce death, then light can produce darkness; if infinite good can beget evil, then Truth can beget error, and we are left without a solitary support for the reasonableness or consistency of God and the law of His manifestation. It is apparent, however, that the denial of a falsity amounts to nothing if the positive truth which renders the denial logically necessary is not understood and adhered to; and the danger of falling into the habit of such mere verbal denial needs to be guarded against by never separating the denial of error from the affirmation of the truth which dispels it. "There is but one way to heaven, harmony, and Christ in divine Science shows us this way. It is to know no other reality—to have no other consciousness of life—than good, God and His reflection." "Material beliefs must be denied and cast out to make place for truth" (Science and Health, pp. 242, 130). These statements express not only the need of discrimination between the real and the unreal, but also the nature of the denial which Christian Scientists are taught to make.

The scientific denial of the reality of sin, sickness, and death does not signify that they are not to be reckoned with as very real to human sense. The thought that evil is to be overcome by ignoring it is diametrically opposed to the teaching of Christian Science. The denial of the reality of evil has immediately and continually to do with the recognition of infinite being, and it can be effectively made only as we enter into the understanding of the eternal verities of Spirit. Jesus proved that sin, sickness, and death are not divinely sustained by annulling their asserted laws and overcoming their asserted power. He thus classified these human experiences as not of God, and therefore unreal, and this is the simple teaching of Christian Science.

JOHN B. WILLIS.

MIND NOT IN MATTER.

FOR many years there has been a wide difference of opinion in the medical profession, as to the value to mankind of experiments on the lower animals, and many protests against these experiments have been made by thoughtful people on humanitarian grounds. At a meeting of the American Association for the Advancement of Science, recently held in New York City, a paper was read in which certain of these experiments were described. The doctor who read this paper stated that he had placed a small creature "in a covered box, from the center of which a maze led to escape and food." After the animal had learned how to make its escape through this winding path, the experimenter removed the creature's eyes, but it still found its way. The other physical senses were then treated in a similar manner, yet the maimed thing found its way out of its prison; and from this it was inferred that certain animals, if not all, are possessed of a sixth sense.

It is hardly necessary to ask whether mortals have the right to gain knowledge at the cost of suffering to any creature, however humble; the question which most concerns us being whether all necessary knowledge may not be gained in an altogether different way. To this Christian Science unequivocally answers in the affirmative; it declares that all knowledge relative to Life and its infinite manifestations may be gained with scientific accuracy by the understanding of that Life,—the creative Mind. The case cited points unmistakably to a Mind not subject to the limitations of matter or materiality,—the Mind that guides every creature in the degree to which that creature responds to such guidance. Jesus said that not even a sparrow was beneath the Father's notice. This case also verifies the correctness of Mrs. Eddy's conclusions that life does not "exist in the thing formed," and leads us to ponder deeply her statement respecting the "governing, infinite Principle outside of finite form, which forms only reflect" (Science and Health, pp. 70, 71).

Here it may be asked what lesson there is for us as individuals in this teaching. It may be answered that the discovery of this all-wise, all-loving, all-governing Principle, which is never affected by finite sense or its discords but is ever ready to correct them, is the crowning discovery of the ages. It is indeed Immanuel—God with us. This discovery reveals the sense by which mortals are led to find God,—led out of the maze of materiality with its bondage and fear, into spiritual freedom with its health and harmony.

Many times have students of Christian Science rejoiced when they saw some little creature lifted from mortal suffering to health and harmony by the declaration of the same divine law which had healed themselves, thus proving to them anew the universality of divine Principle and the availability of its law. Paul said, "We know that the whole creation groaneth and travaileth in pain together until now." He also said, "The earnest expectation of the creature waiteth for the manifestation of the sons of God." As the sons of God are manifested in Science they prove their dominion in the demonstration of the law of Life, of Mind,—the law which heals, not hurts, "the whole creation."

In Christian Science we learn to reason from the highest, —the divine governing Principle,—and from this we work on to demonstrate the perfectibility of all God's creation. The prophet who had a glimpse of this truth said that the lion and the lamb should lie down together, that a little child should lead them, and that nothing should "hurt nor destroy" when the earth should "be full of the knowledge of the Lord." Divine Science is speeding the world towards this glad day, in its declaration and demonstration of the one Mind governing all the phenomena of existence; and for this we, like St. Paul, thank God and take courage.

ANNIE M. KNOTT.

THE WORLD TO-DAY.

THE article by Clara Louise Burnham, "Mrs. Eddy from the Christian Science Point of View," in the February number of *The World To-day*, is one which will be of great interest to Christian Scientists and their friends, and this issue of the magazine should be given wide circulation. The office of publication is 67 Wabash Avenue, Chicago, Ill.

NOTICE.

THE current *Quarterly*, January, February, March, and the next *Quarterly*, April, May, June, were prepared from the 379th edition of SCIENCE AND HEALTH. In some cases the lines given may not correspond with the lines in the revised edition of 1907, therefore readers are advised to compare the references when reading from the revised edition.

Beginning with the July, August, September *Quarterly*, the Lessons will be prepared from the 1907 revised edition of SCIENCE AND HEALTH.

LETTERS TO OUR LEADER.

London, England, Jan. 11, 1907.

Dear Mrs. Eddy:—For some time past I have wished to write to you, to express my sense of the wonderful work which you are accomplishing in this age, and to thank you personally for the benefits which I have myself received. Your book, "Science and Health with Key to the Scriptures," came to me about three years ago, at a time when, as a clergyman of the Church of England and in a responsible position, I often felt that I did not know which way to turn, in my sense of what the teaching of the Bible really implied and as to the true meaning of a Christian denomination. Only a month before meeting with your book, I was privileged with an invitation to preach in Westminster Abbey, and made it the occasion for a special effort to express such light as I had dimly attained on the Scriptural teaching of religion as man's true life now and here, and especially of the contrast between this teaching and the popular and scholastic views of religion in all ages. It was not, however, till I read your book that the scales fell from my eyes, and I gained a fuller enlightenment as to the spiritual truth which the writers of the Bible describe, and realized for the first time that it was scientific and demonstrable. Your patient efforts to open our eyes to this great and increasingly obvious fact have touched me very deeply; they have awakened me to many deficiencies and set me working in the right path. I became a member of your church,—The Mother Church in Boston,—some time ago. I have also joined First Church of Christ, Scientist, in London; and shall endeavor to make my life more worthy in every direction of this new understanding of the changeless Truth. I am

Yours very sincerely,
G. WARRE CORNISH.

Bloomington, Ill., Jan. 10, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We, the assembled members of First Church of Christ, Scientist, Bloomington, Ill., wish to extend to you heartfelt greetings for what you have done for humanity, individually and collectively. We realize that words feebly express the high standard which Christian Science, as taught and lived by you, demands of each one of us, and we thank you for the emphasis every page of your

Digitized by Google

writings puts on daily right thinking and living, since by our fruits are we to be known. The fruits, dear Leader, are shown by the increasing demand for healing and for your writings in this city, making a larger church edifice necessary to accommodate the attendance. We have long had a fund for this purpose and are now bending every effort to build in the near future.

The recent onslaughts on you and your life-work have only stimulated us to a higher appreciation of you and of the great Cause for which you are laboring so unselfishly, and strengthened our faith and deepened our love for this Cause and you, its Leader.

Lovingly and gratefully yours,

MRS. DELLA RIGBY, MISS M. DELTA MOORE,
MRS. B. M. PRINCE, MISS FLORA SCHNEIDER,
MRS. MABEL EDDY, *Directors.*

Philadelphia, Pa., Jan. 21, 1907.

Beloved Leader:—A little incident occurred recently which I thought might interest you if you could spare a moment. A relative, thinking the article announced by *McClure's* would prove interesting to me, placed a year's subscription in my name. The January number was duly received, and after reading the outrageous falsehoods it contained concerning Christian Science and its revered Leader, I wrote the editor as follows: "Kindly cancel my subscription to your magazine, and see that no more numbers be sent me. The statements published by you regarding Mrs. Eddy I cannot countenance in any way. I owe Mrs. Eddy a debt of life-long gratitude, for it was simply by reading her book Science and Health that I was healed of organic troubles which had baffled the skill of Philadelphia's best specialists, and for which I had undergone a serious surgical operation. That healing has stood the test of nine years, and no one is better able to judge of the purity and truth of her teachings than one who has received the blessing of health and happiness through a small comprehension of what she has tried and is trying to elucidate to sick and suffering humanity, and I could not be true to my convictions of justice and gratitude if I did not protest against this unnecessary, unkind, and altogether false publication." The publisher promptly returned the amount paid for the subscription.

Lovingly yours,

E. MABEL TOURNY.

Boston, Mass., Dec. 13, 1906.

Beloved Teacher and Leader:—I have been studying our wonderful text-book, Science and Health, for sixteen years, but I have never loved it so much, and its meaning has never unfolded more clearly to me than to-day. My heart goes out in gratitude to you, its author, well knowing that it must have been your absolute honesty of purpose, from a child, to understand the things of God that brought the revelation of Truth, the Science of which you have so clearly stated. The influx of deepening understanding of this book to-day, only shows me the feebleness of critics who, pondering only for an hour, find not the "pearl of great price," but turn and judge in their ignorance; but the "wrath of man" is praising God. We who have learned to love its sacred, purifying message, grow stronger as the years pass, in the certainty that it was conceived through the holy purpose that humanity might have the truth of being. No gratitude can be too large from the man who has let your book unfold to him the Scriptures and the real things of life.

A young business man recently remarked, while studying Science and Health and just getting interested in Science during two weeks' treatment: "I really long to be a perfect man." He was being "born again"—healed. It seems to me at this hour that the study of your words in our Church Manual about healing, Article 32, Section 7, is of paramount importance.

Above all else I am praying for that spiritual understanding which heals the sick "quickly and wholly."

Your student,

GEORGE WENDELL ADAMS.

Boston, Mass., Jan. 5, 1907.

Beloved Teacher and Leader:—This is only a word of greeting—wishing you a happy New Year. The days speed on so quickly, and they are surely, if silently, marking the stately and steady advance of Truth's great Cause; reminding us as they fly that "all things" are indeed working together "for good" to those who love God. You, dear Leader, see all this from your mount of vision, more clearly than can we,—your students,—but it may cheer you to know that we, too, are catching glimpses of "the glory which shall be revealed," and with which "the sufferings of this present time are not worthy to be compared."

With love and gratitude, your student.

ANNIE M. KNOTT.

Evanston, Ill., Dec. 5, 1906.

Dear Mrs. Eddy:—With a heart full of love and reverence for you, for the wonderful truth which has come to the world through your purity and unselfed love for mankind, I must give some expression to the gratitude that is mine for all that Christian Science has brought to me, and is bringing hourly. It is indeed the "Comforter" which taketh away all sorrow, sickness, and sin, and does "guide . . . into all truth." My daily prayer is so to live that I may be worthy to be called a Christian Scientist, and that I may be your loving and faithful follower in the Master's footsteps.

With sincerest gratitude,

ELEANOR L. MORGAN.

Chicago, Ill., Jan. 28, 1907.

My Dear Mrs. Eddy:—Will you accept my gratitude for the high privilege you gave me last year at Boston?

It shall always be my greatest satisfaction to have received in any degree your trust and confidence, and in addition, my close association with the splendid body of men composing the Board of Directors in the work of the new Mother Church building shall ever remain an inspiration to high endeavor. Faithfully yours,

S. S. BEMAN.

[Telegram.]

Toronto, Ontario, Jan. 15, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

We, the united members of First and Second Churches of Christ, Scientist, Toronto, rejoice to-night in added growth and increased spiritual activity, and in the demonstration of love made possible through your teachings.

J. K. LESLIE, *Chairman.*

Brookline, Mass., Jan. 16, 1907.

My Dear Mrs. Eddy:—"No weapon that is formed against thee shall prosper; and every tongue that shall rise against thee in judgment thou shalt condemn. This is the heritage of the servants of the Lord, and their righteousness is of me, saith the Lord."

Lovingly yours,

JEANNETTE R. MCLELLAN.

THE LECTURES.

THE HAGUE, HOLLAND.

Rev. Arthur R. Vosburgh lectured at The Hague Nov. 17. He was introduced by attorney Æ. Baron Mackay, who said,—

Dear friends, in the name of the committee which organized this meeting, and at its request, I am glad to welcome you all, and to introduce to you the speaker of to-night. Though not a Christian Scientist myself, I do this with pleasure, because I am aware that I may render my fellowmen a service by so doing. Repeatedly when observing Christian Scientists—and I have had many an opportunity during the past two years—I had to think of that which is told to us in the Acts about the people of Berea, "who searched the Scriptures daily, whether those things were so," as Paul and Silas said. I believe I do no injustice to many in our believing Christian circles when I presume that they do not search the Scriptures with the same holy, earnest, and quiet fidelity as the Christian Scientists do.

At the beginning of this year we read in a periodical which is being very much read and whose editor is one of our most learned and gifted clergymen, "In our country Christian Science has attracted only little attention until now." This is quite so; it is only during the last year or so that Christian Science has become a topic of conversation, though here in The Hague there has existed a small number of Scientists for three or four years. But though small, I am sorry to say that in the criticisms which the movement has met in believing Christian circles it sometimes was hard to recognize the spirit of Christ, and more still is it to be regretted that those Christian critics were guilty of so much inaccuracy. For example, the author whom I mentioned above, in referring to the text-book, Science and Health, declares, "This is, so to say, the Bible of the Christian Scientists." And I have often observed that even when contradiction followed, this was not accepted. Others seemed to know better than Christian Scientists themselves.

To-night we shall have the advantage of hearing explained to us the doctrine of Christian Science by Mr. Vosburgh. His visit will prove not to have been in vain nor fruitless, and you will agree with me in thanking the committee to whom we owe this meeting.—*Correspondence.*

NEW HAVEN, CONN.

At the Hyperion Theatre yesterday afternoon [Jan. 20] there was given before a large audience an interesting lecture on "Christian Science: or Deliverance from Evil," by Rev. William P. McKenzie. In his introductory remarks, Rev. Severin E. Simonsen, Reader of Second Church of Christ, Scientist, said in part,—

I took up the study of Christian Science with only one purpose in view, and that was to know if it was the truth or not. I made up my mind that my lips should not be sealed any longer if I found it was the teaching of Christ. After taking class instruction in Christian Science, I found myself face to face with three serious questions. (1) Could I accept the teachings of Mrs. Eddy as the truth? (2) Could I face the ridicule that would naturally be heaped upon one who would step out of the Methodist ministry and join the ranks of the Christian Scientists? (3) Could I trust God to supply myself and family (we were nine in all) the necessaries of life? When I finally came to the point where I could answer the first question in the affirmative and without hesitancy or any reserve, I found it comparatively easy to answer the other two in the same way. At once I resigned from the ministry and membership in the M. E. church and took my stand for Christian Science. It was in the dead of winter; I was without money and in debt besides; but I did it, and God sustained me, and I have never regretted it for one single instant. And now, after years of active work in the Cause of Christian Science, I can truthfully say that its Principle is absolutely unerring. It has been my good fortune personally to meet and talk with Mrs. Eddy, and I have never met any one who to my mind reflected so much of the spirit of Christ as does she. Her humility and unceasing love for the salvation of mankind from sin and all the ills that flesh is heir to, is to me marvelous.—*The Palladium.*

BROOKINGS, S. DAK.

Tuesday evening, Dec. 18, Hon. Clarence A. Buskirk lectured on Christian Science. He was introduced by Mr. Wm. H. Rodder, ex-Secretary of State, who said in part,—

Of Christian Science I am free to confess I know very little. This to me, however, is in no sense an argument against it, but rather in favor of our endeavoring to become better informed, because many of our friends and neighbors for whom we have the highest regard firmly believe in and endeavor to practise its teachings, and surely a belief or religion which to them is sufficient as a rule of life, is entitled to careful and respectful consideration. Without touching upon the strictly spiritual side of the Science, I have often been impressed by the evidences which have come under my observation of the aid which this Science appears to render to those same friends who are guided by it, and it seems to me that whether we believe in it or not it must be admitted that the world is the gainer by reason of any belief which tends to enable its followers to be hopeful, helpful, and cheerful, in adversity as well as in prosperity, to the development of that which is best in themselves, and to make them an influence for good in the circle in which they move and wherever their influence extends.—*Correspondence.*

LECTURES AT OTHER PLACES.

Tacoma, Wash.—Rev. Irving C. Tomlinson, Oct. 26.
Atchison, Kan.—Bicknell Young, Dec. 16.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

In the spring of 1885, while under the care of a noted physician, I received word that a former patient of this same physician had been completely restored to health through Christian Science treatment. I knew that this lady had spent years in a vain search for health, and I did not doubt that her cure had been effected by the Christian Science treatment, but in my blindness I thought it could not do the same for me—I still clung to the material help. During the next five months I passed through a very critical attack, in which my life was despaired of, and when sufficiently recovered the physician advised that I be taken to the seashore for the summer, saying that he could do nothing for me in my extremely weakened condition. I returned to his care in the fall slightly improved. He now told me that I must make up my mind to an invalid's life, that the most he could do for me was to afford temporary relief from suffering. Previous to this time four other physicians had been unsuccessful in their efforts to effect a cure, and as I had perfect confidence in this man's ability to diagnose and skill to treat, I accepted his verdict.

My extreme suffering and resignation to the supposed will of God were, however, preparing me to hear the voice of God. It came to me in November, 1886, through a dear friend—another former invalid restored to perfect health through Christian Science. She came to our home to show us what Christian Science had done for her, and to give us some idea of its teaching. She said to me, "You say that God is omnipotent, yet you admit a power which has made you sick." The words came as a shock. I felt as if convicted of dishonesty; then, as the truth forced itself upon me, chains seemed to be unloosed and to fall away, and a light seemed to envelop my entire person. One trouble, that had baffled the physician for a year, disappeared entirely at this time. Then began an earnest study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and a constant effort was made to apply the knowledge thus gained in the affairs of every-day life. The healing began at once. There were many trials, some dark days, but the light always shone, if sometimes dimly. The close of 1887 found me a well woman, and I then realized that I had never known health before. I had expended three dollars for the text-book, to learn of the great Physician. In the four years previous I had spent about fifteen hundred dollars in my vain search after health.

To-day I stand in awe in the presence of the blessing revealed through Mrs. Eddy. Is it not meet that we should let the world know of the great benefits wrought by this new yet old Christianity?

HELEN C. SHERER, Janesville, Wis.

Through Christian Science I have been healed of stomach and liver complaints, the latter in an aggravated form. It is therefore with a profound sense of gratitude to God, and to Mrs. Eddy, that I hereby testify to the healing efficacy of this Science. In common with many persons engaged in daily newspaper work, I was a member of the great army of nervous sufferers. During a period of nearly fourteen years, within which time I occupied various important positions on prominent newspapers of Minneapolis, St. Paul, and San Francisco, I repeatedly found, as a result of my physical condition, that my duties and responsibilities were in excess of my capacity to discharge them to my satisfaction. I became greatly emaciated and weak, and my whole appearance indicated a serious condition. Many of my friends believed the outcome would be fatal, and several prominent physicians rendered the same verdict. With the exception of a serious surgical operation, I know of no means of help offered me that I did not gratefully accept. My physicians were my loving friends, in whom I had fullest confidence. I was held under an unusually strict diet for years; change of climate was ordered, and accepted by me several times; likewise travel, and at various times I covered several thousand miles of land and sea. Most of the well-known remedies, recommended in similar cases, were given a fair trial; osteopathy was experimented with for more than a year; I also tried physical culture, but the net result of my earnest endeavor to regain health was that I gradually grew worse, until finally there was little in life to interest me. To those who I hope will find a source of encouragement in my testimony, it will be needless to describe the years of suffering and the torture which I unwittingly caused myself to endure.

I came to Christian Science in May, 1903, but with no faith in its power to heal me. I was simply driven to it, not knowing where else to turn for help. Some of my acquaintances said they had been healed through it, and being in so much distress, I felt that I simply must have help if possible, so I grasped at it. Now I am well, and find it very pleasant indeed to eat the food that is placed before me. My healing was slow, for which I am thankful. Before recovering my health, I found it consistent to gain some understanding of the truth of being and its power to heal. In searching for health in this manner, I found at the same time that I was learning to love the Bible, to worship God, to hold Mrs. Eddy in loving esteem, to entertain a most kindly affection toward the Christian Science Church and its members. I had indulged in the use of liquor and patronized saloons most of my life; I had also smoked cigars since I was twelve years of age. I found it necessary, some fifteen years ago, to resort to the regular use of glasses. Without especial treatment therefor, but rather as the result of my reading and the growth of my understanding of the teachings of the Bible as explained by Mrs. Eddy in Science and Health, I have lost all desire for liquor and tobacco and have no further use for my glasses.

After trying to become interested successively in several different orthodox denominations, and finding in each conditions that did not appeal to me, my attendance at religious services became limited to Easter Sundays and similar occasions. The Bible was beyond my comprehension and to me was practically a closed book for over a quarter of a century. Now I attend regularly on Sunday morning and Wednesday evening the Christian Science services, to all of which I look forward with pleasure. To me they are inspiring, comforting, and satisfying. I also count it one of my privileges to study daily the Lesson-Sermons with their instructive and helpful citations from the Bible and Science and Health. I am also pleased to acknowledge a growing sense of humility; and my love for humanity in general, for which I am daily striving, is constantly broadening. Slowly but surely I am overcoming hate, envy, pride, and egotism. Through the understanding of the power of Truth which I have so far gained, I have myself quickly overcome many ailments.

FRANK L. THRESHER, Minneapolis, Minn.

Almost seven years ago, when material remedies had failed to cure me of an internal disease of long standing, —failed even to give relief,—I was pronounced incurable, and *materia medica* gave me up to die. One treatment in Christian Science then restored me, mentally and physically. At the extreme moment, while I lay unconscious, a lady asked my husband to try Christian Science, and he, taking her advice, went for a practitioner. The result was as I have stated, so that my first introduction to Christian Science was after it had helped me. I had never heard even the name previous to that time. What a transformation, —from unconsciousness to consciousness, from sickness to health, from weakness to strength. Best of all; I turned from belief in a false theology—that God is the author of

Digitized by Google

sickness, sending it upon us for chastisement—into the glorious knowledge of Truth, the teaching that God is Love, and "a very present help in trouble;" the healer of "all" our diseases; "not willing that any should perish." I was a member of an orthodox church at that time, and after feeling the power of Truth through the effectual, fervent prayer of a Christian Scientist, the question arose, What shall I do? Go back to the doctrines of my fathers, as taught in the church to which I belonged, I could not, as they do not accept the healing now, believing and teaching that it was only for a special time and for the few; so that to me the question was not long unanswered. One week after receiving my first treatment I attended a Christian Science service in Winnipeg, Manitoba,—where I then resided,—and the beautiful, holy, uplifting truths, living truths, given out at that service brought to my eyes tears of gratitude to God for the freedom from bondage which I began to realize as my portion. Since then I have been a constant attendant, and within a short time became a member of the church in Winnipeg, uniting with The Mother Church a year later.

Three days after hearing of Christian Science and being so marvelously healed, I asked the practitioner to treat my boy, then six and a half years old, who according to *materia medica* had serious lung trouble, and no hope of cure was held out, although he had been treated by the best doctors in Montreal. One of the leading pulmonary specialists of that day gave no encouragement that he would live very long. Under such conditions Christian Science treatment was applied, and within a short time a marked improvement was the result. He has since developed into a healthy, strong boy, indulging in all the boyish sports of winter and summer with no fear of heat, cold, or dampness—cured of lung disease through the application of the truth as understood in Christian Science. For almost seven years the truth has been our only remedy in destroying every form of evil. The way has not been easy; but through steadfastly clinging to the truth and denying the seeming power of error, the result has been freedom from all physical ailments.

I am deeply grateful for the understanding of God and our relation to Him which comes to us through the teaching of Christian Science. My gratitude to Mrs. Eddy, our beloved Leader, who has indeed given to us the "Key to the Scriptures," cannot find expression in mere words; the only reasonable gratitude we can show is in daily service, striving to live the spiritual truths which she makes practical, through the study of her priceless gift to humanity, "Science and Health with Key to the Scriptures."

MRS. LIZZIE TUCKEY, Edmonton, Alberta, Canada.

My experience in this new-old truth has been that it is based on a self-proving Principle, ever-operative and available, and is not dependent upon human belief. Eight years of alternating hope and disappointment, and the final decision of physicians that my case was incurable, had brought me to utter despair. I did not myself believe there was any cure for me, and my husband was of the same opinion. At Cleveland, O., in the spring of 1898, a friend persuaded me to go with her "just to talk" with a Christian Science practitioner. I had no intention of taking treatment, as I had no belief in it whatever. I found the practitioner a picture of health. She kindly answered my questions, and talked with me I think about three hours. My impression was that her health was genuine, from the true source. The idea of Christian healing, and that God could sustain His creatures, was certainly good and had a ring of truth about it. I took one treatment, and was healed of indigestion of long standing, and was so much better of other troubles that I continued treatment until I was well. I could scarcely tell of all the ills that were overcome. One was a trouble which three physicians did their best to cure, and then showed me in their books that it was incurable by medicines but was temporarily relieved by remedies they had used. Then surgery was resorted to. Each operation—I underwent three—seemed to bring about worse conditions, until the surgeons said they could do no more. These operations caused a partial paralysis and a very distressing nervous derangement,—I do not think an organ of my body was performing its functions normally. However, a few months' treatment in Christian Science overcame all of this, and for about seven years I have enjoyed absolute health. Christian Science has not only healed me of my diseases, but is teaching me how the understanding of Truth heals and harmonizes, bringing out the true conditions here and now. I am very grateful that this truth has come to light again, and grateful to Mrs. Eddy for teaching, living, proving, and establishing it in this age.

MRS. LIZZIE M. CAMPBELL, Grand Rapids, Mich.

A little over five years ago Christian Science was first brought to my notice. I had been a sufferer for seven years with lung trouble, supposedly inherited. During this time I employed seven different physicians, all of whom gave the same verdict, and asked if the trouble was not inherited. Three of our family had already died with the dreaded disease. At this time I was in bed most of the time, and had at different times very serious attacks. The last physician told me that in less than a year's time I would be in my grave. All my money had been spent, with only temporary relief and no hope. Although I sought health in every direction, I was getting worse all the time.

A lady who was called a faith curist by my neighbors was watched very closely by me, as she always seemed happy. Meeting her on the street one day, I asked if she did not attend the "faith cure church." She replied, "It is not 'faith cure,' but Christian Science, which must be understood." She then referred me to the first chapter of Genesis, where we are told that God's creation is good and that His children are created in His image and likeness. I told her that I had three children who needed me, and that I did not want to die. She said I need not die if I followed the teachings of Christ Jesus, and she also referred me to the passage in Ezekiel, "I have no pleasure in the death of him that dieth, saith the Lord God: wherefore turn yourselves, and live ye." My healing began then, and the alarming conditions ceased. I attended services at First Church of Christ, Scientist, and studied the text-book, "Science and Health with Key to the Scriptures." As before stated, all my means had been spent, so I have had to prove that in God is all supply, and this has been shown in many ways during my study of Christian Science. For all these blessings I am truly grateful, and especially thankful to God for sending some one who was pure enough to make the teachings of Jesus practical.

MARGARETE WALLACE, Indianapolis, Ind.

With a heart full of gratitude to God, and to Mrs. Eddy for the blessings of Christian Science, I gladly give a testimony of my healing. I had always been well until September, 1898, when my health began to fail. I went to a good physician, who told my mother, after a very thorough examination, that I showed unmistakable signs of serious lung trouble, and must take a vacation. He also advised a change of climate, which was impossible, but I followed his other instructions very carefully. I, however, grew thinner and weaker, until I could take but a few steps at a time. In March, 1899, I was taken very ill with stomach and bowel trouble, and as I did not improve under the care of our family physician, a specialist was called, who pronounced my case very critical. He found, upon careful examination, a serious heart complication. He called two other physicians for counsel, and they decided to operate.

Digitized by Google

This was done, but was not successful, and in a few days a second operation was performed. I then seemed to improve slowly, until the following December, when I gradually grew worse until February. I was again confined to my bed, and the physician then said the disease had spread all through my system. Another consultation was held, and an operation was decided upon. Up to this time I had been examined by seven physicians and all pronounced the disease of a most serious nature. A surgical operation was performed in March, 1900, and in April another was performed with no better results than before. In three weeks I was in a most distressing condition.

We were truly in despair, as I was so weak that another operation would be impossible, and the physicians said I would probably live but a few days. In this extremity we began to think of Christian Science. We consulted the doctor, who said to try anything, as nothing more could be done for me by *materia medica*. On May 25, 1900, we called a Christian Science practitioner, and there was a marked improvement from the first treatment. On May 30 I attended the Memorial day exercises, and my friends all remarked how well I looked. I have never had any return of the disease, and am now in perfect health. We never need any material medicine, as Christian Science is our only remedy. It is now over five years since my healing, and we have since had many clear demonstrations of Truth's power.—Mrs. Pearl Densmore, Jackson, Mich.

In 1899, while visiting a relative in Buffalo, N. Y., who was a Christian Scientist, I was treated for a serious ailment and healed. This was my first knowledge of Christian Science. From early childhood I had suffered greatly with weak eyes, and as the years advanced the trouble grew worse, until finally, about 1897, I was told that I had no sight at all in one eye and very little in the other. I had been treated by the best oculists, but without any beneficial results, and had not a ray of encouragement. I was wearing two pairs of glasses and even then was unable to read or sew. This was my condition when I began to take Christian Science treatment, and in three weeks I had discarded the glasses and could easily read large print. When I returned home, having been absent about three months, I could read small print and was able to do any fine needlework. During the six years since, I have been relieved of many other physical troubles and now rely wholly upon Christian Science. My gratitude must be measured accordingly.—Mrs. M. B. Thompson, Birmingham, Ala.

For fifteen years I was considered an invalid. After receiving medical treatment without any benefit, dieting was recommended. This rule was followed until the diet was reduced almost to nothing; and even then it seemed distressing to eat. Not being satisfied with this state of affairs, another doctor was consulted, and once in two months I traveled two hundred miles to see this doctor and to take treatment of him. This continued for a year and a half, but to my disappointment I was no better. In the course of a few months I found myself in worse condition than ever before. The same doctor then advised an operation, and gave me the hope that after it was performed I would surely be well. I submitted, but after it was over I was no better. I was taken home, and was not able to go out of my room for months; indeed I was hardly able to see any one. Another doctor was then secured, who left me very near death's door. At this time Christian Science was recommended. I felt willing to try it, but had very little hope that I should ever be well again. In a week's time, however, I was looking at things very differently. I had thought I could not read, but found I could read Science and Health by Mrs. Eddy. My eyes improved; I began to eat anything and all I wanted, and have done so ever since. My healing was slow but sure. Every battle that I had in the overcoming of error with truth lifted me out of misery into harmony, whereas, when I was dealing with *materia medica*, I sank deeper all the time.

Since my healing I have had many proofs of God's loving care in healing sickness and sin, and have had occasion to rejoice every day that there was found one worthy to bear this message of Truth and Love to a sin-sick world. The Bible is no longer a closed book, but is full of precious promises for all who are willing to accept and live the truth.—Mrs. Lizzie B. Messer, Randolph, Vt.

About fifteen years ago I was taken down with serious rheumatic trouble, and doctored with a number of the prominent physicians of this city, used material remedies, etc., without getting any relief. Six years ago the trouble became so severe that I was confined to my bed. I continued treatment with the doctors for ten months, at which time I became so discouraged that I wanted to die. Medicine having utterly failed me, I now asked for treatment from my sister, a Christian Scientist, who was living in Chicago. She treated me absently for two months, when she wished me to come to Chicago. This I did, and received another month's treatment; when I considered myself well and returned home. Some weeks after this I was again taken sick, and went to the doctor, who told me I had a good start of a serious kidney disease, and was not long for this earth. I took some of his medicine for about two weeks, receiving no benefit. Getting worse right along, I gave up the doctor and again wrote my sister, telling her what the doctor had said; and in a very short time, under her treatment, I was well. The different physicians, with all of whom I have been acquainted some twenty years, were greatly surprised at my healing. They knew I had been troubled for years, and had seen me around on my crutches for months, and they occasionally remark to me, "So you got out of your rheumatism all right!" This healing occurred five years ago, since which time I have been entirely free, have never taken any medicine, and am not afraid to get my feet wet, nor of being in a draught. The expenses during the ten years of my illness were very great, for during the entire time I was never without medical attendance or medicines. To say that I am thankful for what Christian Science has done for me and what I have been lifted out of, is a very small thing to say. Now that I am a Christian Scientist myself, I am able, through the understanding of God, as taught in our text-book, "Science and Health with Key to the Scriptures," not only to keep myself and my family well, but it also helps me in my business and in every way.—Adolph Baeuerlen, Winona, Minn.

For the encouragement of another mother I will give facts, as we fully realized them at the birth of our last child. The day previous I did my usual amount of work, sewing on the machine, sweeping, and some extra washing, just as I have always been privileged to do. My practitioner was at our house on the 3rd of May, 1904, and at eleven o'clock I left the nursery, thinking it best to retire to my room. Soon there was fear, and mortal mind manifested in pain, but this was of very short duration in comparison to that at the time of our oldest child's birth under *materia medica*. At this time, with the canopy of Love over us, our little daughter, then nearly three years old, took her usual noon rest, and was sound asleep by my side when at half past one her new baby sister was first heard.

We had telephoned to the physician (who had been engaged, as State law requires, for the registration), but divine Love, the only power, had met all our need, for the demonstration was complete. When the physician did arrive, at three o'clock, he said, "All is right; and I have nothing to do." The next afternoon I sat up in a large chair for my dinner, and I was soon entirely normal and free. When baby was twelve days old I was privileged

Digitized by Google

to attend our Christian Science church service. In sincerest gratitude did I thank God that Sabbath morn, for His loving care and protection as promised to us in the 91st Psalm. Let us continually praise our God for this Science of Christ, which gives us the understanding of Truth and Love.—IDELLA HAINES BUZBY, Philadelphia, Pa.

About twelve years ago I was given up to die, the doctors saying it was impossible for me to live. On their advice I went to a hospital in Montreal, but all they could offer me there was two operations, with a slight chance of saving my life. As I dreaded the thought of an operation, I decided to die at home. I then heard of Christian Science, which I tried as a last resort, and after being under its treatment for two weeks I was able to do all my own work without any help, something which I had not done before for two years, and in less than three months I was completely cured of all my diseases. I did not take treatment continually during that time, as after the first two weeks I had help only occasionally, sometimes going for two weeks without treatment. This was over ten years ago, and I have had good health ever since, and have not taken medicine of any kind. We had lost two children under medical treatment, but now have four children, all well and healthy, who have never taken any medicine. We had paid out a small fortune for medical treatment, and the amount paid for help in Christian Science has been very small in comparison. I have great reason to be thankful for Christian Science, and I know it is of God, for it is good.

MRS. E. J. WATERMAN, Peterboro, Ontario.

Those of us who have been released from the prison-house of suffering should consider it not only a duty, but an inestimable privilege to tell others of our deliverance. My heart is filled with thankfulness, too deep for words to express, for the benefits which have come into my experience through the study and application of Christian Science. From childhood I had never been considered strong, and finally invalidism claimed me for many years. I was under the care of physicians nearly all the time and almost lived on medicine. I was a patient in a sanitarium for months, where the examining physician said my trouble was a complication of diseases, and that I would never be well again. Lake trips, mineral baths, etc., also a trip to the Pacific coast, gave but little relief. Two physicians told me that an operation was necessary, but that I could not take chloroform because of a serious heart trouble. I suffered torment under the medical treatment, but the knife was not used. Financial reverses had made it necessary that I should seek employment, and when I told the doctor so, he said I would never do a day's work again. For a time, however, I was able to do a little work, but used medicine in some form constantly.

About six years ago one of the troubles became greatly aggravated, and then it was that I turned to Christian Science, as it seemed the only hope left me. I had heard of Science, but did not think it could help one who had a serious sickness. I did not mention my many ailments to the practitioner when I asked for help, thinking only to be relieved of the one which had been a source of pain so long. I was helped immediately, and was soon better than I had been for years. I accepted a position as nurse to a woman suffering with paralytic trouble, and stayed with her three months. A few months later I became a forewoman in a department store in the city where I had been ill so many years, and lost only one day from my work while employed in the store.

I speak with the greatest respect of my physicians, as each stood high in his profession, but it was not easy for me to forget the thousand and one remedies I had tried to no purpose, nor was it easy to leave my church and take a stand for Christian Science. Day after day I sought to learn what had freed me, and like some others who make a study of Science and Health, the unreality of evil—sin, sickness, and death—was my stumbling-block. Erelong the clouds began to roll away; the cobwebs of materiality were removed one by one, and the consciousness of God, as I had never before known Him, dawned upon me. By the realization of God as the Principle underlying all reality, and man as His idea (child), I have been able to give others the cup of cold water in His name. Accidents, with myself and others, have been met instantaneously. This shows how far-reaching is the power of Truth, as understood in Christian Science.

I wish to express my love and gratitude to our Leader, who has toiled so faithfully for such as sit in darkness. She has made it possible for each one who will study the text-book, "Science and Health with Key to the Scriptures," to demonstrate in some degree this healing truth. Had she hidden her light under a bushel, many of us would still be in bondage to suffering and sickness; still praying to a God who seemed so far away that our prayer never reached Him. To know how to pray makes free.

MRS. KATE KIMBALL FLORA, Philadelphia, Pa.

I wish to express some of the gratitude I feel to Christian Science for the wonderful benefits that have come to me through its teachings. In the latter part of December, 1905, after nearly four months of dangerous illness, my doctor told me that it would be necessary for me to go to a hospital for the removal of an abnormal growth, and that it would take me some three months to recover from the effects of the operation. At that time I was almost a physical wreck; could remain on my feet but a few moments at a time, and was in continual pain. Some good friends at once began to talk Christian Science to me. I knew some lovely people who were Scientists, and believed that they might cure people who had nervous or imaginary ailments, but two of our best doctors had told me of my condition, and I failed to see where any help could come in my case; however, after much persuasion on the part of my friends, I tried Christian Science treatment for one week, and without the knowledge of the practitioner took with it most faithfully all the medicine the doctor had left me. At the end of the week I was if possible in a worse condition than before. However, I had become interested in the reading of Science and Health, and some *Sentinels* and *Journals* which had been sent me, and when the doctor specified a time for me to go to the hospital, I made up my mind then and there, that if there was anything in Christian Science I proposed to have it, before going through the terrible ordeal which was facing me. I went to a practitioner, a lady whom I had known for a number of years, and I went with the belief that I could rely upon whatever she told me. When I left her, after that first treatment, I was confident that I would be healed. I went home and had my mother gather up all my medicine —a large basketful—and destroy it.

That was ten months ago, and to-day I am in perfect health. Since my healing, which took but a few weeks, I have had many other blessings, and should particularly like to mention the overcoming of my fear for those near and dear to me. Formerly I would pass hours of agony if they were away from me, thinking of all the dreadful things that might happen to them, thus making them and myself most unhappy. Now I realize that it is God's care and not mine which protects them. For these and many other blessings I am truly grateful to Christian Science.

MRS. FANNIE R. WANDS, Indianapolis, Ind.

CORRECTION.

In the testimony of Francis W. Fox, which appeared in the *Sentinel* of Jan. 19, the military rank of Mr. Fox should have been given as Asst. Adjt. Genl., U.S.V. (United States Volunteers).—EDITOR.

FROM OUR EXCHANGES.

[*Zion's Herald.*]

We have come to an age when we do not talk very much about these deepest and holiest loves and longings, to be sure; but then, what *is* is not necessarily the measure of what *ought to be*. At the end of his brooding over the problem the pastor knew that there was only one way in which the gulf could be bridged, and Mrs. Culture and Mrs. Artisan find common ground. It would not be by obliterating present barriers; it would be by opening new avenues of fellowship. It would be simply by the revival in both hearts of the living experience of the apostolic age. Let both women once become sure of their Master, absorbed in his service, aware of their fellowship with him, and they would suddenly discover something to talk about. There would be no cant in it, no reserves. It would be the comradeship of the upper room long ago, repeated sweetly and naturally in modern life. When the primary Christian experience is revived, the Christian people of every rank and class will have something in common. Not until then. Social devices are in vain. The fellowship of the Church rests upon the common Christian experience of its living members.

[*The Universalist Leader.*]

Many think they can have life only after they are rich or wise or healthy. There has been as much life lost through these things as gained. Jesus found life on a very small income, and without the advantages of the university or even the kindergarten. Had he been rich and educated he would still have found life. It is the use we make of what we have and know and are which counts. Jesus was born in a stable; much of foolishness and wickedness is born in the palace. What a fortunate thing for the world that Jesus was not born in a modern "civilized" home. . . . Machine-made lives have little capacity for life. Making the most and the best of what we have, we shall have more of which to make the best and the most.

[Prof. John E. McFadyen in *The Congregationalist.*]

Whatever the historical facts that underlie the patriarchal stories may be, the story of Abraham would still illustrate the trials and the rewards of faith; the story of Jacob would still illustrate the power of sin to haunt and determine a man's career, and the power of God to humble, discipline, and purify a self-confident nature; the story of Joseph would still illustrate how fidelity amid temptation, wrong, and sorrow is crowned at last with glory and honor. The spiritual value of these and similar tales is not lost, even when their historical value is reduced to a minimum; for the truths which they illustrate are truths of universal experience.

[*The Churchman.*]

If the pulpit does not deliver a living message, God will have it delivered somewhere and somehow. If the social work of the Gospel is not done by the Church, it will be done, nevertheless. The pity of it is, that the Church should go on spelling out the old story in words of a past generation instead of in deeds of the present. Everywhere men's hearts have been touched by the fraternal flame. Must such men work outside of the Church?

The Churchman.

[*The Standard.*]

We need to become learners at the feet of Jesus Christ. We may not safely content ourselves with the assurance that we interpret the Scripture teaching regarding baptism more correctly than do others. That cannot save us. Unless we make room for his life in our lives, and so become his ministers to all who need, our theological beliefs, however correct, will avail little.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Governor Woodruff, in a special message to the Connecticut Legislature, recommends that the powers of the Railroad Commissioners be increased so that they can have supervision over the telephone business of that State. He recommends that the Commissioners "should by statute have authority to prevent the issue of stock by any railroad company or telephone company until the par value thereof, of such amount in excess of the par value as the company shall require to be paid, has been paid to the company in cash," and that they should "be vested with the right to regulate and supervise the rates to be charged for service by any and all telephone companies." He says further, "We hear much, and justly, about 'water' in the stock of many public service corporations. It is probably impossible to undo the harm that has been done in this direction, but greedy practices, the effect of which is to exert a drain on the public's purse, by daily imposition of higher rates for services and fares than would be demanded to net a fair dividend were there less liquid and more substance in the stock of such corporations, makes action imperative."

Bryn Mawr's new library, begun in April, 1903, is now completed. It is built of gray-stone in the Jacobean Gothic style of architecture of the period of 1630, and forms three sides of a closed quadrangle. The east front is one hundred and seventy feet long and contains a three-story stack, with accommodations for eighty-eight thousand volumes. Above this there is a large reading room. On the north side is the Art Seminary. The main building contains offices for the librarians and cataloguers. The wings of the building, running symmetrically about two hundred feet in length from the north and south ends of the main building, contain twelve seminary rooms and twenty-five professors' offices. The total book capacity of the library is 168,449 volumes. The building is absolutely fireproof.

The deficit in the Post Office Department for the fiscal year 1906 was $10,516,006, and the House Committee on Post Offices and Post Roads in its report estimates that this would be entirely covered if it were possible to compute the amount of mail franked by Federal officials in all parts of the country, in addition to the amount of free mail going out of Washington. The proposed increase in salaries of employes will aggregate nearly $9,000,000 a year, and are believed to be necessary for the retention of high-class men. The cut in the pay of railroads for postal service will aggregate $10,000,000. Part of this saving will be used probably in the increase of salaries to postal employes. The total amount carried by the bill is $209,416,802.

The Western New England Hotel Men's Association has just held a meeting in Springfield, Mass., to devise ways of reducing expenses in hotels conducted on the American plan. In attempting to outdo one another in the variety of menus, profits, they say, have been greatly reduced. The simplification of menu cards by the use of English words only, and the abolition of French, German, and Italian names of dishes, frequently misspelled and sometimes meaningless, is also among the reforms included in the objects of the association.

An inspector of the Interior Department, co-operating with the State Mineralogist, has been investigating land locations in California and has unearthed frauds which will be made the basis of criminal prosecutions, involving men of wealth, influence, and social standing in that State. Relinquishments have been entered on thirty-six thousand acres fraudulently claimed, and the fraudulent character of from twenty to thirty thousand acres more has been established.

The American School Furniture Company, reorganized nearly a year ago as the American Seating Company, is to be investigated by the Grand Jury now in session in Chicago. Witnesses have been summoned from all parts of the United States, and it is understood the campaign will be waged along the lines followed by the Government in the Standard Oil and Beef Trust cases. The Department of Justice has been gathering the evidence for several weeks.

The Army General Staff has under consideration the question of adopting olive green as the color for the army uniform in place of the olive drab khaki suits now worn. German and British military authorities have practically decided to adopt olive green for their uniforms in place of the khaki color, as this color of uniform not only shields the wearer from attack, but enables troops to be moved with the attraction of the least attention.

The monthly statement of the Government receipts and expenditures shows that for January, 1907, the total receipts were $55,237,499, and the expenditures $47,827,241. The surplus for the seven months of the present fiscal year is $32,461,167. The public debt at the close of business Jan. 31, 1907, less cash in the treasury, amounted to $927,442,206.

The Rivers and Harbors Bill, in which is contained an item of $3,894,000 for a deep sea channel in Boston Harbor and numerous appropriations for work in Massachusetts and New England, has passed the House. The bill carries approximately $83,000,000, and an attempt will be made in the Senate to increase this to $100,000,000.

The beet sugar industry, which is but in its infancy in the United States, is being centralized in Colorado, because the soil and climate are particularly well adapted to the cultivation of sugar beets. Fifteen of the thirty-two sugar factories in the United States are located in that State.

Foreign.

The day for the coronation of the new Shah of Persia was fixed by the court astrologers on Feb. 2 as the most auspicious date. There was no opposition to his accession in Teheran. He is supposed to be somewhat reactionary in his political views, and during the weeks that he was awaiting his father's death he was in conflict with the newly elected National Assembly over the conditions of the constitution they had prepared. The Crown Prince wished to have the Senate composed largely of his own appointees, but the members of the Assembly would not consent to this. Finally a compromise was effected, and a constitution providing for a Senate of sixty members, half elected and half appointed, was signed on Jan. 2 by the late Shah. On the following day Persia's first National Assembly was duly organized. The constitution gives the Assembly control of all financial matters, including local and foreign loans and commercial treaties, and of the formation of domestic and foreign companies for the construction of railroads and other public works, but in matters relating to the administration of the provinces the Assembly has only the right of discussion. The Assembly can only be dissolved with the consent of the Ministers and two-thirds of the Senate.

The Schlusselburg Fortress, famous as the Russian Bastile, has been restored to its former use as a prison for persons sentenced to imprisonment for political crimes. It was announced from St. Petersburg on Feb. 15, last year, that the fortress had been emptied, that the keepers had been disbanded, and that the walls would be left standing for use as a show place.

The municipal authorities of Rome are making preparations to complete the excavations of all ancient monuments and ruins in the large parks which form what is called the archeological promenade. The project has been entrusted to Professor Boni, who is director of the excavations at the Forum.

Consular advices state that the King of Siam is to visit the United States in May. His Majesty will leave Bangkok in March and will proceed from Yokohama to Europe *via* America.

Industrial and Commercial.

The earthquake clause upon which many of the insurance companies based their refusal to pay the full amount of policies on losses arising from the San Francisco disaster, was considered not sufficient for exemption by the local jury which heard the evidence in the case of Thomas Bergan against the Commercial Union Assurance Company of London. The case was regarded as a test of the earthquake clause and of the right of the companies to exemption.

Five Pittsburg concerns have been awarded contracts which will total more than $2,000,000 by the Hudson Companies, the subsidiary concern which is building the Pennsylvania Railroad tunnel under the North River and the New York terminal.

The exports from the United States to Panama during the year just ended will aggregate a little more than $14,000,000, against nearly $8,000,000 in 1905, and a little more than $2,500,000 in 1904.

It is expected that the steel rail mills of the country, before the close of the current year, will be in a position to turn out 4,500,000 tons of all classes of rails.

The beet sugar production of Bay City, Mich., this year will reach over fifty-two million pounds.

General.

With the increase of the summer tourist business in Maine there has come about a marked increase in the construction of State roads. This year three hundred and forty towns have built State roads, the total expenditure for which amounts to $510,000, the State paying half. Last year two hundred and seventy towns built State roads, the cost being $105,000.

The buffalo herd in the Yellowstone Park now numbers fifty-seven. The herd was started four years ago with twenty animals.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MRS. EDDY FROM THE CHRISTIAN SCIENCE POINT OF VIEW.

CLARA LOUISE BURNHAM.

[THE following article is copied from the February issue of *The World To-Day*, and is published here with permission of the editor of that magazine. Mrs. Burnham is well known to the reading public as the author of "The Right Princess," "Jewel," "Dr. Latimer," and a number of other successful books.—EDITOR *Sentinel*.]

IN this eminently practical age, when proof of utility is demanded and mere words amount to little, why do people speculate and write so much about Mrs. Eddy rather than study the effect of her teachings among the people to whom she has shown again the light Christ Jesus brought into the world? Sometimes it seems as though it were because there is little to criticise in the well organized churches and the earnest integrity of their members. Scientists are accused of worshiping Mrs. Eddy! If only their traducers and critics would trouble themselves as little with that lady's personality—past and present—as do the Scientists, and would direct the same amount of effort toward learning what it is that she really teaches, the world would be the gainer.

The excitement which prevails when a patient dies under Christian Science treatment might be calmed by the consideration that forty million die annually under *materia medica*. The exasperation caused by the statement that matter is not substantial might give way to sincere inquiry, since now the natural scientists announce that matter has been found to consist not of atoms, as has previously been believed, but of force.

The revered and beloved Leader of the Christian Science movement was long an invalid. After having been given up by doctors and her family, she was healed by divine power, and her attention thus being forcibly called to the cures recorded in the Scriptures, she set at work to discover whether the Principle which was operative in the time of Jesus might not be operative now. She was thus raised from a bed of illness to perform a mighty mission. After her recovery, for three years she was engaged in study which resulted in "Science and Health with Key to the Scriptures." This might be called the first period of her public life. She was then a woman of about fifty.

The second period commenced when she undertook to test the Principle of Christian Science by helping others. Her success led so many people in the vicinity of Boston to come to her for healing and instruction that she became the teacher of a number of classes. The work grew to such an extent that she was no longer able to attend to it all personally, and she devoted herself to the instruction of teachers. She founded in 1881 the Massachusetts Metaphysical College. The applications for instruction in this college were so numerous while Mrs. Eddy was still a teacher that she was actually compelled to close the college temporarily. The Mother Church was built in Boston in 1894 as a loving tribute to Mrs. Eddy. The building still stands, and it is now supplemented by the magnificent addition dedicated in June, 1906.

A third period may be said to have begun when in her seventieth year Mrs. Eddy removed from Boston to Concord, New Hampshire, to gain freedom from the interruptions in her work, due to the great demand upon her for personal interviews relative to healing and teaching. Since then she has published a number of books, the most important being her "Miscellaneous Writings," which appeared in 1896. She has also revised Science and Health. Her last public address was delivered in 1903, when she spoke to between seven and eight thousand Scientists, who made the pilgrimage from the annual meeting of The Mother Church in Boston to Concord.

In heart-breaking isolation, humanly speaking, she began her faithful ministry. In those former days that isolation was forced; misunderstanding and persecution were her lot; but without pause for self-pity she pressed on, and now that her Church is established, her isolation is voluntary and is as strongly resented by her critics as an attempt to mingle with them would once have been. For her there is no relaxation of work or care, even in the beauty of her advanced years. Like the general who in his camp directs the movements of near and remote armies, so she at her desk in her quiet home oversees the onward march of her Christian soldiers.

All that she receives from them in return for an absolute consecration to their needs, is love and gratitude; and even this compensation, which not being monsters they could not withhold if they would, is begrudged to her by those who prefer that she should be ignored by those whom she has blessed. Instead of making a financial tax upon the members of the Churches of Christ, Scientist, she gives freely wherever help is needed. Although Pastor Emeritus, she receives no salary either in that or in any other capacity. Her property is the result of her teaching in the past, and the sale of her own writings; and whatever accumulation exists has resulted from her savings and investments. This substance she dispenses with the wisdom, charity, and lack of ostentation which mark every step of her life. Her humanity, tenderness, and consideration for all is well known by those who come in contact with her in the daily business of their lives, and she is as much beloved as a charming woman as she is extolled from an intellectual point of view because of the marvelous amount of work she can accomplish in a given time, and for her acute perception and her unerring memory.

In the mythological tale of Baucis and Philemon, the gods stopped at the door of a lowly hut, and asked for a drink. It was an earthen jug like countless others from which the humble hosts hastened to serve their guests, but the water they poured turned to nectar; and never afterward did that jar, precisely like its fellows without, run dry, but it was always filled to overflowing with a wondrous, sustaining draught. Thus, despite its simplicity of appearance,

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

the earthen jug became a priceless treasure. In some such fashion this human woman, having been the channel for an enlightened and sustaining knowledge to flow out among mankind, has drawn to herself so much gratitude from those who owe to her the renewing of their life and mind, that she sees in this clinging the danger of a narrowing thought, and wisely withdraws from publicity, while ever exhorting those who seek her to acquaint themselves with their God and hers and be at peace.

As has been said before, Christian Science is known by its fruits, not by its words; and one need only to look upon its churches and the extensive field of its activity to be convinced of the acumen, the administrative and executive ability of that Leader, whose watchfulness is unceasing, and whose wisdom is constantly vindicated. For what does she work? How can even the most prejudiced believe it is for personal glory, when her life breathes personal effacement. She says to those who trust her judgment, "Follow me only so far as I follow Christ." Her labor is now as it always has been, one of love. Her household, so often termed "jealousy guarded," is systematically ordered, the flood of letters pouring into Pleasant View every day requiring the presence of two secretaries. Were Mrs. Eddy to read more than one in ten of these letters, she would have no time for anything else. She alone could give the details of her industrious, selfless hours, planning here, and working there for the good of the Christian cause, showing love for her enemies not only by her failure to retaliate under the surprising attacks made upon her, but, with her thought resting upon the two great commandments, working on toward that day when all men shall *know* that they are brothers.

In my Bible lesson this morning I find these verses: "Blessed be God, even the Father of our Lord Jesus Christ, the Father of mercies, and the God of all comfort; who comforteth us in all our tribulation, that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God." Therein lies the truest joy of the Christian Scientist. After himself receiving the comfort of healing, and gaining glimpses into the vistas of eternal life, to be able to lead others into that state of relief and courage which comes when one ceases to battle for old beliefs and becomes willing that all things shall be made new.

There is an erroneous impression abroad that Christian Science is something secret, a power which those who have acquired it are not willing to impart. It is frequently declared that Scientists are not willing to answer questions about their faith. It is not taken into consideration that all sciences need to be patiently studied. There is no high road to the science of mathematics; there is no high road to Christian Science. For the casual inquirer to be exasperated by the failure of a Christian Scientist to explain in a few words how the healing work is accomplished is as unreasonable as for the person unlearned in mathematics to be incensed because the expert in that line declines to attempt to show him in a few minutes how to work out a problem in Euclid. Mathematics is a science open to all; Christian Science is open to all. There is nothing secret about it. On the contrary, there is always loving help ready to be extended to any one who wishes to study the Bible with the help of the commentary Mrs. Eddy has given us, "Science and Health with Key to the Scriptures." In those two books are revealed all the "secrets" which Christian Scientists have learned.

I am filled with puzzled rather than indignant amazement that even temporary antagonism or bitterness could have existed toward the Christian Science denomination. Were a magazine editor to desire an article on the faith of Episcopalianism, he would be likely to engage an Episcopalian to write it. In like manner, if the beliefs of the Baptists or Methodists were to be described, application to adherents of those churches would be made. In the case of Christian Science alone, it seems to have been hitherto considered that those outside its pale are best qualified to enlighten the public concerning it. Many valuable pages of journals and periodicals have been covered by industrious writers who remind one of Josh Billings' declaration that he "would rather know less than to know so many things that ain't so."

It inspires one with astonishment that a denomination of such size and average quality of individuals does not command sufficient respect in a free country to be let alone, no matter how severely. Christian Scientists would be truly grateful for severity in that line. The insults to their Leader recently appearing in print have so far overshot the mark as to rouse the sense of chivalry and fair play innate in most Americans, being directed unprovoked against a gentle woman of advanced years, living a pure and helpful life. These attacks moreover rouse the ire of her townspeople who are not sharers of her faith, but who object to having doubt cast on the testimony of their own eyes and ears.

It has been well said that Christian Science is the one subject able to make even the well bred forget their breeding. Suppose two men to be accidentally sharing a hotel table. One hears the other give his dinner order. The choice of number two offends the taste of his neighbor. What could induce the first man to ejaculate, "Pah! how can you eat such stuff?" Yet similar gross ill breeding on the part of those outside the pale of Christian Science is frequently being manifested toward the followers of this faith, both in public and in private. The first gentleman at the hotel table would allow the second to eat his meal in peace, whatever it was, provided he did so quietly. The Scientists are willing to eat their spiritual food quietly and not to force it upon any one. I, too, was once among the critics of Christian Science, and that knowledge causes me to ruminate rather than to be indignant. I, too, covered valuable paper with exhortations to misguided relatives and friends who had been inexplicably caught in the meshes of what I hotly detested as a false transcendentalism. Yet I loved the Gospels then. Why could I not see that Christian Science meant only a living faith in them, a realization in the present of something I had until then hoped to attain in another and a better world?

It was physical misery which faithful physicians could not relieve that forced me to turn to Christian Science. Despite the sense of condescension and patronage with which I at first permitted its ministrations, I was healed; and the help came so suddenly that it shocked me out of my intention to withdraw at the first possible moment from its influence. Under the permeating goodness, purity, and truth of the new teaching, one after another of the conditions which hampered my life slipped away, and I stood forth a free being. My experience is paralleled by that of thousands upon thousands of individuals.

It is no especial form of ill which Christian Science rectifies. Every phase which evil assumes goes down before it. All dishonesty, all impurity, all forms of selfishness as well as all forms of physical ill are met and conquered by the understanding and application of its rules. "But," some one says, "all ills are not met." True. All problems in mathematics are not at once solved by the student; but he has succeeded often enough to be convinced that the principle is correct, and that the cause of failure lies only in his own imperfect understanding; so that he works on in quiet confidence, humbly, patiently. Christian Science has but one mission. It goes forth to conquer evil, no matter how subtle; to annihilate it and put in its place the opposite, good. Christian Scientists succeed in this work in the vast majority of cases. An army of rejoicing persons, reformed and healed, bear heartfelt witness to the beneficent power of its truth. Will it not some day be considered a thing incredible that in a world rife with forces pulling downward, there were found many persons of character and reputation willing to decry, ridicule, and work against this wonderful, purifying, and uplifting influence?

"AND SATAN CAME ALSO."

CLARENCE W. CHADWICK.

Again there was a day when the sons of God came to present themselves before the Lord, and Satan came also among them to present himself before the Lord.—Job.

THE above Scripture outlines a mental process that is familiar to every one who has entered the straight and narrow way of overcoming evil with good. The advent of Truth in the human consciousness naturally arouses everything within that is unlike God, since God's law is supreme and demands implicit obedience in the affections of men. To these opposing elements—mortal thoughts and beliefs—Jesus said that he came not to bring peace but a sword. From this the student in Christian Science learns the lesson of separating the tares from the wheat; and until these tares have been bound into bundles and burned in the consuming fire of divine Love, he must needs protect himself against their inherent disposition to obstruct and prevent the natural and orderly unfolding of Truth by various subtle arguments which are calculated to deceive the very elect. Wherever the Word of God has been made manifest in demonstration, we know that some argument of error has been refuted, and the higher the demonstration of Truth the more deceptive must be the opposing argument in order to attract even momentary attention.

According to Jesus' parable of the sower, only those who fail to make practical application of the truth that is given them are liable to be misled by the subtleties of error. Those inspired with singleness of purpose to live a nobler and purer life, because dissatisfied with the world's standard of righteousness, are they who are not easily deceived by erroneous arguments. They are usually intelligently awake to what Truth requires of them, and this alertness to duty fortifies them to protect their mental dwellings from the inroads of the enemy. It is sometimes asked why this protection is necessary, if God is good and All in all. Simply because the argument of evil seems to indicate another actual power and presence opposed to God, until its mythical nature is uncovered and its suppositional masks of power and reality are proven to be erroneous; because error would be thought of as something worthy of our consideration and respect.

It is related in the fourth chapter of Matthew that the devil [evil] had the audacity even to quote Scripture to Jesus. After promising to give Jesus "all the kingdoms of the world," if he would only bow down and acknowledge that evil is something endowed with power, presence, and reality, it is more than evident that Jesus understood this temptation as simply an argument of the so-called carnal mind, of material sense, and he replied, "Get thee hence, Satan: for it is written, Thou shalt worship the Lord thy God, and him only shalt thou serve." In this experience it is noteworthy that Jesus did not ignore the arguments of error, but patiently and persistently met each and every one of them with a declaration of Holy Writ, until the seeming voice of error was silenced "and, behold, angels came and ministered unto him." His great work for humanity was to uncover and destroy, through scientific teaching and healing, the unchristian belief that God endows evil with power to defeat His own wise purposes.

At every point of Jesus' experience he encountered both the ignorant and the educated belief which clamors for the validity of sense testimony; in other words, for the reality of matter and evil. Some went so far as to claim that evil had power to perform the wonderful works of healing, notwithstanding Jesus' assurance to the contrary. So persistently were the false claims of evil presented after the resurrection and ascension, that Christian healing was, after the first few centuries, lost sight of by the professed followers of Christ Jesus; and now that it is being reinstated in human consciousness through the teaching and demonstration of Christian Science, is it not strange that any should listen to the statement that they do not need to look to Christian Science for healing; that it is being accomplished through various human systems, not based upon Biblical teaching, and requiring little or no self-abnegation on the part of the patient? We may well think it strange to hear the cunningly devised argument that one should not presume to read any book that claims to throw light upon the subject of Christian healing as recorded in the Bible. It is asserted by some that hypnotism, mental suggestion, etc., are performing the works of healing accredited to Christian Science. This is a marked instance of the attempted diversion of attention from the true healing, to various human counterfeits which do not even pretend to believe, much less to understand, that evil is only an impotent illusion of the mortal or carnal mind. It also well illustrates the erroneous and oftentimes dangerous conclusions which can be reached where one is content to judge according to appearances. Such unrighteous judgment fails to sound the depths of moral and spiritual regeneration, and consequently does not understand the fundamental Principle of Christian healing.

The constant effort of mortal thought is to delude people into thinking that the counterfeit forces of the human mind can repeat the works of the Almighty, and that it is "unchristian and unscientific" to trust Him in every hour of need without resorting to material means. Strange reasoning this! And yet many there be who enter this broad way "that leadeth to destruction."

This whole subject is tersely expressed in the following quotation from our text-book: "Because God is Spirit, evil becomes more apparent and obnoxious proportionately as we advance spiritually, until it disappears from our lives" (Science and Health, p. 207). When professing Christians of other denominations learn what the student of Christian Science has learned,—that so long as he is conscious of the argument of evil; in other words, is conscious of Satan's coming also "to present himself before the Lord," just so long must he meet this false argument with a declaration of the truth based upon his understanding of the one Mind,—they will joyfully accept Christian Science and lend the whole weight of their thought to the practical demonstration of the omnipotence of good. This will heal the sick in Jesus' way, and so reveal the kingdom of heaven at hand.

THE BIBLE ILLUMINED.

EDWARD KENNEDY.

THE Bible has never meant so much to me before as it has during the past year, and especially during the past few months. A larger sense of self-reliance seems to be growing up within me, to which each passing month and experience adds something, and this growth seems to come with a larger and better understanding and appreciation of Science and Health, and also of the wonderful characters of Bible history. I have recently thought that it must have been a condition approaching to holiness which caused Noah to discern so clearly the workings of mortal mind, foresee its legitimate consequences, and know definitely the time when these would appear. There is no record that he spent any time in disputing with his neighbors, but that he continued in diligent obedience to the divine command until the ark of safety was complete. The same lesson appears in the beautiful story of Joseph, who never let go of his hold upon God, good. So clearly did he discern the thought of his time, that he not only foretold the nature of the punishment which error was bringing upon itself, and the time of its occurrence, but he also discerned the length of the chastening experience needed to bring human thought again into touch with abundance.

I have also gathered some wonderful things from a study of Jacob's life and experience. The time was when I pre-

Digitized by Google

sumed to criticise Jacob, and to look upon him as a sort of opportunist, one who was ready to take advantage of any circumstance which would be to his own advancement, even at the expense of a helpless brother; but I have learned to consider him one of the sterling characters in Bible history, divinely led and protected throughout all his experience, and the only one of his particular period who was fitted to receive the blessing and become a father in Israel.

His brother Esau was a wild huntsman, a man of the forest; skilled in the craft of trailing his prey, and no doubt delighting in an opportunity to measure his animal strength with theirs. Jacob, on the contrary, was a quiet man, a man of domestic habits and home pursuits, taking pleasure in the work of the field, all the while dwelling in thought upon the problems of being, and as the years went by getting closer and closer to God. Jacob's mother knew of his coming greatness, because, having inquired of Mind, she became conscious of the Divine presence, and in that exalted condition of thought was told that "the elder shall serve the younger."

Poor Esau, rejoicing in animal courage and strength, knew not how to be wisely governed, and first brought grief upon his parents by marrying one of alien thought, and then, thinking to make amends for his mistake, went into the family of the outcast son of the bondwoman, Hagar. Jacob, however, obeying the command of his father, went to seek a wife among his mother's people, and on his way became conscious of the Divine presence at Bethel. Jacob is sometimes accused of having dealt treacherously with Laban, although not always severely censured on account of it, but let us hear Jacob's own testimony when he parted with Laban: "This twenty years have I been with thee:" and then he enumerates a succession of brave achievements which he has accomplished in the service of Laban; then he charges him, "And thou hast changed my wages ten times." Continuing, he says to him, "Except the God of my father, the God of Abraham, and the fear of Isaac, had been with me, surely thou hadst sent me away now empty." Laban had six years before acknowledged the value of Jacob's services, and entreated him to remain with him, saying, "For I have learned by experience that the Lord hath blessed me for thy sake." and they then entered into the agreement which finally resulted in transferring to Jacob the legitimate accumulations of his twenty years of faithful service.

He had reached at this time such an understanding of Truth that he no longer feared that treachery could defraud him. It made no difference how often Laban became jealous of his prosperity and changed the condition of his wages, we have Jacob's own testimony, "God suffered him not to hurt me." I have sometimes thought that Laban has not changed his nature until this day. Mortal mind is still in bondage to idolatry, and just as unwilling that the representatives of Truth should prosper as it was in the time of Jacob. It is also well to remember, at this point, that God has lost none of His original nature, and that He is the same Divine guide and protector to-day that He was in Jacob's time. Surely Jacob lost nothing of his twenty years of faithfulness in the final reckoning. Did not the angel say to him, "For as a prince hast thou power with God and with men, and hast prevailed."

The great need to-day is for more of the spirit and patience that can continue in rendering excellent service, in calm and dignified submission to law and order, even in the midst of present injustice, deception, and wrong; all the time growing nearer and nearer to God, gaining a clearer understanding of Truth's omnipotence, omnipresence, and omniscience, and waiting upon Him to liberate, restore, and recompense. I find myself recalling here the words of our revered Leader, "A real Christian Scientist is a marvel, a miracle in the universe of mortal mind" (Miscellaneous Writings, p. 294).

SIGNS OF THE TIMES.

EFFIE ANDREWS.

NEVER have I felt Truth so near, so real, and so soul-impelling as since the storm of error has brought into glowing radiance the power of divine Love to bring to human consciousness the ever-presence of Spirit, God, as revealed in the teachings and life of our Leader, Mrs. Eddy. God, not man, makes history; and the attempt of a magazine to do so brought to me with startling clearness the divine energy of one living germ of spiritual truth,—forcing its way through all material environments and limitations, though driven hither and thither in search of peace and rest and finding none; with soul-filled longings never satisfied in any material person, place, or thing. What mental and physical suffering this all meant is not to be conceived, for these restless longings were not to be appeased until the turning and overturning brought out an awakening to the supremacy of Truth—the allness of Mind, God, and the nothingness of matter, mortal mind.

Jesus declared, "When he, the Spirit of truth, is come, he will guide you into all truth [Spirit]." Material history would find Mrs. Eddy in materiality, but the truth knows no affiliation there. In Science and Health (p. 152), speaking as the author, Mrs. Eddy says, "Every material dependence had failed her, in her search for truth; and she can now understand why, and can see the means by which mortals are divinely driven to a spiritual source for health and happiness." Surely the darker the experience the greater the light that has guided her into the position where to-day, the wide world round, there are hearts joined to hearts, breathing love and gratitude not simply to Mrs. Eddy, but to the truth she has brought to the world, turning darkness into light, sorrow into joy, and causing sin and death to lose their terrors through a higher understanding of God, whom to know aright is eternal life—now. This truth is known by its deeds, and no greater evidence do we need than that supplied us in the fact that Mrs. Eddy has been able to withstand and overcome every attempt to hinder or destroy her work. She lives the truth she teaches, and standing ever at her post, without the weapons of the world, she has held aloft the banner of Christian Science against every effort to pull it down. All who honestly and consistently follow her teachings and example may prove the truth for themselves and see how it is that loyal-hearted Christian Scientists love and honor their Leader above all others.

[Written for the *Sentinel*.]

TEACH ME.

S. GORDON THOMSON.

TEACH me to watch when mortal night is deepest,
Assured there comes a passing of the night,
When I may open wide my Father's window
And point the rousing dreamer to the light.

Teach me to help my brother as he wakens,
To tell him where the bread and wine are found,
That he may rise with gladness in the morning
And leave the chains wherewith he has been bound.

Keep me, dear Father, ever humbly waiting
Thy loving work of always doing good;
Help me to give out gladly to the hungry
Thy everlasting store of heavenly food.

And wine which brings high hope and strength and gladness,
To heal the weary heart of all its pain;
Help me to pour out freely from my pitcher
And fill it at the well of Life again.

SELECTED ARTICLES.

[Edward E. Norwood in the *Washington* (D. C.) *Herald*.]

Let us very briefly consider the "five fundamental things" that our ministerial critic sees in Science and Health:—

1. "There is no matter." It is well to note that the Scriptures have quite as little respect for matter as Mrs. Eddy has. Jesus himself said, "It is the spirit that quickeneth; the flesh profiteth nothing." We might ask, How much is nothing, and what is the origin of that which is altogether unprofitable? Christian Science agrees with Paul, "The things which are seen [material phenomena] are temporal"—very real to the senses, but no part of Spirit's spiritual creation.

2. "There is no individual mind." Christian Science again agrees with Paul that we should have that Mind "which was also in Christ Jesus"—the one infinite, eternal Mind, God, whom every child of God reflects, and who is the Mind of each one, just as there is but one sun, though all enjoy its light and heat.

3. "There is no evil." Does our critic put himself on record as believing in the reality and power of that which Jesus termed "a liar, and the father of it"? We speak of darkness as the absence of light. Is darkness a reality? Darkness is not something, but the want of something. So evil should be understood as the absence of God; error the want of truth; sickness the lack of health. The denial of matter in Christian Science does not mean the denial of creation, but a denial that it is what it seems to be to the so-called human mind, or the quality of understanding that does not receive it from a spiritual view-point.

4. "There is no personal God." Mrs. Eddy teaches that God is the infinite Person, personal in its highest sense, but not in any humanized lower sense; and upon reflection the doctor would perhaps agree with her.

5. "The Bible does not mean what it says." Such an assumption is entirely unwarranted, for Science and Health teaches no such thing. We are exhorted to seek and find the spiritual meaning, thus agreeing with Paul, "The letter killeth, but the spirit giveth life;" and those who have carefully studied the Scriptures in the light of Christian Science have joyfully found them to be indeed a new book, fresh from God's hand, and their meaning unfolded and made practical.

Were the statement to be made that the teachings of the Baptist denomination tend to disregard morals and a moral life, our critic would have cause for complaint; yet such a statement would be just as true when applied to his church as to Christian Science. It is absolutely erroneous, unwarranted, and unjust.

[John L. Rendall in *The Waterloo* (Ia.) *Courier*.

Our critic says he believes in the miraculous healing of the sick "when it is done according to Scriptural injunction." Christian Scientists do not consider "healing" as "miraculous," but rather as the divinely natural result of the operation of God's laws. The ancient prophets were healers of the sick, Jesus' disciples and the early Christians for three hundred years after Jesus' time taught and practised Christian healing. The "gifts" of "teaching" the truth and of "healing the sick" went hand in hand then, and this is so understood in Christian Science. Each and every instance of healing mentioned in the Bible was individual; the circumstances differed, the methods varied, but in each instance God's nearness, presence, and power were manifested. . . .

Mind healing as accepted by Christian Science is according to law, "the law of the Spirit of life in Christ Jesus," therefore spiritual and not material law. This law has always been, from the infinite nature of its truth, applicable to healing. Jesus, in accordance with this law, which he understood in its fulness, worked intelligently, recognizing the infinite nature of its application, and said of those who should believe on him throughout all time, "Greater works than these shall he do; because I go unto my Father." It is not recorded that greater things than Jesus did have yet been accomplished; therefore, if Jesus' words are true,—and Christian Scientists believe them to be true,—these greater things yet remain to be accomplished, and by whom if not by those who have started along the way of Christian healing?

Christian Scientists recognize that healing the sick is but an incident in the demonstration of the truths of Christianity, and though it is an essential part of Christianity, it is to them but a proof of the Divine power to heal which Jesus offered. The regenerative effects of Christian Science, its influence upon the lives and characters of the adherents of this Cause, its reformatory mission, its health-bestowing, peace-giving influence, attest its nature as a Christian teaching.

["A Manufacturing Chemist" in *The Evening Sun*, New York.]

If, as some of your correspondents aver, medical science has been advanced and suffering reduced by discoveries made in connection with vivisection, why is there such a wide difference of opinion in the minds of our best physicians and surgeons on this topic? Indeed, why do so many of our best students of medicine insist that no advance has been made in the past hundred years. The venerable Dr. Alexander said recently to his class in the New York College, that "with all our boasted improvements in medical discovery there is as much suffering to-day as there was thirty years ago." This in the face of newer antiseptics, cocaine, morphia, etc.

In *The Evening Sun* of yesterday there is a sample of the advance we have made in *materia medica* [*sic*] in the item headed "Rabies or Opium," reporting the case of one Louis Schmidt, seventeen years old, who died, according to some physicians from Bellevue, of rabies; others diagnosed the disease as opium poisoning, and a report in another paper gave a physician's opinion as stating it was excessive cigarette smoking.

Dr. E. R. Wardell, a practising physician of this city, in delivering an address in this city last Tuesday, is reported as having made the positive statement that cancer was caused by worry, and that other mental qualities like fear, hate, or anger were known to paralyze the nerves and actually poison the blood and cause any loathsome disease, even cause death. If doctors who have proved this are among the sane and reputable practitioners of this and every city, for what are they searching by vivisection? Many physicians concur in Dr. Wardell's opinion and many disagree. There seems to be no positive agreement among physicians on any disease, cure, diagnosis, treatment, or cause. New "cures" come up so fast for our diseases we can't discard the old "positive cures" fast enough. Then we read of "diphtheria" cases, so diagnosed and confirmed by microscopic test, turning out to be a pin in the throat, as recently appeared in the case of a little girl, Margaret Curl, in the Bronx; of healthy little children vaccinated and dying in fifteen minutes. With the science of medicine over four thousand years old, and not one positive cure for any one of our diseases which any school of medicine will guarantee, is it any wonder the public questions the advisability of granting unusual powers by our legislatures to physicians and are growing more skeptical of the worth of any or all medicines? Is it not getting back to the opinions expressed by such famous students of medicine and surgery as Dr. Benjamin Rush, Dr. Benjamin Waterhouse, Dr. James Johnson, Dr. Mason Good, Dr. Chapman, Sir John Forbes, who after long years of practice, observation, and reflection, conscientiously state, in effect, that "if there were

Digitized by Google

not a single physician, surgeon, apothecary, chemist, druggist, or drug on the face of the earth, there would be less disease and less mortality"?

These facts may be interesting to vivisectionists, who will keep on torturing animals and arrive where all students of medicine have arrived—nowhere.

[C. H. Fahnestock in the *Wilkes-Barre* (Pa.) *Record*.]

Christian Science does not deny the existence of evil of all sorts in human consciousness, but it does overcome evil with good by changing the consciousness just as we destroy darkness by an influx of light, and this is accomplished not by merely "asserting," but by knowing, becoming conscious, that the evil did not proceed from God, is not a reality of His universe, and can have no power over His creation. It is not the purpose of Christian Science ruthlessly to destroy the practice of our friends and brethren of the medical fraternity (we respect and revere their earnest, unselfish labors), but to adopt for themselves "a more excellent way."

There is no record that Jesus ever used a drug. He healed as a rule instantly; his specific was, "Go, and sin no more." Our schools have abandoned the method his example and teachings gave us, and for centuries have adhered to an empirical use of drugs, and the mission of Christian Science is to gently lead out of the realm of experiment into the regenerated condition where all may know how to destroy the mortal laws of sin, disease, and death, by the law of God—the law of harmony—as Jesus did and enjoined all his followers to do.

Jesus was our Wayshower. He lived to show us how to live and overcome the mortal law of sin and its results. He rose again to show us how to overcome "the last enemy," death. He "ascended" to show us how to so rise above mortal sense, into conscious spiritual existence, as to become invisible to human view.

[George Shaw Cook in the *Peoria* (Ill.) *Star*.]

While Christian Science is based upon the premise that God is good, Spirit, Mind, Life, Truth, Love, and that He is the only cause and creator, the one infinite, self-existent, supreme, incorporeal being or Principle of the universe and man, and therefore that all that really exists by way of effect or phenomenon must of necessity be spiritual and good, it does not teach that a recognition or demonstrable understanding of this great fact is present with Christian Scientists in a perfect degree at this hour. While those who are Christian Scientists have perceived that the acceptance of the premise that God is infinite and God is good necessarily carries with it the logical conclusion that evil, being the opposite of good, is unreal and therefore destructible, nevertheless it does not deny the seeming reality of matter and evil to human sense and the consequent necessity of overcoming the human belief in the reality of evil with the divine understanding of the unity, infinity, and all-inclusiveness of good. While Christian Scientists claim to have made some progress along the line of overcoming evil with good, they do not pretend to have arrived at the point of complete and perfect demonstration of the Science of Christianity, but look for hope and encouragement to the example of Jesus, the perfect Wayshower, who with an unexampled record of practical achievements in the way of overcoming evil with good, said, "The works that I do shall he do also."

[A. W. Mainland in *The Free Press*, Winnipeg, Man.]

As Christian Science is purely a system of mental and spiritual treatment, and does not teach physiology at all, it has no physiology to be "dangerous." Some profess to consider its theology heresy. Every great religious reformer from Jesus down to the present time has been called a heretic. Much of the theology of Christian Science is to-day being preached from the same pulpits that denounced it ten years ago. Its therapeutics may be called irregular by those who believe in medicine, but nevertheless it is healing thousands of diseases of all kinds that have been given up by the "regulars." . . .

It is admitted that there is a "grain of truth in Christian Science," but this "grain of truth" is said to be "the influence of mind over matter," which is not Christian Science at all. In Science it is God, or Truth and Love, that heals, and not the mesmerism of the human mind. That this system heals all kinds of diseases, including what have been pronounced germ diseases, has been abundantly proven, and why should our critic object to its being used, as long as it does the work? The important thing, surely, is to heal sickness as quickly, safely, and thoroughly as possible. Is it wise to oppose a system simply because it may not be called "regular," to-day when there is so much need of healing?

[Editorial in the *Times-Enterprise*, Albert Lea, Minn.]

The fact that a multitude of people are content to follow her [Mrs. Eddy's] Leadership and study her teaching is sufficient reason to protect her from the weak comment of a space writer. That Mrs. Eddy has achieved great prominence as the Founder of a cult should not make her the target for sensational write-ups. It is enough for us that those who know the lady best are loudest in their praise for the good she has done and is doing.

[Reuben Pogson in the *Eastern Morning News*, Hull, England.]

Some "said that it thundered: others said, An angel spake to him." As in Jesus' time, so to-day, those who listen only with the ears that "hear not" and look with the eyes that "see not," hear only the "thunderings" of a material voice, whereas those who through suffering have worn out the unsatisfying consolations of scholastic theology declare that God's message has come to the ears of a weary, waiting world. Every point that our reverend critic has brought up was thoroughly answered by the Rev. A. R. Vosburgh. "When any one heareth the word of the kingdom, and understandeth it not, then cometh the wicked one, and catcheth away that which was sown in his heart. This is he which received seed by the wayside."

Mrs. Eddy does not try to teach us "how to free our non-existent bodies from disease which exists only in our own imagination." What the author of Science and Health does say is this: "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being. If Christian healing is abused by mere smatterers in Science, it becomes a tedious mischief-maker" (Science and Health, p. 460).

The lecturer said: "I hope no one will go away from this hall to-night with the impression that I have said that Christian Scientists have no bodies." The teaching of Christian Science is in line with Paul's declaration that "they which are the children of the flesh, these are not the children of God." All the quotations our critic has made are easily explained from the spiritual light thrown upon the Bible by Science and Health, yet he still views them from behind the veil of matter.

Why is it that the clergy are the most strenuous upholders of the reality of sin, sickness, and death? How is it that when Christian Science tries to loosen the world's grip on this trio of evils that mankind, and particularly those professing to be followers of him who went about destroying the works of the devil (evil), instantly resent it? All Christians agree that Jesus Christ came to do his

Digitized by Google

Father's will; they all agree that he healed the sick, reformed the sinner, and raised the dead without the aid of drugs; then from these two premises is it illogical for the Christian Scientist to draw the perfect conclusion that it is not the will of God that man should be sick, sinful, or dying, and that drugs are not necessary for his healing? If it is not God's will, whose is it? All followers of Jesus will grant that God made all that was made, and "God saw every thing that he had made, and, behold, it was very good." Then if God is omnipotent, omnipresent, omniscient, who else has power to create evil, and where is the mind to know it?

If Jesus Christ was the Great Physician, and that Master Physician never used a material remedy, what authority has any one to insinuate that because the word "physician" conveys a certain meaning to the average thinker, that this meaning was present in Jesus' thought when he used the word "physician"? . . .

Let us sum up the Christian Science standpoint. If God is All in all and God is good, what and where is evil? If God is All in all and God is Spirit, what and where is matter? If God is All in all and God is Life, what and where is death? If God is infinity, where is finity? The only evidence we have of the existence of these antipodes of good is based on the five material senses, which declare that God does not exist.

"Choose you this day whom ye will serve," whether Baal (matter) or God (Spirit). Adam to the Christian Scientist is a synonym for error. Christ is a synonym for truth. Now read Paul's text as Mrs. Eddy has interpreted it: "As in Adam [error] all die, even so in Christ [truth] shall all be made alive." May I not gently echo this apostle's words to the Romans, "It is high time to awake out of sleep"?

[Caleb H. Cushing in the *Reporter-Journal*, Gardiner, Me.]

If one were to ask our learned critic as to what constitutes the "Christian faith," or what it means to be a "Christian," he would doubtless admit first of all that it is to be a faithful and consistent follower of Christ Jesus. Our Master's definition was concise and comprehensive when he said that those who truly loved and followed him would keep his commandments. In carefully studying the New Testament one is impressed with the fact that Jesus' command to heal the sick was no less imperative than to preach the gospel, and the adverse criticism of a sect that is honestly and earnestly striving to emulate the Saviour in all his works comes with poor grace from one who confines his ministrations to preaching the Word. Our critic mistakes when he asserts that Mrs. Eddy places her writings on an equality with the Bible. The Christian Science textbook is what its name indicates, a "Key to the Scriptures," —in other words, a Bible commentary, and it is but just to state that "Science and Health with Key to the Scriptures" has accomplished more for humanity than any other Bible commentary. Through its spiritual interpretation of Holy Writ it has healed multitudes of disease and sin, implanting in them a deep and abiding love for God's Word and a desire to do His will.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

AMONG THE CHURCHES.

ENID, OKLA.

At the semi-annual communion of First Church of Christ, Scientist, in this city Sunday [Jan. 13], fourteen new members were added. The church membership has doubled in the past year. Some attractive improvements are also being made in the place of worship.—*Enid Daily Wave.*

NO. YAKIMA, WASH.

Sunday morning [Jan. 13], at the regular service, the dedication ceremonies of First Church of Christ, Scientist, on North Third Street, were held. The church was erected some years ago, but could not previously be dedicated on account of the remaining debt. An address was made by Mr. Clarence C. Eaton of Tacoma, a member of the Christian Science Board of Lectureship. The service included the dedication and the regular Lesson-Sermon.

The Yakima Daily Republic.

OTTUMWA, IA.

As we look backwards over the year 1906, we have just cause for rejoicing at every successive footstep that has landed us at the threshold of the present progressive hour. Our growth as a church has been more marked individually than numerically. This is gratifying, because individual growth is the beginning of great things and must precede growth by addition. It is what the wise man's prophetic vision revealed to him when he said, Better is he that ruleth his spirit than he that taketh a city. The first progressive step that marked the advancement of last year's church work was the recognition that the Reading Rooms should be open daily instead of three days out of the week, as formerly. No sooner was the need made clear than it was acted upon.

When the work of extending The Mother Church edifice was begun, our church members, though few in number, opened heart and hand and proved that giving did not impoverish us, but with every subscription God's plenty was demonstrated. The total amount of our offering sent in to Mr. Chase was seven hundred and forty-nine dollars. A large number of our members went to the dedication in June, and this chronicles another progressive footstep. We have the pleasure of knowing that whatever progress comes to the Cause of Christian Science at large comes to this Field, that in whatsoever way the work advances we are advanced. In no other way does the church advance more surely than in the efficient work of the Sunday School. Our Leader says that the children "are the bulwarks of freedom, the cement of society, the hope of our race!" (Pulpit and Press, p. 14.) The lecture given by Rev. William P. McKenzie, C.S.B., of Cambridge, Mass., Nov. 9, was another event in the line of progression.

The year 1906 was eventful in Christian Science progress. It marked the completion of The Mother Church edifice, in Boston, an event which stands a royal monument to the Cause of Christian Science and to the labors of our revered Leader. Thus the year closed upon the Cause of Christian Science, its Discoverer and her followers, rich in experiences and achievements.

The least we can do in the present year is to heed the gentle but significant admonition found in Mrs. Eddy's beautiful poem, "Laus Deo," "Like this stone, be in thy place."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

HEAL THE SICK.

It has been the practice in the churches of the older denominations to plan and provide special services or entertainments for different classes of the community, and in this way it has been supposed that the old people and the young, the men and the women, would be severally brought into the church; but we doubt whether in any instance more has been accomplished than would have had there been no division into classes. However it may be in other churches, we feel sure that these methods cannot be profitably used in the Church of Christ, Scientist, for we know that no person is truly converted to Christian Science otherwise than through intelligent study of its text-book, study that is confirmed by the healing works which stand as the demonstration of divine Principle reflected in man.

Through the regular Sunday services, the Wednesday evening meetings, the lectures, and the Reading Rooms, opportunity is freely afforded to those who wish to learn something of Christian Science, and these agencies place this healing gospel before all classes without offensive and unwarranted efforts at proselytism. It has been found that young and old, rich and poor, men and women, are all reached by these regularly constituted agencies, and that they are sufficient for the purposes for which they are intended; yet all these are merely supplementary to the healing works which were so distinctively characteristic of Jesus' ministry.

People do not, as a rule, become genuinely interested in Christian Science except through its healing and saving work. Preaching without practice is vain, but the healing of the sick and the reform of the sinful is most impressive, sustaining, as it does, the claim of Christian Scientists that their religion is a practical exemplification of the gospel of Christ. As an example of how this healing appeals to those in need, we quote from the testimony of Mrs. Lanham, which appeared in the Jan. 12 issue of the *Sentinel*. She writes in part as follows: "Christian Science was presented to me in a very practical way. I came to know personally of the healing, and wanted it for myself. I got the Christian Science text-book, 'Science and Health with Key to the Scriptures,' and began to read it and was healed perfectly, or rather I was born again, for it changed things for me entirely. The suffering and pain had passed away and I knew they could never have any power over me again. On the third day after the reading began I threw away all my medicines and remedies of every kind and have never had occasion to return to them." Another instance is that of Mrs. Whalen, whose experience is given in the same issue of the *Sentinel*. She writes: "Two weeks before I heard of Christian Science I felt I was slowly descending to the grave. A very serious bowel trouble had set in, and I experienced a feeling of terror. But just then, when I thought there was no help, a friend told me of his healing in Christian Science and advised me to see a practitioner; which I did, and took treatment. . . . By degrees every ailment left me and I was and am now in perfect health."

The best method of bringing Christian Science to the attention of the world is by healing the sick, and so ordering our lives that they show forth the Christ-spirit.

ARCHIBALD MCLELLAN.

FAITH'S SURE FOUNDATION.

One cannot acquaint himself with the general drift of religious thought to-day without perceiving that it is undergoing a change which is destined to effect a complete overthrow of the sovereignty of belief. It is rapidly coming to be seen that however venerated and inspiring the statement of truth, apart from practical demonstration it is an entirely inadequate basis for Christian faith.

The patriarchal sense and system of the Jewish people led to that veneration of prophetic leadership which rendered its "Thus saith the Lord" a satisfying authority for both personal and communal guidance. Jesus shared this reverence of his people for "Moses and the prophets," but he made it very clear in his teaching and works that demonstration is the only final and convincing evidence that spiritual verity has been attained; and he taught, moreover, that this true basis of faith was to be reached and continuously maintained by all his followers. The loyalty of the apostles to this teaching placed the brightest jewels in the crown of the early Church, but as it became identified with political power and worldly rule, the old dependence upon historic statement, the authority of approved interpretations of the Scriptures and of ecclesiastical traditions, was resumed.

It would be hard to compass even in thought the greatness of the good which Christianity would have accomplished in all the intervening centuries, had the practical demonstration of the healing truth of Jesus' ministry been adhered to, but we can readily understand how significant is the re-establishment, through Christian Science, of the basis of faith for which Jesus and his immediate disciples stood. At a time when it would seem that the drift of religious thought into uncertainty, indifference, and ultimate agnosticism would otherwise have been unstayed and inevitable, Christian Science came to affirm the possibility and establish the fact of the present demonstration of the Christ teaching. It has again proved to the world that "Christianity as Jesus taught it was not a creed, . . . it was the demonstration of divine Love casting out error and healing the sick, not merely in the *name* of Christ, or Truth, but in demonstration of Truth, as must be the case in the cycles of divine light" (Science and Health, p. 135).

With the scientific basis of Christian faith recovered, and the healing works in attestation of the presence and power of Truth again seen, questions as to the date and authorship of the sacred writings, as to whether the incidents of given narratives were actual or assumed, as to the historic consistency or probability of the asserted facts of illustrative teaching, etc.—all these become relatively unimportant. One who is daily utilizing and thus verifying the fact that bodies attract each other directly as the mass and inversely as the square of the distance, would not be at all disturbed by any amount of "higher criticism" respecting the historical incidents of the enunciation of this law; and equally undisturbed by kindred criticism respecting the appearing of the great spiritual truths of the gospel, will he be who is daily demonstrating the effectiveness and reliability of these truths in the solution of life's problems.

Speaking of the repose of a faith which is grounded in demonstration, Mrs. Eddy says, "If there had never existed such a person as the Galilean Prophet, it would make no difference to me. I should still know that God's spiritual ideal is the only real man in His image and likeness" (Remark to Mr. Wiggin, *Christian Science Sentinel*, Dec. 1, 1906).

Belief in statements of truth which others have made

Digitized by Google

may have a very important place in our spiritual education and advance, but it is only as we come to know the truth, and are thus able to verify it for ourselves, that we meet the requirements of Christian Science, and lay a foundation for faith which is indifferent to the surge and shock of error's wildest storm. JOHN B. WILLIS.

RIGHT LIVING.

FEW would deny that there is a wide difference between right and wrong living, but there are many opinions as to what constitutes this difference. The philosophy of a large number is that in order to attain worldly success, one must take good care of his body,—and this seems reasonable,—but the majority of mankind have a very misty idea of what it is that should take care of the body, and what are the powers and privileges of this imperfectly-known entity. It is very clear that the body cannot take care of itself, hence that which cares for the body must of necessity be superior to it; but the strange anomaly of human experience is that the body is admitted to be the task-master, and all the years of mortal existence are spent in efforts to feed, clothe, shelter, and adorn it. The results of this subjection of the higher to the lower are to be seen in the physical discords which prevail in an increasing degree wherever and whenever the material is given precedence over the moral and intellectual.

There are now large numbers ready to admit that many of the present-day tendencies must be overcome in the interests of so-called physical health,—notably worry and irritability; but these people do not so readily see that it is not possible to eradicate these evil tendencies while the body is held to be the ruler. The prophet Isaiah said of the Christ-idea,—the type of true manhood,—"The government shall be upon his shoulder;" and until this is scientifically understood the human mind will continue to be in bondage to the body, nor will any material theories bring freedom from this bondage. That Christ Jesus understood and demonstrated the true government of the body is evidenced by the marvelous works recorded in the Gospels, works by which he proved for himself as well as for multitudes of others what it is that really takes care of man—protects him and provides for all his needs. Knowing that divine Mind alone can do all this, the Master said, "Take no thought for the body." He directed thought away from the body to God, Spirit, and spiritual law, obedience to which results in health and harmony.

We may well rejoice that at this late day, after long centuries of servitude to the body, we have again been called by a divinely inspired messenger to hear and heed the truth which makes free. Mrs. Eddy tells us that "the Ego is Mind," and she adds, "This understanding makes the body harmonious; it makes the nerves, bones, brain, etc., servants, instead of masters." She goes on to say, "If man is governed by the law of divine Mind, his body is in submission to everlasting Life and Truth and Love" (Science and Health, p. 216). A body so governed has the best of care, for there is no attempted usurpation of man's rightful and God-given authority over the body. If like St. Paul we can say, "So then with the mind I myself serve the law of God," we shall also become conscious of that quickening process by which "the Spirit of him that raised up Jesus from the dead" brings to us "the redemption of our body" for which we have hoped and waited so long. If every thought is a thought of divine service, whatever be our daily tasks, we shall be living rightly, more nobly each day. It is not possible to overestimate the value to humanity of this discovery of the true relation of Mind and body as given in Science and Health, and as this is more generally understood, mental and physical health will be universally experienced and we shall have perfect freedom to work out the great problem of being. ANNIE M. KNOTT.

THE COMMITTEE ON PUBLICATION.

WITHIN the past few months the work of the Committee on Publication has largely increased in volume and importance, and in order to make this work as effective as it should be there must be a very liberal support of the State Committees by the branch churches. The aim of all Christian Scientists is to destroy falsehood with truth, and so far as the refutation of public misrepresentation of Christian Science and its Leader is concerned this can best be done through wide circulation of printed matter containing truthful statements about them. This work cannot be done without considerable expense, and the branch churches throughout the Field should see to it that the Committees are not hampered by lack of funds.—EDITOR.

LETTERS TO OUR LEADER.

Salem, Ore., Jan. 11, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—It is desired on the part of First Church of Christ, Scientist, of Salem, Oregon, that some expression of our love and gratitude be sent you. The immediate occasion for this gratitude, and that which impels expression, is the completion of our first full year of consolidation. Through you, Love's Messenger, bars and obstacles are being removed to prepare the way in Science for the reign of Truth. Our obedience thus far helps us to agree with the "adversary" more "quickly" —to agree that it is an adversary, and that it must ever remain so, the opposer of unity, of progress, of infinite Love. We know the perfect unity which you have revealed to the world can only be attained through loving, earnest efforts to be obedient to your every teaching, to destroy the false consciousness—the illusion of sin in ourselves and in others. The perception of all this is enabling us to bear fruit, and many are testifying to sin destroyed and sickness healed. Our Bible Lessons are accomplishing their mission in our midst; healing, health, and peace being their harvest. An ever-increasing number are reading your blessed book, "Science and Health with Key to the Scriptures," and because of your self-abnegation, purity, loving patience in persecution, wonderful leadership, and immovable, steadfast obedience to Principle, we are reaping results.

May we discern the unity of good and faithfully follow.

Lovingly,
JESSIE N. WATERS, *First Reader.*
Committee for Church.

St. Joseph, Mo., Jan. 12, 1907.

Beloved Leader:—A short time ago we called on some friends who are Christian Scientists. The daughter of the family is preparing to be a school teacher. She is a devoted young Scientist and tries to apply her understanding of the truth under all circumstances, and she related to us an experience she had had a week or so before. A professor from the State University comes to St. Joseph every two weeks to give a lecture on psychology, and on the occasion in question he examined the class, and it seems included some questions on work which this girl had not been over. Many of the pupils tried to look it up in their books—cheating—but our young friend said the answers came to her mentally. At first she supposed them to be merely random thoughts, but they kept coming to her and she finally wrote them down. When the papers were collected and examined, her answers were the only correct ones in the room.

On hearing this experience your words in Science and Health, page 89, came to me in explanation: "Mind is not necessarily dependent upon educational processes. It pos-

Digitized by Google

sesses of itself all beauty and poetry, and the power of expressing them." This has been a beautiful lesson, and I thought that perhaps you would be glad to hear of it.

Hoping I have not intruded upon your precious time, I am Lovingly yours,

MARY B. HOWE.

Paris, France, Jan. 5, 1907.

My Dear Mrs. Eddy:—Just a short letter to tell you from this far-away city how much I appreciate your life-work, and the dear little church organization of Christian Scientists in Paris. I have been here three months from my former home in Chicago, and have not missed attending one of the Sunday services, where a devoted few are always in attendance, gathered together from the four corners of the earth. It is indeed a blessing to find a place in this great city of strange sights and an unknown tongue, where one can worship God after the dictates of his own conscience. Never before have I appreciated your glorious work so much, never has the blessed Bible been such a comfort, and the literature of our denomination been read with such interest. Error has "screamed" very loudly at times, and tried to overcome me with fear, but slowly and surely I am learning to trust God more, to catch glimpses, even though faint at times, of His matchless love and omnipotent power. So I send my greetings to dear Mrs. Eddy from across the great waters, with a grateful heart for what Christian Science is doing for the whole world. Truly it is of God and nothing can stay its progress.

MARGARET CONE ALSBURY.

Hyde Park, Mass., Jan. 13, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dearly Beloved Leader:—We, the members of First Church of Christ, Scientist, in Hyde Park, Mass., having moved into more commodious quarters, which have been literally transformed to meet our need, send you loving greetings. The opening into the new rooms was marked by a lecture delivered by Mr. Bliss Knapp, and we recognize the great benefits flowing from this branch of the work. On this, the semi-annual communion day in the branch churches, our hearts go out to God "for his great love wherewith he loved us," realizing that "every good gift and every perfect gift" comes from Him—our loving Father. We thank Him for the steps by which He has led us; for our growth in grace, unity, healing, and numbers; and as we render unto Him "the glory due unto his name" we turn to you in loving and loyal gratitude for your life, consecrated to God and humanity, which has made our present attainment possible. We are drawn still nearer to you at this time, and know that "under the shadow of the Almighty" you are protected from all harm. We thank you for the example which forgives enemies, and for all your teachings, which are lifting humanity Godward; and we pledge to you our obedience, devotion, and trust.

Lovingly yours in Christ,
First Church of Christ, Scientist, Hyde Park, Mass.
BELA B. NICHOLS, *Clerk.*

St. Johnsbury, Vt., Jan. 4, 1907.

Dear Mrs. Eddy:—We, the members of First Church of Christ, Scientist, in St. Johnsbury, Vt., assembled in annual meeting, unite in expressing loving, loyal gratitude to you for your purity and selflessness, through which you have received the great revelation of Christian Science and established it in this age. We are striving to be faithful and obedient in following your wise guidance. We thank you for the manifold blessings we are daily and hourly receiving from the study of Science and Health. In the recent injustice and misrepresentation of you and your work, we rejoice that you have given the whole world indisputable proof that you are so intrenched in the Love that is unconscious of all unlike itself that you are beyond the reach of error. Gratefully and lovingly yours,

GEORGE P. MOORE, *Clerk.*

Council Bluffs, Ia., Jan. 13, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We know that it will give you pleasure to learn that what were known as First Church of Christ, Scientist, and Second Church of Christ, Scientist, of this place, have dissolved their respective organizations and united into one body, and they held the communion service to-day as one church. We feel that this action on our part is but the manifestation of individual growth in the knowledge of the one Mind, one Church, and will do much for the upbuilding of our Cause in this city. For this we rejoice. We desire to renew our pledges of loyalty to the Cause of Christian Science so dear to your heart, and express to you our unbounded gratitude for all that you have done in order that this great Truth might be made practical to a suffering world. We are also grateful to you for the exemplification of the words of our Master, "Love your enemies, do good to them which hate you, bless them that curse you, and pray for them which despitefully use you," as shown by the manner in which you have met the calumnies that have been heaped upon you. We desire to take this lesson to heart and to go forth with a stronger resolve to do unto others as we would that they should do unto us, and to work more faithfully for the time to come when we all shall fully realize "Thy kingdom come." Our love for you grows more and more as we learn to understand and appreciate more fully the purport of your life's work.

Lovingly yours in truth,
First Church of Christ, Scientist,
LILLIAN A. HART.

Washington, D. C., Jan. 30, 1907.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—At a special meeting of Second Church of Christ, Scientist, of Washington, D. C., held Jan. 29, 1907, the action of the Joint Boards of First and Second Churches was ratified, the following resolution being unanimously adopted.

Resolved: That it is the sense of the Boards of First and Second Church of Christ, Scientist, of Washington, D. C., in joint meeting assembled, this 22nd day of January, 1907, to consider ways and means of uniting the two churches, that this desired end be accomplished by the members of Second Church uniting with First Church as a part thereof.

The overflowing hearts of the members of Second Church would share with you, dear Leader, the sweet fruits of the loyal love to Principle that knows unity perfected here to be but the outward symbol of the bond that makes us one with you. With abiding love,

IDA M. CRAWFORD, *Clerk.*

New York, N. Y., Jan. 22, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—Sixth Church of Christ, Scientist, of New York City, in corporate meeting assembled, desires to assure you that it follows your lead heavenward with greater confidence than ever in the genuineness of the way you designate, and that it praises God for having given to the world through you so full and final a statement of the nature of the way.

With love and gratitude,
Faithfully yours,
STELLA W. HEWES, *Clerk.*

THE LECTURES.

BENTON HARBOR, MICH.

Mr. Bicknell Young delivered a lecture at the Bell Opera House, Tuesday evening, Jan. 15. He was introduced by Dr. G. J. Edgcumbe, President of Benton Harbor College, who spoke as follows:—

It may appear strange to my numerous friends and acquaintances of so many years' standing that I, a Methodist of somewhat pronounced opinions, should thus identify myself with this movement, but I assure you that I do so with pleasure, because these people are Christians and proclaim their devotion to the teachings that Christ promulgated; they love and serve Him whom I as a Christian love and serve. They are Scientists, and science has ever been my favorite study. Further, I hope some glad day to greet in the land beyond the river, Methodists, Baptists, Congregationalists, Catholics, and every other Christ-loving people, and among them all I am sure I shall find many a Christian Scientist. We shall there forget the sects and recognize only brothers and sisters. On these grounds, then, I clasp hands with these people and with you, and shall listen with pleasure to the presentation of the fundamentals of Christian Science.—*Correspondence.*

CHARLOTTE, MICH.

The lecture at Masonic Temple last Sunday afternoon [Jan 13] by Rev. William P. McKenzie, was given marked attention. Mayor C. W. Morrell, in introducing the lecturer, said in part,—

I am not a Christian Scientist, nor do I know much of their beliefs, but if I knew absolutely nothing of it the mere fact that it is attracting the class of people that it does would cause me to give the matter some attention. Christian Science is unlike many of the so-called religious movements which spread over the country, that simply attract the ignorant, the superstitious, and fanatics, but it numbers among its followers the very cream of our community and the country at large. If Christian Science will help to lighten our burdens, if it will cure the sick and heal the broken-hearted, if it will help to bring us nearer to Jesus Christ and cause a seven-day religion to exist where there may now be but a one-day religion, then we should seek to know the truth.—*The Charlotte Leader.*

NEW ORLEANS, LA.

A lecture on Christian Science was delivered last night [Jan. 18] at the Athenaeum by Edward A. Kimball of Chicago, under the auspices of Second Church of Christ, Scientist. A very large audience was present. The lecturer was introduced by Mr. M. J. Sanders, who said,—

When a committee of gentlemen called upon me a few days ago, requesting that I would preside upon this occasion, I objected to doing so, on the ground that I was not only not a member of the Christian Science Church, but in fact was somewhat antagonistic to what I had heard and read were its teachings. The Christian Science Church has long passed the stage where it suffices to shrug the shoulders and smile the indulgent pity which we feel for the weakened brother. A Church which numbers earnest, devoted adherents in the hundreds of thousands; that has over six hundred branch churches, many of them having edifices amongst the most beautiful and magnificent in our country; that comprises in its membership hundreds of the most highly educated and successful industrial men in our country, must have some serious claims to the earnest consideration of all who welcome and seek after truth. We are willing to seek after truth, and to give, what I know a New Orleans audience always does give, a courteous, attentive, and careful hearing to an earnest man. I have pleasure in introducing to you the lecturer of the evening, Mr. Edward A. Kimball.

Daily States.

CHICAGO, ILL.

Bicknell Young lectured on Christian Science Jan. 18 and 19, in Fifth Church of Christ, Scientist. He was introduced as follows by John Stuart Coonley:—

If in the strife and turmoil of our daily life—if amid the anxiety and fear that daily, yes hourly, beset us as to our health, happiness, and prosperity—we stop to consider the conditions under which we live, we cannot but be impressed with the pathos, sordidness, and even futility of it all, and it is often with difficulty we sustain our courage, for the questions occur to us, Where does it all lead to, is it worth the struggle? Past experience has proved to us that when the material goal has been attained, we find it unsatisfactory and illusive, and all that has really come to us is a greater desire for more; and therefore a greater struggle and increased discontent.

We all have these conditions to meet, and most of us are swept along in the general current without ever facing these problems intelligently. The very fact that these conditions are so distasteful, proves them alien to us, and we are naturally looking for some aid to assist us in the solution of them. Meanwhile we are still drifting along helplessly in the ocean of materiality and discontent, bruised and buffeted by the continual struggle to attain so-called success; and yet within the reach and grasp of each one of us, if we are but earnest and honest, lies that which will unravel the snarls and tangles of our lives, bring the correct answer to each and every problem that confronts us, no matter how small or how large, and guide us into the haven of harmony and peace. That which is accomplishing these very things to-day is Christian Science—it is simple and demonstrable, and a practical aid in every detail of life.—*Correspondence.*

CONNEAUT, O.

The lecture given last evening [Jan. 15] in the Opera House by Judge William G. Ewing, marked an epoch in the local circles of Christian Science. Attorney A. M. Cox introduced the lecturer, and said in part,—

It is hardly necessary for me to tell you that I have never investigated Christian Science, at least critically; I have noted some things, however, in regard to Christian Scientists, and one is that I rarely ever hear them complain about anything. There is another thing I have noticed, and that is, they never speak an ill word of any person, and I really believe if we were all Christian Scientists, and should adopt that as one of the tenets of our creed, the majority would be greatly benefited.

Conneaut News-Herald.

TESTIMONIES OF HEALING.

I came into Christian Science through reading our beloved Leader's great work, "Science and Health with Key to the Scriptures," which appealed to me as nothing else had ever done before. I had always read the Scriptures, but after reading this wonderful book I saw them in a different light. I saw how true and how applicable is the Word, and I also saw that it was for me. In June, 1901, I identified myself with the Christian Science church here, and took up the study of the Lesson-Sermons with earnestness, with gratitude to God, and to Mrs. Eddy, for the privilege. Up to this time I had suffered with all kinds of complaints, both mental and physical, and was frequently confined to the bed, attended by a physician. I had taken all kinds of medicines without receiving any permanent help; but in reading and studying Science and Health these troubles all left me,—a result which I attribute solely to the understanding gained by the study of this wonderful book.

On the 30th of May, 1902, while working in a sawmill, I received an injury which rendered me unconscious. Those about me at first thought I was dead, but seeing later that I was breathing a little, sent for a physician. When he arrived I had partly regained consciousness and was trying to realize the truth for myself, but the sense of excruciating pain rendered it difficult to do so. The doctor took me home in his carriage, but said he could not do anything for me. He afterwards said that he thought I could not recover as the injuries were so near the heart, and the suffering terrible. The ring and stem of my watch had been driven into the flesh. I at once sent for a Christian Science practitioner, who came as soon as possible, having been told that I was nearly killed and perhaps would die. Without any questioning the practitioner gave me treatment for a short time, after which I was free from pain. I fully dressed myself, came out of my room, and joined in conversation with my family. Two days later the pain returned in my side. I walked with some difficulty to the office of the practitioner and received treatment. From then until now I have been in perfect health, for which I feel truly grateful. Christian Science is my only physician. I have learned, to some extent at least, that divine Love is all-sufficient for me and mine.

L. L. HANNAH, Vancouver, B. C.

In 1897 I was led through friends to investigate Christian Science. For fifteen years previous to that time I had been in the drug business and was a graduate of what is said to be the best college of pharmacy in this country. Through loss of health, and financial loss brought about largely by the neglect of business made necessary by my physical and mental condition, the drug business was disposed of in 1895. At that time I had been under the care of three of the best physicians in our city for a period of two years or more. My condition had been diagnosed differently by each of the three physicians. The first one apparently did not understand my case at all, he simply knew I was in an extremely nervous condition, but did not know how to handle the case. The second one said that my condition had been brought about by worry over business reverses, and that I would be all right in a few weeks. He gave me much medicine, however, even though he had said there was "nothing the matter,"—in other words, he was practically giving me suggestive therapeutic treatment. All this time I was getting worse, and finally changed to the third physician. He diagnosed my disease as nervous exhaustion or degeneration, affecting all the organs of the body and their secretions. I began a very rigid treatment under this physician, and continued it for over a year. About six months after beginning treatment with him, my friends advised me to try Christian Science. I unwisely spoke to the doctor about it, and he told me Christian Science was all right for people who had nothing the matter with them, but for me it could do nothing. I went on with his treatment for more than six months longer, and while perhaps a little improved in some ways, I was in a most distressing mental condition; in fact I have not sufficient command of the English language to describe this dreadful state. I could eat very little that did not cause me intense pain, but the doctor encouraged me by telling me I was coming out all right in the end, though secretly he sent word to my wife that he considered my case hopeless and the worst he had ever treated or known.

It was in this condition—after two years of medical treatment and intense suffering, marked for the grave by my physician and all my friends—that I finally sought relief through Christian Science. Throughout eternity I shall never forget the first interview I had with the faithful practitioner who afterwards treated me. With fifteen years of medical education in my thought, it was rather hard to take in all that was said to me at the first interview. I was convinced, however, of many things, and that this student had the understanding I needed. We had a general talk and a few moments of silent prayer, followed by the voicing of truth by the practitioner. I did not make arrangements for treatment on this day. I was told to eat for supper what was set before me and ask no questions "for conscience sake." I did so, and was not distressed in the least. I had been taking some five or six different kinds of medicine,—before and after eating, between meals, and upon going to bed,—and I cannot fully recall what I did that night about taking them, but never since that day have I taken any medicine or had any desire to do so. I went out of the city next day to remain over Sunday, and while away I ate everything that was placed before me, without being in the least distressed. The healing of my stomach troubles was instantaneous, on the day I had the first interview with the practitioner, and it was permanent. Upon my return to the city, the following Monday or Tuesday, I sought the practitioner and made arrangements for treatment, bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, also a copy of her "Miscellaneous Writings." The treatment lasted for three weeks,—the last week being more to make sure I could go on by myself. My mental and entire physical condition began immediately to improve and continued to do so. I was so deeply impressed with my healing that I started on a thorough investigation of Christian Science; for a period of two years or more I read very little else, but made Science and Health and other writings by Mrs. Eddy, my teacher and companions.

It may be interesting to mention that the last physician who treated me had sent me to an oculist. He claimed to find a condition in which glasses were needed, and my regular physician instructed me not to leave them off, as he was very anxious to "save all the nerve force possible." Very shortly after coming into Science I laid aside the glasses, and have never had occasion to use them since. It may also be interesting to state that my wife had a similar demonstration over the wearing of glasses. Through a mishap her glasses were broken, and she immediately declared that she could see without them, nor has she had occasion to wear any since. She also had a demonstration over a growth on the face that was diagnosed by her family physician as of a serious nature, and which had attained considerable size. The growth was removed through a declaration of the truth made during a call from a sister Scientist. It disappeared shortly after that call, my wife being uncertain as to the time.

At the time of my healing I was a member of an orthodox church of this city. At the proper time I withdrew from membership there and united with First Church of Christ, Scientist, Syracuse, N. Y. I was simply starving for this blessed truth, which I did not get in my old church, and have ever since been striving to follow our Leader's counsel,

Digitized by Google

"Study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495), and I have met with some marked success in this line. This blessed understanding of Truth has not only healed me physically and mentally, but has led me into new paths of usefulness and happiness; it has taught me how to live, how to care for my family, and how to help my friends when they will allow me to do so; it has led me to study my Bible as never before, and has unlocked the heretofore closed door of knowledge. I have established a manufacturing business and carried on an insurance agency with success through my understanding of the teachings of Christian Science. I especially mention the manufacturing business, because it was started without money, and at this time is a success and still growing.

I owe a deep debt of gratitude to God, to the friends who induced me to look into this truth, and especially to the Discoverer and Founder of Christian Science, Mrs. Eddy. I feel that Jesus the Christ would say of her also: "Verily I say unto you, Wheresoever this gospel shall be preached in the whole world, there shall also this, that this woman hath done, be told for a memorial of her." Blessed indeed is the truth which restores a person in my former state to his right mind and cleanses him mentally, morally, and physically. Christian Science to me has been, and still is, like the unfolding of a beautiful rose. My wife joins with me in giving this testimony, and the case is open for the investigation of any honest seeker after the truth.

FREDERICK H. FOX, Syracuse, N. Y.

Christian Science came to me when I was a wreck, my body being completely covered with sores. My eyes were very bad, so that I sat in a darkened room for weeks together, most of the time in bed under opiates. The home doctor and a specialist said the disease of the eyes could not be cured, though they might help me for a while. I had one operation, and the doctor said if I took cold I would become totally blind. My suffering was beyond telling. A clergyman called almost every day, and sat by my bed and wept, and my good, kind doctor shed tears many times. Finally, after a year of this terrible suffering, I was sent to Indiana, to a sister who had been healed of lung trouble by Christian Science. The first day I was there she read to me from the Bible and from "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I was healed. I knew that God was no respecter of persons, and when I saw what had been done for my sister, who was changed from being a mere frame to a strong, robust, healthy, rosy-cheeked woman, the cough all gone, I said, "God has as much for me, if I will accept it." I was healed instantaneously by Christian Science, and am thankful to God for giving us this understanding through Mrs. Eddy, our beloved Leader. I am now in perfect health.

MRS. FLORENCE STRATTON, Laurel, Miss.

For twelve years previous to the fall of 1897 I had been under the care of a physician much of the time. Different opinions were given by them, as to the nature of the trouble, some diagnosing it as an abnormal growth, etc. I was healed through reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. It was a clear case of transformation of the body by the renewal of the mind. I am perfectly well at the present time.

JESSIE MASON HARRIS, Omaha, Neb.

When Christian Science first came to my notice it was through the healing of a sister, and afterward the healing of my wife. I made very light of it, as I thought it was nonsense; but when I found myself afflicted with rheumatic trouble of the most severe type, so that I had to be lifted into bed, I became alarmed, because I knew that my physician would prescribe morphine to give me ease. As I was already in the power of that monster, alcohol, I thought that my family would be better off with me out of the way than to have me become a morphine user. When the pain became so intense that I could stand it no longer, much to my wife's surprise I called for Christian Science, and through it I was entirely cured of the disease and also of the alcohol habit. This happened over seventeen years ago, and I have remained free ever since. It would take a volume to contain all that I would like to say in regard to the blessings that have come to my family since we have taken up Christian Science. One of my children was healed of a very severe bowel trouble. My friends think my case wonderful.—JOHN H. SHAFFNER, Fort Dodge, Ia.

In 1895 we made a business assignment, and the shock was very great at the time. For five years after I did nothing but take medicine of all kinds, and finally I went to a physician, who said that I ought to be treated by hypnotism. I told him that it was evil, and I did not want it practised on me; nevertheless it was done. I was given a preparation of strychnine, arsenic, and quinine, and through this and the hypnotic treatment I was a mental and physical wreck in a month. This occurred in Indiana, and I then came home to my parents in Rock Island. I kept getting worse; had four different physicians, and finally underwent an operation, the physician stating that it would cure the mental trouble; but when the healing from the operation was completed, I was still more shattered physically. My case became more of a mystery to the physicians, but the final diagnosis made it an unusual form of bowel trouble, induced by mental conditions, and I was told that such a case was hardly ever known to be cured. I was in a sanitarium three months; was helped, but not by any means healed, and after leaving there commenced to go backwards again. I did not know where to turn, but just then a *Sentinel* was handed me, and from the time I read it I realized that there is only one physician,—God. With the help I have received, I am now anything but a physical and mental wreck, as I seemed to be at the time I found Christian Science. I had gone down to seventy pounds in weight; at the present time I weigh one hundred and thirty. Not one drop of medicine has been taken, nor any desire for it expressed through me, since I have taken up the study of this wonderful truth, which does set us free if we only wait patiently and know that God governs.

MRS. R. F. SCHAUM, Davenport, Ia.

At the time I was led to try Christian Science I knew very little about it and had no faith in it whatever, but as my family physician and three specialists had frankly told me there was no medicine known to the medical faculty that could cure me, I ventured to try Christian Science as the last resort. During a surgical operation two years before, one of my kidneys had been seriously injured. At times I experienced dreadful distress, which lasted several days and confined me to my bed. One side had grown much larger than the other, and I began to lose my strength. My eyesight also failed me, at times almost entirely. The best surgeons of Grand Rapids, Mich., where I was living at that time, were consulted, and they recommended an operation; but as they considered the operation a critical one, and my chances of recovery very doubtful, they advised me to think of it only as a last resort. At this time I was advised to try Christian Science, and the operation never occurred. About three weeks after I began treatment, I was conscious of the kidney going back into its right place. The enlargement on my side disappeared, and I knew I was healed. My health improved very rapidly, and I have never had occasion to consult a physician, or to resort to *materia medica* during the past four years, either for myself or for any member of my family. I had been treated by different physicians for two

Digitized by Google

years without any relief, and was very grateful indeed when three weeks' treatment in Christian Science relieved my suffering.—Mrs. Dora Welch, Winnipeg, Canada.

I desire to express my gratitude for Christian Science. It is now eight years since I first heard of it. I did not take it for the healing, although I was in a very bad condition physically at the time. I had been "converted" in the old way, but was entirely unsatisfied with the result. I had been praying for ten years for peace, but could find no rest. My thought was ever reaching out for something, I knew not what, when a friend read to me the Lord's Prayer with the spiritual interpretation as given in the Christian Science text-book. I instantly saw that heaven was not a place far away, but a state of consciousness wherein I might dwell now; that my Saviour was Christ, Truth, and so ever-present. I was instantly healed of mental depression and of liver and kidney trouble, although I had not been told anything about the healing. A fortnight after this I had one treatment for an internal trouble. I was healed at once, and my wrist, which had been out of place for about twelve years, was healed during the treatment. At one time my little boy swallowed a quantity of bleaching fluid; he at once manifested great suffering, but he had treatment and in a few minutes was relieved. In half an hour he left home to attend a gathering with his father, perfectly well. While in the park he was very hungry, and ate two large sandwiches. There was no soreness or tenderness left. I have seen many wonderful cases of healing, both of sin and of sickness. I thank God for sending me this great light; it has made me a better mother and wife. I shall ever be grateful to dear Mrs. Eddy for bringing to us this wonderful truth in such a way that all may understand it.

Anne McAlister, Edinburgh, Scotland.

I am very grateful for what Christian Science has done for me. Last April I had such a distressing pain in my head that I consulted one of the best specialists in Dayton, and after a thorough examination he said that nothing but an operation would do me any good, nor did he speak very favorably as to its probable results, although he said if I did not go through with this operation I could not live more than two or three days at the longest. Christian Science had helped me before, and I decided to try it again, and I am glad to say that the trouble was entirely overcome in a few days, and I have had no after-effects from the ailment. I also had a serious abdominal trouble, from which I had suffered for fourteen years, and this was cured by Christian Science after specialists had failed to help me, and I have not needed a support since.

Miss Edith Schneider, Dayton, Ohio.

Within this last year Paul's statement, "I take pleasure in infirmities," has been in my thoughts a great deal, and I believe I am at last beginning to understand its meaning. When sickness or temptation comes to me, instead of the hopelessness, inability, or self-pity, which used to accompany such a condition, I find a new feeling making its appearance. There comes a sense of perfect confidence that my remedy for these evils is at hand and that it is a never-failing remedy. Then, as I turn to this sure source of strength and help (and I turn very humbly, because I know that the condition of discord is brought about through some carelessness of thought or speech on my part,—some door to my consciousness left unguarded), a feeling of joy comes surging in,—joy that the experience cannot leave me where it found me, but that I am taking a forward step. This knowledge makes the struggle a real joy, for I am certain of the outcome, sure that "when the smoke of battle clears away" (Science and Health, p. 22), I shall see the good that has been accomplished.

At the time of the Communion service at The Mother Church, last June, the words of admonition from our beloved Leader and the officers of The Mother Church helped me to see, more clearly than before, that it is far more apt to be the "triumph" than the "tear" which harms. Joyous as I was to see Christian Science taking its honored place among the religions of the world, my heart was filled with wonder and thanksgiving because of that great temple crowded with happy faces. I came away with the fervent prayer that at this time of prosperity and success in the eyes of the world, I might be found faithful to the name I so earnestly desire to be worthy to bear, the name of Christian Scientist.

Anne Elizabeth Jenkins, Evanston, Ill.

When my baby was born he weighed only three pounds, and had only gained one pound when two months old. My doctor recommended our trying different infants' foods, but there was still no improvement. When he was four months old we decided to try Christian Science, and he had two weeks' treatment and two visits from a practitioner. From this time he steadily improved, and could digest and assimilate any food that we gave him. When eight months old he weighed nineteen pounds. He is now five years old, is a healthy boy, and as large as any boy of his age. I am truly grateful to Christian Science for this healing.

Mrs. Cora Hartmann, Pittsburg, Pa.

In 1865, while living in a small town in Mexico, I was taken suddenly with a severe illness, and in the excitement my husband and friend gave me a powerful drug without diluting it in water, which came near causing instant death. Through faithful work on their part, I revived, but ever afterwards was unable to take any solid food. A few years later I moved to New Orleans, where I was attended by two physicians, but no relief was ever obtained. I also consulted another doctor, who told me I could never be cured; that he himself had about the same trouble. He afterwards died of this complaint. After a number of experiments I finally abandoned all hope of ever being cured. I also had neuralgic trouble for a number of years; in fact the doctors told me I had a complication of diseases which made it impossible for me to be cured. In 1903 some friends advised me to try Christian Science, saying that they had been healed by it; but I refused to try it. About this time my son was preparing for an operation (the fourth), and I was induced to investigate Christian Science for him. While talking with the practitioner she asked me why I had my head bundled up in such a manner, and I explained to her that I had been compelled to keep my head wrapped up day and night for years, and that I was also very much in need of help. She told me that God did not make disease, and the air could not hurt me. As soon as I reached home I took off the wrappings from my head, and from that time have never suffered from the ailment. A few days afterwards I was taken with severe pains in my stomach, and sent for the practitioner. In about three treatments I was entirely healed of every trouble, and have ever since been a well woman.

Words cannot express my gratitude to God, and to our Leader, Mrs. Eddy, for Christian Science. Because she understood and lived this truth, I was healed.

Mrs. P. Kate Faller, Tickfaw, La.

I wish to tell of a wonderful demonstration,—the healing of my nephew, a lad of seven years. It occurred in May, 1899. The child's father was superintendent of a boys' industrial school, their home being at Eldora, Ia. The child came home from school one evening, sick with

Digitized by Google

an eruptive fever. He was immediately quarantined with a good nurse, and seemed to get along very well for the first few days, but one morning the nurse reported that he had taken cold and was very ill. A physician who was called pronounced the case very serious, and said that both lungs were implicated. The father and mother stayed with him all that day and the doctor was there a number of times, but by evening it seemed that the little fellow could not live. I went in at that time to care for him, and never left him for three weeks. How we tortured the little lad by giving him medicines, applying poultices, etc., until we finally felt we would have to give him up. Early one Thursday morning the doctor said I had better call the parents, that the little one was passing away; but he rallied again. The doctor said he had done all that could be done, that the child must die. We then asked the father if he objected to our sending for a Christian Science practitioner. We had become somewhat interested in Science previous to this, but knew very little about it and did not personally know of any practitioner. We, however, consulted the *Christian Science Journal*, and decided to send for a lady who was First Reader in the Des Moines church, and she came on Friday morning. In the mean time we again consulted with the doctor, but he said nothing more could be done. We then told him that we had sent for a Christian Scientist, and that she would soon take the case. The practitioner began treatment at seven o'clock that morning, and by noon the child was better and took a little nourishment. The following Tuesday he was dressed and taken out driving. It was nine weeks before he was strong, but from the time the practitioner came he began to improve, and continued to do so until he was entirely healed. This was more than six years ago, and two or three times within this period he has been threatened with a return of the same trouble, but each time it has been quickly met by Christian Science in a few hours. He knows what healed him, and has never taken any medicine since that time, and is a strong, healthy boy to-day.

I wish I might make every one understand the condition of this child when Christian Science was brought to him. Never have I seen any other so sick get well. The father had been a physician, so he understood the child's condition from a medical standpoint, and knows that no material means could have saved him. I am so thankful to have witnessed this demonstration of the power of Truth over error, and that I am learning to know that God is infinite Love—All in all—and that man is His image and likeness. My heart is full of gratitude to our dear Leader, Mrs. Eddy, for what has been done not only for me and mine, but for all humanity. God bless her!

ELIZABETH J. COOK, Des Moines, Ia.

I have been healed of many ills since coming to Christian Science. Two years ago I had catarrhal trouble, and had some kind of a cold nearly all the time. This condition seemed to grow worse, and at last the doctor said my stomach was seriously affected. I also had very painful throat trouble. Two years ago I was healed in Christian Science. Jesus said, "The truth shall make you free." None know what it is to be "free" until they seek the understanding that will give them a true and harmonious sense of being. Last winter I was taken ill in the middle of the night. I did not want to call any one in the house, for they were not Scientists and I knew they would ask me to take medicine. I had a great deal of fear, but I was soon able to quiet it with the words from the 91st Psalm, "Thou shalt not be afraid for the terror by night;" and "A thousand shall fall at thy side, and ten thousand at thy right hand; but it shall not come nigh thee." I then fell asleep until morning. When I awoke I recognized all the symptoms of an old enemy, and hurried to a practitioner's house to get help. I stayed there till late in the afternoon, then went out into the snow and cold with a thankful heart. I had never before been as sick as that without going to bed for a week or more. The next day I was perfectly well, and went to church.

When I first asked for physical help in Christian Science I felt sure that I wanted nothing more, for I had been a member of an orthodox church since I was twelve years of age. When my father died, four years ago, my orthodox religion did not comfort me, but Truth as revealed in Christian Science has made me happy and I am glad I am learning to know what is good.

KATE D. PECK, St. Johnsbury, Vt.

It is with deepest gratitude I tell of the benefits I have received in my healing through Christian Science over a year ago. I had been suffering for two years with an eruptive disease on my hands, and had tried everything that *materia medica* could prescribe. At last my physician informed me that he would be obliged to give up; that he had tried everything he could think of. He also discouraged me by saying that I might have the disease all my life. It was then that I concluded to try Christian Science. I took one month's treatment, and now my hands are entirely well. I had worn glasses for over six years, but after three treatments I laid them off and have not needed them since. In the time I was wearing them I had had to change them four times. I was also entirely cured of bowel trouble, after a week's treatment. Myself and my family have since been helped in many ways. I cannot say enough in praise of Christian Science, and it is my prayer that I may grow daily in the knowledge of this truth.—LITTA MARY FERRIS, Choteau, Mont.

I wish to express my gratitude for all the good that I have received through Christian Science. It is our duty as well as our privilege to let the world know what great things God does daily for His children through Christian Science. It is a year since I had treatment and was healed of stomach and bowel trouble. I had also been a sufferer from rheumatic trouble for about thirty years. The spiritual uplifting was a great blessing. I had been a professing Christian over forty years, but my faith in God was greatly strengthened. My heart is full of gratitude to God and to Mrs. Eddy, and my desire is to so work and pray that I may win others to Christ.

MRS. MARTHA HINDMAN, Carbondale, Ill.

[Written for the *Sentinel*.]

THE VOICE OF TRUTH.

MARY J. ELMENDORF.

THY guiding voice, O Truth, in thought I hear,
Rebuking error, stilling grief and fear!
My heart its healing benediction shrines;
And lo, like sun-surf purpling hillside vines,
A rush of radiance ripens power and cheer.
Awakened faith brings to my waiting ear—
Soft as the murmur of some distant mere
Yet mighty as the wind that rends the pines—
Thy guiding voice.

Thought, volant, free, transcends this finite sphere,—
Knowing the unseen things of Spirit near,—
And up the thistly way that peaceward twines,
The open gate of harmony divines,
When through its hush, O Truth, rings rich and clear
Thy guiding voice.

FROM OUR EXCHANGES.

[From "Confessions of an Undistinguished Heretic" in *The Independent.*]

Experience has thus taught me not to be too rampant with my heresies. I have learned that if one keep his doctrinal discoveries in his study drawer for about five years, taking them out now and then to refresh his soul, allowing occasionally a delicate effluence from them to steal over a page or two of the next Sunday's sermon, he will find at the end of the period that he may avow them as violently as he pleases, and they who aforetime would have lit the torch for his burning will sit peaceably under his doctrine, and sing the last hymn lustily in satisfaction that they have heard once more truth they have always believed.

[*The Church Standard.*]

The divisions of Christian people into many wrangling sects and denominations have been caused by differences of mere opinion on matters which are no part of its original content, and the recent assaults upon the faith are having this one good effect at least, that they are compelling Christian men in all churches to distinguish between the truth of God, as given in that first revelation, and the thousand matters of speculative opinion on which God has not yet seen fit to reveal the whole truth. It is the very citadel of faith that is now attacked, and the lost cause of Christian unity may yet be won by the united resolution of all Christian men to stand together as one solid phalanx in defense of that faith, and that only, which was once for all delivered to the Church of God.

[Rev. R. J. Campbell in *The British Congregationalist.*]

You read the Bible in such a queer way, many of you. Those of you who scoff at it never really get at what it means at all. You profess to feel for humanity, love humanity, rejoice in the victories of humanity. Well, here they are represented as well and as truly as you will find them represented anywhere in the history of human thought and action. Here they are seen in the light of God. Get beneath and behind the mental dialect of the men who wrote these old-time stories of struggle and achievement, and you will find very much the same kind of thing which is going on to-day.

[*The Universalist Leader.*]

When the awful revelations are made of awful conditions, it is because of the revolt of virtue rather than the triumph of sin. This is a good world, with good people in it and a good God over it. It is sweeping along not to failure but to a glorious success. There are faults in your friends, but there are virtues too. We have our failures, but we have our successes. Death abounds, but much more does life prevail. Preach the gospel, which is good cheer. Be a minister of gladness and joy, and your sunshine shall drive away the shadows from your own and other hearts.

[*The Congregationalist.*]

Nature is the creation of mind. Christian and scientist agree in that. Behind all existing things is thought and will. If that were denied there would be no need to discuss miracles. But science is constantly making new discoveries, and minds of men are yearning for new knowledge of God. The scientist is rare who would affirm that he has so completely compassed the knowledge of nature that he comprehends all that may be meant by miracle. The believer in God finds his greatest inspiration and support of faith in the things of God still beyond his knowledge.

[*The Christian Register.*]

He who thinks this world is worse than it ought to be, and tries to make it as good as he thinks it should be, will soon find that it is not as bad as he thought it was.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In a letter to the Consumers League, at a recent meeting in New York, President Roosevelt, in commenting on the question of child labor, says: "You are doing a work that should appeal peculiarly to every good citizen, for those you befriend are greatly in need of friends and are not powerful enough to stand up for themselves. I am particularly interested in your efforts to improve conditions under which girls do their work in the great shops, and I have an especial interest in your effort to combat the evils of child labor. There is much outcry, chiefly, I think, from the beneficiaries of abuses, against interference by the National Government with work that should be done by the State Government. The State's authority should enact reforms when possible, but if the State authorities do not do as they should in matters of such vital importance to the whole Nation as this of child labor, then there will be no choice except for the National Government to interfere. I am striving to secure either final action or else a full and thorough investigation of the matter by the authority of Congress at the present time."

The Peace Association of Friends of Philadelphia has presented to the President a memorial of that body respectfully urging upon him the importance of including in his instructions to the commissioners to the coming Hague Conference, the signing of a treaty making arbitration of all international controversies obligatory; provision for periodic sessions of the conference, whereby a recognized and authoritative code of international law may be developed; the exertion of the influence of the Government to arrest the increase of armaments and ultimately to insure their proportionate reduction, and the absolute neutrality of all private commerce in time of war.

President Roosevelt, in a recent message to Congress, strongly advocates the conservation of coal and other fuel resources on lands still belonging to the Government. He urges Government control of the Western public land pastures, a system of Government leasing of its mineral lands, and for treating the fuel lands as public utilities and thus to "provide against recurrence of the conditions we deplore in the East." Citing twenty-three hundred cases of public land entries in four districts mentioned, the President says non-compliance with the law was found in over half of them and deliberate fraud in very many cases.

The largest dry dock in the world, with a stone and concrete basin big enough to hold any two of the battleships of the United States Navy at one time, is about to be constructed at Hunters Point, near San Francisco, by the San Francisco Dry Dock Company at a cost of $1,250,000. It is said that the new dock will be one thousand and fifty feet in length, one hundred and seventy feet longer than the famous dock at Glasgow and two hundred and twenty-five feet longer than the Alexandra dock in Belfast harbor.

Thirty-two millions of dollars worth of income-bearing securities has been given by John D. Rockefeller to the General Education Board. He previously had given the Board $11,000,000 for the same work.

The coal lands of the Great Lakes Coal Company at Kaylor, Pa., have been taken over by the United States Steel Corporation. The amount involved in the transaction is about $1,500,000.

The Senate of South Carolina, by a vote of 21 to 15, has passed with amendments the House bill killing the State dispensary, which has been in operation since 1893.

President Roosevelt has been elected an honorary member of the Royal Geographical Society of London. This is a distinction held by only nine other persons.

The Spooner law placed a cost limit of $135,000,000 on the Panama Canal. Of this amount $50,500,000 has been spent.

Foreign.

A new departure in the export trade of Australia is the recent despatch of two thousand tons of iron ore from Port Pirie, South Australia, to England. The ore is declared by experts to be the finest they have handled and that it is easily convertible into Bessemer and Harveyized steel. There are millions of tons at the Iron Knob, situated northwest of Spencers Gulf, in South Australia, from which it was taken, and where it can be obtained cheaply and easily by open-cut work. The Iron Knob mine constitutes one of the most extensive iron-ore deposits in Australia, and the ore is said to average sixty per cent of iron and to be equal to the best Swedish iron.

The Japanese Minister at St. Petersburg has handed a note to the Russian Minister of Foreign Affairs, informing him that the Mikado is desirous of re-establishing a normal state of affairs in Manchuria; and as also showing a sincere desire to resume complete friendly relations with Russia, has ordered the immediate evacuation of the province. The only troops which will be left are those strictly necessary to guard the railway.

The International Exhibition which will be held at Dublin, Ireland, from May to October of this year, will be the biggest undertaking of the kind ever organized by Irishmen. Various foreign countries are making active preparations to send exhibits. Altogether the Exposition will cover fifty-two acres of ground and will mark an important epoch in the industrial development of Ireland.

The new Shah of Persia has sent a message to Parliament granting all the popular demands, including formal recognition that the country is under constitutional government. The people of Tabriz had threatened to elect a new Shah unless the demands of Parliament were granted, and rumors were current of preparations for an uprising in all the large towns.

The Canadian Minister of the Interior has introduced a bill in Parliament which throws open for settlement nearly all the odd numbered sections in the Canadian Northwest. Under the existing law homestead entries can only be made for even numbered sections. The minimum price to be paid for the land pre-empted will be $3 an acre.

The total length of railways now working in Mexico is 13,507 miles, and most lines report increases in their traffic returns. With the exception of the opening of the Matamoras branch of the National Railway of Mexico, there was but little railroad construction of importance in 1905, but during 1906 there was considerable activity.

The Austrian Emperor intends to send to the Jamestown (Va.) Exposition a first-class armored cruiser, the Kaiser Karl VI., and a second-class cruiser, under the command of an officer of high rank.

According to a schedule of losses, the damage done by the recent earthquake and fire in the city of Kingston, Jamaica, is estimated at $13,000,000.

Industrial and Commercial.

The new Wocheiner Railway from Assling to Trieste is one of the most remarkable engineering feats in the world. It is the first section in a new route through the Alps by which Southern Germany will be connected directly with Trieste, and it traverses a beautiful but exceedingly difficult mountain country, which has necessitated the excavation of forty-seven tunnels and the building of six hundred and seventy-nine small and forty-nine large bridges. The bridge on the Isonzo River is the largest stone-arched railway bridge in the world. Its span is more than two hundred and seventy feet.

The consumption of sugar in the United States in 1906 was six billion five hundred million pounds. More than nine-tenths of the sugar imported from foreign countries and all of that brought from our own islands was produced from cane, and less than one-tenth from beets. Of the production in the United States a little less than one-half was from cane and a little more than one-half from beets. In Europe by far the larger proportion of sugar consumed is produced from beets.

It was announced at a meeting of canary breeders at Yarmouth, Eng., that twelve thousand canaries were exported to the United States during the last year, consigned to one Norfolk firm alone. Breeding the birds is a profitable hobby among workingmen, who supply dealers, receiving good prices. The record price of $125 was obtained for a Yarmouth canary in November.

The Tower Hill Connellsville Coke Company has purchased two thousand acres of coal lands in Luzerne and Redstone Townships, Pa., for $3,400,000, which it will immediately develop. On this property the company will erect one thousand coke ovens of modern design.

The rice-growing section of Arkansas, which is rapidly developing since the demonstration that rice can be successfully cultivated, is to have a rice mill, located at Stuttgart, Ark., a company with $50,000 capital stock having been formed for the purpose of constructing the plant.

In the month of January 1,341,081 bushels of potatoes were shipped from Aroostook County, Me., over the Bangor and Aroostook Railroad, making a total to Jan. 31 of the crop of 1906 of 6,553,810 bushels.

The *Manufacturers' Record* says: "The true value of property in the fourteen Southern States in 1906 may be conservatively estimated at $19,377,304,710."

Austria's enormous salt mine at Wieliczka has been worked for six centuries. It employs nine thousand miners and has six hundred miles of galleries.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

HUMILITY.

JOHN E. FELLERS.

HUMILITY is greatness bending, but not yielding to the storm. It is power, reserving its strength. It is faith, ready for the test. It is patience, willing to wait. It is the soul, listening for the angel's song. It is wisdom, parting with ambition. It is unselfishness, leaving worldly honors to others. It is confidence, prepared for the call. It is love, anxious to serve. It is the bud of gentleness, infolding the fruit. It is obligation, realizing its responsibility. It is goodness, kneeling in prayer. It is the dove, returning to the ark. It is understanding, calm and secure. It is justice, weighing and considering the evidence. It is mercy, waiting for God to point the way. It is meekness, simplicity, and purity, contemplating God and rebuking selfishness, arrogance, and pride. It is the "fruit of conquered sin." It is the Easter morning of the sufferer, gladdening the heart with its sunshine. It is the test by which we may know the truth that makes men free. It is loyalty and steadfastness, unmoved by the threats of injustice and wrong. It is the attribute of our Master which impels the inquiry whether we would be as grateful for God's blessings as those we criticise, if our circumstances were reversed. It is the watchword of Christian Science; a "pearl of great price" which our beloved Leader has set in humanity's crown of rejoicing.

Are we willing to do that which blesses the world, and without protest see others appropriate the honors? Are we willing to sow for others to reap? Are we willing that "the old man with his deeds" shall be put off, and the "new man" put on? Are we willing that the world should know the motive of all our actions and of all we say? Are we willing to cease the strife for personal recognition and be accounted "least in the kingdom"? If so, we have learned somewhat the meaning of humility, and are prepared to contemplate its deeper lessons, as revealed in "Science and Health with Key to the Scriptures" and demonstrated by the daily life of the illustrious Discoverer and Founder of Christian Science.

TRUE RICHES

LAURA CAREY CONANT.

MANY professing Christians, praying daily that they may be of use in the world and that God will show them how to work in His vineyard, how to be followers of the Master, confess that they do not know how to follow. They admit that they fail to bring joy to the sorrowful and despondent, that they are unable to lift the burden of fear from those around them, that they cannot alleviate suffering, that they feel utterly helpless in the presence of so-called incurable disease. Christian Science teaches us how to perform the "works" which Jesus declared should be done by those who really walk in his footsteps. It gives us the understanding of Truth so that we can heal the sick, cast out the devils, or evils, of sorrow, despondency, and fear, and with unfaltering faith stand beside the couch of the hopeless sufferer and raise him to health and happiness. Christian Science brings to us peace and joy in place of unrest and discontent. It gives us an abiding sense of the presence of God in place of the barrenness of human life. It brings us health and harmony in place of disease and discord. It places our treasure in heaven instead of in the earth. It exalts our ambition.

Though the desire for happiness is universal, few possess it. Many think they would be happy if they only had greater success in gaining material possessions, in attaining social distinction, in winning worldly fame. In Christian Science one learns that happiness is spiritual, that it proceeds from goodness, and not from the abundance of material things which he may possess. Accompanying the desire for material riches often come thoughts which bring with them much unhappiness,—envy, discontent, selfishness, greed, and sometimes a dishonest thought,—the wish to get something for nothing, the willingness to profit at another's expense, also the unhappy and unchristian ambition to outshine one's neighbors, the desire for precedence. In the writings of Paul we read, "Be kindly affectioned one to another with brotherly love; in honor preferring one another;" again, "They that will be rich fall into temptation and a snare, and into many foolish and hurtful lusts, which drown men in destruction and perdition."

A man may think that because he has been able to lay aside a certain amount of money, that he has thereby made great gain, but what is gain? Paul teaches that "godliness with contentment is great gain." Then it would follow that true riches are mental, and only as we are growing in holiness are we gaining the riches which can never be taken from us. The world thinks that riches give power, but with clearer vision Mrs. Eddy declares, "The good you do and embody gives you the only power obtainable" (Science and Health, p. 192), and she urges us to have no ambition nor aim other than that of holiness.

The magnificent character, the beautiful life, and the spiritual teachings of our beloved Leader have brought out clearly these truths, that men are powerful only as they are good; that they are happy only as they are righteous; that they are rich only as they have spiritual understanding. The prayer, then, of the true Christian Scientist will ever be for growth in grace and in the knowledge of our Lord and Saviour, Jesus Christ, and that he may be able to do good to his fellow-man through this knowledge.

The spiritual understanding of that which constitutes true riches, and the overcoming of the material sense of wealth, will enable Christian Scientists to destroy the claim of poverty. If we would overcome a sense of financial limitation we should examine our thoughts and the real desire of our hearts. We should be sure that our prayer is for greater spiritual growth, a sincere desire for the real substance, a longing for the true riches, and not a desire for more material possessions. Spiritual attainments call down blessings from heaven, and assurance is given that when, through goodness and spiritual understanding, we obtain

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

power with God, our present needs will all be supplied. When our thoughts are made right, the outward manifestation will be a more harmonious environment.

The important thing, then, is to seek first, last, and always, "the kingdom of God, and his righteousness." The whole teaching of Christian Science is to direct thought away from the material to the spiritual. Dependence upon the material, and love for it, must fade out of human consciousness, and be replaced by love for spiritual realities. This is the only road to health, happiness, and to the consciousness of our heavenly Father's abundant supply; and those who follow this road will realize the promise of Isaiah: "Then shall thy light break forth as the morning, and thine health shall spring forth speedily."

THE COMMITTEE ON PUBLICATION.

WILLARD S. MATTOX.

THE value of the work performed by the Committees on Publication cannot be overestimated, and our Leader's foresight and wisdom in organizing this department of our denominational activities is amply justified by the good effects brought about in practice.

The functions and purposes of the Committee are not always understood, even by Christian Scientists themselves, and frequently editors and critics fail to appreciate the purport of the Committee's mission. The Church Manual clearly explains why it was organized and what it is intended to do. Those who misjudge Christian Science by professing to believe that the activity of the Committee on Publication is "aggressive," or that his intention is to "advertise" the personnel of the Committee, or Christian Science, should know the real reason for the activity they censure. The truth is, the Christian Scientist loves his religion with a sincerity and earnestness which prompt him to be instant in its defense. Quite apart from the critic's estimate of the merits or supposed demerits of the system itself, it will probably be granted that such loyalty is praiseworthy and not blameworthy, and that church may consider itself most happy which can foster or encourage similar sentiments on the part of its rank and file.

For many years Christian Scientists labored patiently under a storm of abuse and misrepresentation, without public reply or correction. As the misunderstandings and public criticisms increased in number and virulence, it became necessary to make some response, and that this work has been done systematically and by regularly appointed members of the Christian Science Church is to its credit.

The organization of this Committee is a boon to editors, because it is well known by all Christian Scientists that this work of publicly correcting misrepresentations has been entrusted to certain individuals in each State, and consequently no other Christian Scientist undertakes the task of sending letters to editors in correction of misstatements which have come to his attention. It thus protects them from a flood of protesting letters, and therefore it should receive their hearty approval.

The Christian Science Committee on Publication is not a propagandist. It has no desire to advertise either itself or the Church, and seldom takes the initiative in addressing the newspapers, but usually writes only when compelled to do so by force of circumstances. The Christian Science Church has its own periodicals, a weekly paper and a monthly magazine, and these denominational organs are sufficient by way of literature for the exploitation of Christian Science views. Again, it gives Christian Scientists no pleasure to be obliged to correct misrepresentations that are often cruel and malicious. It is not especially agreeable to be obliged to interview unfriendly editors, and no amount of self-advertisement would induce a Christian Scientist to embark on the campaign of education which has been pursued for some time, nor could it compensate him for the discomforts which he meets by the way. The Christian Scientist disavows any ulterior or selfish motive on the part of the Committee on Publication, and calmly awaits the time when a proper sense of justice will assist his critics to see the matter in its true light.

The work of the Committee on Publication has gone along so quietly that Christian Scientists themselves are not always informed as to its nature and scope. If we were to liken the great body of Christian Scientists to an army, we might appropriately compare the Committees on Publication to the sentries who patrol the camp, or to the skirmish-line which precedes the army on a march. The army is informed through its outposts, is protected by them, and depends much upon their loyalty and vigilance.

The simile of an army, with an enemy to fight, would be unfortunately chosen if it conveyed the idea of personal antagonists. The Christian Scientist does not so regard the situation. He understands that the only enemy Truth has, is a belief of error, not persons. The only enemy the Church of Christ has ever had, has been an evil intention to thwart the purposes of good. The Christian Scientist, in keeping with the metaphysical teaching of his Church, does not combat personal critics. He opposes states of mortal mind which are contrary to God, or as Paul puts it, the carnal mind, which "is enmity against God."

The mission of the Committee on Publication is, when made aware of the various attempts of this so-called mind to oppose the Cause of Truth, to destroy this evil intention with the declarations of Truth. In so doing he does not destroy persons, he does no violence to anything that is good or that deserves to be spared. The mission of this Committee is to heal, not to aggravate. He strives to present Christian Science in such a clear light that all will understand it, appreciate the Leader of the movement, estimate her true worth, value her works, and honor her courage and devotion to Principle.

The work of the Christian Scientist is educational, never controversial. The key-note of his activity is, "Let there be light." In pursuance of this mission he seeks not to proselyte, but to tell the truth so unmistakably that the truth itself will convince and convert his readers.

PURE AND PRACTICAL CHRISTIANITY REINSTATED THROUGH CHRISTIAN SCIENCE.

GRAY MONTGOMERY.

CHRIST JESUS, the purest and most spiritual man who ever lived, was constantly doing good. Through his correct understanding of God he was able to rise above every material condition,—to heal the sick, multiply the loaves and fishes, still the waves and winds, raise Lazarus from the dead, and finally to demonstrate eternal Life by his own resurrection and ascension. His teachings and life-work, understood and demonstrated, would long ago have fulfilled the prophecy of the coming of the reign of universal harmony. For three hundred years after his ascension his followers clung closely to his teachings, and in obedience to his commands they followed his example,—healed the sick and destroyed sin in all its forms. Thus Christianity spread throughout the whole of civilized Europe, and it became immensely popular. People then began to profess it from political motives, to gain worldly power and prestige, with the result that paganism and materialism crept in and became identified with it, the understanding of God became obscured, and spiritual healing was lost.

In response to the great and crying needs of sick and sinful humanity, and centuries of blind belief in God, pure and practical Christianity has been reinstated through Christian Science. It has afforded and is affording the proofs which Christ Jesus commanded, and through the Christian Science text-book, "Science and Health with Key to the Scriptures," the unadulterated spiritual interpretation

Digitized by Google

of the Bible and the spiritual healing practised and taught by the Master and his disciples are clearly set forth and explained. This reinstatement of the Christ-ideal, discovered and given to the world by Mrs. Eddy, has done so much good, has restored to health so many hopeless invalids, that those who have received such benefits cannot be other than loyal and loving followers of their dear Leader. They are grateful indeed to her who, in the face of tremendous opposition and the attacks of malice and hatred, has continued for forty years to guard and guide this sacred movement.

The vast numbers who out of their great needs have turned to Christian Science, have received not only physical healing, but spiritual upliftment and mental transformation. It has given them an understanding of God as infinite Mind, Spirit, Life, Love, and of the true man as His spiritual image and likeness, His perfect spiritual reflection. It has taught them that God is "All in all" (Science and Health, p. 468), in whom "we live, and move, and have our being;" that evil is a mere negation, and sickness only a false mental claim. They have learned that to be well they must think right. This method of right thinking, or spiritual realization of God's allness and goodness, has overcome every known disease and false appetite. It has destroyed worry, fear, anxiety, and brought peace and satisfaction.

The earnest Christian Scientist knows that the final redemption of all mankind must be brought about through individual regeneration and reformation, hence he recognizes that he must blot out sin from his own consciousness, that he must manifest love continually towards all, and that he must do good at all times and under every condition. He is striving, by constantly holding pure spiritual thoughts, —denying every wrong thought the instant it presents itself and declaring God's allness and goodness,—to attain that spiritual consciousness which is the Christ-mind, the reflection of the one infinite divine Mind. The life of Christ Jesus is his inspiration and model, and the Bible with its spiritual interpretation, as given in the text-book of Christian Science, is his guide in showing him the way to live the Christ-life and to do the works of the Master.

"THOU SHALT LOVE THE LORD THY GOD."

GEORGE R. LOWE.

CHRISTIAN SCIENCE gives a most comforting sense of the divine nearness. As we learn that God is Mind, the one infinite consciousness,—omnipresent, omniscient, and omnipotent,—a sense of secure and intimate relationship with the supreme Being is disclosed to us. No human friend can understand so well our inmost thought of good; nor can we understand our real selves without God, since the one Mind is the sole originator of right thinking. No one else can know so well our aspiration to be good. We cannot confide so deeply in any human being, for all true confidence in a friend must be based on a recognition of Godlike qualities. Only God and God's likeness can be truly trusted or loved. The love and the lovableness are both of God. To love God is, therefore, fundamental. To love God, and to love man, God's idea,—these comprehend the whole meaning, duty, and purpose of being. In Christian Science we learn that God is Love, but divine Love is not of the quality of false, fickle, temporal human affection; nor yet a pantheistic, ethereal subtlety believed to permeate its supposed opposite, matter,—but the infinite consciousness of good, the one Ego, the only person, incorporeal, sublime. God is more than the sum of all good, true, eternal qualities, because these proceed from infinite Mind, and have no being, save as manifestations of Mind, and "the conscious identity of being" (Science and Health, p. 475).

Do we love God? So far as we understand Love, we must love and adore; we must, more naturally than children cling to their parents, cling to divine Love, made known in Christian Science as "our Father-Mother God, all-harmonious" (Science and Health, p. 16). Peter said to Christ Jesus, "Yea, Lord; thou knowest that I love thee." So God's child naturally loves the God and Father of our Lord Jesus Christ; and God, the divine Mind, knows the love of His own child, which is simply God's own thought reflected,—His own love, His own creation, manifested in conscious individuality.

Does God hear our sincere avowal of love? Does the all-hearing Mind hear us? Yes, indeed, and that alone does He hear, though it may seem to come through a cry of sorrow. It is the love and not the sorrow that He hears, for there is no sorrow in divine Love. Though the upward look may seem to glance through bitter tears, it is the love-light that He sees, for there is no bitterness in the sweet consciousness of perfect Love. Though it seem to be uttered by a sinful, imperfect, sick, struggling mortal, there is no sin nor sickness in the true confession of love; and the love which is awakened for God is the pure response of Soul's image to God, the only Soul or Love. God is Love; God is All; and His children simply reflect the Love that is Lover and Beloved, and that heals and saves and blesses forever. No sorrow, nor sickness, nor sin, nor want can withstand the pure fervor of divine affection, nor can death itself sever from Soul the individual who loves God.

SHALL PREVENTION BE FORBIDDEN?

CHARLES T. ROOT.

THE reading of a newspaper account of the most recent legislative attempt to place the healing of disease through Christian Science in the category of offenses against the law, has suggested an interesting speculation. Assuming the success of the effort to legalize a *materia medica* monopoly in a given State, it is pertinent to inquire to what lengths the prohibition against the substitution of the power of divine Truth for drugs might be construed to go. In Science and Health, p. 369, the prevention of disease is explicitly stated to be as much a part of Christian Science practice as is the cure of disease. It would seem to follow that any legislative edict against Christian Science practice must inhibit equally both of the recognized branches of this practice, for it could not well be lawful to employ for a preventive that which is unlawful as a remedy.

The logical enforcement of such legislation would lead to some interesting results. Suppose, for example, a man or woman who, after years of periodical illnesses, like grip, sick-headache, or some other persistent malady, requiring medical aid at each recurrence, had become a Christian Scientist and discontinued the regular calls for the doctor; would not such an one become, *ipso facto*, a suspicious person legally, and subject to judicial inquiry as to whether he or she had not violated the law, the presumption of course being that but for indulgence in the forbidden practice of Christian Science the patient would have continued to be sick and send for the doctor at the proper and customary intervals? Or, again, taking the case of one who, after having been repeatedly exposed to the most virulent forms of contagion, should apparently pay no attention to that fact and still fail to come down with any of the diseases involved —could such an one escape the accusation of having resorted to Christian Science, and would he not be called upon to show cause why, if innocent of this charge, he had not been stricken in accordance with the laws of the medical profession? Of a truth, they who believe that God is the sufficient and only Great Physician would have but a perilous legal status if material thought could have its way; but the lack of success which has pursued all attempts legally to ostracize the practice ordained by Christ Jesus and illustrated by himself and his early followers, gives assurance that no such attempt can ever succeed in the face of the ever-accumulating testimony to the superior efficacy of that practice.

SELECTED ARTICLES.

[Ben. Haworth-Booth in the *Eastern Morning News*, Hull, England.]

In your issue of Nov. 5. Rev. M. H. James quotes a fragment of a verse from Matthew's Gospel, "They that be whole need not a physician, but they that are sick," and therefrom deduces Divine authority for the present system of drugs and potions as a means of restoration for the sick. But surely it is only right to examine the context and take the lesson as a whole if we are to avoid falling into error. Jesus was sitting at meat in the house of Matthew the publican, "And it came to pass, as Jesus sat at meat in the house, behold, many publicans and sinners came and sat down with him and his disciples. And when the Pharisees saw it, they said unto his disciples, Why eateth your Master with publicans and sinners? But when Jesus heard that, he said unto them, They that be whole need not a physician, but they that are sick. But go ye and learn what that meaneth, I will have mercy, and not sacrifice: for I am not come to call the righteous, but sinners to repentance."

Why did not this critic quote the whole of the passage? Christ Jesus was careful to guard his words from misinterpretation. Is it not clear from the context quoted that the Christ himself was the physician referred to, and that he will accept the heart that is full of mercy and humility, and not the Pharisaic giver of sacrificial gifts? His mission was not to the self-righteous (see Alford's notes), but to the sinner and to the publican who smote his breast and exclaimed, "God be merciful to me a sinner."

Had Jesus' words on this occasion reference to the sick, or to the sinful? They were addressed to the Pharisees in reference to their objection that he should sit down at the same table with publicans and sinners; the question of bodily sickness had not been mentioned; and, lest his words should be distorted to refer to such bodily sickness, he continued his sentence as quoted above and as omitted by this critic.

Again, if any of your readers still consider that Jesus' words on this occasion were intended as an endorsement of the system of drugs and medicines, let us for a moment examine the position created by such a contention. The Talmud tells us what were considered the best medical remedies in the first century,—remedies as efficacious perhaps as any of to-day,—and it is quite easy for us to consider them and adopt them too, if the Master really intended to recommend them, as the critic would have us believe.

It can scarcely be contended that Jesus recommended the physician, but did not recommend his physic. According to John Kitto, D.D., the following is an extract from the Talmud: "It is permitted (even on the Sabbath) to go out with the egg of a grasshopper or the tooth of a fox, or the nail of one who has been hanged, as medicinal remedies." It may be taken for granted that the Jewish authorities reserved the best remedies for the Sabbath. Another authority tells us that it was held "that the windpipe of a wolf will infallibly cure the mumps if hung around the patient's neck." The greatest reliance was also placed on written charms, a large majority of all classes and ages usually having some paper or image or relic about the person, which was supposed to avert evils and confer benefits. Can it seriously be contended that these were remedies approved and recommended by Christ Jesus?

I am sorry that this critic should have expected to be taught in a moment, at Rev. Mr. Vosburgh's lecture, how to heal the sick. He is like a student of mathematics who would learn how to measure the distances of the fixed stars before he has learned to add two and two. Ministers who do not heal the sick are in the difficult position of having to try to explain away the words of one who spoke plainly when he said, "And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." And again, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Moreover, it is recorded by the early Christian writers, and repeated by the historian Gibbon, that the early Christians were healers of the sick, without the aid of drugs, and by prayer alone, for nearly three centuries; and this spiritual healing appears to have been lost in the growing materialism of the Church under Constantine, who for political reasons adopted Christianity.

[Frank W. Gale in the *Santa Cruz* (Cal.) ***Sentinel.***]

Christian Science is Christian, scientific, and practical, for the following reasons: It is Christian, because it is in harmony with the teachings of Christ Jesus, spiritually understood, and proves that they are true. It is scientific, because it reveals a knowledge of God, Spirit, the divine Principle and creator of the universe, and His spiritual law, which constitutes true science. It is practical because it enables its adherents to practise the teachings of Christ Jesus, reforming the sinner, healing the sick, and proving in daily life that divine Love supplies every need.

Since Christian Science demonstrates that the power of God is sufficient, when rightly utilized, to heal the sick, it is not necessary to use material remedies; and if we are depending upon God to heal, the use of such remedies would show a lack of faith in His power, and hinder rather than help the cure. Jesus said: "It is the spirit that quickeneth; the flesh profiteth nothing;" and Christian Scientists accept that statement. While Christ healed the sick instantaneously, it was not always so with his early disciples. When they brought to Jesus one they could not heal, he said it was because of their unbelief, and he healed him. . . . When Christian Science is better understood the healing will be more quickly accomplished. If Christian Scientists do not use the same formula of words that the early disciples sometimes used in healing, the spirit is the same, and that is the essential part. Where the Bible says, "Faith without works is dead," it does not mean that one must use drugs in order to help God heal the sick, for Jesus did not do so, nor so instruct his disciples. If faith does not result in healing works it shows that the faith was dead, or, in other words, was not faith, but unbelief; for Jesus told his disciples that if they had faith even as a grain of mustard seed, nothing should be impossible unto them.

Christian Science is making the practical application of Jesus' teachings which the world and the Church so much desire, and it is because of this that so many are accepting its teachings and receiving its benefits.

[H. Cornell Wilson in *The News*, Buffalo, N. Y.]

In the *News* of Nov. 24 appear lines which declare that there is bodily suffering, sorrow, and poverty in the world and that Christian Science is not meeting its obligations toward these because its message is false and its motives are mercenary. The writer, in bringing this accusation against Christian Science, forgets the significant fact that there are to-day scattered over the civilized world tens of thousands of Christian Scientists. She forgets that every one of these was once ignorant of Christian Science; that, after hearing of it, practically every one of these has, at some time, either been indifferent to it, has ridiculed it, or has been in active opposition against it. What has changed these thousands from indifference, ridicule, and hostility, to interest, respect, and active co-operation? Simply this, that every one has been freed from some one

Digitized by Google

or more of the hundred forms of sin, disease, sorrow, misfortune, and misery under which men and women are to-day suffering.

If any one supposes that in this great army thus relieved, there have been, are now, no poor, he is misinformed. He is equally misinformed if he supposes that "Science and Health with Key to the Scriptures" cannot be read without money. There are no "free" copies to be indifferently thrown about, or to be put upon the shelf for the dust to cover, but it is a fact that it can be read without cost at the free Reading Rooms maintained by Christian Scientists in every city of any size. Most Christian Science Reading Rooms also contain circulating libraries, where a stranger can secure a copy of the Christian Science text-book for a period of two weeks or more without cost. So far as I know, public libraries are well supplied with copies placed there by committees of Christian Scientists. In the public library at my former home, there were, when I left the place, ten copies, in such constant demand that the library authorities asked the committee for additional copies, which were gladly furnished. Nor need any one be without the text-book because of lack of means, since those who have been blessed by its healing, reforming message, and who are financially able, are always glad to help their less fortunate fellows. I myself have given away several copies of Science and Health, and know that many of my Science friends have supplied inquirers who were without necessary funds to buy the book.

[Isabel A. Walker in *The Onlooker*, London, England.]

The practical outcome of my thoughts, on reading the interesting report of the Christian Science lecture (delivered by the Rev. Arthur Vosburgh) published in these pages a fortnight ago, landed me on Tuesday afternoon [Nov. 13] in the Queen's Hall, Langham Place, determined to hear for myself what manner of man this was, and what was the message he came to give. The hall was filled to overflowing, and this in itself is no small achievement when it is remembered that the subject was a religious one and the place London.

The title of the lecture, "The Practical Orthodoxy of Christian Science," seemed to bristle with difficulties, but the striking simplicity and earnestness with which the Rev. Arthur Vosburgh broached his subject at once raised the question beyond any mere controversial basis. Four essentials underlie all the teaching of the Bible, and they formed for him, and he hoped for many others, rules whereby truth may be found:—

Belief in God—the God of the Bible. No "absentee God," but the divine Principle who is all around us, and in whose thoughts "we live, and move, and have our being;" belief and understanding of the Bible; belief in Christ Jesus; and the individual application of these, by each, to the daily living of the Christ life.

It was, said the lecturer, the sudden and vivid realization of these truths which enabled Mrs. Eddy forty years ago, when she lay on what was thought to be her death-bed, and by the aid of that passage in the Bible which tells of Christ and the man with the withered arm, to rise suddenly cured and well; and through the practical application of what she had so learned she had founded Christian Science, and proved, to the joy of thousands, that good, not evil, is our heritage and our birthright, and that pain, sin, and suffering have no part in the scheme of God's world, which He made, and found "very good." Evil, continued Mr. Vosburgh, is a lie, a phantasmagoria of our own imagination, and it should be the aim of every man and woman to be freed from this unreal bondage, to "unknow" evil, and so find our way back to the lost Eden. Christian Scientists do not claim to be on a higher platform than others; they wish to raze no altars, to violate no shrines; but what they do claim is that their Founder has discovered a clue to the very heart of Truth, wherein lie peace and health,—health spiritual, health physical. In prayer we find a channel whereby we may uplift our thoughts to the plane where these truths are made clear, for there we shall find that the divine resources are for the asking, and that we are, indeed, part of God himself.

I hold no brief for Christian Science, but as I watched the crowd disperse on Tuesday evening, each to his business or pleasure, it came to me that wherever men and women are gathered together for the thought of good, or for the witness of the Spirit, there also good must and will result.

[From the *Asheville* (N. C.) *Citizen*.]

The man most needed by the business world to-day is the one who brings with him a well-poised mental equipment, moral courage, and the ability quickly to discern and choose the right from the wrong; and he who is alert is learning more and more that right thinking makes right living and right living means success; that man is not bound by the iron shackles of heredity or environment, but that he is free to choose the right, and that if he will use the Divine power offered him he can live it. Young man, when you are tempted to do wrong hold steadfastly to the thought that you are not the slave of evil, passion, and appetite; that man is made in the image and likeness of God, and you are placed here to have dominion over the earth and all things therein, if your motives and aims are for the glory of your creator and the good of your fellow-men. If you make this your mission in life, all other things necessary for your happiness and success will certainly be within your reach.

[The above extract is taken from the address of a Christian Scientist before the local Y. M. C. A.—EDITOR.]

[Albert Cope Stone in *The Ballarat Star*, Victoria, Australia.]

Our critics object to the teachings of Christian Science regarding matter. In doing so, they fail to recognize what Mrs. Eddy gives in place of that which she repudiates. When she denies the existence of matter it is not the creation itself which is denied in this Science, but the false material concept thereof. Christian Science does not teach that the creations of God do not exist, and that man has no body, but that they are not what they appear to be, and if their actual existence was seen in the light of spiritual understanding, we should behold them as they really are in their beauty and perfection. It is the darkened material sense of things which hides from us this true view of God and His creation. The quotation given by Dean Vance (which he declares to be Mrs. Eddy's own words) is not to be found in the Christian Science text-book. Christian Science does not deny that sickness exists as a seeming reality in the human consciousness, but teaches that it may be overcome and destroyed by the understanding of the supremacy of Spirit, and by knowing that in God's kingdom sin, sickness, and death are unknown.

Our critic asserts that Mrs. Eddy teaches that there is no final judgment day. Christian Science endorses the Bible statement, that "whatsoever a man soweth, that shall he also reap." Sin brings suffering here and now, and unless mankind is learning this lesson from experience, the judgment is proceeding daily and hourly. It is incompatible with divine law that man should spend a lifetime in sin, and expect to escape punishment for an indefinite period of time.

[Lloyd B. Coate in the *Dayton* (Ohio) *News*.]

Last spring the Christian Scientists in Ohio sought an amendment to this medical law, and the chief objection made by physicians was that Christian Scientists were unable to diagnose disease. Soon after this my attention

Digitized by Google

was called to the healing of a baby in this city, through Christian Science. It had been sick for three months, and during this period had been under the care of seven physicians in Dayton (two specialists), representing various schools of medicine. They did not agree in their diagnosis and their treatment failed to relieve the little one's suffering. As a last resort the mother sought Christian Science treatment. In a few hours thereafter the baby was able to retain its food; the second night it rested well all night, and at the end of one week it was cured. Which is of the greater importance, diagnosis without healing, or healing without diagnosis?

Jesus Christ, the greatest physician ever on earth, healed the sick through spiritual means and not material. To those who criticised him, he said, "For which of those [good] works do ye stone me?" Must Christian Scientists be deprived of the rights of citizenship, the right of contract, because they heal the sick after material remedies fail? If Christian Scientists should turn their thoughts from God, Spirit, to the study of *materia medica*, they would no longer be Christian Scientists, and if a law making this compulsory were passed in any State, it certainly would be contrary to their rights of religious liberty as guaranteed by the Constitution of our country. . . .

Each school of medicine has had to fight in the legislature for recognition. Was it not because the allopaths distrusted the homeopaths and other schools, and condemned their methods that they might have the monopoly? The medical fraternity is not ignorant of the healing efficacy of Christian Science, else they would not be seeking to bar Christian Scientists out by legislative means. By so doing are they not seeking to establish a monopoly?

[Alfred Farlow in *Public Opinion*.]

We indulge many customs and habits which we must suffer "to be so now," that will not be necessary when the perfect man is understood. The "belittling" of Job's boils was not left to the twentieth century, for in his day he saw the manifestation of God in the healing of his "flesh," and it should be noted that it was when Job had obtained a proper understanding that his boils disappeared and his flesh became as that of a little child. It was not material comforters; it was not the use of material remedies, but wisdom alone that cured Job's distresses; and the exercise of wisdom, it should be noted, is a mental *modus operandi*, and confirms the teaching of Christian Science that disease is a mental error and that when the proper mental condition is attained the bodily condition is improved.

In direct opposition to the critic's statements, Christian Science teaches that "cleanliness is next to godliness." It is the unreasonable hygienic rules which are condemned by Christian Scientists, not cleanliness. Pure food, pure air, and sensible sanitary regulations are in agreement with Christian Science, for the purest and best is nearest the spiritual. Christian Scientists have enough troubles that come uninvited without going after any, and it is a part of their consistent practice to avoid trouble, as well as to get out of it after having been unfortunate enough to fall into it. It is never right to do evil that good may come of it. While a Christian Scientist in trouble should depend upon God to deliver him, he could not in keeping with his belief wilfully venture into it.

The allegation in a recent issue of your paper, that Mrs. Eddy borrowed her ideas from a certain magnetic practitioner, recalls the fact that this is the seventh person besides Mrs. Eddy to whom the discovery of Christian Science has been credited in the public press during the past few months. I am wondering how Mrs. Eddy could have borrowed her ideas from each one of these persons, or indeed from any one of them, since each differs from Mrs. Eddy and from all the others.

AMONG THE CHURCHES.

LINCOLN DAY.

In compliance with the proclamation of Governor Guild of Massachusetts, setting apart Feb. 12 as Lincoln Day, and calling for the appropriate observance of the occasion, a service was held in The Mother Church of Christ, Scientist, at 10.45 in the forenoon. It was estimated that the congregation present numbered about three thousand, and we are informed that similar services in branch churches throughout the State were also well attended. The subject of the specially prepared Lesson-Sermon was "Liberty and Freedom," the Golden Text, 2 Corinthians, 3 : 17, and the Responsive Reading, Isaiah, 61 : 1–4; Isaiah, 62 : 1, 2, 11, 12. The following citations comprised the Sermon:—

I.	
The Bible.	Science and Health.
Isaiah, 58 : 6, 8;	225—28;
Romans, 8 : 18, 19, 21–23.	226—5 to 2 next page.

II.	
Luke, 4 : 14, 16–19, 21;	224—28;
John, 8 : 31, 32.	225—13 to 27;
	227—20 to 25.

III.	
Galatians, 5 : 1, 13, 14;	22—23 to 27;
James, 1 : 22–25;	407—7 to 21;
James, 2 : 12.	228—11 to 15.

After the Sermon, Mr. W. D. McCrackan, First Reader of The Mother Church, delivered a brief address in commemoration of Abraham Lincoln, as follows:—

Friends, we are assembled here to-day, in glad compliance with the request of his Excellency, the Governor of this Commonwealth, to commemorate the life and achievement of Abraham Lincoln. It is an inspiration to recall this great man's labor of love in behalf of liberty and freedom. His place in history is marked by his Proclamation of Emancipation, through which African slavery was legally abolished in our land; his place in literature is determined by the twenty lines of his noble "Address at Gettysburg;" and his place in the heart of humanity is secured by the heroic qualities he displayed during the dark hours of a nation's crisis.

What were some of these qualities? His sense of justice was supreme, the courage of his convictions unbounded. His fidelity to truth, as he saw it, was never shaken. His honesty was proverbial, so that he went by the familiar appellation of "Honest Abe." He was fairness itself, even to his opponents. Whether he met them in the wrestling-match, or in the stump-speaking contest, or in the grander arena of national affairs, he did better than merely conquer his antagonists,—he made friends of them.

A Confederate general has written of him that his most conspicuous virtue was "the absence of a spirit of resentment, or oppression towards the enemy." His wife once said of him, "His heart is as large as his arms are long." Indeed his life, and his conduct as the head of the nation, prove him to have been instinct with love, tenderness, and compassion; forgiving, wise, and patient.

He was an advocate of universal popular education, also of the rights of woman, and believed in the power of prayer. During a crisis in national affairs he stated to an inquirer that he had prayed to God and gained the "sweet comfort," as he expressed it, "that things would go all right." Before issuing his Proclamation of Emancipation he told a member of his cabinet, "I have promised my God that I

Digitized by Google

will do it." He seems to have talked as consciously with God as did the Hebrew patriarchs of old.

But what quality above all others prepared him for his great task of emancipating a race? What was it that enabled him to pass by degrees from the frontier cabin to the White House, from felling trees to felling human wrongs? It was his receptivity to good. He was poor, in the Bible sense of the word, and according to the meaning of that word in Christian Science. Jesus said, "Blessed are the poor in spirit: for theirs is the kingdom of heaven." Abraham Lincoln was poor in this sense. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, speaks of the poor as "the receptive thought" (p. 34). The thought of Abraham Lincoln was receptive of good. He turned instinctively to good and was led through storm and stress by his highest sense of good. He understood the mind of the common people, and it was true of him, as it was true of one greater than he nineteen centuries ago, that "the common people heard him gladly,"—those who were unbiased and unprejudiced and not overloaded with false learning.

In view of Abraham Lincoln's open-minded and open-hearted character, is it too much to say that were he with us to-day he would rejoice in the work of liberty and freedom which Christian Science is accomplishing? Is it not natural to suppose that he who had the courage to emancipate a race from unpaid servitude, would have had the courage to align himself with a movement for the emancipation of the whole human race from every ill to which it is heir? Moreover, there is good reason to believe that he who years ago saw the necessity for safeguarding the rights of woman, would not be afraid to-day to accept this greater emancipation from the hands of a woman. Abraham Lincoln was too much of a real man for that.

THE READING ROOM IN CHICAGO.

The annual report for 1906 of the Central Christian Science Reading Room in Chicago gives some hint of the rapid growth of the work in that city. It shows that the total sales of literature during the year amounted to $31,209.84, an increase of nearly $4,000. The sales of Science and Health reached a grand total of 4,512 copies, an increase of 449 for the year, while the other principal items were 714 copies of "Miscellaneous Writings," 5,678 *Journals,* 17,003 *Sentinels,* 23,183 *Quarterlies* (an increase of 6,691), and 6,483 pamphlets. Fifty thousand copies of local newspapers containing lectures by Judge Hanna, Mrs. Sue Harper Mims, Mr. Bicknell Young, and Mr. Bliss Knapp were distributed under the auspices of the Reading Room, as also were 10,000 copies of the *Sentinel* of Nov. 3, 1906.

During the year it became necessary to move the Reading Room into larger quarters in the same building, and the Executive Committee states that "where formerly two tables were sufficient to accommodate those who came to read, now four large tables are required." This growth is most encouraging.—*Correspondence.*

WASHINGTON, D. C.

First and Second Churches of Christ, Scientist, have united their congregations during the past week, and much satisfaction is expressed in their membership at the result. First Church, which three years ago bought the St. Paul's Methodist Church, Fifteenth and R Streets, Northwest, has the larger membership, approximating four hundred; Second Church, worshiping at the Hall of the Friends School, 1809 I Street, Northwest, is much smaller. They had almost outgrown their quarters, however, and were thinking of moving to a larger place farther in the Northwest section, as it was felt there was no real need of the two bodies being so closely situated—many members living in the suburbs. But at a recent meeting it was unanimously voted to unite with First Church, which move was heartily welcomed by that body and ratified by each. The first service together will be to-day, and all are greatly gratified at the move.

The Scientists number somewhat over one thousand in Washington, though hardly half are members of the Church; and they say their Cause is prospering as never before. The recent attacks in newspapers and magazines, they aver, have added to their ranks large numbers, causing people to investigate their tenets and become converts. Mr. Edward E. Norwood, of the Committee on Publication for Washington, told a *Herald* reporter that it is but a question of a short time when the seating capacity of First Church (about eight hundred) will be outgrown, and a larger temple, worthy of the National capital, erected; and the Scientists are confident, when the proper time comes, this will be done without difficulty.—*Washington Herald.*

SHERMAN, TEX.

The Sherman Christian Scientists will hold the opening service in their new church at the corner of Crockett and Jones Streets to-morrow morning [Jan. 20] at 10.45.

The history of the building of this church is unique and interesting in some respects. The membership of the Church numbers but twenty-nine, yet they have purchased their lot and erected their building, at a cost of $4,000, without asking any aid from the outside. A few contributions from friends of the faith in Sherman, Denison, and Whitesboro, given voluntarily, is the only help they have had. They have asked for none.

The lot was purchased about three years ago; the building was begun in October, and is now so nearly complete that it can be used for services. The church is a small frame building, but very substantial, and handsomely finished and furnished within and without. The walks and lawn have not been completed yet, but will be soon, and will aid in making this handsome little church one of the ornaments of the city.—*Exchange.*

THE COMMITTEE ON PUBLICATION FOR NEW YORK.

The annual report of the Committee on Publication for the State of New York indicates that the work of this Committee is largely on the increase, both in the amount of labor performed and its importance. The following items are significant of a growing interest in Christian Science. The Committee received at its office upwards of 4,100 newspaper clippings, "representing all comments, pro and con, on the subject of Christian Science during 1906, and from practically every town in the State." During the year the Committee and assistants prepared 695 answers and corrections, 402 of which were published. The Committee also distributed for free circulation the large number of 84,067 newspapers, periodicals, and pamphlets.

Correspondence.

EXETER, N. H.

Our little church holds its services in the Town Hall building, and the rooms are well furnished and attractive. Much Christian Science literature is being circulated, the interest is increasing, and our growth is steady. Unity and harmony are manifested, and there is an ever increasing desire to be loyal to God, to the teachings of Christian Science, and to the wise guidance of our Leader.

Correspondence.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

TIMELY LETTERS.

[We are glad to give prominence to the following timely and appreciative letters recently received by Mrs. Eddy. —Editor.]

New York, N. Y., Feb. 7, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Precious Leader and Teacher:—It is evident in your last edition of Science and Health that you have been impelled by divine Love to sweep your hand across "the harp of a thousand strings," once again attuning it to the Science of Being. The effect of your last edition of our text-book has been to quicken our spiritual sense and to increase our faith. The pages of this edition radiate more brightly than ever the light and might of intelligence, revealing Christ, the quickening Spirit, as ever present, compelling mankind to repeat the query of prophet and seer, "Will God in very deed dwell with men on the earth?" Through your discovery of the power, presence, and allness of Truth, which Jesus understood and demonstrated, all who are ready to receive Christ at his second appearing are being emancipated from bondage to time-honored erroneous theories of life and intelligence in matter. You have continually communed with God, or you could never have established the rule and demonstration of scientific Mind-healing, as you have done. You have gone before us, and marked the way which Jesus trod, and have patiently, meekly borne with the slow progress of a doubting world and dull disciples.

I rejoice to be found worthy to be called a Christian Scientist. While you, immortal scribe and Revelator, were busy transcribing the deep things of God, as you worked on page after page of your book Science and Health, your inspired thought stirred human consciousness, dead in trespasses and sins, drowned in the belief of pain and pleasure in matter. This carnal mind resisted resuscitation, and struck the hand which was reviving it to grasp the realities of life in God. You have demonstrated the power of divine Mind over all evil, and have proclaimed "liberty to the captive, and recovery of sight to the blind."

With ever-increasing love and gratitude, I am

Your student,

Augusta E. Stetson.

New Britain, Conn., Jan. 31, 1907.

Beloved Teacher:—How thankful I am in these days, when falsehoods about you are circulated, when misrepresentations or misconceptions are published throughout the world, to know the truth about you and your life! My years of service at Pleasant View mean more to me every day, as I press on in the great field of Christian Science. When the liar (mortal mind) would disturb our young Church with its maliciously concocted reports about you, our beloved Leader, then I speak a word of truth, telling them that I know your inside home-life, know it to be nothing less than a life of love and prayer for all mankind; and all is well again.

Recently, after the Wednesday evening meeting, a young student of your books came to me all aglow, to tell me of a bit of good news from her home. Her husband, one of the leading business men in one of the largest manufactories here, had been strongly opposed to Christian Science, but this good woman had learned from your writings to "love more for every hate," with the following result, which I know will rejoice your heart. The husband wanted to reward her for some special work she had done for him. He said to her: "What shall I give you for this splendid work?" The wife's reply was, "Give me the joy of knowing that you have destroyed all newspaper or magazine articles that you have saved up, that contain anything against Mrs. Eddy or Christian Science." He at once consented, replying heartily, "I'll do it." The overjoyed wife then told me she would rather have this gift from her husband than a million dollars.

This account, beloved Leader, will give you a fair sense of the spirit of the young branch here, which is little more than a year old. Its forty charter members are further proving their faith in God, and in you and your great Cause, by building a chapel of their own on one of the best corner lots in the city, the house to have a seating capacity of from three to four hundred.

What I have often told you, I to-day reiterate,—it would be impossible for me humanly to compute my individual indebtedness to you. My very life in this world, I might say, I owe to you, for had it not been for your pure spiritual vision, Christian Science, through whose touch God's right hand snatched me from the grave over twenty years ago, would not have been available to me. May the Love that is God keep you safe above all evil, is the constant prayer of your loving student,

Joseph G. Mann.

"DIANA OF THE EPHESIANS."

The following editorial, which we copy from the *St. Louis Post-Dispatch*, refers to a bill now pending in the Missouri Legislature, and it discloses the animus of certain attempts to enact laws, ostensibly in behalf of the public, but really for the benefit of a favored class. The *Post-Dispatch* says,—

Senate bill No. 123, which has passed the Senate and is now pending in the House, is not properly designated in its title. The bill was drawn and is being pushed by members of the medical fraternity, and purports to be an act to regulate the practice of medicine and surgery. It should be designated a bill to invest physicians of certain schools of medicine with the privilege of monopolizing all the fees.

The bill not only prohibits the practice of medicine and surgery without a license, which is to be given by the State Board of Health only to graduates of recognized medical schools who stand an examination, but prohibits the treating of the sick or afflicted by any one without such a license—that is, for fees—it expressly permits the gratuitous treatment of the afflicted by any person.

The object of the bill is not to protect the public from treatment by incompetent persons, but to protect the doctors of certain schools in the monopoly of charging fees.

It is eminently proper for the State to provide that no one but competent persons—persons as competent at least as good medical schools make them—should administer drugs and use the knife on the sick and afflicted. Poisonous drugs and knives in the hands of incompetent persons are very dangerous. The public should be protected from incompetence in the use of drugs and knives, whether the work is done gratuitously or for fees. But great care should be taken to avoid any attempt to compel the public to accept only certain modes of treatment in case of illness or affliction or to compel persons to accept the services of only those who use drugs and knives in the treatment of the sick or afflicted. The art of medicine is continually changing. Schools differ as widely as night from day. The old schools fight the new schools, regardless of the fact that the new are sometimes proven superior to the old. The records of homeopathy, osteopathy, and other "opathies" show what radical changes take place in the practice of medicine. The State should avoid empowering any groups of physicians or any schools of medicine which presume to be superior, to discourage and cut off the practice of others which may be as good or better.

Then there is a large, intelligent, growing element of the people who do not believe in the use of drugs. Many eminent and learned members of the medical profession discourage the use of drugs. Not only the Christian Scientists, who have obtained excellent results and have taught the physicians something about therapeutics and mental modes of healing the sick, but members of older church denominations, believe in spiritual methods of healing the sick. Respect ought to be paid to the convictions of these people who

Digitized by Google

believe that they have found something better than drugs. The right of citizens to choose the manner or mode in which they shall be treated should not be invaded or ignored. It would seem foolish to demand that a practitioner who does not use drugs or instruments should be schooled in the use of drugs and instruments before he can help any one who applies to him for treatment, or to forbid him to receive compensation therefor, if the patient feels that he has had the worth of the fee. Compulsion bearing upon the conscience of persons of religious faith, or the convictions of intelligent men with regard to what mode of treatment they shall adopt when sick, is tyranny.

When the State protects the public from instruments and dangerous drugs in the hands of incompetent persons, and prescribes wise sanitary regulations for the preservation of the public health, it has performed its whole function and duty in the matter of regulating medical practice.

If medical practice were an exact science, instead of an experimental practice, as it is admitted to be by physicians themselves, and if its exponents were uniformly successful in all cases, there would be no need of legislation for the purpose of compelling sick people to call a physician. The continued demand by the doctors for monopolistic laws in their behalf is a confession of weakness, and the fact that the people do not join in this demand is not only evidence of their desire for individual liberty, but also of their detection of this weakness. An incident described in the 19th chapter of Acts shows that human nature was much the same in the first century as it is to-day. The following is the sacred writer's description of one of the effects of Paul's preaching of the Christ:—

For a certain man named Demetrius, a silversmith, which made silver shrines for Diana, brought no small gain unto the craftsmen; whom he called together with the workmen of like occupation, and said, Sirs, ye know that by this craft we have our wealth. Moreover ye see and hear, that not alone at Ephesus, but almost throughout all Asia, this Paul hath persuaded and turned away much people, saying that they be no gods, which are made with hands: so that not only this our craft is in danger to be set at nought; but also that the temple of the great goddess Diana should be despised, and her magnificence should be destroyed, whom all Asia and the world worshipeth.

And when they heard these sayings, they were full of wrath, and cried out, saying, Great is Diana of the Ephesians.

ARCHIBALD MCLELLAN.

THE MENTAL STATE.

IT is very interesting to inquire into the reasons for the rapid and steady progress made by some pupils in their school days, as compared with that of others, and this inquiry may be pursued in the wider school of human experience. No one can deny that certain persons reach given results much more easily than do others, or that the same persons attain desired results more easily and quickly at certain times than at others. Christian Science is already doing wonders in giving its students clearer views than had before seemed possible, of the relation of cause and effect in every direction, and it will do much more for the enlightenment of mankind as it is better understood and more persistently applied. Every student of our text-book learns of the absolute impartiality of divine Principle, the absolute justice of divine Mind, which implies a "square deal" for every human being. The problem is how to bring to the human sense a clearer recognition of this basic truth, so that each may avail himself of it in overcoming the many disadvantages consequent upon ignorance of God and His law. The seeming difficulties are, however, greatly lessened when we remember that God is working in us "both to will and to do of his good pleasure," which is to do us good and only good. We, on our part, are required to "work out," to express this salvation which God is effecting in the depths of consciousness, at whatever expense of time and effort it may require, applying the truth to every problem of human experience, and knowing that perfection and nothing less is demanded as the ultimate of all endeavor.

If all knew how to be "co-workers" with God, failure or even delay would be impossible. If we are bringing out poor results in any of our work it only proves that our mental state is not what it should be, and this can and should be corrected at once. If we are reflecting the divine Mind we shall surpass the best that is attempted by the unaided mortal thought, for we shall express unlimited intelligence and strength.

A wonderful lesson to the toilers on earth's troubled sea is to be found in the Gospel accounts of the stilling of the storm by Christ Jesus and the hastening of the disciples' passage to the shore. On this perilous voyage the toil at the oars had counted for nothing, and when they saw Christ Jesus coming to them through the storm —walking on the water—they were terrified. When, however, they heard the words, "It is I; be not afraid," their fears and the sea were both calmed, and when they took the Master into the boat their goal was reached immediately.

To the extent that each reflects divine Mind, he is like Christ Jesus, a law unto himself and to all his activities. More than this, he reflects the divine law and order on all about him, for we either reflect or obscure to mortal sense this law and order. Mortals murmur over very small tasks, but Jesus fed the five thousand with no toil because he understood and reflected divine Mind. The study of the Christian Science text-book is leading many to recognize and welcome the Christ, to take in God's idea, as did the disciples. When Truth and Love rule in our mentality each task will bring joy and new strength for the next. "Old things" are indeed passing away, and with the new order we shall begin to know ourselves, to understand our own mental states, and this will enable us to measure up to the Christ standard in all we do.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Brookline, Mass., Feb. 8, 1907.

My Beloved Leader:—For many years I have realized that I owed you more than I could ever repay, and now the debt has been greatly increased by the recent revision of Science and Health. Each sentence has gained new meaning, and words can never express how deeply I was touched as I found on every page evidences of your marvelous care and loving watchfulness, in giving us every possible assistance which would enable us to clearly understand the truth. As Isaiah says, "By his knowledge shall my righteous servant justify many." I appreciate more than ever what you are accomplishing for the human race, and what we owe to your tireless patience and far-seeing wisdom. May we be worthy to appropriate your latest great gift to our Cause, and may we in our turn, reflect, in some measure at least, the same care and honest labor in our efforts to help spread the "good tidings of great joy, which shall be to all people." From all parts of the world grateful hearts will praise God for the ever-increasing light which is coming to humanity through your unparalleled labors of love. Believe me

Most gratefully your student,

ANNIE LOUISE ROBERTSON.

Washington, D. C., Feb. 4, 1907.

Mrs. Mary Baker Eddy.

Beloved Leader:—Once more you have put the Field, yea, the world, under obligations to you by your wonderful revision of Science and Health. I have spent some time in a careful study thereof, and am amazed at the great originality, spirituality, and profound love there added. And a striking and gratifying thing also, is the fact that, in spite of the great number of changes, several on every

Digitized by Google

page, the new book works no hardship to students of older editions, for it does not affect the *Quarterly* references, nor the Concordance, to any appreciable degree. Altogether, dear Teacher, you have given us a wonderful gift —a priceless boon which will help to lift the thought of the whole Field, and draw Scientists nearer to that infinite Love with whom you walk so closely and understand so well. May God bless you, is the fervent prayer of

Your loving student,

EDWARD EVERETT NORWOOD.

Detroit, Mich., Feb. 4, 1907.

Beloved Leader:—I have just finished a careful inspection of a copy of your recent edition of "Science and Health with Key to the Scriptures," the edition printed from new plates. Permit me to express my thanks for your additional labor, and my gratitude for the many changes and additions, illuminative, ameliorative, and intermediary, that are contained in this your latest revision. The chapter "Fruitage" just teems anew with glowing evidence and testimony to the Science itself and the capacity of the thought expressed in the text-book to heal. With constant affection from Mrs. Prophet and myself, I am

Faithfully yours,

EDWARD PERCIVAL PROPHET.

San Francisco, Cal., Jan. 19, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Teacher and Leader:—Thinking that you might like to know something of the publication work that is being done in California, I enclose a copy of my annual report, and would say in addition that the press of this State is assuming a more friendly attitude towards our Cause and its beloved Leader as both are becoming better understood. Your reply to *McClure's* January article has been published in our papers and given wide circulation, and its beneficial effect is already seen in the favorable comment it has brought forth. We know that divine Love is protecting you and our Cause, and continue to work with the assurance that all the promises will be fulfilled.

With love and gratitude, your student,

FRANK W. GALE.

Mr. Gale's report reads in part as follows:—

The work of your Publication Committee and his assistants during the past year shows an increase of more than fifty per cent over that of the preceding year, much of it the most important work that has been accomplished. Corrections, articles, news items, reprints, etc., prepared by the Publication Committee and his assistants, and also by Mr. Farlow, for California papers, number 322; there being 147 corrections, 35 news items and articles, 91 reprints of Mrs. Eddy's Message to The Mother Church. I have received and filed 902 clippings from the papers of the State of favorable editorials and news items, 63 of which were despatches concerning Mrs. Eddy, and 307 were in connection with the lectures. This makes 1,224 favorable articles of all kinds appearing in the papers of this State during the year. In connection with the publication work 1,562 letters and telegrams were sent out, besides 372 letters relating to the relief work.

The 322 corrections, articles, and reprints which the Publication Committee and his assistants prepared for the press were more widely distributed than ever before, being published in fifty-five cities and towns in this State as compared with twenty-two last year. The distribution of literature by the Distributing Bureau during the year was greater than any previous one, 11,285 pieces being sent out. The literature included 7,415 newspapers, 2,100 *Christian Science Sentinels*, 270 magazines, and 1,500 copies of "Christian Science and Legislation."

Philadelphia, Pa., Feb. 2, 1907.

Beloved Leader:—In sending herewith my report for the past year's work, it is not my intention to burden you with the task of perusing it. I simply want to point out that during the period named we have circulated more than sixty-five thousand marked pieces of literature and that the recent attempt to enact legislation against us in the grand old Keystone State—founded on religious liberty—resulted in a prompt protest from us which prevailed. I have just accepted the post of Committee on Publication for another year, making the sixth in this service. My love for you grows apace with each day's duties. Your blessing on my work has been my guiding star.

Faithfully,

ALBERT E. MILLER.

Mr. Miller's interesting report contains among other items the following, which are of especial interest at this time:—

The recent attempt to enact legislation inimical to our Cause has engaged a great deal of time and interrupted to some extent the regular office routine. The protest recently made by your Committee and associates against the clause in the medical bill aimed at the practice of Christian Science seems to have prevailed. A new bill has been substituted for the one against which protest was filed, eliminating the offending clause, and was introduced in the House of Representatives at Harrisburg to-day by the author of the previous bill.

Your attention is called to the great amount of literature distributed during the past year. This department of the work has grown to be second to no other branch, and your Committee desires to express most grateful appreciation for the splendid and loving support which has been given to this work, not only financially, but also the faithful, efficient, and earnest efforts of the regular assistants and local representatives to keep the newspaper editors supplied with information respecting our Cause and its revered Leader.

Total number of newspapers, etc., containing marked articles distributed by your Committee during the year 1906, 65,286; number of letters and telegrams received, 1,308; number of letters and telegrams sent out, 2,689; number of corrections and miscellaneous contributions sent to newspapers and other periodicals, 653; number of contributions published, 226; number of calls made upon editors and others in connection with this work, 224.

Chicago, Ill., Jan. 22, 1907.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—You have "gentled" out the recent criticisms and misrepresentations with a patience and love that give "peace, be still," a new meaning. Your soft answer has turned the wrath of man, making it to praise God. I am grateful beyond expression for your example of patient waiting until the storm is dead. I have learned again the fact that storms do die. You have again directed the thought of the world to the humility of Jesus and shown us its deep lessons. While studying these lessons I worked out the enclosed article on "Humility," which I thought you might care to read. Thanking you again and again for the benefits I have gained from your work and your example, I am

Yours in truth and love,

JOHN E. FELLERS.

[Mr. Fellers' article, referred to above, will be found on page 451 of this issue.—EDITOR.]

THE LECTURES.

FARGO, N. DAK.

Judge William G. Ewing lectured on Christian Science at the Fargo Opera House Jan. 8. He was introduced by Hon. George E. Perley, who said:

In these days of startling innovations, of rapid and wonderful progress in science, art, invention, and discovery, when thought is in a state of upheaval and transition, when old theories, beliefs, and creeds, accepted for centuries perhaps, are being examined and tested, perhaps disproved and thrown aside; when men are sometimes wildly asking what are the fundamentals of religious belief; there has flashed across the sky a seemingly strange and unheard-of doctrine, which asserts among other things, that our God is one who not only pardons our iniquities, but heals our diseases. There is nothing strange or new about this to any one who has studied the Bible at all, for it was freely asserted and practised by Jesus, and after him by his disciples; it was known and practised in the early Church, and the prophets and poets of the old dispensation evidently well understood it. But the power to heal the sick having departed, mankind has assumed for centuries that it was of a transitory nature only, given for a special purpose, to fix the attention of men on Jesus as the Messiah, and as a proof of his divine mission, and to bring his message to the world, though it was itself no part of that message. We shall have to give up, we are giving up, that theory as illogical, unreasonable, and plainly contrary to demonstrated facts, for the world is too full of undisputed evidence to the contrary. For my part, I regret most of all that this blessed truth could not have been given to the world through the Church universal, that it was found necessary to organize in a little corner of the earth the Christian Science Church to promulgate this glorious fact. What rancor and bitterness and ridicule and unkind words and thoughts might have been spared, if Christianity had only understood its heritage.

I speak to-night not as a Scientist, but rather as a member of an orthodox church; I speak as a believer in Truth and a friend of Truth, and I ask myself and you what should be my attitude and yours toward this new religion which has to a considerable degree turned the world upside down. That it is contrary to my previous habit of mind is not decisive, for I may be wrong. It is surely only sane and fair for me to apply two practical tests to this or any other doctrine seeking recognition. First, What kind of spirit do its devotees possess? Second, What are the results of the movement? I find here first, a body of men and women rather remarkably healthy and happy; many of them say they were great sufferers from physical disease and have been cured by divine Love, and so far as my knowledge and investigation go, I find they tell the truth; they look on the bright side of life, and they seem to make realization of the Divine immanence a part of their daily experience, even in very small matters. They talk about God, not irreverently, but still with an attitude of mind far removed from awe; their practical faith in His promises almost takes away my breath; they seem to possess in an unusual degree those Christian graces which St. Paul talks so much about,—meekness, gentleness, self-restraint, faith, hope, and love; not depreciating the joys of heaven to the soul after death, they still look for heaven here and now; they are good neighbors and friends, and make the world better for having lived in it.

What about the results of such living? Why, to ask the question is to answer it. The natural, inevitable tendency of such a spirit is manward and Godward, is upward and onward, for better men and women, better government, better social conditions. Then why seek to oppose such a faith, whose works are only for the good of mankind? Rather let us say, Here's my hand and my heart for all the good we can do in the world.

Correspondence.

POLO, ILL.

Thursday night, Jan. 17, Bicknell Young delivered a lecture to an appreciative audience at the Opera House. He was introduced by M. M. Trumbaur, a banker of Polo, who said in part:—

During the last two decades many of our most faithful and intelligent church workers have severed old and cherished ties in order to cast their lot with that earnest band whose views are under consideration to-night. When we think of the various interests affected by this movement, we need not be surprised that it has called out some opposition; but let us hope that a better day is dawning, and that the time is at hand when no sincere follower of Christ, no child of God who constantly and prayerfully studies His Word for light and guidance, shall meet with the ridicule and censure which have so often been the portion of Christian Scientists.

Many of us who have seen the measure of their unselfish work have been forced to admit that we might do well to emulate their zeal and faithfulness, their constant striving to overcome sin and alleviate distress, and their daily endeavor to fulfil a solemn pledge, "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497). Is it to be wondered at that fair-minded people ask, For which of these works do men stone them? True, many of us differ with them in point of belief, but should not these minor questions of opinion be disregarded, when we remember that the great vital essentials are held and practised by us all?

We are pointed by the Revelator to the twelve pearly gates of the golden city, flinging out, as it were, to the four corners of the earth a blessed invitation to that "multitude, which no man could number," many of whom seem to be journeying by paths widely separated, but who, along these converging lines, shall at last be joined together in one "innumerable company" around the throne. As we think of these things may the spirit of heaven's own broadness descend upon us, and may we approach this hour with friendly hearts and open minds, while an able member of the Christian Science Board of Lectureship, Bicknell Young, shall address us.

Correspondence.

CLEVELAND, O.

Rev. Arthur Reeves Vosburgh delivered a lecture at Gray's Armory yesterday afternoon [Jan. 27] to a large audience. Mr. Vosburgh said in part,—

When such a movement as Christian Science should come into the world it was inevitable that there should be a divinely ordained one to reveal and lead the way; and because it is inevitable that the knowledge which is divine power shall come in gentleness, beauty, purity, and light, it was in the native order of the divine fitness of things that this one should be a woman. It is a matter of common knowledge that Mary Baker Eddy is the Discoverer of Christian Science, and that this discovery came about through her own healing—a healing that came through the touch of Divine power, when human resources could offer neither help nor hope.—*Cleveland Plain Dealer.*

Every follower of Christ must represent his religion purely, loftily, impressively, before that multitude of Bible readers whose only Bible is the Christian.

T. L. CUYLER.

TESTIMONIES OF HEALING.

About three years ago I was led to investigate the teachings of Christian Science. As at the close of day a child weary of play discards its toys, and turning from them stretches forth its arms towards a loving parent, to be eagerly enfolded in her tender embrace and soothed to rest, so did I, a child of larger growth, forsake that which had hitherto seemed so pleasure-giving, so attractive, so alluring; and failing to find in human love that for which I craved, I turned with arms outstretched to my heavenly "Father-Mother God," yearning to be but understood and loved. Completely heart-broken and heavily laden, as it seemed, I went to Him who is always saying, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." It was at this time, when existence seemed unendurable, while vainly seeking among the hideous jumble of entangled thoughts to find some sort of solution to the apparently unsolvable problem of mortal existence, its mysteries, the undefinableness of everything, visible or otherwise, that a prayer escaped me for deliverance from it all. To whom or what I prayed I knew not, for what God was, or my relationship to Him, I had no idea—that was part of the mystery. Still I prayed, trusting that from some unknown source a response might return; wondering indeed if the prayers of the unrighteous were of any avail, or ever reached their destination, which one might sometimes be inclined to doubt. Thus I continued, wrestling with conflicting feelings and emotions, knowing no way out of the turmoil, seeing no light in the darkness, feeling only too conscious of my incapacity to cope with the unseen enemy, this power seemingly so destructive to my happiness. In doubt, perplexity, and a state of mind so completely wretched, I was only too willing to try anything which might be likely to prove effectual in bringing about a more happy condition of thought, explain away my doubts, and solve the problems which seemed for so long to have baffled the efforts of all seekers after truth.

At this point Christian Science was brought to my notice, and at the request of a student of this Science I turned my thought in this direction and read a copy of "Science and Health with Key to the Scriptures" which was loaned me. This wonderful book, together with other Christian Science literature, and the Bible, I have been studying ever since. I never have doubted that this was the divine truth I had been seeking, which had come to me in the hour of my greatest need, in answer to my prayer, and if ever I doubted the efficacy of prayer before, I have never done so since. With the new understanding that has come to me through Christian Science, of what prayer really is, and does for one, I begin to know and realize what it means to pray aright, and "with signs following" to demonstrate, in however small a scale or humble a way, the power of Truth and Love to remove every form of error that would obstruct and impede one's progress and access to God. One learns, too, how through this right method of prayer it is possible to "pray without ceasing." Here truly I found direction, and a means by which to extricate myself and others from all difficulties, mental, moral, or physical, —an exit, not through death, but through Life and a right understanding of God. It is for the knowledge and understanding that have come to me through the study of this text-book, for a renewed desire once again to open the Bible, which hitherto had seemed inexplicable and full of contradictions, but which I now read with fresh interest and purpose, and above and beyond all for the spiritual uplifting that has come to me through the inspired pages of Mrs. Eddy's works, that I wish to express my heartfelt thanks, that it has led me to speak of how I sought the truth and to tell others where to find it. Tired and weary, I reached forth to Him who, being the all-knowing, all-hearing Mind, seeth the needs of His children and in due season supplieth them. When all else failed, I was led to realize the allness of His presence, and to know that the arms of everlasting Love are around me, protecting and shielding from all harm. "The eternal God is thy refuge, and underneath are the everlasting arms: and he shall thrust out the enemy from before thee; and shall say, Destroy them;" so, when sad thoughts tempt me, I turn afresh to Him who wipes away "all tears" from our eyes, knowing the time cometh and is now being ushered in when "there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

Words being inadequate by which to express my love and gratitude to our beloved Leader for the good that has come to me through this wonderful revelation of Truth, it will be my earnest, prayerful desire to become more filled with Truth and Love, and so be able to demonstrate by deeds, by leading a consistent life, all that which I know to be true. I have but just started, and I have stumbled oft, but with renewed strength I press forward, and hope some day to become more worthy to be called a Christian Scientist.—DOROTHY ESCOMBE, London, England.

Thirty-three years ago, while teaching vocal music, I was supposed to have overworked the vocal organs, and by taking cold I contracted a throat trouble, culminating in an abnormal growth which at one time so obstructed the throat that I was unable to swallow food. I had medical treatment, but received little or no benefit. While a soldier in the Civil War I had also contracted stomach and bowel troubles, for which I consulted several doctors, but the medicine I took had no effect. When I was examined for a pension the doctors discovered that I had heart trouble, besides rheumatic trouble. I then moved to South Bend, Ind., where for one year I doctored with three different physicians, one of them, who was a throat specialist, advising me to go to a different climate; but I grew worse right along.

In this extremity I was advised by a neighbor to try Christian Science, and in January, 1899, I went to see a practitioner, and took my first treatment. I felt the good effects before I left the house, and from that day I could eat anything I wished with no bad results. At the end of the week the practitioner suspended treatment, advising me to help myself by reading the Christian Science text-book. During this first week I was enabled to walk about five miles in the country, in deep snow, running the last mile and a half to catch a train, whereas previous to this I could not walk as many blocks without the greatest difficulty. At the end of six weeks my throat was healed in a most peculiar manner. It was in the nature of a surgical operation, performed by the power of Truth. One morning, after having felt more discomfort than usual, I felt impelled to clear my throat, and what seemed a piece of solid matter was expelled with great force, but painlessly. Thus an obstruction of over thirty-three years' standing was completely removed, and I can now sing as if I had never had any trouble with my throat. My eyesight, which had become very dim, was restored the first day so that I could see to read the finest print. I have also been entirely freed from the catarrhal trouble. The healing seemed to manifest itself all at once by a clearing and expulsion that was very marked, and there was no return of the trouble. Later on I took a few treatments from time to time, until I was perfectly well. I gained in flesh so that I weighed more than ever before, and am now robust and hearty, and able to do the heaviest kind of labor.

With my healing there came such a wave of gratitude, and a longing to give to others "the true Light, which lighteth every man that cometh into the world," that I cannot express it in words. It is my whole desire to spread the gospel of Truth, and to show in works as well as in

Digitized by Google

words the gratitude I have to God, and to our revered Leader, for the means that have brought Christian Science to me.—NATHANIEL SHAFFSTALL, Mishawaka, Ind.

My gratitude for Christian Science cannot be expressed in words. From childhood I had a disease which was said to be hereditary. All was done for me that could be done by *materia medica*, but I was not healed until six years ago, and then it was by Christian Science. I was also healed of catarrhal and female trouble, and of a fever. I had had five different physicians. The last one employed said that an operation was needed, but I have been healed of all those diseases through Christian Science, for which I am thankful to God, and to Mrs. Eddy, our beloved Leader.

MRS. HARRIETT M. PRINCLER, Greensburg, Pa.

It has long been in my thought to say a word of gratitude for what Christian Science has done for me. For three years I was an invalid, afflicted with what my family physician and three specialists diagnosed as a severe case of throat, lung, and stomach trouble. I had undergone an operation for catarrhal trouble in a severe form, and my throat was in a very bad condition. I could neither sleep nor eat without terrible suffering. Every doctor whom I consulted would give me the same answer,—that he could not cure me, but only help me temporarily. When I had given up in despair, a very dear friend, on hearing of my condition, asked me to try Christian Science, as she had been healed by it of a severe ailment. I decided that if she had been healed there might be a chance for me, and my husband took me to a practitioner. After the first treatment I was able to eat a hearty dinner of solid food, and never felt the least discomfort from so doing. I went home feeling like a new creature. I continued the treatment for three weeks, and was entirely healed,—a well woman!

It is now over five years since I was healed and I can say there is not a single trace of the old disease. Since I was healed I have had many experiences, both for myself and in my family, which have proved the power of Truth. I can now do all the work for a family of six. I wish to express my gratitude to our dear Leader for the good she has done, not only to me and mine but to all mankind. I am still more grateful for the spiritual uplifting, and the understanding of how to live aright, than even for the bodily healing. Each demonstration, whether over sin or disease, brings a sweet sense of divine Love. I am thankful for Science and Health and for the periodicals, through which our Leader has given this truth to the world, that all may follow more closely in the footsteps of the Master.

MRS. MAGGIE N. BOYER, Pass Christian, Miss.

In March, 1900, when all medical help had failed and the last doctor had left me, having done all he could to relieve my suffering, I came to Christian Science for help. From infancy I had had constant stomach trouble, and as I grew older it continued, in spite of my being under a doctor's care the most of the time. At twenty I was practically an invalid, suffering from heart and spinal trouble, in addition to the other. The pain was so intense at times that I was delirious, but the doctors were powerless to help me. I was sent to California, to see if a change of climate would be of any benefit, but after spending a year and a half there, I returned to Brandon, if anything worse. During the time I was in California I consulted three doctors, who all said they could give me no hope of ever being well. About this time some one sent us some Christian Science literature, including a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. After reading this for some time, I decided to take treatment. I was treated at first for eleven weeks, and after that for a week or two at various times for three years, when all the old troubles had entirely disappeared and I was perfectly well. I am now able to do my part in the housework, and feel so glad that I can be of some use. The first two weeks' treatment in Christian Science brought me out of bed and I was able to eat what I wanted and could walk around. Before taking treatment I had been too weak to walk and had to be carried when I was able to be up at all. Words can never express my gratitude for all Christian Science has done for me and for our family. I shall never forget the kindness and patience shown to me when I applied for help, and will endeavor to show my thankfulness by trying to live the truth as we are taught it in Christian Science.

ISABEL MAY WALKER, Brandon, Canada.

After several years of suffering with throat and lung trouble, which was pronounced serious by physicians, and after using all the material remedies offered to me by them and by friends, I was told that it was necessary to have a change of climate. I was then located in Indiana, but I sacrificed my business and everything, and went to Phoenix, Arizona, for my health. We rented a house from people who were Christian Scientists, and after a short acquaintance they began to supply us with Science literature; then we were invited to attend the church services, which we did gladly. After a short investigation of Christian Science, I concluded to first try it for the tobacco habit. I had been an inveterate user of the weed for about eighteen years, and had tried to give it up several times, but without success. I took three treatments from a practitioner, which not only cured me of this habit, but also cured me of my throat and lung trouble. This was about three years ago, and I have never had any return of it. I have gained about thirty-five pounds in weight. I also wish to state that my wife was cured of serious ailments, after having failed to find relief through material means, including several operations. My sense of gratitude goes out to God, and to our Leader, Mrs. Eddy, through whose discovery and teaching this great blessing has come to us. I wish to show how grateful I am by trying to live the teachings of Christ Jesus, as made practical in Christian Science.

E. ARONSTEIN, Fort Worth, Tex.

Nov. 5, 1888, was a memorable day in my experience, for it was at that time that I found God, Life, and health and peace. Previous to that time I had for nearly twenty-five years been a partial invalid,—for months at a time confined to my bed, then for weeks a struggle against weakness,—and during the entire period I was able to perform only the lightest household duties. I will here state that early in my life a great sorrow had come to me, and its pall had shadowed and darkened my otherwise sunny nature and happy home. At the beginning of my illness the physician who was summoned was a dear friend of the family, and I feel sure he did all he could to cure me. According to his diagnosis mine was a case of extreme prostration of the nervous system, and one day when he left the house he told a friend that I would not be alive in half an hour. In a few days, however, I grew stronger, and four months after he was first called I was able to leave my bed and walk about the room. During the summer this kind physician died, and my hope of ever regaining my health died also. Another doctor was called, who attended me for more than a year, but as there was little or no improvement he gave up the case as hopeless.

About this time my beloved father died, after a brief illness. I was a member of an orthodox church at this time, and its creed taught me that this dear father, loving and beloved, an honorable citizen, a kind neighbor, and a faithful friend, was banished forever from the presence of God; that he was beyond hope because he had never

Digitized by Google

made a public profession of religion or subscribed to the creed of any church. I was prostrated with grief, and in my sorrow and physical suffering I often prayed most earnestly that I, too, might go to be with him, and at least share his lonely banishment from hope and God. As the years passed slowly by, ministers of my chosen church exhorted me to be patient under these afflictions, because God had sent them to me for a wise purpose. Outwardly I tried to be calm, but inwardly I rebelled, and could not see in these things either love or justice. As time went on, one physician after another was called, no two agreeing as to the nature or location of the disease. One called it a form of lung trouble, with heart complications, and remedies were used which only added to my suffering and brought neither health nor hope of recovery. Failing to effect a cure, this physician also abandoned the case as altogether hopeless. As the need seemed great, another doctor was called, and after a careful examination he said the whole cause of the difficulty was spinal, and I was subjected to added torture, but without its affording any permanent relief.

Nearly twenty-five years had now passed in the vain effort to regain my health, and all hope had fled. Nine different physicians had attended me, and for their care and kindness I have always been sincerely grateful; much money had been spent, but the conditions were continually growing more and more hopeless. I was at this time advised to go to Colorado. The change seemed to benefit me for a while, but the old conditions returned, with most distressing complications. I had abandoned all hope of ever being any better, and often prayed for death, feeling that it would afford the only relief. In this condition Christian Science found me. The practitioner to whom I applied told me that God never sends sickness, and explained the relation of mental conditions to the physical. This thought was new to me, and I began to wonder if my mental state could account for all this bodily suffering. The practitioner also assured me that no one is or can be finally lost; that there is still an opportunity to gain heaven beyond the grave, just the same as there is here; that God is Love, always. This was a revelation. Could it be really true? A new world had opened up before me. I had found God, a God of Love. He was near, He was present, and I was His child, inseparably His. So were all the dear ones who had gone before. My whole thought of earthly existence and heaven and God was changed; God had become to me a real, living presence. How my heart melted with a deep, abiding, indescribable sense of love to the God I had not before understood. I was healed,—made every whit whole.

More than sixteen years have passed since that time, and the old conditions of pain and suffering have never returned. From that moment and forever my whole life and energies have been and shall be devoted to the work of trying to point out to others the wonderful healing truth which makes free, and the Love that has nothing unlike Himself to send His child. It has been my happy privilege to be able to help others, and I have witnessed the illusions of disease and sin in their myriad forms flee before the light of Life and Truth and Love.

I herewith express my heartfelt gratitude to God, and to Mrs. Eddy, His approved messenger to this age, through whom has been so clearly revealed to mortals this living truth that heals and blesses and saves.

MRS. LOVINA S. CARPENTER, Glenwood Springs, Col.

I desire to tell of the great benefit I have received from Christian Science. For many months I had suffered with rheumatic trouble, and for ten months was unable to do a day's work. Almost everything I could hear of in the medical line had been tried, but it was of no avail. At last I was advised to try Christian Science, and thanks to the kind help given me, and the reading of Science and Health, I am now able to work as before. I am pleased to have others know of the great truth of Science, and the benefit to be derived therefrom.

CHARLES ENGLER, West Jordan, Utah.

Prior to last August I knew little or nothing about Christian Science. At that time I had for many months been suffering from serious stomach troubles. This brought on nervous ailments and day by day I was getting in a more serious condition. It was almost impossible for me to eat or sleep, and I was living mostly on stimulants. The medicine given me by doctors only seemed to increase my misery; many nights I walked the streets, being unable to sleep or to be confined in a room. My business took me to New York, and while there, by chance as it seemed, I called on a friend who is a Scientist. When my friend saw my condition she told me about Christian Science. I called again, and she persuaded me to attend service with her on the following day. This was a trying ordeal in my nervous condition, but I was benefited by the service for I was able to sleep that night. The next day I went to a practitioner, and in three or four treatments I was perfectly cured of all my stomach and nervous troubles, and also completely healed of double hernia of fifteen years' standing. For these demonstrations of healing I thank God, and I shall always be thankful to our dear Leader, Mrs. Eddy, for bringing to light this wonderful truth.—F. J. CHAPMAN, Atlanta, Ga.

For fifteen years I had been a sufferer from what the specialists called a serious throat trouble, which was growing worse as the years went by. I had spent a small fortune on operations, etc., until a famous specialist told me to waste no more money on medical treatment, as the only relief that could come to me would be from complete rest during the attacks. As I was solely dependent on my voice for my livelihood, the outlook seemed very dreadful to me. When Christian Science found me I was sick with discouragement and fear. I shall never forget my first visit to a Christian Science practitioner, and especially her reading and explanation of the 91st Psalm. Never had I heard anything so beautiful, and I left after my first treatment with a great sense of peace and joy.

For years my first thought in the morning had been anxiety as to the condition of my throat, and I continued in this fear until I learned from our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, that Mind is the source of all action; then the awful fear left me and I was thoroughly healed, not only of the throat trouble, but also of other ailments from which I had suffered since childhood. For the past four years we have not used any material remedies in our family. My son was kicked in the abdomen by a horse one afternoon, but was able to go fishing the next morning, and later was healed of a well-developed attack of lung trouble in one night, going to school as usual the next morning. One day my face and arms were scalded with boiling water, and the healing was almost instantaneous. I was able to go out within an hour with scarcely a mark on my face.

I cannot express my gratitude to God, and to our dear Leader, who has taught us how to demonstrate this wonderful healing truth. I am most grateful for the understanding of how to uncover error in my own con-

Digitized by Google

sciousness and cast it out, knowing that God alone does heal us of all our sickness and sin.

ADA PALMER WALKER-HUBERT, Bellingham, Wash.

[Translated from the German.]

As I had been ill for several years, I decided two years ago to consult a physician, who diagnosed the case as kidney and liver trouble. I was also suffering from a weak heart. Although I followed his advice faithfully, yet I found no relief. Then I heard of Christian Science through a friend who had been healed of a severe trouble, whereupon I attended the meetings and took treatment. After the first I felt a sense of relief, and in four treatments I was completely healed and began to be a different woman. I have also been healed of throat trouble. I cannot thank God enough, and our Leader, Mrs. Eddy, who has brought us into the path of Truth.

FRAU AUGUSTA BOEHME, geb. Wittenberg, Berlin, Ger.

Sitting in my room watching the beautiful sunset, I cannot help feeling grateful to God, and to our Leader for Christian Science. It found me, about ten years ago, in a very nervous condition. I could go nowhere alone, and was watched night and day for fear that I might harm myself. Some friends advised Christian Science, and I tried it. It seemed as though the dear practitioner must have had quite a struggle with my case, but never did she falter. Lovingly she helped me to see that God, good, is the only power, and an ever-present help in time of need. My earnest desire is to live nearer to God every day, that I may be able to do His work when I am called upon. I wish to express my love and gratitude to Mrs. Eddy for her loving labors in giving this truth to the world.—E. E. DAVISON, Cambridge, Mass.

During the summer of 1897, while in the country, I injured my finger severely. I retired early that night, but could not sleep as the finger and indeed the whole arm became very painful. A piece of wood was so firmly embedded in the flesh that I could not get it out. Just then a neighbor passed my window, and seeing the light spoke to me. I told her of my trouble, and she said she would help me. I think she had scarcely reached her room before the splinter was out of my finger. I went to bed and slept all night. The following day I was told not to look at the finger, and I did not—I had forgotten all about it. About eight o'clock the next evening I was filled with astonishment and awe to see that every trace of the injury was gone. Another time, during the same year, I injured another finger severely. I bound it up, and asked for help, as it seemed quite painful. In less than an hour afterwards I found that the healing had already taken place. These demonstrations were made by one who was earnestly studying Science and Health by Mrs. Eddy. I could never tell one half of what this truth has been to me. I only wish every one would try it.

ANNIE DANKS, San Diego, Cal.

Sixteen years ago I became interested in Christian Science through the healing of my mother. I did not, however, wish to place my confidence in any religion too soon, lest I might find it lacking and make a shipwreck of my faith, so I first studied the New Testament and then Science and Health, and became sure that no logic could disprove them. They bring that peace which passes understanding and that sense of God, good, which feeds "the famished affections" (Science and Health, p. 17). This truth immediately became of help to me in every branch of my business affairs, and gained me the first word of commendation from my employers. Later I was taken with a serious form of lung trouble, and for seven days was without food and for the most part unconscious, but at the end of that time the healing was truly wonderful. I have valued this experience, as it taught me many things. We all may learn from our struggles as well as from our victories, but if we have no battles we shall have no victories. Experience teaches us the mental process by which we become sick or sinful, and also how to guard against these thoughts and become well and happy, thus proving Christian Science an exact science. It has healed thousands, and prevented even more disease than it has healed. Paul tells us, "Prove all things; hold fast that which is good," and blessed is he who through the knowledge gained from Mrs. Eddy's teaching rejects evil without trying it at all. She has proved to us the value of man's long-forgotten inheritance, and God has blessed her for so doing.

CORNELIUS J. RANNEY, Cleveland, O.

At one time I was greatly prejudiced against Christian Science; in fact, I was so stubborn that I would not give it a thorough investigation, although I had ample opportunity to do so; but when sickness and disease had seemingly destroyed my once rugged constitution, and when I had been confined to the bed for over three months, racked with such pain and suffering that many times I longed to die, then I was ready to accept Christian Science. I had prayed, or tried to pray, for health and strength, if only to be spared to take care of my family, for I had read in the Word of God that what we ask, believing, we shall receive; but I denied my own faith in the power of God to heal the sick, by employing physicians and using remedies prepared by mortal man. Finally the doctors said they could do no more for me, and I came home none the better for all their skill. It was then I turned to Christian Science as a last resort, and thereby I have found the true and living God. I know He has done for me what mortal man failed to do and could not do. I praise His holy name for what He has done for me, and I wish to add my heartfelt gratitude to Mrs. Eddy, the one who has been the Wayshower in this age to the true God.

RAY D. BATES, Sedro-Woolley, Wash.

[Written for the *Sentinel*.]

"THY WILL, NOT MINE."

W. PETCH.

IN Thy pure sight, O wondrous eyes of God,
Naught but the perfect thought is ever seen;
For every serpent-fear, behold, a rod!
On which the erring human sense may lean.

No life have I, but consciousness of Thee,—
Of deathless Love that ever must increase;
No time I count, for present and to be
But blend into one perfect day of peace!

No work I do, but all that's done is Thine;
No love I give, but first 'twas given to me;
No strength I lack, for I find strength divine
And rest in every step I take with Thee!

So may I learn to know each thought aright,
As God—our Mother—gives them radiant birth,
Till Life stills death, till day outshines the night
And Love interprets heaven to all the earth!

FROM OUR EXCHANGES.

[Amory H. Bradford in *The New York Observer.*]

At a conference between English laborers and English clergymen, the spokesman of the laborers said: "The clergy are honest and hard working on their own lines, but we want them to take a new line. We are in the presence of a social breakdown, and I say that as matters stand, for practical purposes to me and my duty in everyday life, the bulk of the clergy of all denominations are of the least possible use in the world to me and mine." Thoughtful artisans are more concerned with social than with metaphysical problems. They do not believe in any religion which does not aim at the betterment of the present conditions of wage-earners. The wails of their fellows ring in their ears. The cry of to-day drowns all voices that speak of to-morrow. The present hell gives no promise of a future heaven. "What will make life worth living for us?" A rational answer to that question thoughtful men will go anywhere to hear. The churches have that answer in the teachings of Jesus, and they should give it clearly and without fear or favor.

[William Jennings Bryan in *The Commoner.*]

Christ has given us a platform more fundamental than any political party has ever written. We are interested in platforms; we attend conventions, sometimes traveling long distances; we have wordy wars over the phraseology of various planks and then we wage earnest campaigns to secure the endorsement of these platforms at the polls. But the platform given to the world by the Nazarene is more far-reaching and more comprehensive than any platform ever written by the convention of any party in any country. When he condensed into one commandment those of the ten which relate to man's duty toward his fellows, and enjoined upon us the rule, Thou shalt love thy neighbor as thyself, he presented a plan for the solution of all the problems that now vex society or may hereafter arise. Other remedies may palliate or postpone the day of settlement, but this is all-sufficient and the reconciliation which it effects is a permanent one.

[*The Universalist Leader.*]

There is nothing better for a man in the midst of the storm and stress of life than to once again reconquer for himself and the world the old, fine faith in the captain of our salvation which, as often as it revives in man, brings with it a glimpse of all that lies ahead of us in that history which has for its problem the realization in all of what was a sublime fact in one man's soul. For it is the true Christian faith that what God is doing with each one of us is leading us by paths, however smooth or rough, to that consciousness of himself and His love which in Jesus is the light of the world.

[*The Examiner.*]

The man who strives to pattern his life after the life of Jesus will often find himself in antagonism to the ways of the world. The customs of society, the methods of conducting business, the moral standards of living will not infrequently, like Apollyon in the Valley of Humiliation, "straddle quite across the whole breadth of the way," and demand a fight for free passage. But such a man will have the inexpressible joy of an approving conscience, and, if he persevere, will come off "more than conqueror" at last.

[*The Congregationalist.*]

Moral standards are constantly changing. But the motive which God and man's conscience approves abides forever the same. And where love is the ruling motive the moral standards of each age will be higher than those of the age before it.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science.* These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By Prof. Hermann S. Hering. 29 pages

MR. KIMBALL'S LECTURE. 31 pages.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Active and extensive work of preparation is being done by the Committee of Arangements for the National Peace Congress to be held in New York in April, which will be the greatest national demonstration in behalf of international arbitration and peace which this country has ever seen. Two national arbitration conferences have already been held, both of them in Washington, the first in April, 1896, and the second in January, 1904. The coming Congress will be wider in scope than either of these and will include in its program not only arbitration, but most or all the great subjects with which the international peace movement deals. The purpose of the New York Congress is to promote the development and expression of American public sentiment in support of the subjects which have been suggested for the program of the second Hague Conference.

The committee of the thirty-five insurance companies which acted in unison in settling their San Francisco losses by fire and earthquake, has made public the list of the net losses by the disaster. The estimated sound value of the destroyed or damaged property insured by two hundred and thirty-three companies in San Francisco was $315,000,000, on which there was a net insurance loss of $180,000,000, covered by one hundred and two thousand policies. The gross loss of all kinds by the disaster is estimated by the committee at $1,000,000,000. The thirty-five companies in their settlements handled forty-two thousand and seventy-seven claims.

It is probable that the appropriations of this session of Congress will exceed by $100,000,000 the appropriations of any other Congress in the history of the country. The expenditures have now grown until, if they are as large next year as this, a "two billion dollar Congress" will be at hand. Scarcely an appropriation bill has been passed by the House that has not exceeded in amount any bill of a similar nature ever passed by that body. In addition the members have voted an increase in their salaries of fifty per cent, have passed a big river and harbor bill, have added $15,000,000 to the annual pension roll, and have authorized $200,000,000 worth of battleships.

The Federal Grand Jury at New York has indicted the Great Northern Railway Company on a charge of violating the Elkins Act by paying rebates to the traffic agent of the American Sugar Refining Company. There are two counts, alleging the payment in all of $14,599 in May and June, 1905.

The House Committee on Interstate and Foreign Commerce for the lighthouse establishment has reported a bill aggregating $1,640,000.

Foreign.

Bolivia recommends that the seventeen republics of Latin America should combine for defensive purposes. This recommendation is said to have found favor with the Mexican Government. It is estimated that, should such an alliance be arranged, the combined fleets of the four nations with the largest naval equipment would furnish an armada of more than two hundred vessels, with approximately fifteen hundred cannon. Added to this would be the fleets of the other thirteen republics, the whole making an efficient fighting force. Brazil, by 1909, will have eighty-six vessels with a total displacement of 110,479 tons, while her present strength is only fifty-five vessels, with a total displacement of 38,161 tons. Peru is preparing six fighting vessels of 18,250 tons displacement, with one hundred and twenty pieces of artillery. Chile now has thirty-seven vessels, with a displacement of 60,389 tons and four hundred and twenty-two pieces of artillery; Argentine has forty-one vessels, with a displacement of 77,657 tons and five hundred and forty-four firing-pieces.

News from Sven Anders Hedin, the Swedish traveler, who last year started from Chinese Turkestan on a journey of exploration to Tibet, has reached Calcutta. When he sent off his courier Hedin had already explored eight hundred and forty miles of unknown country, and said he hoped to reach the monastic city of Shigatse, one hundred and thirty miles from Lhasa, at the end of February. The geographical and geodetic results of the expedition are already exceptionally rich. He discovered many unknown mountain ranges, rivers, and gold-fields, and traveled eighty-four days in the solitude of an arctic winter, not meeting a single Tibetan. "The journey," he says, "is the most wonderful I have made in Asia in my twenty-two years of travels."

A hitherto unknown portrait of Shakespeare has been discovered in a village inn at Winston, near Darlington, England. It is a panel portrait, framed in oak, representing the poet when he was about twenty-eight years old. Two sisters of the inn-keeper, who is named Ludgate, say the portrait has been in possession of their family hundreds of years, for which alone it was valued. An art lover advised Ludgate to have it valued. It was sent to Christie of London, who declared that it was the earliest portrait of Shakespeare extant. It is said that he estimates its value at about $20,000.

The Secretary of the Public Health Committee of London says that the total amount of foodstuffs that reach London yearly is between 2,500,000 and 3,000,000 tons, of which rather more than two-thirds arrives by water and less than one-third by rail. Three-fifths of the whole quantity is consumed by the Londoners, the remainder merely passing through in the course of transit elsewhere. The shipments include 1,000,000 tons of meat, fish, milk, butter, eggs, lard, etc.; 500,000 tons of fruit and vegetables, including sugar and preserved fruits, and 1,400,000 tons of grain and flour.

The Italian Government issued instructions that the directors of all schools explain to their students on Washington's Birthday the meaning and importance of the celebration of this day in the United States. The instructions close with these words: "All civilized countries must aspire to peace as their supreme aim."

The first overland mail from Berlin to the Far East since the outbreak of the war between Japan and Russia left Berlin Feb. 15, *via* Vladivostock for Shanghai, which city is expected to be reached in twenty-one days.

Industrial and Commercial.

The ice harvest in Maine, which is practically completed, amounts to about 650,000 tons. About 400,000 tons was taken from the Kennebec River and 92,000 from the Penobscot River. The remainder was from ponds near shipping points. The total is about twice as large as the average amount cut in the past six or seven years. The average cut on the Kennebec River has been 200,000 tons. When the ice was gathered by local concerns the houses often were filled to their capacity, which was 1,000,000 tons. Since then a number of the buildings have been burned, so that the present capacity on the Kennebec River is about 500,000 tons.

An enterprise is about to be started on the westward side of Curtis Bay, near Baltimore, Md., which proposes to convert Texas crude petroleum into asphalt products. The plant occupies about twelve acres, on which have been constructed a number of storage tanks to take care of the oil, which will come by tank steamers. The company is to manufacture paving blocks, asphalt, water tubing, electrical insulation, roofing and felts, rubber paints, varnishes, and a variety of other products.

An advance in wages, effective March 1, that will directly affect twenty-one thousand men and mean the paying out annually in the Connellsville (Pa.) region of nearly $1,500,000 more than hitherto, has been announced by the H. C. Frick Coke Company. The advance will, it is said, be followed by every other coke company in the Connellsville, Lower Connellsville, and Greensburg regions, and over sixty thousand workmen will be benefited.

Articles have been filed with the Secretary of State of New Jersey incorporating the Mexican Petroleum Company, the object of which is to develop oil fields in Mexico. The authorized capital is $50,000,000.

General.

Inspector Lefebre of the Egyptian Department of Antiquities has unearthed a large number of leaves of papyrus of the Codex Menander, containing over twelve hundred lines. The leaves are not continuous, but there are five hundred lines from each of two plays. Two more plays are represented by smaller quantities. These will enable modern scholars for the first time to form an independent judgment of the style and genius of the famous Greek comic dramatist.

As the result of her mudhook getting afoul of something at the bottom of Hampton Roads recently, a fishing schooner recovered the lost anchor and chain of the Confederate armor-clad Merrimac or Virginia, the last being the name given her by the Confederate Government and under which she fought the famous battle with the Monitor.

The Baldwin Locomotive Works is erecting at the Jamestown Exposition a building of its own, 125 x 225 feet, in which to display its product. The building will cost $100,000 and in it will be displayed a most complete and wonderful array of machinery in the motive power line.

Those who wear seal skin ought to be willing, says *Our Fourfooted Friends*, to hear that in 1896 over sixteen thousand young seals were found dead from starvation on Pribilof Islands, the mothers having been killed at sea while off searching for food for themselves and their young.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

SEEING INVISIBLE THINGS.

M. G. KAINS.

In few fields of thought does interest play so important a role in the progress of the student as in the sciences. Unless the novice possess at least an inclination to become interested, have an incipient or potential interest, as it were, such knowledge as he may acquire through association with other scientists or through compulsion will be superficial and more or less ephemeral, because to him it will lack the vital spark of interest and consequent value. With interest as the basis the student may always be on the *qui vive* to grasp some new truth, catch some new thought, see something previously invisible.

This is particularly well illustrated in the study of plants and the smaller animals such as insects. He who lacks interest may walk miles through fields abloom with flowers and dancing with animal life, but be aware of nothing save grass and such few insects as leap upon him. Even the naturalist, intent upon finding certain kinds of minute plants or animals, may become so oblivious to other kinds as to be almost if not quite unconscious of trees and even large animals. Yet his interest may be so acute and his eye so alert that he can pick out at considerable distances insects, for example, perfectly invisible to the untrained eye through their protective coloring.

This term protective coloring aptly conveys the idea that certain animals, especially insects, so closely resemble their surroundings as to be practically hidden from the untrained searcher; but in a wider sense it conveys the more important idea that the eye which glimpses them in their visible concealment is a trained eye, the ready servant of an interested thought. Nay, further, it shows that this interested thought, as a rule, already holds a more or less clear mental picture of the animal or plant, which becomes manifest the moment this mental picture is brought into the presence of the actual creature; just as a person having a photograph of one he has never seen recognizes the original at sight. The mental picture need not, however, be very definitely outlined in the student's thought. Indeed it is self-evident that such cannot always be the case. No human being knows it all. The essentials are that the student be interested and have an open thought unhampered by preconceived notions, especially those due to erroneous training, so as to be alert to grasp, relate, and translate mental impressions, in order to advance from the known and proved to the unknown. It was such openness of thought that led Newton to the discovery of the law of gravitation, which led Adams in England and Leverrier in France simultaneously but independently to proclaim the existence of the planet Neptune, which neither of them had seen, but which was found by astronomers who followed these scientists' directions. It is such receptivity of thought which has given to the world the vast majority of useful and interesting inventions.

Scientists, inventors, discoverers have all pursued the same thought-journey. Their interest has led them to set aside preconceived notions, accepted statements, and the declarations of skeptics, and to open their mentality to catch, ponder, and test ideas. Though their first trials may have been crude, they profited by their experience, corrected their mistakes, and at last presented the world with the finished product which, invisible to the world, had existed in thought always as a perfect idea. The presentation of such ideas to the world, however, has always demanded proof, proof; and only when there was no gainsaying the testimony has the world accepted the idea, whether expressed as a round world, an American continent, a telephone, or anything else whatsoever. Whereas, through interest, discoverers and inventors have been able to discern things totally invisible to others not similarly interested, the mass of mankind has waited in ignorance until the knowledge, system, invention, or discovery has been presented in tangible form, so that the less receptive thought could grasp and utilize it.

Just as people with untrained mental faculties fail to see protectively colored animals, many fail to grasp the realities of spiritual existence through lack of interest; "for the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead; so that they are without excuse: . . . Professing themselves to be wise, they became fools."

Both before and since the day when Paul wrote this passage to the Romans mankind has manifested the conditions described. They have been content to give tacit assent to any teaching in harmony with appearance rather than actuality, with tradition rather than fact, with superstition rather than truth, with authority rather than proof—in short, with anything and everything easier to accept than to deny and thus be forced to withstand the inertia of popular opinion. In this attitude has been exhibited the lack of interest which characterizes the ignorant, to whom only the physically tangible is real. Spiritual things, even when pointed out by the spiritually enlightened, are invisible to the unspiritually minded, because the only concepts of spiritual things which such people have formed have been after the pattern of the physical—false pictures which of course have no discernible counterpart because of their very nature, falsity. With such physical patterns in thought, these people are always calling: "Shew us the Father, and it sufficeth us." By making such demands they quite ignore or overlook the definitions, "God is Love," and "God is Spirit." No human being ever has or ever will see Love, though its manifestations are evident on all sides. Love is divine Principle, and bespeaks a quality, not an embodiment. The same is true of Spirit, which is a synonym of Love. Wherever the manifestation is, there is the active Principle which all mentally alert can see, irrespective of any physical embodiment.

Love is therefore visible to an interested thought, one alert to see what is invisible to an uninterested thinker. This interested thinker, therefore, who carries a mental picture of a perfect manifestation of Love, can see that

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

manifestation where one not so equipped can see nothing lovable. Nay, further, this recognition of the lovable reality, in spite of the unlovable appearance, nullifies and replaces the unlovable with the lovable. That these statements are true is indisputably attested by the results of Christian Science; hosts of people are living witnesses to it. A very large number of these people were not particularly lovable, humanly speaking, when they first turned to Christian Science for help. Indeed, from the basis of mere appearance they were decidedly the reverse; but Christian Science teaches us to distinguish fact from appearance, to replace the false mental picture with the true, and to make that picture so positive that it shall become more or less rapidly manifested in an improved appearance; for as a man "thinketh in his heart, so is he."

Thus these proofs that invisible things can be seen are the signs that Jesus declared would always follow, as a necessary consequence, the practice of his teachings. Any one who will strip himself of bias and with the simple honesty of a child study the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, can prove to himself and for himself, little by little, that invisible things can be seen, and seen clearly.

ENLIGHTENMENT VS. IGNORANCE.

FRANK BELL.

THERE would be less misconception of the Christian Scientist's insistence on the nothingness of all evil if it were understood as being similar to the schoolmaster's attitude toward ignorance. The schoolmaster knows that ignorance is essentially nothing,—a mere lack or negation, which disappears before knowledge,—yet he is profoundly impressed with the importance of rescuing his pupils from its direful effects. The teacher is not accused of inconsistency in devoting his time and effort almost exclusively to the work of eliminating that which he could not recognize as an entity; on the contrary, the world applauds the public educator and accords him a high position among the benefactors of the race.

Although the chief aim of the educator is the overcoming of ignorance, he really has nothing to do with ignorance itself, except constantly to know it as only a negation which wrongfully claims a place in the pupil's consciousness, distorting his concept of facts so as to make him believe the untrue to be true. This attitude of the schoolmaster toward ignorance—not ignoring it, but seeing it for what it claims to be and is not—is essential to his success. From such a view-point he sees clearly that the only remedy for ignorance is to supply the positive knowledge of which it is but the negation or supposititious lack.

A tremendous amount of human effort has been devoted to a systematic campaign against the nothingness of ignorance. Thousands of high-minded men and women have enlisted unreservedly in this cause. Private fortunes and public revenues have been appropriated to the establishment and maintenance of schools, colleges, and universities dedicated to the anti-ignorance crusade. The wonderful mechanism of printing, all the arts and sciences, as well as many other lines of human endeavor, have made common cause against the absence of knowledge; and indispensable to those engaged in all this educational effort has been the realization that despite the seeming prevalence of ignorance and its conspicuous part in the history of mankind, it is unlawful and unnecessary; that it can be blotted out; therefore, that they have a right to resist it,—to strive for and expect its ultimate annihilation.

The world unhesitatingly acknowledges its obligations to the pioneers of secular education, and to the army of men and women who have devoted themselves to the work of the schoolroom, the lecture platform, and the laboratory. One day the world will realize its great debt to that exceptional woman who has presented to humanity the text-book by means of which each individual may learn and prove for himself the nothingness of all other forms and phases of evil as well as the nothingness of ignorance; and that sin and disease will vanish from consciousness as they are stripped of their false pretenses to positive actuality and are discerned in their naked negativeness, devoid of inherent power or essential reality.

THE GOLDEN RULE.

MAUD RICHARDSON.

Therefore all things whatsoever ye would that men should do to you do ye even so to them: for this is the law and the prophets.
MATTHEW, 7:12.

ALL Christians are praying for the kingdom of heaven to come on earth, and for God's will to be done. The coming of God's kingdom and the establishment of peace on earth will appear in proportion as men keep the First Commandment and the Golden Rule.

It is doubtless unanimously believed among Christian people that the living of the First and Second Commandments would dispense with the necessity for the other eight, for it is quite impossible to conceive of any perplexities that would not be settled satisfactorily thereby. There would never be any more war, no need of lawyers, trials, juries, or prisons; there would be no strife between labor and capital; no greed or dishonesty could ever be manifested; no injustice, criticism, or revenge would ever enter into the hearts of men. In fact, the living of these two great and foremost commandments would do away with all that from which mankind now suffers.

Christian Science teaches us how to overcome evil with good, and in so doing we find that we must not allow ourselves to think or say anything of our brother except what we would be willing and glad to have him say or think of us. In this way do we learn to live the "love that takes no account of evil." The Golden Rule should be carried out in our every thought, impulse, and word; and above all others, Christian Scientists should show the world how true Christians love and live. In our business life, our home and church relationships, watchfulness and wisdom of speech should characterize us, that our brother may never be misjudged or condemned by us. Inasmuch as we all have in times past made mistakes, and have afterwards seen, repented of, and corrected them, we should give our brother credit for a kindred disposition. When we are tempted to believe that our brother is harboring any unloving thoughts of us, or any one else, we are crediting him with that which from the standpoint of Christian Science is neither true nor real. How little we may know of his temptations and struggles in overcoming sin. We can lift our own, as well as our brother's burden, only as we judge righteous judgment, and thus only will we help to bring the peace on earth and good will to men so earnestly desired by all.

In "Miscellaneous Writings" by our Leader there are three wonderful admonitive articles,—"Love your Enemies," "Judge Not," and "Taking Offense,"—which will bear frequent reading and study. If these and the Golden Rule were heeded by all Christian Scientists, in thought, word, and deed, surely the kingdom of heaven would seem much nearer each day and hour, and our individual spiritual progress would be unhampered.

THE MATERIAL COUNTERFEIT.

FRANK H. SPRAGUE.

IN the Christian Science text-book our Leader declares that "the visible universe and material man are the poor counterfeits of the invisible universe and spiritual man" (Science and Health, p. 337). It frequently happens in midsummer that very early in the morning our eyes are

Digitized by Google

greeted by the spectacle of what appear to be innumerable spider-webs scattered about over the grass. So accustomed are we to the phenomenon, that we are in the habit of alluding to it as if the delicately spun structures themselves were actually visible to the physical eye.

A proper understanding of the situation, however, makes it evident that as a matter of fact they are invisible from our distant point of view, and that the visible impression is occasioned by something quite foreign to the supposed fabric in its composition, viz., a glistening sheet of dewy vapor deposited on the surface of the underlying web, and concealing it from view. Moreover, if we survey the same scene at noonday, after the sun's rays have dissipated the moisture, the webs cannot be detected by the eye. And yet we feel just as assured that they are still there as when the sheen of the extraneous covering attracted our attention and made the objects seem conspicuous. Were we, however, to rely for proof of their presence on the testimony of the physical senses, we would have no warrant for believing them to exist. It is also worthy of remark that without the real object as a basis of manifestation, the illusive appearance would "fall to the ground" for lack of support.

From this illustration we may obtain a suggestion of the distinction, evident to the discerning thought, between the materially conceived phenomenon misnamed man, and the real or spiritual man concerning whose nature the physical senses can give no reliable information. Paul says, "The things which are seen are temporal; but the things which are not seen are eternal." And on page 353 of Science and Health we read that "all things will continue to disappear, until perfection appears and reality is reached."

JOY.

MARTHA E. KILLIE.

It had been one of a succession of rather weary days; material thought seemed to hold sway. An old ailment, and the only one of many which had not yet wholly yielded to the action of Truth, seemed to assert itself persistently. Even the declarations of Truth, whose wondrous power had been proven to me so many times, seemed mechanical and void of results. With a heart yearning for its rightful heritage of light and peace, I was about my daily duties when these words from Isaiah came to me, "I will bring the blind by a way that they knew not." I went to a pile of old *Sentinels* that were stored away, took out a copy at random, and the first article that caught my attention was entitled "Rejoicing." It was just a little experience in the life of one faithful student, woven into a love-message and sent out to cheer and brighten the hopes of thousands of readers, who might forget the Scriptural command, "Rejoice always."

For a brief moment mortal sense seemed to whisper, "How can I rejoice when the shadows seem to hang so heavy? Is joy something to be forced? Should it not be spontaneous? Immediately the words of Jesus came to mind, "Blessed are ye, when men shall revile you, and persecute you, and say all manner of evil against you falsely, for my sake. Rejoice, and be exceeding glad: for great is your reward in heaven." Could the loving Saviour bid his followers to "rejoice, and be exceeding glad," under the most trying human conditions, did he not, with his clearer vision, see all about them the ever-present source of joy? Then I remembered the words of James, "My brethren, count it all joy when ye fall into divers temptations; knowing this, that the trying of your faith worketh patience." Also Peter's ringing words, "That the trial of your faith, being much more precious than of gold that perisheth, though it be tried with fire, might be found unto praise and honor and glory at the appearing of Jesus Christ." These and many other familiar passages of Scripture came as angel-messages to my thought, until every shadow was dispelled.

Then memory recalled a beautiful demonstration of joy given at one of our testimonial meetings. A young mother told that her two little girls in the evening had complained of illness, that she denied the error, but in the morning they seemed worse, and before noon both were in bed, and unable to speak aloud. All the afternoon she labored faithfully, declaring the truth, but with no apparent result. Toward evening, with a heavy heart, she went to the telephone to ask her teacher for help. She told her how faithfully she had done everything she could. "Everything?" asked the teacher. "Yes, everything." "Have you rejoiced?" "No." "Then rejoice." She went to the piano, which had been silent all day, and began to play and sing the beautiful hymn by Mrs. Eddy, "Shepherd, show me how to go" (Miscellaneous Writings, p. 397). She played and sang the first verse, ending, "I will follow and rejoice all the rugged way," over and over again; and as she did so the shadows melted away and a sense of peace enfolded her. She kept on singing, and soon she heard from the adjoining room a chorus of little voices. The little ones were sitting up in bed and singing with clear, glad voices the hymn so dear to them, which they had learned in Sunday School. Every vestige of the trouble which had all day seemed so real, had melted away; and the young mother learned, as we all must learn, that the seed of truth may be sown in tears or amid clouds of anxiety, but they need the sunlight of joy before they can burst into full fruitage.

Paul wrote to his church at Philippi, "Fulfil ye my joy, that ye be likeminded, having the same love." What a gospel of joy is brought to this age, and to our Church, through the inspiration and the consecrated life of our beloved Leader. Even though as individuals we may seem at times to have no joy of our own, we can lift up our hearts, and fulfil her joy, that we, too, may be like-minded with her,—having the same love for all mankind,—and thus we shall find our joy.

HYMN OF PEACE.

These things shall be! A loftier race
  Than e'er the world hath known shall rise,
With flame of freedom in their souls
  And light of knowledge in their eyes.

They shall be gentle, brave, and strong,
  Not to spill human blood, but dare
All that may plant man's lordship firm
  On earth and fire and sea and air.

Nation with nation, land with land,
  Unarmed shall live as comrades free;
In every heart and brain shall throb
  The pulse of one fraternity.

New arts shall bloom, of loftier mould,
  And mightier music thrill the skies;
And every life shall be a song
  When all the earth is paradise.

There shall be no more sin nor shame,
  And wrath and wrong shall fettered lie;
For man shall be at one with God
  In bonds of firm necessity.

JOHN ADDINGTON SYMONDS.

SELECTED ARTICLES.

[From the *Lake County* (Minn.) *Advocate*.]

JUSTICE TO MRS. EDDY.

McClure's magazine, which has heretofore taken a front rank among the periodicals of the day on account of its able editorial staff and brilliant special writers, has lost prestige and influence in the eyes of the literary and religious world by its recent publication of a most uncalled-for personal and malignant attack on the Rev. Mary Baker G. Eddy, the able Founder of the Christian Science Church, than whom there is no more refined, cultured, or talented woman in the New England States, and whose life from her childhood days within the borders of the old Granite State has been Christian. It is a matter of profound regret to the many readers of *McClure's* magazine that the publishers should have condescended to dim the luster of its pages with a mass of vituperation and personal abuse which is only fit for the sensational yellow papers of the day.

As a matter of simple justice to the life and good works of Mrs. Eddy we feel it our duty to publish some incontrovertible facts regarding her early life prior to her becoming the Leader of the Christian Science Church—before she became distinguished through the promulgation of her noble teachings for the uplifting of the human race, teachings which are so in harmony with the doctrines of the great Prince of Peace.

As a matter of fact, Mary Baker studied with honor in several of the seminaries in New Hampshire, and the late Julia A. A. Wood, who was the daughter of Ezekiel Sargent of New London, N. H. (one of the old settlers of Minnesota), and who was well known under the *nom de plume* of "Minnie Mary Lee"—a contributor to magazines as well as author of several books and of a history of Minnesota, uncompleted at the time of her death—was a classmate of Mrs. Eddy, as was Mrs. Wood's sister, Emily Sargent. Later, Mrs. Wood, who was the mother of the writer of this article, was one of Mary Baker's bridesmaids at the time of her marriage to Major George W. Glover of Charleston, S. C.

Mrs. Wood often referred to the beautiful character shown by Mrs. Eddy as a schoolgirl. The principal of the academy which these young ladies attended at that time, in speaking of the high grade of scholarship attained by Mary Baker and the brilliant future in store for her, often said that she was an exceptionally bright student, and the writer's mother frequently referred to the esteem in which Mary was held by the other members of her family, Col. George S. Baker saying, "We are all proud of my sister Mary." Mrs. Wood spoke of Mrs. Eddy as a typical New England woman, whose natural talent and conspicuous ability had gained the esteem and admiration of the people of all religious denominations, and who had also won a warm place in the hearts of all those with whom she had come in contact.

The brutal and scandalous attack on Mrs. Eddy will cause a wave of righteous indignation throughout the country and the Cause of Christian Science will be advanced a hundred fold.

[From *The Boston Post*.]

A TRIBUTE TO MRS. EDDY.

A tribute to the Rev. Mary Baker Eddy was paid by Captain William A. Morse, formerly commander of the Ancient and Honorable Artillery Company of Boston, counsel for the Christian Science Church and one of its followers, in an address before two hundred and fifty members of the Ancient and Honorable Artillery Company gathered together at the Quincy House yesterday to observe the birthday of Washington. The reference to the Rev. Mrs. Eddy created considerable surprise in the company and stirred a dozen members to vigorous applause.

Captain Morse in his address referred to the past as the age of young men, citing as examples Alexander at the age of thirty-two sighing for new worlds to conquer, and Napoleon at twenty-seven the conqueror of Italy. The present age, he said, was the age of the grown man, and he cited as examples Gladstone at the age of eighty guiding the world-empire of Great Britain and the Rev. Mary Baker Eddy at the age of eighty-six directing and counseling in the work of Christian Science.

"No matter what you may think of her doctrine," said he, referring to Mrs. Eddy, "it is certainly a significant fact that this woman at the age of eighty-six is directing and counseling the work of the Christian Science Church, which has thousands of followers all over Europe and Asia and has many thousand adherents in New England alone."

Captain Morse spoke with much feeling and spirit regarding the number of Christian Scientists in the world, and showed an intimate acquaintance with the spread of the cult. He has long been known to be interested in its doctrines, and with his wife he has attended the Christian Science church many years. Last Monday he appeared with former Governor John L. Bates and Samuel J. Elder as counsel for the Christian Scientists in opposing the medical bill at the State House.

[Editorial in the *Daily World-Herald*, Omaha, Neb.]

BE FAIR TO CHRISTIAN SCIENCE.

The various bills emanating from the medical profession recently introduced in the legislature, purporting to safeguard the practice of Christian Science, constitute in effect an attack upon it. Each should be entitled, "A bill for an act to put the control of the practice of Christian Science into the hands of its enemies." These bills all subject the practice of Christian Science to the control of the "Board of Health," which is another name for the medical profession, and unfortunately the medical profession has not yet adopted towards Christian Science that attitude of toleration and appreciation to which its achievements entitle it. It remains intolerant and antagonistic and is not qualified to give Christian Science the square deal which American sentiment calls for. The *World-Herald* is not an advocate of Christian Science, but it is an advocate of fair play. It recognizes the achievements of medicine and surgery, but it also recognizes the achievements of Christian Science, which are at least equally susceptible of proof.

As a newspaper the *World-Herald* is in a position to know and to say that the evils, dangers, and mistakes arising from the practice of Christian Science in this community are among the least of the things calling for legislative interference or regulation. Several years ago, when this matter was up on a former occasion, the *World-Herald* made this comment:—

"If Christian Science is meritorious it has equal right with other beliefs to exist. If it is without merit it will die out of its own inherent weakness. In either view of the case there is no call for legislation concerning it."

What was true then is true now, with the added emphasis that the lapse of time has produced strong evidence that this cult has by its achievements established its right to exist.

[R. E. Lidgerwood in *The Chicago Chronicle*.]

A few days ago I saw in an Eastern newspaper a letter, signed "A Groping One," severely and to my mind ignorantly criticising Mrs. Eddy's remarks to her congregation in Boston. The letter contained nine parts of sarcasm to one of intelligent inquiry. The groping ones also find it difficult

Digitized by Google

to understand the sayings of Epictetus, Shakespeare, Emerson, and others. As a layman I have no authority and do not consider myself qualified to defend all the beliefs and assertions of the professed Christian Scientists, but having studiously read several works on the subject of metaphysics and moral philosophy, it is not difficult to understand—indeed, I find it an inspiration to read—Mrs. Eddy's interpretation of the teachings and works of the Christ as recorded in the Bible.

A year or more ago a friend of mine was completely cured of a complication of physical and mental ailments. Being greatly interested in his case and the benefits received by other friends, I concluded to inform myself, as I do not wish to remain ignorant of principles and modern thoughts of great interest. I am convinced that the benefits received from the practice of Christian Science are the results of intellectual and spiritual adaptability to natural laws as taught in the Bible and practised by the patient and believer.

In order to enjoy physical, mental, and spiritual growth we must live in harmony with the creative power. The Christian Science religion is a religion of understanding and deeds rather than a religion of mere beliefs and creeds. We read in the Bible, "Faith without works is dead;" also, "Be ye transformed by the renewing of your mind." A profession of faith without works is hypocritical and harmful, weakening the mental and spiritual understanding, which must atrophy and die from disuse and abuse. One can glean from the writings of Plato, Socrates, Dante, our own Emerson and many others, the very essence of moral philosophy.

Members of other denominations will tell you that Christian Science families in any community are good neighbors, friendly and happy, and appear to enjoy "the peace of God, which passeth all understanding." That it will have a great and good influence on the community, State, and Nation, in physical health and good morals. I believe Mrs. Eddy's work to be the truest interpretation of the teachings of the Christ; and if the Bible is true, then the teaching of the Christian Scientist is true.

[Editorial in the *Ashland* (Neb.) *Journal.*]

House Roll No. 51 and Senate Files Nos. 72 and 108 are measures introduced in the Nebraska legislature which every honest representative should unhesitatingly vote against. They are proposed measures which are without a particle of merit to their credit. Should our law-makers prove so unwise as to enact them into law, they would be a disgrace to the State and would stand as monumental sign-boards of the bigotry, intolerance, and folly of the men who voted for their passage.

The ostensible object of these bills is to regulate the practice of Christian Science, . . . and the claim sometimes made that this class of legislation is only asked as protective measures for the people will no longer do. . . . The talk of regulating the practice of Christian Science is as foolish and nonsensical as it would be to talk of regulating the "practice" of Catholicism, Methodism, Baptism, or Presbyterianism. And the State has no more right to attempt to "regulate" the practice of any of the latter isms than it has to "regulate" Christian Science. It is a religion as much as any of the latter. In this country a man has the right to worship God as he pleases. The Christian Scientist is certainly religious. His belief is a religion, and the fact that it inculcates healing without medicine, as taught by Jesus Christ, should not debar him from the protection of law, nor make him an object of tyrannical legislation. Such measures as are embodied in the bills above mentioned are class legislation of the grossest kind. They are of no earthly benefit to any one but drug doctors, and we should think—for their own self-respect—that they would not countenance the passage of such bills a single instant. Let every tub stand on its own bottom. If *materia medica* is the only true healing art, it will win recognition through its own virtues, and not by attempting to smother out all contrary teaching. Intolerance never wins in the long run. If Christian Science is error, it will soon fall of its own falsehood. Truth is as mighty now as when the omnipotent Father gave it birth. Let the people try both, if they will. In the crucible of time the real gold will be separated from the baser parts and the true virtues of each will shine out resplendent, and all may see, choose, and appropriate.

These bills, we understand, provide for the examination of Christian Science practitioners before the State Medical Board in anatomy, physiology, pathology, chemistry, etc. This would be a monstrous injustice. Christian Science practitioners, as we understand it, make no pretensions of knowledge in these branches of wisdom. When called in to treat a patient their only method is to pray for him. They ask the Father to heal the patient, and give no medicine of any kind. Must a man get permission of the State Medical Board before he can ask Almighty God to heal the sick? If so, every minister in the land should be "regulated" by them in the same way. No Sunday passes by but what ministers pray God to heal the sick. Christian Scientists claim that their prayers are answered—and surely their graveyards are not more densely populated than are those of their contemporaries, the M.D.'s! (But the efficacy or non-efficacy of Christian Science treatment, or of *materia medica*, are not the questions at issue.) We have a very high respect for both classes, when they work according to the Golden Rule and with the spirit of toleration, but we have little use for unfair legislation—class favoritism of any kind. The doctors are doing good work; so are the Christian Scientists. Let each class work out its own place in public estimation, without invoking the aid of the law to help it out.

[Rosemary O. Anderson in *The Waterbury* (Conn.) *American.*]

Mr. Editor:—You comment editorially upon an article which appeared in the *Outlook* relative to the inauguration of healing methods as adopted by Emmanuel Church, Boston, and which are being compared with Christian Science healing. It is not our purpose or desire to criticise or comment upon the endeavors of our Christian brethren in this direction, but we feel we must correct the erroneous claim made, that the method adopted by Emmanuel Church is in any sense in consonance with that practised by Christian Scientists. [The rector of Emmanuel Church has stated that the method employed by him is not Christian Science.]

If the plan introduced in Emmanuel Church is correctly stated, this Church has called to its aid eminent physicians and surgeons, who are to diagnose the cases which come before the Church for Christian healing and to determine if the case is one that can be cured by prayer or mental processes.

Christian Science teaches that all things are possible with God, and its adherents are taught to follow strictly both the teaching and practice of Christ Jesus in their efforts to overcome every form of discord. In James, 5 : 15, we read, "And the prayer of faith shall save the sick." This implies that all forms of sickness can be destroyed by reliance upon divine power alone; not that some are within God's power to heal, while others require material methods. Such practice as this would deny the omnipotence and omnipresence of God.

The adoption of the term "scientific Christianity" in connection with this movement of the Emmanuel Church, is a rebuke to the undue criticisms of Mrs. Eddy made by many Christian people and ministers, and is a recognition of her use of the word science with Christianity; but to scientifically demonstrate spiritual healing, it will be nec-

Digitized by Google

essary to understand the teachings of Jesus when he said, "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life," and to abandon recourse to material ways and means of restoring health and harmony.

Relative to the statement that physicians have long known the value of mental therapeutics and have in some degree practised the same, there is no question. But to confound such practice with Christian Science is not consistent, inasmuch as it embodies but a small part of the teachings of Christian Science as set forth in the textbook, "Science and Health with Key to the Scriptures" by Mrs. Eddy, which are based entirely upon the allness of Spirit and the nothingness of matter.

[Anna H. Carter in the *Democrat and Chronicle*, Rochester, N. Y.]

A correspondent in your issue of the 10th says, "The regular physician studies diseases, symptoms, and remedies." From the standpoint of Christian Science these studies are partial and superficial. The regular physician believes that disease of the body is limited in all its aspects to matter. He considers that the mind affects such disease, if at all, so remotely and incidentally that its connection does not enter into the problem and needs no investigation. His experiments and researches, therefore, are confined to the realm of the physical, and practically ignore that accumulation of human experience which proves the fundamental, vital interdependence of the human mind and body. . . . By thus failing to recognize the effects upon functions, and the still more radical effects upon structure, produced by thought forces, the regular physician is not getting facts essential to the solution of the real problem of disease.

Christian Scientists, on the other hand, recognize that all disease is primarily a thing of mind, a product of human thought forces acting directly upon the organs of the body. The Christian Scientist recognizes the same physical disorders in a patient that the medical man sees, but instead of dealing with them as something separate from the patient's mental environment, he immediately investigates the mental facts and conditions that underlie, surround, and permeate the disordered bodily condition. In so doing he recognizes certain mental facts as the immediate, and certain others as the remote, cause, both acting with the force of law (nature's laws) through the patient's thought upon his body. Upon this metaphysical diagnosis the Christian Scientist applies the metaphysical remedy, his understanding of the facts and laws of man's actual life. . . . This knowledge of the divine presence as presented to our age has been named by Mrs. Eddy, Christian Science, and is now, as in Jesus' day, not human thought-action, but is the divine activity in man, or the action of that Mind "which was also in Christ Jesus."

Your correspondent thinks this knowledge should never fail, adding, "It is not on record that Christ ever failed in an attempt to heal, or to perform a so-called miracle." On the contrary, we are told in Mark's Gospel that in his own province Jesus "could there do no mighty work," because of their unbelief. We are also told of a case where healing was prolonged, the man at first seeing "men as trees, walking." No doubt there were many other such cases, but these show that conditions of thought in the community or in the person seriously interfered with the work of even the Master. We are also told of early attempts of his disciples which were a failure; but these same disciples later healed the sick, even to raising the dead. This shows first, that failure in Christian Science results from no lack in the "divine power," but rather from some human limitation connected with its application; and second, that knowledge of this Science of divine Life and ability to use it is nothing miraculous, but comes as increased spiritual capacity is gained through spiritual experience and growth.

THE LECTURES.

LOS ANGELES, CAL.

Hon. Clarence A. Buskirk lectured on Christian Science at the Auditorium, Jan. 27. He was introduced by Judge John D. Works, former judge of the Supreme Court of California, who said:—

This occasion carries my memory back more than a quarter of a century, to the time when I first knew the lecturer of to-day. We were then residents of Indiana. I occupied the humble position of member of the legislature, he the more important and exalted one of Attorney General of the State. Neither of us had even so much as heard of Christian Science. Neither of us could have dreamed that twenty-seven years later we would be occupying a platform together, away out on the Pacific coast, advocating the claims of that religion on the intelligence and reason of mankind, and the claims of its Founder and Leader on the sympathy and gratitude of the human race for having brought it into the world.

We are here because this religion has appealed to us, and proved itself in our own personal experience. We feel it to be a solemn duty, as well as a great privilege, to bear public witness to its beneficent power to heal and save. There are thousands of others who have had like experiences and gladly bear similar witness. The world has been made better, and happier, and more contented by the teachings and practice of Christian Science, which are a revival of the teachings and practice of Jesus the Christ.

It is a religion of charity and brotherly love. It reclaims and regenerates the sinner, heals the sick, and comforts the sorrowing. Those who come in contact with it are taught to be charitable, loving, cheerful, and helpful to their fellow-men. It makes no war upon any other religion or creed, or upon the physician who conscientiously endeavors to ameliorate human suffering through material means. It only says to the other churches, in all kindness and charity, There is a better, higher, holier, more practical religion than yours,—that not only preaches the gospel to the poor, but heals the sick, according to Jesus' full command. It only says to the physician, in the same spirit, There is a better way than yours, —a higher power, a greater physician, who heals both disease and sin by the same means.

It is a singular trait of human character that leads men and women, members of other churches, good Christian people, to condemn such a religion as this; but we are charitable enough to believe that it is because they do not understand. They condemn what they think Christian Science is, not what it really is. Mrs. Eddy has lately said, in a different, a more Christian spirit, "I love the prosperity of Zion, be it promoted by Catholic, by Protestant, or by Christian Science, which anoints with Truth, opening the eyes of the blind and healing the sick." [*Sentinel*, Dec. 1, 1906.] These lectures are provided chiefly to bring the people to a better understanding of what Christian Science is, and what it stands for. The Mother Church, The First Church of Christ, Scientist, of Boston, has provided a Board of Lectureship for that purpose. We have a member of this Board with us to-day, who will now address you.

Correspondence.

WATERTOWN, N. Y.

The City Opera House was well filled last evening [Jan. 29] by those anxious to hear Bicknell Young of Chicago give his lecture on Christian Science. Mr. Young was introduced by Mayor Hugo, who said:—

The question asked Christ Jesus by Pilate, "What is

Digitized by Google

truth?" was not original with Pilate. It had been asked since man was. It is the riddle of the ages. It will be repeated as long as man is. Christ Jesus by his life and teachings was the first to give us a clear and comprehensive answer to this question. In order to interpret Christ's answer and to carry his teachings into practical effect, the Christian Church was founded and continues to exist. This church has taken on many forms and clothed itself with many ceremonies, depending largely upon the interpretation put upon the teachings of Christ by the founders of such churches. The adherents of the Christian Science Church endeavor, as I understand it, by healing and teaching to explain the truth and to adapt its fundamental laws to human life, and from my observation they show no disposition to hinder or criticise others in their interpretation and adaptation of the truth.

Watertown Standard.

LAUREL, MISS.

Edward A. Kimball lectured on Christian Science Jan. 21. He was introduced by Rev. Mr. Rose, who said in part,

I do not know very much about Christian Science. I am a learner. I want to sit at the feet of our brother as a disciple. I am not a Christian Scientist, but I hope I am a Christian. I believe in science, and I have the honor of being a minister in a church which believes that a man ought to be permitted to think. Outside of plain, simple, definite articles of faith, I believe a man ought to have all the room for intellectual development, for growth, for spiritual evolution,—and so I feel interested in Christian Science. I don't believe that any of us have got the truth, the whole truth, and nothing but the truth. I do not believe that there ever was a great movement started in this world which had favor of the people that did not have at the roots a great deal of truth. And it is the truth in it that makes it live. If a movement starts, and it is erroneous, it soon dies, but if it has got truth in it, it will live; and to the extent that there is truth in it, it will prevail. At one time the Christian Church was a sect everywhere spoken against. I am looking, my friends, to the great church of the future. It is sure to come. It is going to be a Christian church, and it is going to be scientific, too. I do not know whether it will take just the particular form that some of these good people here to-night expect it is going to take, but it is going to be Christian and it is going to be scientific.—*Laurel Chronicle.*

LINCOLN, NEB.

Judge Septimus J. Hanna of Colorado Springs last night [Feb. 5] delivered at the Auditorium a most eloquent defense of Christian Science and eulogy of Mrs. Mary Baker G. Eddy, the Founder. Royal D. Stearns introduced the speaker, and said in part,—

Pilate in the judgment hall, some nineteen hundred years ago, asked the Christ the question, "What is truth?" This inquiry has been echoing down the centuries. Christ Jesus was the personification of the ideal truth which was exemplified for man's benefit and guidance. This truth held sway among his followers for about three hundred years after his ascension. The great trend of human thought and belief has been, it would seem, toward deifying matter in some way, and has greatly magnified and exalted the man whom Adam is supposed to typify. A great human, pathetic cry has gone out during the ages of "Adam, where art thou?" Had the intelligent thought of mankind been more uniformly centered upon the potential fact that after the energizing fiat of creation had been fully wrought, "God saw every thing that He had made, and, behold, it was very good," greater progress would doubtless have been possible, but the diverse wandering of the children of men in their weary search of truth, continually left many millions hopelessly entangled in the labyrinths of matter, with no exception of the fact that truth, in the last analysis, is wholly of spiritual origin. When Mary Baker G. Eddy, our great Leader, proclaimed Christian Science to the world, she was the most isolated person of the Christian era since the time of Christ. But she and her followers are sustained and encouraged by what the learned "doctor of the law" said to the Pharisees who were persecuting the disciples of Jesus, "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it."

The Lincoln Star.

KANSAS CITY, MO.

Edward A. Kimball lectured for Third and First Churches of Christ, Scientist, Feb. 4 and 5; and Judge William G. Ewing for Second Church Feb. 7. In introducing Mr. Kimball at First Church, Judge Ewing said,—

Ladies and Gentlemen:—Somewhat broadly and a little humanly speaking, I venture to say that the most magnificent picture that ever has or ever will lift the human heart to ecstasy, is that one produced by the harmonious blending of a great subject, a great audience, and a great, perfectly equipped, earnest man. If you look through the lens of an artist, you will discover, I am sure, that this wonderful combination of color, or more simply speaking, this marvelous combination of opportune conditions, confronts us all to-night. The subject is the measureless wisdom and boundless goodness of God. The audience, two thousand intelligent, cultured men and women, intense in their quest of good; the orator, a strong man, abundant in resources, rich in learning, ripe in experience, who has given a quarter of a century to the study of his mighty theme; so why may we not immediately enter into the pleasure of the promise before us by introducing to you the man of this hour, Mr. Edward A. Kimball of Chicago.—*Correspondence.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

ENLARGING OUR BORDERS.

IN the natural and orderly progress of the Christian Science movement it has been necessary to "enlarge our borders" from time to time, and recently a permanent enlargement of the *Sentinel* has been one of the way-marks in the growth of our Cause. The *Sentinel* now comprises twenty pages, an increase of four pages of reading-matter each week, and this increase has been found none too great to meet the demands made upon our space by the greater activity in the Field and by the rapid spread of Christian Science to almost every portion of the civilized world. Our readers may be sure that as the work continues to grow the *Sentinel* will keep pace with it.

In addition to this four-page enlargement it has been found necessary to improve in other ways this weekly messenger of good things, in order that it may properly represent our Cause, which stands for the best in every department of life. The appearance of the *Sentinel* has been greatly enhanced during the past few months by the new cover, and our readers will find that a further innovation has been made in this week's issue by the use of better paper for both cover and inside pages. These papers will be used regularly in the future, and we feel sure that the better appearance which they give to the *Sentinel* will be appreciated.

The increase in the number of pages, and these various changes, have added quite materially to the expense of publication, and it has been found impracticable to continue the *Sentinel* at the price of one dollar per year, which is much lower than that of other religious weeklies. We have seventeen papers of this class now on our table, and we find that only one of them is priced at less than two dollars per year. Their figures are as follows: one is $1.50, seven are $2.00, three are $2.50, five are $3.00, and one is $3.50.

Commencing April 1, 1907, the subscription price of the *Sentinel* will be $2.00 for the United States, Canada, Mexico, and Cuba; and $3.00 for all other countries. These rates will apply to all subscriptions which *commence on April 1 or later,* whether they be new subscriptions or renewals. Single copies will be sold for five cents each, and a reduced price on larger orders (particulars of which will be published later) will be made as heretofore. Subscribers are requested to order for the full year, instead of for six months, whenever possible to do so.

Apropos of this announcement we quote the following kindly editorial comment, which recently appeared in the *Daily Capital Journal,* Salem, Ore., under the heading, "A Model Religious Paper":—

The weekly ***Christian Science Sentinel*** is one of our most beloved exchanges.

It carries no advertisements or illustrations.

It publishes the choicest extracts from other religious papers.

It engages in no sectarian controversies.

It treats other denominations with courtesy; lets politics alone, and minds its own business.

It advocates a scientific religion—a form of Christianity that is demonstrable.

ARCHIBALD MCLELLAN.

THE CONCEPT OF FAITH.

TRUTH'S ministry always begins at the point of human need; it is considerate of conditions, waits patiently for the right time and opportunity, and knows how to be no less wise than uncompromising. The life of Christ Jesus was a continuous illustration of all these things. At the time of his appearing the Jewish people were expecting the fulfilment of the Messianic prophecies, and their most clearly defined anticipation was that of a great dominating personality, a princely leader who would stand for the kingly splendor and authority of David's line. Jesus understood this, and consequently emphasized the necessity and importance of belief in him as the one to whom the prophets referred. He thus consented to the centering of an early faith in his personality, indeed he reproved them for not believing in him; but little by little he lifted and enlarged their thought. He said that of himself he could do nothing, that his works were in manifestation of the presence and activity of another, even his Father, the God of Abraham and of Moses, and that for the works' sake they should believe, though they could not yet see in him the fulfilment of the prophetic promise. The thought of faith was being advanced from belief in personality and dependence upon it to the realization of the Christ, God present to will and to do. Later he said they should be filled with the Holy Ghost, know the things that were of God, express Truth through apprehension, and become identified therewith. As "the morning drinks the morning star," so their faith in him was to be lost in the possession of his faith, the spiritual understanding which is man's at-one-ment with God.

The effectiveness of the early disciples, their multiplied demonstrations over the asserted powers of material law, witness to their continued realization of this divine idea, that the faith of Christ Jesus was their faith, and that his understanding of Truth and Truth's invariable law was to be the inheritance of the saints, so that all Truth-seekers might indeed become "the children of God," realize the Master's exaltation and do his works, for the same reason and by the same means that he did them. This is the distinctive teaching of Christian Science, which declares that "until belief becomes faith, and faith becomes spiritual understanding, human thought has little relation to the actual or divine" (Science and Health, p. 297).

The difference in nature and influence between the concept of faith held by the great body of Christian believers and this teaching of Christian Science can but appeal to all. The present immature state of general thought regarding faith is the inevitable fruitage of a substitutionary idea of the atonement which has made it seem unnecessary for men to have the Master's faith, and a sense of the nature of Christ Jesus which has made it seem impossible for men to share his perception and point of view. "Back to Christ" has of late years become the shibboleth of a new Christian enthusiasm, and yet to a multitude of Christians it brings no suggestion of the possibility or need of acquiring that understanding of Truth which made the character of the Nazarene so Godlike, his ministry so eventful.

History attests that zeal is effectual only as it is intelligent, and that content with the nerveless comfort of mere belief means the atrophy of the spiritual life. It is important that a student believe in the veracity of his teacher and in his command of the subject taught, but if the pupil is not stimulated to acquire the knowledge of his teacher, what does his discipleship signify? This is the distinction and the gain of Christian Science, that it impels every believer to the attainment of that spiritual understanding which was in Christ Jesus. It is inherently opposed to the mistaken belief than men may be saved by proxy, or apart from the personal apprehension of Truth. The willingness that another should think for us, and the assumption that we do not have to solve our own problems,—these beliefs have

Digitized by Google

always proved stupefying to spiritual aspiration. The call of Truth to every man is and ever has been, "Awake!"

This new-old thought of faith which is being pressed upon the world's attention through Christian Science, is finding its way into the hearts of men as the springtide finds its way to the sleeping bulbs. It thrills them with a new sense of capacity and of power, and straightway longed-for flowers are seen, and the summer's harvest and autumn's store are brought nigh. JOHN B. WILLIS.

THE LESSON OF THE FIG TREE.

IT sometimes happens that students of the Bible are perplexed by the seeming incongruity between Jesus' treatment of the barren fig tree (as recorded by Matthew and Mark) and his words spoken when enforcing this lesson, "When ye stand praying, forgive, if ye have ought against any: that your Father also which is in heaven may forgive you your trespasses." It is certainly difficult if not impossible to understand this incident, if it be taken apart from its setting. In the light of the context, however, and of the spiritual sense of the Scriptures gained from the study of the Christian Science text-book, the whole story is wonderfully illuminated.

In the 21st chapter of Matthew we read of Jesus' triumphal entry into Jerusalem, an event which culminated when he cast out of the temple the representatives of a material sense of religion and healed "the blind and the lame" who came there seeking his ready aid. A study of the Gospels shows that material law was even then being invoked for the destruction of this "prophet of Nazareth," who refused to acknowledge its authority and whose wonderful works put to shame the fruitlessness of mere creedal religion with its forms and ceremonies. It was therefore necessary for him to leave the city each night to avoid arrest, and so he went over the hills to Bethany, where but a few weeks before he had raised Lazarus from the dead. On his way back to the city in the early morning, accompanied by his disciples, he was hungry, and seeing a fig tree "afar off," he went to it expecting to find fruit, as it was covered with leaves; but there was none, and he said, "No man eat fruit of thee hereafter for ever." Later we are told that when they passed it, next morning, it was "dried up from the roots."

The authorities tell us that inasmuch as the tree was in full leaf, it was proper to expect fruit, as it seems that many varieties of the fig develop fruit before the leaves. In any case, the barren tree but represented the conditions which Christ Jesus had found in the synagogues all over the land, where there were many sick folk, but where he had been condemned for healing them, because he ignored a technicality as to the observance of the Sabbath. It also symbolized the conditions found in the temple, where forms and ceremonies had usurped the place of the spiritual fruits which alone could satisfy the needy.

The Master had come to the church of his day, seeking fruit but finding none, a condition which could but call forth the stern reprobation expressed in the words already quoted with reference to the tree. Immediately after giving this object-lesson to his disciples, we find him bringing it home to the chief priests and elders in the temple by means of a parable, which concluded with the significant words, "The kingdom of God shall be taken from you, and given to a nation bringing forth the fruits thereof.

St. Paul tells us that the "fruit of the Spirit is love, joy, peace, longsuffering, gentleness, goodness, faith," etc., and the healing work of Christian Science is the bringing to perfection of this "fruit." In the experience of the one who has been for years, perchance, a hopeless sufferer, this fruit is sadly lacking. The leaves of religious belief and outward observance may be much in evidence, but they do not satisfy his hunger, they do not supply either the mental or the physical need. Then it is that Truth directs the willing wayfarer to the Christ, who heals to-day as surely as in that olden time. It is true that many such see their doctrinal beliefs, as well as their diseases, withering before the rebuke of Christ, Truth, as did the barren fig tree at the word of the Master. Our revered Leader says that we can become members of Christ's church only as we are "bringing forth the fruits of Love,—casting out error and healing the sick" (Science and Health, p. 35).

As one phase of error after another disappears before the truth spoken in Christian Science, we may well recall Jesus' words to Peter, when pressing home the lesson of the barren fig tree, "Have faith in God."

ANNIE M. KNOTT.

THE MARCH COSMOPOLITAN.

The March issue of the *Cosmopolitan* contains an article by the Earl of Dunmore, entitled "The Truth About Christian Science." The article is a valuable contribution to the current literature on this subject, and the magazine should be widely circulated by Christian Scientists.

LETTERS TO OUR LEADER.

New York, N. Y., Dec. 21, 1906.

Dear Mrs. Eddy:—The article for the magazine of which I told you is finished, and as soon as a fair copy is made of it I have told Mr. Alfred Farlow to submit it to you at Concord for your final correction and (I hope) approval. I worked at it—and it was a labor of love—these last four days from 7 A.M. till 5 P.M. I was anxious to catch the steamer to-morrow, which should get me home in time for New Year's day, to join my wife, children, and grandchildren, who are all gathered together at my wife's old home in Norfolk. I felt it a great privilege to be considered worthy to be called upon to give my assistance at this particular juncture. It was a great pleasure at any rate to go to Boston, but it was a double pleasure to me to be invited by you to Pleasant View and to find you looking so well and happy in the midst of the peaceful and harmonious surroundings which form the beauties of your New England home. I like to feel that I have been of some use to you; and that feeling, combined with the remembrance of your kindness to me last Monday, will give me additional strength to continue to do my work—however humble it may be—for the furtherance of the Cause of Christian Science. I shall hope to hear what you think of the article.

Your loving and loyal student,

DUNMORE.

Chicago, Ill., Feb. 1, 1907.

Mrs. Mary Baker G. Eddy,
Concord, N. H.

Dear Leader:—Fourth Church of Christ, Scientist, of Chicago, sends greetings and love for your tireless consecration to divine Principle, which has enabled us to dedicate our church. Feb. 17, 1907, has been fixed as the date of dedication, and in making our preparation for the dedicatory exercises it seems to us most fitting, as one of the first steps, that we write you briefly, detailing our experience leading up to this occasion. Seven years ago, Feb. 19, 1900, the congregation of First Church of Christ, Scientist, of Chicago, having for the third time grown too large for the edifice, one hundred and eleven members met and organized Fourth Church of Christ, Scientist, of Chicago. Three and one half years ago, Fourth Church decided that the time had come to build. In November, 1905, our church edifice, costing about one hundred thou-

Digitized by Google

and dollars, was completed and occupied. We are now free from debt, and our approaching seventh anniversary seems a very appropriate time to hold dedicatory services.

An interesting fact in connection with the building of this church edifice is that over three thousand people have contributed to the building fund, the money coming from our own members and from friends in all parts of the city. This work, too, has been done during the erection of The Mother Church, without at any time allowing our interest in that work to abate. Through the benign influence of your precepts and practice this demonstration has been made possible for us, and we know you will be gratified to receive this brief account of our church experience, which culminates in a beautiful church home seating about one thousand people, with nearly all the seats occupied at our regular services. In making this demonstration we have realized, "except the Lord build the house, they labor in vain that build it."

Our hearts are filled with gratitude to you, who have prepared the way for us to see this work accomplished.

In loving gratitude,

BOARD OF DIRECTORS.
BOARD OF TRUSTEES.

Fourth Church of Christ, Scientist, of Chicago, Ill.

Chicago, Ill., Feb. 4, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—One of the greatest pleasures a body of Christian Scientists can have is to be able to let you, the Discoverer and Founder of Christian Science, know that its place of worship is ready to be dedicated, debt-free. And it is now our pleasure to tell you that our church will be dedicated Feb. 24, 1907.

This church grew out of First Church of Christ, Scientist, Chicago, and was organized Jan. 8, 1903. In the past four years it has grown from a charter membership of two hundred and seventy-three to its present number, which is six hundred and eighteen. In this hour of quiet joy, when we are preparing to dedicate our edifice to the worship of God, our hearts turn to you in humble gratitude for your lovely life—your gentle example as to what true church building and true church dedication should be. We have tried to follow in your footsteps in the building of our church,—first in love, then in the healing born of love, then in the visible edifice, which we now desire to offer, with a greater consecration of our lives, to the furtherance of God's purposes on earth. We thank you for having made this possible; we realize that it is your unselfish devotion which has given us this truth to guide and purify the motives and aims of our lives. You have taught us that good alone is power, and we have been blessed proportionably to our faithfulness to this teaching. May this teaching in our church heal the sick, comfort the sorrowing, and reform the sinful.

We extend to you at this time the assurance of our loyalty to you, and of our entire confidence that God, good, will give you and all Christian Scientists "growth in grace" sufficient to meet and overcome every obstacle that tries to hinder the advancement of our Cause.

Lovingly yours,

ROSALIE G. AMORY,
WILSON K. DOTY,

Committee from the Boards of Directors and Trustees of Fifth Church of Christ, Scientist, of Chicago.

Kansas City, Mo., Jan. 28, 1907.

My Dear Mrs. Eddy:—With a feeling of deep gratitude I write these lines to tell you what the teaching of Christian Science has done for me. I was brought up by orthodox Jewish parents. Sincere as they were, they wished me to remain in that faith forever, but as I grew up I drifted from Judaism to agnosticism. (I have since learned that the latter does not exist.) Up to a year ago I had lived what might be termed a life of unrighteous satisfaction; that is to say, I thought I knew all there is to know about life; in other words, I supposed that all I needed was worldly pleasure, such as plenty of money, etc. Christian Science found me in a condition called nervous prostration. For nearly six weeks I had been in constant unrest; I had little or no sleep, could eat hardly anything, and cried at the slightest provocation. I did not want to see my best friends, even my wife and child were in my way, and I was entirely unfit for business. My condition might have been summed up in these few words,—I was in hell.

Now comes in the fact that man's extremity is God's opportunity. Through the advice of my brother-in-law, who had been healed through Christian Science, I began to read "Science and Health with Key to the Scriptures." At first I could not understand it, but a voice told me to keep on. A practitioner was called in, and finally, after a few treatments, I was sent to the store to attend to business. The desire for smoking had left me, although I had been using about eight cigars a day; there was no more card playing, but a better conception of honesty and morality, besides many other benefits. One which I value above all is that I love and respect my fellow-men, though they may not think the way I do. Instead of spending a great deal of time away from home as I used to do, I take the Bible and our textbook in company with my family, and it gives me sweet pleasure to learn therein how to love God and keep His commandments. To my former co-religionists I can say that Christian Science is intended for them as well as for every one who wants to learn the great truth that God is the only power. As a Scientist you become at once a true Jew, and the Shemah Israel takes on its real meaning.

Dear Teacher, how can I thank you for what I have learned so far through your work of love? I feel as if I were at the feet of Jesus, to learn more of Him who is the only Life, Truth, Love. Again those words appear to me, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Allow me to remain your ever grateful follower,

ALBERT JACOBSON.

Chicago, Ill., Feb. 5, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—My gratitude for the new edition of Science and Health is profound. We are receiving the living waters of Spirit "without money and without price." We can drink freely only through understanding, which earth's riches cannot buy. In this portentous hour we are cognizing the things of the divine realm into which we have been born. All things foreign to this new birth are as shadow. This kind of "coming to life" prepares us for greater light. "My soul waiteth for the Lord more than they that watch for the morning: I say, more than they that watch for the morning."

With great love,

W. A. REED.

A NEW PAMPHLET.

The lecture by Francis J. Fluno, M.D., C.S.D., "Christian Science: a Reasonable and Rational View of All Things," has been published in pamphlet form and is now on sale. Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

AMONG THE CHURCHES.

COUNCIL BLUFFS, IA.

At a recent joint meeting of First and Second Churches of Christ, Scientist, it was decided to disband the present organizations and reorganize as one congregation. This creates an organization of eighty members. The church meetings will be held in Temple Emanual.

Council Bluffs Nonpareil.

NEW HAVEN, CONN.

The announcement is made that First Church of Christ, Scientist, will hereafter have regular Sunday evening services in addition to the morning service. This evening service has become necessary because of the greatly increased interest in Christian Science now being manifested in this city. This onward step of First Church of Christ, Scientist, will be much appreciated by the people of New Haven.—*New Haven Leader.*

CANYON CITY, TEX.

We find, after our yearly business meeting, that the books and literature sold by this branch of God's planting is almost three times the amount that it was last year. Our Sunday contributions also amount to about three times more than in the past year.

We are gaining not so much in number as in "unity of thought and action." The attitude of non-Scientists at present is very encouraging and we anticipate much good. We rejoice in some progress made and are thankful to God, and to our beloved Leader, who has made these things possible by revealing to our consciousness the infinite possibilities of a life "hid with Christ in God."

Correspondence.

SAN FRANCISCO, CAL.

[The Field will be especially interested in the following items from the eleventh annual report of the Clerk of First Church of Christ, Scientist, San Francisco, Cal., as showing progress under rather unfavorable circumstances.—EDITOR.]

During the year just past services have been held every Sunday morning and evening and every Wednesday evening, and from January to the middle of April an overflow Wednesday evening meeting was conducted by the Second Reader in the Sunday School room. After the destruction of our church edifice by the fire, regular services were continued every Sunday morning and Wednesday evening, except April 18, 22, and 25, upon a temporary floor built on our lot, corner of Sacramento and Scott Streets; and these services were continued during the erection of the temporary church edifice, now known as Christian Science Hall. Upon the completion of this hall in September, the Sunday evening service and the Sunday School were resumed and have continued to show very marked interest and growth.

During our services pending the erection of Christian Science Hall, the Readers performed their duties in the open air, and on Wednesday evening this was accomplished by the light of two lanterns, the congregation being seated on temporary benches or piles of lumber. The musical service was conducted with the aid of a parlor organ, loaned by a generous neighbor. Christian Science Hall has been constructed and furnished under the direction of a building committee, with 1,275 seats on the auditorium floor and 543 on the lower floor, at a cost of $25,004.87, giving ample room for Sunday School and Reading Rooms. Prior to the fire the Reading Rooms were maintained in the Adams Building, which was destroyed, and the contents of the rooms was a total loss. This work was begun again Aug. 1, in rooms fitted up in Christian Science Hall.

The reports of the Literature Committee show the sales of literature for the past twelve months to have amounted to $7,623. Number of copies of Science and Health sold 975. Three lectures have been given during the year, two in February and one in October.

The financial report is as follows: Balance on hand Jan. 1, 1906, $25,180. Receipts from various sources during the year $27,517.73. Disbursements during the year $46,738.27. Balance on hand, Dec. 31, $5,959.46.

The report of the Christian Science Relief Committee of San Francisco shows contributions to this fund to Dec. 31, 1906, amount to $22,478.66, interest $84.32, relief returned $7,041.40, total relief granted $29,320.45. Balance on hand, Jan. 1, 1907, $283.93.

DELAVAN, WIS.

Built entirely from the liberal contributions of its limited membership and dedicated Sunday, in accordance with the requirement of The Mother Church, without a cent of indebtedness, First Church of Christ, Scientist, on South Sixth Street, stands a monument of credit to those who have worked and planned long and faithfully for the accomplishment of that end. The building is a handsome cement-finished structure, erected at a cost of about fifty-three hundred dollars. The edifice was formally dedicated Sunday afternoon [Jan. 6] at 3.30 o'clock, an audience exceeding the seating capacity of the little church being assembled. In an address which contained much information and history concerning the local church, Mr. J. J. Phœnix said in part,—

At our annual meeting in March, 1905, as an expression of gratitude for great spiritual and physical blessings received through Christian Science, it was unanimously voted to send to The Mother Church building fund the entire balance in our general treasury. We then took up the question of more harmonious quarters for our growing congregation, and a committee was appointed to look up available rooms and report to an adjourned meeting. In the mean time the members were asked to ponder the definition of Church as given on page 583 of our text-book, Science and Health. Divine Love clearly pointed the way, and the committee reported, advising the purchase of the present property and the construction of a church edifice thereon at an estimated cost of thirty-five hundred dollars. This seemed a large problem for a church of sixteen members, rich only in faith in God and sincere love for Truth, but we were given another opportunity to realize that "with God all things are possible." It was determined as the Father had led us thus far, we could in His name press on and demonstrate the necessary funds to build His house. Work began in May, 1905, and the first services were held in this building Aug. 3 of the same year. No general public appeal was made, no adventitious aids resorted to, only a simple statement made of the needs, and hearts here and elsewhere, grateful to God for benefits received through Christian Science, gave funds as the work progressed. The final payments were deferred until after the completion of the Church in Boston. The total cost of this property, fifty-three hundred dollars, having been paid, we are permitted the deep joy of dedicating this dear little edifice and of consecrating its members anew to the work of demonstrating the imperative commands of our Master, Christ Jesus.

To all who are weary and heavy laden, who stagger under the load of human life, its disappointment, sickness, sin, misery, poverty, intemperance, failure, or despair, Christian Science extends the compassionate love of Christ and invites them to come and learn the truth that restores them to their rightful inheritance as children of God.

The Delavan Enterprise.

TESTIMONIES OF HEALING.

Several years ago I broke down in health with what was pronounced nervous exhaustion. At that time I was architect of First Church of Christ, Scientist, of Milwaukee, Wis. I was offered help by my Christian Science friends, but scorned it, and two years of invalidism followed. After trying "rest" and the climate of Florida for a time, and after spending two months in one sanitarium under the care of an eminent specialist, and six months in another under a physician who was not so eminent but from whom I received far more benefit, I finally removed to California. There, after spending several months fishing and boating on the island of Catalina, working for a while as a hired hand on a ranch, sleeping for several months in a tent, and much riding on horseback, I finally regained my health sufficiently to resume architectural work in a desultory way.

I first spent an hour or two a day in the office, as partner in an established business; but eight months after starting in, having increased my working day to six hours, my health again broke down. This time I again tried living in the open air in California for a couple of months, but with little appreciable benefit; then I took a trip to the South Sea Islands, returning from that far-away country of coral reefs and primitive people much worse than when I went away. I then returned to Wisconsin and spent an entire summer in the open air there, still with little appreciable gain. Beside being very nervous, I was afflicted with a lamentable inability to read or write, so much so that at times the mere signing of my name was an effort. I finally decided to return to California for the winter, but supposing that I would not be able to resume work for some time (indeed I thought it very likely that I could never resume my chosen work) I purchased a tent, which I intended to pitch in the Santa Monica Mountains near a ranch-house of which I knew, and there lead a quiet, though necessarily a solitary and joyless life. So difficult to me was reading and writing at this time, that before leaving home I asked my mother to write her address on a quantity of postal cards to save me the exertion, and I intended to pen her abbreviated reports of my condition upon them.

Just before leaving home my interest was thoroughly aroused in Christian Science. I had been prejudiced against it through the reading in former years of a semi-religious magazine whose attitude toward it was not very friendly, but upon my attention being called to a marvelous cure it had accomplished in the case of a friend whose illness had been similar to my own, I agreed to try it on the score that the end might justify the means. I considered the means pretty foolish, but the results in this case I could not question. With my tent, my addressed postal cards, and a copy of the Christian Science text-book (the latter borrowed from an open-minded Presbyterian who said that he had not yet been able to grasp what was in it, but nevertheless it might be a better form of Christianity than his own!), I started for the far West. While on the train and when nearing Sacramento I got out the copy of Science and Health and attempted to read. The first sentence of the first chapter, telling of the absolute faith that is necessary in order to be healed through Christian Science, struck me with the force of Truth. I also read the saying of Jesus: "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." The assimilation of these two ideas I verily believe cured me then and there of my inability to read and write, for to my surprise and great joy I met with none of my former difficulty in continuing to read, and that evening I got off the train at Sacramento and wrote a long letter home. The recovery from nervousness came less rapidly, although that, too, was quick, and was brought about entirely through the reading of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. It might be well to say that right here I found out what Mrs. Eddy means by the term "chemicalization." One of my troubles had been sleeplessness. My Christian Science friend had wisely told me that the mental upheaval incident to such a complete reversal of previously entertained views might occasion a temporary aggravation of physical symptoms—and such proved to be the case. For a week or more I slept but little—not nearly as much as previously—but my sleep was sounder, and such as there was of it seemed entirely adequate for the purpose of rest and refreshment. This unusual mental activity soon wore away, however, and I then slept normally.

Arriving in Los Angeles in less than two weeks from the time I left home, instead of hunting up my mountain ranch-house I consulted a Christian Science practitioner, told her my story, told her that I believed myself well and was going to work, and asked her whether I had better curtail my working hours as I had been doing before my health broke down. She advised me not to do so, and the second day after my arrival in Los Angeles I worked a full day's time and have done so ever since. My business partner, not being a Scientist, was at first skeptical regarding my improvement, but upon the third or fourth day of my return, being impressed by the efficiency with which my work was done, he exclaimed, "Thank God from whom all blessings flow!" I remarked that he should say it sincerely, and he replied with much feeling, "I do!" Some months later a prominent clergyman came into the office, and I was pointed out to him as a picture of thoroughly restored health. "Look at him," my partner said; "how do the Christian Scientists do it?" "I don't know," replied the clergyman. "I believe though," he added, "that they accomplish their cures by means of a universal law." "Yes," I said, "but the Christian Scientists use that law, while other denominations do not." "Perhaps that's so," he said; "perhaps that's so."

Business prosperity followed at once, and in a very marked degree. Since then I have had nothing but continued health and happiness to report. The tent which was to shelter a lone invalid in the Santa Monica Mountains is pitched in my back-yard and contains a lawn-mower, kindling, and the like. In addition to my professional duties, I have at times done considerable literary work at night. Upon one of these occasions, and after several consecutive working nights, I continued writing until four o'clock in the morning, with no deleterious effects the following day. For all this health and strength and the happiness that has come with it, I am more grateful than I can say to Christian Science, to Mrs. Eddy, and to my God.

ELMER GREY, Los Angeles, Cal.

I send my testimony hoping it may help those who are seeking aid in Christian Science. Several years ago I was working in the coal chutes in this place, and was taken with lung trouble, becoming so ill that no one thought I could live. I had the very best doctors, but they said there was not much that could be done for me, that the best they could do for me was to send me to Colorado,—that this might prolong my life. I went to Denver, Colorado, in the early summer, and there I stayed until fall. I took several trips in the mountains, climbing many peaks to get light air, and traveled in the woods, hoping that I might inhale something from the trees which would benefit me. In fact I did everything I could think of, sparing neither money nor effort, but in October I was convinced that all I had done was of no avail, as I was sinking gradually all the time. I made up my mind to go home and die, for I believed there was no help for me. At that time I heard of a specialist who was considered very good, and I decided to consult him. He made an examination, and said there was no hope, that nothing but death could relieve me. When I asked him

Digitized by Google

how long I could live, he said about two or three months. I then asked him if I could live longer in Colorado than in Minnesota. He said perhaps a month longer in Colorado. I decided to go home, and left Colorado Oct. 20, 1898. All through the winter I was very weak, and in the spring I went to a neighboring town to settle some accounts, thinking it would be my last business on earth. When I left I told my friends it was the last time I should see them. I had become weak mentally as well as physically and everybody believed that my time here was very short.

I then heard of Christian Science, and at first I thought it was of no use to try it, I had tried so much and failed; but at last I decided to give it a fair trial. I went to Minneapolis, and began taking treatment. The truth took effect at once, for the first treatment relieved me, and from that time on I gained very rapidly. I began to have a strong desire for food, but was afraid to eat, as my stomach had been very weak. I consulted the practitioner, and she said I could eat whatever I wanted; that I was in God's hands, and that nothing could hurt me. I began to do as she advised and the food did not hurt me. In two months I had gained in flesh and was very well. The cough was more persistent, but that too finally left me. To-day I am a well man and can do any kind of work. I am very thankful to God for His goodness, and to our Leader, Mrs. Eddy, who has shown us how to demonstrate this goodness in our every-day affairs as well as in time of sickness.—O. P. NELSON, Willmar, Minn.

I entered the army in 1864, when I was nineteen years old. While in the South, and after about five months' service, I contracted severe bowel trouble, and after my return home I still had it. I tried all kinds of remedies, but they did not help, neither did doctors and their medicines. In 1867 I consulted an old army doctor, and told him if he would cure me I would give him my last hundred dollars. After a three-months trial he said there was no medicine on earth that could cure me. I was then told that I might be cured by strong stimulants, so I started with whisky and brandy, and took large quantities, but I was not cured. In 1873 I came to Beatrice, Neb., and lived there for about ten years, and though I could do some light work I was never without pains, which were sometimes very severe. After a time I took a severe cold, and had two ailments, so I went to Florida for the climate, but the bowel trouble became worse. In 1887 I came back to Beatrice to look after my interests there, and the doctor told me that I should fix up my affairs, for I could not live. He also said there was no medicine which could do me any good.

That same day I saw an old friend, who asked me to meet a Christian Scientist. I at first refused, but he urged me, and I went. The practitioner talked to me, and showed me how infinite Mind controls the body. I asked him for treatment and bought a copy of Science and Health. I was treated and felt better, so that I was able to go to Wisconsin. I took three weeks' absent treatment, read as much as I could in the Bible and Science and Health, and in two months I returned, having gained in weight and feeling quite strong, though not entirely rid of the old disease. I took treatment from another practitioner, and was helped. I was studying Science and Health all the time I could, and gaining right along; then I thought that if some one else could get the truth out of that book, I could do it as well, so I continued to study it, and also read what Jesus said about healing, and in that way I, too, was healed. In 1888 I went through a class with Mrs. Eddy, and after that I was better able to help myself and others. The old disease does not trouble me any more, and whenever symptoms of any ailment make their appearance I am able, by knowing the truth, to cast them out of my consciousness. Now I weigh two hundred pounds, am in perfect health, and have been able to keep myself so for eighteen years. Even in the beginning I said that I would not take three times its price for Science and Health if I could not get another copy, and after I understood better what I was reading, I said I would not take three thousand dollars. At this time I would not take the whole world for my book, if I could not get another copy, for what is a man profited if he gain the whole world and lose his own soul?

This book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the Bible, are worth all there is in the world to me, and I would not be without them.

G. A. WALTHER, Watertown, Wis.

I was always delicate from childhood and it was believed I had inherited weak lungs, as my mother had died with lung trouble at an early age. I was unable to attend school regularly, and finally began to suffer terribly, and was under a physician's care. He did all he could for me, and for a time I seemed better, but at the end of ten months I was if anything worse, and my friends came to the conclusion that I had not much longer to live. At this time a friend told me of Christian Science and I gladly availed myself of the opportunity to go to her home and meet a Scientist. At this time I could not sit up all day, and could walk only a very short distance. After two weeks' treatment I walked a mile, and after nine weeks returned to my home needing no more assistance, and continued to gain in strength. I have been well ever since and have taken no medicine since 1891.

LETTIE E. THOMPSON, Larimore, N. D.

I am perfectly well and happy to-day because of Christian Science. It came into my life not because I knew anything about the Science or desired it, but only because it seemed to be the last resort in a case that had resisted material remedies. Christian Science cured me of hip disease, which had developed as the result of a severe fall. The greater part of nine months after the accident I had spent in bed in almost constant pain and with sleepless nights. The physicians and my family did all they could for my comfort, but nothing brought me relief from the suffering. All drugs failed, and anesthetics were useless. The daily use of hypodermic injections of morphine only produced a sore at the point of injection, and even the possibility of an operation was questioned. In this situation I accepted Christian Science treatment, and in less than one month I was cured. I returned at once to continue my course in college, which had been interrupted by the accident, and again I played tennis, etc., and took an active part in all college festivities. This was a number of years ago, and from that day to this there has never been the slightest return of pain or weakness. Blessings and cures unnumbered have come to me through my subsequent study and application of Christian Science. I have found it an efficient, sufficient, tangible, and operative Science, which in direct proportion as it is understood is demonstrable, healing all sickness and sorrow and sin. Many, many times have I returned thanks for the discovery and the Discoverer of this healing Truth, for her through whose patient, tireless, loving labors all who will may benefit.

GRACE L. SISSON, New York, N. Y.

The first experience which I had in Christian Science came with help from a dear friend, the first Scientist I had ever met. She gave me many helpful thoughts, which have been passed round and have taken root, so that there are now about a dozen Scientists in our small town. When my second child was a little over a year old I had a serious illness. After six weeks I sent for the Scientist, who was staying at the time a few doors away, and after the first

Digitized by Google

treatment I was free. I got up and went about the house as usual; the healing seemed to me instantaneous.

A month or two after this my little one was suddenly seized with a violent attack of throat trouble. I carried the child downstairs to my friend, who set to work mentally. In about two hours the trouble passed away never to return. My husband brought the child downstairs next morning as well as though nothing had happened. He asked her who had made her well, and in her beautifully simple way she said it was God. I have had two children born since then, and I can honestly say I did not have material help at their birth in any way. I have known for certain that God was all-sufficient in all seeming difficulties. I am thankful to our beloved Leader, who has shown mankind how to live.

MRS. GUTTRIDGE, Mansfield, Nottingham, England.

For years I had tried to read the Bible understandingly, but seemed to get farther away from comprehending its truth, and during the last five years I studied various isms and ologies in the vain hope of finding something more satisfying than the orthodox beliefs. Not quite a year ago a friend who is a Christian Scientist remarked to me, "I know what religion you are seeking, it is Christian Science." She then gave me several copies of the *Sentinel* to read, and they convinced me that she did know what I had been seeking. Since that day I have been a student of Science and Health and believe that it presents the religion that satisfies. Since I was a child I had been in bondage to a supposedly inherited taste for tobacco, and consequently had been a slave to it, trying at times to quit its use, but always going back to it with even a greater desire. After having read Science and Health by Mrs. Eddy, which is indeed the "Key to the Scriptures," I took two weeks' treatment from a practitioner, at the end of which time the desire for tobacco had entirely left me, the smell of it now being obnoxious to me. I can truly say that in the light of Christian Science the Bible is a different book to me, for now I see its spiritual interpretation. It is with a deep sense of gratitude to God, and to our revered Leader, that I acknowledge this spiritual advancement and greatly improved health.

JOHN SNOWGOOSE, Ashland, Ore.

I feel impelled to express my gratitude for Christian Science. I have studied Science and Health with the Bible for several years and can hardly imagine what life was before the light of this inspired teaching illumined the way. I belonged to an orthodox church, was a Sunday School teacher, but was content to leave difficult questions to be answered in another world. At first I thought the healing and teaching of Christian Science was simply a beautiful addition to the old faith, but I find that much rooting out and giving up of old beliefs and theories is necessary. While I did not study Science and Health for my own physical healing, many ailments have since yielded to Truth, among them catarrhal trouble, painful corns, effects of vaccination, etc. God is felt to be near and real when understood through the teachings of Science and Health; the Bible is a new book, and one can more fully appreciate the glorious life and work of Jesus Christ. As there is only one other interested in Christian Science in this town, besides ourselves, we are specially grateful for the *Sentinel* and *Journal*. It is my greatest joy to be able to help others to see the nothingness of the physical and moral errors which claim to bind them, and my one aim is to become worthy of the name Christian Scientist. A recent demonstration has greatly strengthened my trust in the one intelligence which governs every man. I had promised, after much pressure, to take a singing class, though feeling I was quite incompetent. The morning of the day I was overwhelmed with a sense of inefficiency and nervousness, but my sister helped me to realize that the one Mind enables each to do his duty; that there is no limit to man's ability; and before the dreaded hour came I was looking forward to it with eagerness. Although there were thirty women instead of about twelve girls as I had expected, all sense of nervousness had vanished, and the work is progressing satisfactorily.

LUCY TOLLER EADY, Market Harborough, England.

Having received so much benefit through Christian Science, I feel it time to add my testimony to the power of Truth. About three years ago I was healed of neuralgic trouble, and there has been no return of it. A hernia of several years' standing has also been overcome, although I have had no special treatment for it. Christian Science has also helped me to overcome, to a great extent, irritability, depression, self-love, anger, resentment, and other evil tendencies, and has made me more charitable and loving. For all this I wish to express my deepest gratitude to God, and to Mrs. Eddy.—BLANCHE MARKS, Chicago, Ill.

For a long time I was a great sufferer, both mentally and physically. After having tried a great many different doctors, twenty-five years ago, and having also taken some treatments from Christian Science practitioners, I was discouraged because all seemed to fail of curing me of a stomach trouble of long standing. I had been told that Mrs. Eddy had given up her own teaching (which was a false report), and I could not go back to the creeds I had left behind, so I was altogether despondent and gloomy, besides having a complication of diseases. I had settled in the South, thinking it might benefit my health, but became so weak I could not work over an hour at a time, and suffered much at night. I seemed to be completely prostrated, suffering with every disease that could be heaped upon a mortal. One night I told my people that I seemed to be coming down with a fever, but very suddenly the realization and understanding came to me that my real selfhood was and always would be with God. At that moment I was changed, both mentally and physically,—in the twinkling of an eye, as it were,—from sickness to health; from weakness to the perfect vigor of youth. I was perfectly well; had never felt better in my life. I could feel nothing but perfect love for everything and everybody; that I did not have an enemy in the world; that there was nothing which could do me any harm; that everything manifested Life; the leaves of the trees seemed to be clapping their hands at the goodness of God; the birds were singing their songs of praise,—everything seemed like heaven on earth. I arose early the next morning, and worked hard all day. At night I was not the least bit tired and had no pain. I felt the presence of Spirit, God, directing me in all I did.

About two years after this experience I was very ill for over a month, indeed I seemed to be at death's door. I had bidden my family good-by, and all left the room but my wife. I whispered to her that I was going, but she said no; and declared that my life was in God and could not die. I felt a sudden change, and I rose up and said, "God bless you." Previous to this time I had not thought I could help myself; I had depended on others to help me out of my difficulties, but since this experience I have had wonderful demonstrations. Who could doubt the genuineness of healing through Divine Science when the evidences are so plain?

I am filled with gratitude to God, and to our dear Leader, Mrs. Eddy, for this wonderful truth.

T. SWARTWOUT, Chicago, Ill.

Digitized by Google

It is with the deepest sense of gratitude and love to God that I add my testimony of the healing power of His word. In February, 1906, I was healed through Christian Science of a severe attack of lung trouble. The marvelous and sweet sense of divine Love that flows from the fountain of Truth, brought to me joy, peace, and a consciousness of the allness of God. I am indeed most grateful to our Leader, Mrs. Eddy, for this wonderful truth. My daily prayer is that I may reflect more of divine Love.

MRS. MARTHA FLETCHER, Brooklyn, N. Y.

It is with gratitude to God that I can give my first experience in Christian Science, a healing effected by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and two weeks' treatment, after having spent ten years under the treatment of the best medical talent to be had, both here and on the Pacific coast, where I went on the advice of my physicians. While there I became unable to eat anything, and I also underwent a surgical operation for another trouble, spending weeks in a hospital, and emerging therefrom greatly weakened. For two years I took powerful medicine, as the physicians and surgeons had assured me that another operation, more severe than the first, would be necessary as soon as I was strong enough to endure it. I was, however, finally sent home with the caution not to allow the operation. After my return I was in a very deplorable condition, both mentally and physically, as it was beginning to dawn on me that the physicians were unable to cure me and were only shifting me around from one locality to another. During this time I would read my Bible, with the expectation of finding relief and comfort; but not being able to understand it, would lay it down, feeling more discouraged than before. I often wished there were healings now, as in Jesus' time.

At this time the subject of Christian Science was broached to me. While I felt that it might do for some, personally I was in despair, little knowing that this help I was rejecting was the Christ-healing for which I had been longing. I was told of a case of healing effected by it, and a little later a request for treatment was sent to a practitioner. She happened to be away from home at the time, and it was not known how soon she would return, but on the fourth day I arose, dressed, and went downstairs unaided, with perfect ease and freedom of thought—something I had not done or experienced for years. Six days later I went to the practitioner's home, and there learned that the freedom of thought had come with the first treatment. I went to her home on the street car, but walked back, a distance of one and a half miles, with a happy heart and a light step, and with a gratitude to God which expressed itself all the way.

I have since had many beautiful demonstrations which proved the omnipotence of God, and am very grateful for the light, and for the understanding which has been given me of man's relation to God. I am deeply grateful to Mrs. Eddy for this understanding, as well as for my healing.

MRS. HULDA LEY ELLIS, Burlington, Ia.

For two years prior to 1897 I had suffered great distress and pain from frequent attacks of rectal trouble, and was so depressed by it that I decided to accept the oft-repeated advice of our family physician, who had most faithfully prescribed every known remedy for the trouble, and had told me that the only permanent cure must come by a surgical operation. A few days before I was to go to the hospital, a dear friend, who was then having Christian Science treatment for her eyes, hearing that I was intending to have the surgeon's aid, told me how she was being helped by Christian Science, and begged me to try it. She was so earnest in her wish for me to give Christian Science a trial, that with the hope of being spared from the knife I decided to see a practitioner. The next day I went to call on the lady who was helping my friend.

As there were several others in her office, I waited for over an hour, and when I was shown in I told her I wanted to come to her just as I would go to a real doctor. She very kindly but firmly asked me not to think of her as a doctor, and when I said that I did not want to read Mrs. Eddy's book, she asked me if I would read just two paragraphs in Science and Health. She said this would enable her to do the work for me more effectually. With reluctance I consented to do so, and she gave me the book to study for a week. At the end of that time I went to see her again, very much in the dark and with but little improvement, as it seemed. (I make this statement to show what my mental attitude was at this time.) She told me I could be healed, and I followed her advice for two weeks longer, with the result of a clearer thought about the power of God and His willingness to help the suffering. Before a month had gone by I was so much better that I knew I need not go to my old doctor again. Physically I was healed, and spiritually I was awakening to a new light. One by one other troubles have been healed, all by the power of the truth that makes us free. I have not used drugs of any kind, nor have I needed medical treatment.

To be perfectly free from physical ills is to me a very great relief, but the greater blessings that come in the spiritual strength, gained by honest, faithful study of Christian Science, is far above what I sought for when I first went for help. My gratitude to God, for having given to the world these blessings through our dear Leader, Mrs. Eddy, is unbounded; and I am truly happy to send this testimony of my healing, with the hope of helping others in like need.—MRS. MARY E. GILMER, Cambridge, Mass.

I wish to express my deepest gratitude to God, and to Mrs. Eddy, for the healing truth which has been brought to me through Christian Science. A number of years ago I was healed by this truth of a complication of acute diseases which were very severe, indeed most alarming. A serious throat trouble was overcome later, though more slowly. The first illness mentioned was overcome by the help of a loving student of Christian Science. For this physical healing, and the sweet peace and joy which have been mine since studying "Science and Health with Key to the Scriptures," I am sincerely grateful.

MRS. MARTHA J. H. PIXLEY, Seattle, Wash.

[Written for the *Sentinel*.]

COMMUNION.

JENNIE MAY MYERS.

THIS is a day of gladness, and my heart
Accepts with joy and love the better part;
Communes in secret with the One above,
Omnipotent and omnipresent Love.

No loneliness oppresses, and no fear;
I feel God's tender presence now and here.
The Father's law protects me from all ill,—
Contented, safe, when merged in wisdom's will.

Whate'er appears of want, I've learned to call
For every need on God, the All in all.
How incomplete life seemed before I knew
From Mind, the source unseen, good springs to view.

O consciousness of Truth, and Love and Life,
At one with God, apart from earthly strife,
This is the home wherein I love to dwell,
Herein I rest, and know that all is well.

FROM OUR EXCHANGES.

[*The British Congregationalist.*]

The churches themselves have to share with the old Adam the responsibility for the neglect of the spiritual use of the Lord's Day. Men are not attracted by formal, perfunctory, and unreal public devotions. They will not listen to preaching that takes no account of modern movements of thought and is out of touch with the practical things of every-day experience. They are as desirous as ever they were for the knowledge of God and for what used to be called saving truth. There is, indeed, an extreme restlessness and an eager longing for light on spiritual things that is characteristic of large classes of the people to-day, and will not consent to be fobbed off with music, ritual, and platitudes. There is plenty of indifference, no doubt, and plenty of hostility to religion in all its forms, but behind and beneath these things there is a divine discontent which constitutes for the churches a splendid opportunity did they only know it. It may be said, indeed, that their future—we do not say the future of religion, which is a different thing—depends on the measure in which they rise to this occasion. There must be a shaking among the dry bones of crude evangelism, ignorant orthodoxy, and empty ceremonialism. The churches must set themselves to their work with fresh enthusiasm and self-sacrifice. The fire must be heated to that white glow which will burn away the ridiculous dross of sectarian jealousies and selfishness.

[Rev. Dr. Algernon S. Crapsey in *The Boston Herald.*]

Let the thought, therefore, come to every one of us that we are commended to a sinless life, and by that is meant that we are to put ourselves in right relations to the universe, to truth, and to mankind; for sinlessness is just that. Let us go to work to bring it to pass that there shall be no evil in the world which we can prevent, whether it be evil in our own hearts, in the streets of our city, or in the lanes and highways of our country. That is a task beside which the picking of oakum and the stepping on the treadmill is the mere task of a child. For we cannot go on promising to the men of our day and generation a heaven beyond the sky, or threaten them with a hell beyond this life, while we make no effort to create a heaven here on earth and while we let hells burn with all their fires in our very midst. Sinlessness in our own lives, sinlessness in all other lives, through the mighty power of our own transformation—this is the work that Christ has set us to do.

[*Pacific Christian Advocate.*]

No man should ever preach what he does not believe to be true; no minister should ever preach his doubts, for so long as doubts remain he cannot be certain that what he says is true. A Christian minister is a truthful preacher of the truth, or else he is an impostor. If he is a sincere and honest man he will be very careful to know the truth and to know as much of it as he can, and equally careful to utter nothing from the pulpit that he does not believe to be true. The business of the Church is to teach the truth, to lead men to see and know the truth and follow therein; and in doing that, it points to Christ as "the way, the truth, and the life."

[*The Universalist Leader.*]

Heaven is attained not by moving from this world into the next, or by dying penitent or impenitent, but by repenting of our sins as a beginning and then growing in grace. What we have to do, therefore, is to repent and grow.

[*The Outlook.*]

Our concern now is not with the form and manner of life beyond, but with such a shaping of life here that when the gate opens we shall take with us that purified vision which shall see God.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

President Roosevelt, in his address to college men at the Harvard Union, last week, said:—

"Like most other things of value, education is a good thing in so far as it is used aright; but if it is misused, or if it causes the owner to be so puffed up with pride as to make him mis-estimate the relative values of things, it becomes a harm and not a benefit. There are few things less desirable than the arid cultivation, the learning and refinement which lead merely to that intellectual conceit which makes a man in a democratic community like ours hold himself aloof from his fellows and pride himself upon the weakness which he mistakes for supercilious strength. Small is the use of those educated men who in after life meet no one but themselves, and gather in parlors to discuss wrong conditions which they do not understand, and to advocate remedies which have the prime defect of being unworkable. . . .

"The educated man who seeks to console himself for his own lack of the robust qualities necessary to bring success in American politics by moaning over the degeneracy of the times instead of trying to better them, by railing at the men who do the actual work of political life instead of trying himself to do the work, is a poor creature, and, so far as his feeble powers avail, is a damage and not a help to the country."

Although the desire of the United States and Great Britain to see the question of the limitation of armaments included in the regular program of The Hague Peace Conference is considered to be doomed, Great Britain is engaged in direct negotiation with several continental Powers and also, it is believed, with the United States upon a proposition to introduce the question outside of the regular program, with the object of having it referred to a special commission in order to ascertain whether it is possible for the representatives of the great Powers to agree upon a plan for the limitation of armaments for submission to their respective Governments.

The international cable chess match between Great Britain and America was won by Great Britain this year by a score of 5½ to 4½. This is the third time the foreign players have been victorious, America having won five times and one match being a draw. The silver trophy, which has been in the possession of the Brooklyn Chess Club since 1899, will now be sent to England, where it will remain until the American team is again a victor. Three consecutive victories are necessary to obtain permanent possession of the emblem.

It has been decided not to accept any bids for the building of the Panama Canal, and for the present there will be no re-advertisement inviting proposals for constructing the canal under the plan as first laid down. President Roosevelt has transferred to the engineer branch of the army the responsibility for the further construction of the canal.

The excavation at the Culebra cut of the canal for the month of February amounted to almost six hundred and fifty thousand cubic yards.

An American expedition for exploration in Asia Minor has been planned by Professor Sterrett of Cornell, who will take with him four young scholars who have all had experience as students in the American School of Archeology at Jerusalem. The expedition hopes to leave Constantinople about May 1, and will cover a large part of Asia Minor. They will take photographs, copy manuscripts, locate ancient cities, and reconstruct the map as far as possible.

The Postmaster General has approved designs for one-cent and two-cent postage stamps commemorative of the Jamestown Exposition. The one-cent stamp will be green in color and the two-cent carmine. The one-cent will bear the vignette of Capt. John Smith, with profiles of Pocahontas and Powhatan. The two-cent stamp will bear a fine engraving of the landing of the first settlers at Jamestown.

The overflow of the Colorado River at the Imperial Valley Dam has been stopped, according to statements made by officials. The dam has stood a test of two weeks and the officials are satisfied that the work of building levees will be finished by April 15. The total expense involved in curbing the river will be between three and four million dollars.

Before the Interstate Commerce Commission at New York, investigating the Harriman System, it was brought out that before 1898 the Chicago and Alton's capitalization was, in round numbers, $33,000,000, against $122,872,328 on June last. The increased capitalization was mostly "water."

Somewhere between $175,000 and $200,000 was stolen from the local sub-treasury at Chicago about the middle of February. All the money taken was in bills of the denomination of $1,000, $5,000, and $10,000. At first it was believed that there must be some error in the bookkeeping.

Five thousand families of European immigrants are to be brought to Nuevo Leon, Mexico, as the nucleus of a gigantic colonization project. Two million acres of land have been secured upon which to establish the colonists.

An amendment to the Agricultural Appropriation Bill, adding $1,000,000 to the appropriation for improvements in forest reserves, has been adopted by the Senate without debate.

George von L. Meyer, former American Ambassador to Russia, has returned to the United States, and will become Postmaster General in President Roosevelt's Cabinet.

The Right Hon. James Bryce, the new British Ambassador to the United States, succeeding Sir Mortimer Durand, has arrived in the United States.

Foreign.

In the Newfoundland Legislative Assembly the Premier has proposed to adopt a contract between the Newfoundland Government and London and Paris capitalists, providing for the establishment of a short line of transatlantic steamers between Killory, on the west coast of Ireland, and Green Bay, on the east coast of Newfoundland. The plan provides for a two-hour railway trip across the colony to Port au Basque, whence a twenty-knot steamer would convey mails and passengers to Gaspe, Que., in summer, and Sydney, C. B., in winter. The promoters of the project claim that there would be a saving of thirty-two hours over any other transatlantic route.

Lord Curzon, ex-Viceroy of India, who is giving his personal support to Lord Newton's bill for the reformation of the House of Lords, wishes the principle of life peerages to be adopted on a large scale, partly as a counterpoise to the hereditary element and partly as insurance for the representation of important interests, such as religious denominations outside the Church of England, labor organizations, the Indian civil service, and the colonies.

The election of members for the next Russian Duma has proceeded far enough to show that it will be even more radical than the last. The party of the Left predominates, and the Constitutional Democrats will form a strong Center party in favor of a Constitutional government by a responsible ministry. It is expected that the Government will refuse to manke any concessions to the Duma, and that upon the first manifestation of a disposition to overstep the limits prescribed for it, it will be dismissed.

The great new Keyham docks at Devonport, England, which complete the most important naval dockyards scheme of the British Empire, were opened last week by the Prince of Wales with ceremony. The warships were dressed with bunting and the harbor was gay with flags.

In an official declaration issued, the Government of the Netherlands sets forth its readiness to receive the delegates to the Second Peace Conference on or about June 1.

The Japanese cruisers Tsukuba and Chitose left Yokohama Feb. 28 for Jamestown, Va., where they will participate in the naval parade.

Industrial and Commercial.

An agreement to build passenger and freight terminals at Kansas City, at an estimated cost of $30,000,000, has been made by the Kansas City Terminal Railroad Company, representing the leading roads entering the city. The railways are to erect a $2,000,000 union passenger station, five union freight houses along the river front in the west bottoms, and forty street viaducts and subways. The city agrees to give the railway a fifty-year grant for the terminals.

The Pennsylvania Coal and Coke Company has leased holdings of Beach Creek Coal Company for 999 years, and obtains thousands of cars, thirty-nine mines and workings, one thousand coke ovens, thirty-three shipping stations and one hundred and six thousand acres in Clearfield and Cambria Counties. The consideration is $3,000,000 in bonds.

The paper manufactory recently established at Orange, Tex., has an output of ten tons of wrapping paper daily. The operators claim that with the proper bleaching process the same material can be converted into writing paper or newspaper stock. The raw material used is sawdust, shavings, and other refuse from lumber mills.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

"BE STILL, AND SEE THE SALVATION OF GOD."

London, Ontario, Feb. 22, 1907.

Dear Mrs. Eddy:—I have many times desired to address you with a letter, but have refrained from doing so lest I should trespass on your precious time. Now that the desire is again upon me, I yield to the gentle impulse to take up the pen and pay tribute to your worth and work.

The publication of falsehoods and worthless statements, under the name of "history," is a breach of moral law and an insult to the intelligence of the age. Were it not for the restraining power of Christian Science, curbing human resentment, my hostility to this would be liable to overstep the bounds of "righteous indignation." I am a native of Scotland—the land of Wallace and of Bruce, of John Knox and Henry Drummond, and, as my name indicates, have come from a clan whose claim to chivalry is as clear as its title to valor. I was born in the heart of the Highlands, and spent my boyhood days on the estate of the Duke of Sutherland, whose illustrious ancestor—the noble Earl of Sutherland—was the first to sign the National Covenant (an historic covenant designed to protect religious liberty in 1638) by thrusting his sword into his left arm and writing his name in characters of blood. Little wonder, then, that the spirit of the old Covenanters should animate my feelings, when I see you persecuted by an unprincipled portion of the press in a periodical which must have lost its sense of honor and justice, its pride, dignity, and self-respect.

A libel is a malicious misdemeanor, a criminal offense that deserves punishment; but who shall execute judgment? I have learned from you to put up the sword, "to overcome evil with good," and to allow the cutting claymore of Truth to decimate error, or rather, to let error destroy itself. My thanks for the lesson. When Daniel was cast into the den of lions, of what avail would his snarling in opposition to the growls of the wild beasts have been? The salvation of the prophet, as it proved, lay not in matching his voice against the mighty roar of the king of beasts, but in the silent recognition of God as omnipotent Love.

I should like to relate here an incident in the life of an eminent Scotch divine—Doctor McDonald, better known in the Highlands as "the apostle of the North." During his ministry in a seacoast town, a number of fishing-boats belonging to his parish were one day suddenly overtaken by a severe storm while the men were attending to their nets. Their safety being imperiled, a hasty retreat was made for the harbor. It was a race for dear life, for, with every effort put forth by the struggling fishermen to reach their place of refuge, which lay several leagues leeward, the storm increased in violence and threatened the destruction of the whole fleet. Becoming alarmed for the lives of their fathers and husbands, toiling against odds, the women-folk of the town forsook their homes and congregated on the beach, where they mingled tears of distress and cries of despair with the salt spray of the roaring billows that lashed the shore. In the midst of this pandemonium, composed of hurricane and hysteria, Dr. McDonald appeared on the scene, bareheaded, but clothed in calm, his white hair blown about by the ungentle gale. Lifting his eloquent voice above clamor and storm, the Scotch divine appealed to the wailing women to quiet their fears and cease from weeping. He beseeched them to be silent, and to comfort their troubled hearts with the assurance that all would be well. "Be still," he entreated, "and see the salvation of God." Then kneeling down upon the surf-beaten strand, the reverend doctor with hands uplifted to heaven invoked divine aid, and whispered in prayer the "peace, be still" with which Jesus calmed the tempest on the sea of Galilee. Presently the boisterous wind began to abate, the white-capped waves to subside, and the cries of hopeless despair were hushed almost to silence. The raging elements were rebuked. In a little while one of the fishing-boats succeeded in making the harbor, and shortly after, another reached the haven; but not until every vessel in the fleet had sailed into safety, did the "apostle of the North" arise from his knees with a holy smile lighting up his serene countenance and words of gratitude falling from his lips.

Beloved Leader, I cannot help thinking what grand Christian Scientists my countrymen will make when they come to learn and accept the religion which radiates from the heart,—your religion of Love. The day is hastening when all shall come into the unity of this faith, which is the gospel of good works.

The world is slow to acknowledge merit in any department of science or art. However much we may now revere the memory of the Christian martyrs, and honor the names of the ancient worthies whose achievements for the betterment of the race have advanced them from the temple of virtue to the pantheon of fame, yet the guerdon of the truly great is immortality, and the reward of the righteous, life everlasting. While humanity is tardy to do you justice, in this hour of persecution it is sweet to know that your recompense is sure, for you have brought to the world a revelation, and founded a Church that will eventually redeem mankind through the merits of Christian Science.

Lovingly yours,

PETER E. MACKAY.

COMMON GROUND FOR ALL

W. D. MC CRACKAN, A.M.

IN quiet moments, and during pauses between work and amusement, mankind asks as to the meaning of life. This speculative habit of thought has persisted through the ages. The question, What is life? comes to the child growing into youth, to the youth developing into maturity, and to men and women of all ages. Whence is life and whither does it tend?

It is becoming increasingly evident that thinkers of every kind are making efforts to secure some common ground upon which the real meaning of life may be viewed and reviewed and final conclusions reached. Thus a drawing together of savants and scholars is observable, a regrouping.

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

a veritable reconciliation between former antagonists. It is the hope of such investigators that by a new unity of purpose the riddle of existence may be solved; that life, its origin, continuance, and ultimate, may be explained.

Those who have read the signs of the times know that Christian Science has already answered this great questioning of the human heart about the true meaning of life. The Christian Science text-book, Science and Health by Mrs. Eddy, by elucidating the Scriptures, has clearly shown to all who are willing to see, that God is Life, the eternal, indestructible, and only real Life of man. Thus mankind, in seeking for the meaning of Life, is really seeking to understand God, good. From the standpoint of Truth, then, the riddle of existence is already solved, and the origin, continuance, and ultimate of real Life is already explained.

Not so, however, with the problem of mortal existence or human life. Mrs. Eddy states: "Mortal existence is an enigma. Every day is a mystery. The testimony of the corporeal senses cannot inform us what is real and what is delusive, but the revelations of Christian Science unlock the treasures of Truth" (Science and Health, p. 70). The sense of life in matter, limited as it is to a brief span between the cradle and the grave, cannot satisfy the aspirations or even the legitimate expectations of man. When contrasted with the spiritual understanding of God as Life, the inadequacy of a mortal, material belief about life becomes glaring indeed; therefore mankind is bidden by Christianity to lay down this false concept in order to take up the true, to put off the old man in order to put on the new. Jesus said, "He that hateth his life in this world shall keep it unto life eternal." On this ground also Paul could say, "I die daily," *i.e.*, he could aver that he was outgrowing day by day the sense of life in matter. On this common ground of the spiritual understanding of Life the thinkers of this age are even now more and more uniting. In subscribing to the teachings of Jesus, of Paul, and of Christian Science, they will eventually find that complete agreement and restful concord for which they are justly longing.

So also in regard to the much-debated question, What is truth? The quest for the truth has never for an instant ceased since mankind first began to ask questions. Mortals have searched for the truth in the earth and under the earth, in the sea and in the sky, through the microscope and through the telescope, in matter and in mortal mind, by experiment and by observation; and truth has never once been absent during the whole of this pathetic pursuit on the part of suffering, sinning, and wondering humanity. Truth is ever-present, ever ready to be apprehended and comprehended by the honest and spiritually minded in every age. In our day the absolute Truth of being has been set forth and demonstrated by the teachings and the life of a consecrated woman, Mrs. Eddy, so that all may understand and be blessed by her unselfish labors. She has proved and is proving daily that God is Truth, and as mankind's eager search for the meaning of life must lead finally to God, so do their strivings to understand the truth bring them inevitably to the same God, who is both Life and Truth.

In the light of the simple solution of the life-problem presented by Christian Science, the efforts of a chain of philosophers, extending back to the very dawn of recorded history, to solve this problem by trying to exclude God from it, must appear singularly unfortunate. The veritable libraries of books devoted to the belief that life is in matter lose their supposed value. Their studied conclusions disclose themselves as the useless speculations and inventions of a supposititious mind. They can no longer pretend to be emanations of absolute Truth. But in whatever conclusions about life and truth humanity may have sought solace, it has never ceased to stretch out its hands towards the ideal of love. Through much tribulation, much disappointment and disillusion mortals are forced to lay off the temporary sense of love for the Love which is eternal, universal, and impartial, which "fadeth not away," because, as John assures us, "God is love."

A little child knowing God knows all there really is to know. A single note of joy overtops the clamor of a thousand discords. One kindly deed outweighs a million guesses at truth. A moment's realization of the omnipotence of God as Love nullifies centuries of traditional evil. Then to know God as Life, Truth, and Love is to have reached the common ground prepared for all men. On this ground, and on no other, there is room for all, hope for all, health and happiness for all, brotherhood, justice, and peace for all.

A PRESBYTERIAN MINISTER'S TRIBUTE TO CHRISTIAN SCIENCE

REV. FRANK N. RIALE, PH.D.

THE little "honest confession of the soul," "Our Debt to Christian Science," which I took the liberty to make some time ago in the *Westminster*, a Presbyterian weekly published in Philadelphia, it is needless to say has called forth all kinds of criticism and comment. In at least six periodicals I have noticed the article reprinted in full, either with editorial words of warning or expressions of great satisfaction and delight. Some have cried out, ecclesiastically speaking, "Man overboard!" Some of my dearest ministerial friends have written wondering why I was so ignorant; others why so injudicious. The attitude of the editor of the *Westminster* was very clearly stated in his caption to the article and his after-comments. Here it is in a sentence: "Christian Science is nonsense; and we do not believe in it enough to burden the believing capacity of an idiotic mosquito."

Mrs. Eddy gave one of her sweetest love-messages in regard to this severe criticism upon herself and her work. In a little personal note to the writer, not a drop of anger was expressed, but only love abounding toward those who criticised so cruelly and wrote so contemptuously about that which is to thousands the dearest message of heaven that ever came to their hearts.

I am very glad indeed to express my own reason for gratitude for what Christian Science is doing; for he is not a truth-lover who would not be willing to proclaim upon the house-top the honest convictions of his heart. I do most sincerely feel that the *spirit* of the message of Christian Science is that which ever has been dearest to the heart of Christendom at the moments of its deepest awakening; and is truly naught else than the heavenly-anointed message of Jesus. It is a living consciousness, not a mere theoretical assent to the great cardinal truth of all religion, that "God is All and in all," and that in Him there can be no darkness at all. It is the awakening of the conviction in our hearts, by the witness of the Spirit, that "God is Love;" and that in Him there never has been, nor ever can be a problem in human life that the working out of this love will not solve. It is a conviction that the present working out of this love in the hearts of the believers is for the great purpose of forgiving all our sins and healing all our diseases. God's great purpose from the foundation of the world is the bringing forth of the sinless, sickless, and deathless man, and to show that there is no more reason for a man being sick than for being a sinner. The whole creation groaneth and travaileth for the bringing forth of just such sons of God as is so clearly expressed in Christ Jesus. This consummation so devoutly to be wished is not some far-off divine event toward which the whole creation moves, but is potentially present now, and is actually present to every one that believeth. The "tree of life" is on both sides of the stream of time—here and in what men call the after-here. The great final message of the Spirit

Digitized by Google

is, "Come,"—enter into the fulness of Him that brought life and immortality to light through the gospel, which is hid as good news from many, on account of the ecclesiastical bushel we have placed over it.

However imperfectly it may have done so, Christian Science is most honestly endeavoring to recover this primitive faith of Christendom, once for all delivered to the saints; and is expressing the same in terms of the "divine immanence" which Professor Bowne says is "the greatest discovery of the century." It is a most honest attempt to express Christ's message in such thought terms as to revitalize the ecclesiastically devitalized faith in Jesus.

The fact is, veil it as the world will, thousands within the church (and many of these its very rarest souls) are finding the spirit of the message like a "lost chord" to their hearts, without feeling the need of leaving their churches because they have found it such, any more than the Church of England has gone over to the Salvation Army ranks simply because the work of General Booth has become almost officially recognized as one of the greatest influences of the century to bring us back to an experimental knowledge of the real saving power of Jesus.

The following incidents taken almost at random from more than a hundred that have personally come under my immediate observation in the last year, will illustrate this. The first is that of a letter received a few weeks ago. It is from a son of a man who was one of the most godly I ever met. For years the father was a member of the session of his church—the Paul for power and the John for love in it. When he was called up higher, the mantle very largely fell upon his son, who has for years been a prominent officer in our church. He can perhaps be truly said to be a leading officer, as well as the leading merchant of the place. Here is the letter in part which he so unexpectedly writes:—

"I wish to congratulate you on the most wonderful article published in *The Christian Science Journal* of March, 1906 [republished from the *Westminster*], on "Our Debt to Christian Science." I want to say you have hit the nail square on the head, and have driven it in full length with one blow. It caused me to secure Science and Health and read it through. I say the teachings are most beautiful; and more so from the fact that they are so truthful. When I was in Chicago the first of the month, I attended the meeting of First Church. There were fully fifteen hundred people present, and I was deeply impressed with them. I have had your article printed in both our city papers."

Another case that comes to me just now, is that of a friend who was one of the leading educators of his State. He was given the highest honors in public school work the State could confer. He is recognized as a man of "fine sanity" and good common sense. He is an honored elder in one of the strongest Presbyterian churches in the Middle West. Science and Health is his daily companion. Outside of the Bible he says he gets from it far more than from any other book.

Another case is that of a friend equally prominent in public school circles in one of the largest cities of the land. He is a member of the official board in one of the strongest Methodist churches. He is indeed *the* member of it. He is also superintendent of the Sunday School, and teacher of a very large Bible class. Science and Health is also his constant companion. He is saturated with the message of it. This he pours forth every Sabbath in his teaching—not the letter, but the spirit of it. Those under him feel that they have never had such a message of joy and power, although none of them know from whence it comes; for it is simply given "with the label off," which is the best way to give any great heart truth. Though truth comes through men, it always, when it comes most clearly, makes the messenger feel it is not of men, and demands no rights to that which is "free grace and dying love" to a world to be redeemed by the life and death of Jesus.

Once more, if it may be allowed. Just the other day, the president for years of the Board of Trustees in one of our very best churches told me that he reads daily from the text-book and never in all the years has there come such a flood of light on the real message of Jesus. He feels that it is the spirit of the message universal; and loves to stay in his church and help give the larger interpretation of it.

Science and Health is read over and over by many a godly minister, and the essence of Christian Science is really preached from every live pulpit. There is no use denying it. Mr. Bryan, when referring to Socialism in his recent speech in Madison Square Garden, heard some one cry out, "Hurrah for Socialism!" His reply at once was: "I have no objection to a man expressing himself in favor of Socialism, because the Socialist as a rule is an honest man. I believe he is a mistaken man; but you must meet him with argument, not abuse."

Much more truly must the Church thus meet Christian Science. I am frank to say I scarcely ever speak to a minister about the matter, that he is not filled with wrath. The tirades against the cult from the pulpit are the saddest and most senseless things one can witness. How different from the spirit of Jesus. When the disciples saw devils being cast out by men that followed them not, they wanted at once to have the whole matter stopped. Then came from the great heart of the Lord: "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part." Christian Scientists certainly do work miracles, and cast out devils, and do it in the name of Christ.

The religious press almost without exception seems to hate anything that smells or smatters of Christian Science, as Satan hates the saints. As Mr. Bryan said of Socialism, much more truly can it be said, *must* it be said of Christian Science: "No one should have any objection to any man speaking out for Christian Science, for Christian Scientists, as all the world knows, if it is not creed-mad, are good people, some of the best of people—and most of them vastly better people than they were before they became members of this new faith. The Church may feel that they are mistaken people; but if so they are to be met not in anger, but in argument." When anger begins, argument ends. He who resorts to abuse confesses thereby that he has reached the beginning of the end of his cause, and the final downfall is not far off. If Christian Science is another "heresy," then it should, in the spirit of the largest wisdom and the deepest love, be met as such. If it is a "heresy," will it not be to Christendom what every heresy always has been,—the voice of God saying to us, "Here, my child, is something you have eliminated or overlooked in the working out of the full-orbed message of Jesus."

Surely one cannot help but see in the whole movement, and the way it grips the hearts of the best of men and women and gives them a new quiver of the heavenly life, that it is like some "Old Mortality" chiseling off the overgrowths of the centuries which were hidden from the view of the Church, that other half of the full-orbed truth which is the key and the core of heaven's message to us—the message from Him who healeth all our diseases.

I am not ashamed to say here what I wrote to Mrs. Eddy; that as a Christian minister I wanted to express my most sincere gratitude for what she has been the means of doing through God's proven presence, to lead a great multitude that no man can number into a more living realization of the priceless preciousness of an experienced knowledge of Jesus Christ, and make them feel he came to show us that there is no more reason for a man being sick, than there is for his being a sinner; and that the sinless,

Digitized by Google

the sickless, the deathless life is the gift of God, to be had by all for the taking,—the longed-for possession to be had by all that fully believe it.

A SCIENTIFIC TRUTH ILLUSTRATED.

REV. JESSE L. FONDA.

THE illusive nature of sense testimony is illustrated in the following incidents: One morning a man was driving a cow into the stable, in which there happened to be at the time considerable dust. As a ray of sunshine streamed through a knot-hole and hit the particles of dust, it made them all visible and there seemed to be a veritable bar across the way, which was so real to the cow that as she hurried along she jumped over it to get to her place. A friend recently told me this experience of a neighbor. Coming home one night he was laughing heartily. His wife asked the cause, and he told her that for two or three evenings he had been stepping very carefully over what seemed a crack in the cement sidewalk. This evening he had for some reason looked at it carefully, and found that it was no crack at all but the shadow of a wire overhead.

In both these instances there was no reality involved, only a seeming; a veritable shadow, perhaps, but no substance. In "Science and Health with Key to the Scriptures" by Mrs. Eddy, we learn that the same is true of all that is based upon sense testimony. We have all been living in the sense that the body is real and the only thing that we can live in; and to material sense this is the only possible consciousness of existence. Mrs. Eddy is the only one who has had the courage to attempt to disabuse the thought of the world on this point. She discovered and proclaimed that the body and material sense are not the realities of being, but are the errors and falsities of human thought; and that the spiritual, the divine, is the only reality of being. Others may have gained a glimpse of these facts, but she studied them out, gave them a philosophical analysis, and set them in logical sequence and in scientific form. She has given to the world the results of her work in language fitting to the originality and grandeur of the subject, and we have it in our text-book as "apples of gold in pictures of silver." Here we are shown that while mortals continue in this false sense, they take the sins, pains, and sorrows that necessarily inhere in it, and accept them as real and essential. They step over shadows and bars and make sorry work of it.

The method of getting out of this bondage is learned from the case of the man and the shadow. One must first understand the unreal nature of these ills,—these shadows and bars,—and with the apprehension of Science this is now possible. We can know surely that disease is a false condition, hence unreal, and when this is perceived the supposed power of falsity vanishes and its hold is broken. In the sunlight of Truth we are assured of its illusiveness. Some may say that it is not quite so easy to gain the sense of victory over sin and sickness as it was in the case of the one who learned of the shadow. There is in mortal thought a distinct insistence upon the reality of these evils which requires a positive and persistent denial and refutation. We must, therefore, know that there is a power in our denials to overcome every false claim of power; that the eternal Christ-power, with its supreme denial and destruction of evil, is with us, and that "the everlasting arms" sustain us. We should thus be filled with confidence in the adequacy of Truth and then evil would soon vanish and harmony be restored.

The sense of the semi-sacredness and normality attached to sickness and disease is so manifestly false, that we need not fear that we shall offend against divine law by disputing and resisting every encroachment of these evils. As we progress in this practice we shall rise to a sense of the grandeur and divinity of Truth. In doing this there will come to us a deeper appreciation of Mrs. Eddy's courage and originality, and with it esteem and gratitude for her work.

A CONSUMING FIRE.

LAURA C. NOURSE.

A FEW days since a trifling incident brought to my consciousness a childhood thought which the years had not wholly obliterated, and from which I am learning valuable lessons. As a child, if a piece of work went wrong and I could not bring it up to my idea of perfection, but one thing ever suggested itself to me as a possible remedy, and that was to burn it all up, and begin over again. As the years went on and I began to encounter the real vicissitudes of life, I many times found it in my heart to wish that I might put into effect my childish thought—"burn it all up, and begin over again;" but woe was me, this was not so easily accomplished. I had begun too many things which had so woven themselves into the warp and woof of my life that I could not escape the inevitable consequence, or hinder the work, so poorly begun, from going on and on, as it seemed to me then, in one eternal and endless round.

I was continually tugging away at tangled skeins, and working vainly against what seemed to be an inexorable fate. Weary of the strife, sick, disappointed, heavy laden, I longed for rest and peace. When the Comforter came to me, was I ready to wipe out all of material sense and self; give up my false ideals of life and its joys, let go of matter and its illusions, and live in Spirit, God? Was I ready for this full and sufficient remedy for all my woes? The answer must be tentative. I was ready to be relieved of pain, ready for the benefits of Christian Science, ready for the "loaves and fishes;" but I was not ready for the work of purification; the baptismals of fire; the regeneration of thought; the spiritual purgation which must ever precede, or go on in even ratio with, the true healing of the body; in a word, I was not ready to "burn it all up, and begin over again."

It is well that we have a patient God. It is also well that "our God is a consuming fire;" and that we have only to be willing to part from sin with all its illusive pleasures, and the flame stands ready to devour,—to separate the gold in human character from the dross, and lead us gently on to the perfect and eternal good. But we must be willing, if need be, to pass many times under the rod; willing, in every event of our lives, to say with the great Wayshower: "'Not my will, but Thine, be done!'—that is, Let not the flesh, but the Spirit, be represented in me" (Science and Health, p. 33); and with the sweet singer of Israel: "Search me, O God, and know my heart: try me, and know my thoughts: and see if there be any wicked way in me, and lead me in the way everlasting." And it must be an active service; not a simple acquiescence in the divine will, but an intelligent co-operation with good. There is no chance to slip into the kingdom on another's passport; to let some one else gather our honey for us. We must be "busy bees," working out our own salvation, letting God's will be done in us, through us, by us. Then, as we journey on, the hand of Love will separate the chaff from the wheat, and our God will consume, utterly destroy in each individual consciousness, all that is unlike Himself.

Our Leader's life of toil and self-abnegation is the Moses of to-day, pointing the way; leading the tired prodigal back to the Father's house; waiting so patiently and so lovingly on the ofttimes tardy and unwilling feet. O Love divine! help each one of Thy "little ones" to cast into the devouring flame all that would hinder their growth spiritward, and with new resolve and steadier purpose to "begin," if need be, "all over again."

SELECTED ARTICLES.

[From the *Lawrence* (Mass.) *Telegram.*]

NOT BY FORCE, BUT BY REASON.

The *Haverhill Gazette* points out the absurdity of the proposed attempt to legislate against the practice of Christian Science healing; absurd because such matters are not regulated by force, but by reason. The *Gazette* says:

"The opposition to Christian Science is once more before the Legislature with a proposed bill which is expected to place such burdens upon the practice of Christian Science, or any other art of healing outside of the two recognized and 'regular' schools, that it will be abandoned. There isn't a chance of the bill being enacted into law, but there is a chance that agitation for legislation of this sort will be continued by the advancing of some apparently feasible arguments that may be brought forward. But it will be difficult to secure a law that will regulate or restrict the practice of the art of healing. The law may properly define the limitations for the use of the title 'doctor,' and may properly insist that in the practice of the art of healing or in the offering of advice to that end there be no pretense beyond the truth and no deception of any sort, but when it has gone as far as that the law has reached its limit. It can't restrain you from advising your friend as to the best remedy for his corns, or a ready relief for his cough, or prevent you from using your mental power to get him out of the doldrums or 'the blues,' which may be his principal ailment, and it can't prevent your friend from accepting your advice or your treatment. Nor is it desirable that the law should have such a power. If it would exert all of its power in having things advertised by their right names, in abolishing deception and requiring the truth in all claims in such matters, there would be no need of any further legislation to sufficiently protect humanity."

[From the *Indianapolis* (Ind.) *Star.*]

The [Indiana] Senate yesterday [Feb. 13] passed the Farber Bill by a vote of 27 to 15, regulating the practice of medicine. Several amendments were offered, but were defeated save the one introduced by Senator Slack, which provides "that nothing in the act shall be construed to apply to any person who administers to or treats the sick or suffering by mental or spiritual means, without the use of any drug or material remedy."

This section applies particularly to Christian Science practice, which found a large number of supporters. Senators Slack and Kistner both made speeches praising the work of the Scientists. Senator Kistner referred to them as one of the largest and most influential churches in the land. Several representatives appeared before the House Committee on Health yesterday afternoon and spoke in favor of the amended Farber Bill as it passed the Senate. The Committee, it is expected, will report the bill as it came from the Senate.

[The following excerpts are from an article entitled "Christian Science in Boston," in *The Onlooker*, published in London, England. The editorial note which accompanied the article reads as follows: "Mr. Algernon Hervey-Bathurst, who contributes the article on Christian Science to our present number, is the son of the late Sir Frederick Hervey-Bathurst. His family is connected by marriage with that of the late Lord Inchiquin, two of whose children, Mr. Donough O'Brien and Miss Eileen O'Brien, are themselves Christian Scientists. His wife is a niece of Lady Abinger, one of the earliest adherents to Christian Science in this country."—EDITOR.]

The effect [of the incidents in connection with the dedication of The Mother Church] on a Scientist, and one who is able to give an answer concerning the hope that is in him, can be realized only by that one who knows and has proved what Christian Science is, and what it is doing to alleviate pain, heal sickness, and above all, sin, and to show to humanity that "God is a very present help in trouble;" that still to-day

> The healing of the seamless dress is by our beds of pain—
> We touch Him in life's throng and press, and we are whole again.

Any one who has observed in the least degree the methods, results, and growth of Christian Science in America, England, or any other country, cannot fail to see that its continual steady progress is due solely and entirely to the indisputable fact that Christian Science does heal both sickness and sin, and is therefore benefiting mankind in a far greater degree than anything else has done since the Great Master was exhorting the people of that day, as well as those of all time, "Be ye therefore perfect, even as your Father which is in heaven is perfect;" and "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

In view of the unspeakable benefits received by honest students of Christian Science, is it to be wondered at that they should feel that they owe to Mrs. Eddy, the Discoverer and Founder of Christian Science, a great debt of gratitude, because she has been able to give to all who will receive it, not only the understanding of everything that is great, grand, noble, and true, but also the means whereby they can put it into practical use at all times and under all circumstances. These are the expressions of gratitude which are poured forth at all the Wednesday evening services in the Christian Science churches now encircling the world.

[Charles G. Manness in the *Kingston* (Ontario) *News.*]

Christian Scientists understand that sin and disease exist only in the false material sense of things; they seem real, but they are not facts, because God never made them; if they were real they could never be destroyed, for a real thing is an eternal thing and is incapable of destruction. If sin, sickness, and disease are realities it would be foolish to attempt their destruction either through religion, medicine, or any other method. Christian Scientists do not say that pain is imaginary, for "it is neither imaginary nor unreal, that is, to the frightened, false sense of the patient;" but it is a solid conviction to him. [See Science and Health, p. 460.] If this were not so, he would not suffer, and he will lose his suffering only as he learns the unreality of all that is unlike God.

Surely our critic can readily see that in the use of the word "opposite," as applied to evil in contradistinction to good, Mrs. Eddy does not use the term as he uses it in his statement, "East which is real has west for its opposite, therefore west is unreal." In this sense it is not intended to declare that east is antagonistic to west or that the presence of the east renders the west unreal.

Our critic objects to Mrs. Eddy's interpretation of the Scriptures. If he should investigate he would find that whenever her interpretation has been accepted and made practical, good has always followed, and her followers (numbering hundreds of thousands of the most cultured, refined, and intellectual men and women the world can produce) are proving that this interpretation is true, for the signs are following them that believe,—the sick are healed, the sorrowing are comforted, and the sinful are reformed. Christian Science brings forth the normal condition of things; it does not annihilate man, but brings forth his perfection, and has delivered hundreds from the intense fear that eating would cause them suffering, hence delivering them from a state of semi-starvation. Above all, Christian Science enables its followers to obey the

Digitized by Google

Golden Rule; namely, to love their neighbors as themselves, and to do unto others as they would that others should do unto them.

[V. O. Strickler in the *Schenectady* (N. Y.) *Gazette*.]

In view of the fact that so many people honestly fail to understand just why Christian Scientists have more faith in Christian Science than in medical treatment, I feel sure that the readers of your valuable paper will be interested in a brief statement of their position.

Christian Scientists believe that the religion of Jesus Christ is sufficient to regenerate the sinner and to heal the sick. Their faith is founded upon the fact that Jesus himself healed the sick, and taught his disciples to do so. In each case where he commissioned disciples and sent them into the world he commanded them to both preach the gospel and heal the sick. Christian Scientists believe that the command to heal is of as high authority as the command to preach, and that it is the duty of the Christian Church to obey Jesus in both commands.

There are many thousands of people who testify that they have been both healed and regenerated by Christian Science. They come from every walk in life, and there is no reasonable ground for disbelieving their statements. The rapid growth of Christian Science is the marvel of the age, but it becomes more marvelous when it is understood that practically all Christian Scientists became such only after they themselves, or members of their families, had been healed through its teachings. In fact most of them ridiculed and scoffed at the claims of Christian Science until they became witnesses of its power.

The argument is sometimes made against Christian Science that if it were from God, it would never fail. This argument, however, is not sound, for failures are not of the Science, but of the practitioner. The disciples of Jesus were not able in their earlier ministry to heal all cases. It is related that in at least one case which they were unable to heal, they brought the man to Jesus, who healed him immediately. Subsequently these same disciples raised the dead, thus showing that in the mean time their understanding had become more spiritual. Jesus himself said that the knowledge of the truth shall make you free, thus indicating that man's power over the things that enslave would increase as his knowledge of the truth increases.

If Christian Scientists believe more in prayer to God than they do in drugs, who is able to affirm that honest, sincere prayer to God is less efficacious than drugs? If one prefers to submit his chances to drugs, and another to God, why should not each have the right to do so?

[Editorial in the *Omaha* (Neb.) *World-Herald*.]

We give space to a letter from an Omaha physician, who criticises the *World-Herald* for opposing the proposed legislation against Christian Scientists. He avers that the legislation which would subject Christian Science practice to the control of medical practitioners does not in any manner interfere with "belief" in Christian Science. He apparently thinks it fair, for instance, to compel Christian Scientists who do not believe in disease to study and pass examination before physicians on "pathology"—the science of diseases. This is one of the provisions of the proposed bill. It would be about as reasonable as to require a physician applying for a license to pass an examination before a board of Christian Scientists on Mrs. Eddy's work, Science and Health. In either case the applicant would be under necessity of appearing before an antagonistic board to be examined in something he did not believe in.

Other States have defeated unjust bills like this, and Nebraska should do the same. If Christian Science is to be regulated by law, it is narrow-minded to put the regulation into the hands of its enemies.

[Willard S. Mattox in the *St. Albans* (Vt.) *Messenger*.]

Jesus' dictum, "Ye shall know them by their fruits," is as inexorable as mathematics, as immutable as the laws of the Medes and Persians. It is merciless to the unfruitful systems; it does not condone failure, compromise with hypocrisy, or sympathize with incompetency. It demands results. Preaching, according to Jesus' standard, must be followed by results. The mere process of intellection is not an evidence of Christianity. The older religions cannot hope and should not try to escape measuring up to this standard. Acceptance of a religious belief by a great number of persons is not, in itself, evidence of the truthfulness of that belief. Nor does the age of a religious belief necessarily imply its verity. There may be popular forms of religion which have existed for many years, which nevertheless may not have any of the fruits spoken of by Jesus, by means of which they may be identified. He did not say, You shall know the true Christian church by its intellectual preachers, its colleges and seminaries, and the fact that many have believed in it for a long time. He gave one simple test, "Ye shall know them by their fruits;" and Christian Scientists are willing to be tested by Jesus' standard.

The fact that our critic does not seem willing to agree to such a test, cannot rebut the evidence in favor of Christian Science. He tries to explain away the fruits of Christian Science practice. He says other systems show similar results. In this he is mistaken. To him they appear similar, but the Christian Scientist knows why they are not alike. Faith-cure, mesmerism, and other human theories, depend upon the activity of the human mind. Christian Science eschews the aid of the mind of mortals and depends entirely upon the divine Mind "which was also in Christ Jesus." Again, the results of Christian Science practice are said not to be invariable. No, but they are sufficiently persistent to indicate plainly the operation of a fixed Principle. Our critic has probably gone to the daily press for his statistics regarding the percentage of successes and failures in Christian Science. In the past it has happened that imperfect, unreliable, and even false reports have been intruded upon the editors of the press, but since the editors have become more awake to this intrusion, it is reasonable to expect more accurate reports from now on.

[Editorial in the *Medford* (Ore.) *Daily Tribune*.]

Mrs. Eddy is endeavoring to elevate the moral, social, physical, and religious standard of the human race. . . . As a believer in the Biblical doctrine of faith, we can discover nothing in Mrs. Eddy's teachings that is antagonistic to the gospel of the Lord Jesus Christ, and nothing that does not tend to the moral and religious betterment of the human race.

The creed, or cult, or doctrine that aims to make mankind better and instill in the mind of the thinking seeker after truth the great essential doctrine that God is Love and that we are His children, cannot be dangerous; and while not in perfect sympathy with all of her teachings, we wish the world had more who are like Mrs. Eddy. If that man who makes two flowers to bloom where but one bloomed before is a benefactor to his race, then he who saves a soul from sin, by whatever interpretation of the gospel of Christ, is deserving of a crown of glory.

[Editorial in the *Columbus* (Wis.) *Democrat*.]

Surely one who has done so much for humanity and science as Mrs. Eddy has, is certainly entitled to the unstinted praise and commendation of every man, woman, and child in entire Christendom. The world has never before and never will again have an opportunity of seeing one who has done so much for the Science of Christianity as has Mrs. Eddy.

THE LECTURES.

EL PASO, TEX.

Judge Septimus J. Hanna lectured on Christian Science in the Crawford Theatre, Sunday afternoon, Jan. 27. He was introduced by A. Jones, a well-known lawyer, who said in part,—

When Christ Jesus was taken before Pilate for trial he said, "Every one that is of the truth heareth my voice." And then Pilate asked him, "What is truth?" and left the judgment hall without waiting for an answer. In the matter of religion this has been an absorbing question to all peoples and in all ages.

We as a people believe that our sacred Scriptures contain spiritual truth. Thus far we are one; but when we have come to interpret the Scriptures we have differed in many respects; and these differences have given birth to various religious denominations. One of the latest religious denominations arising from this different interpretation of the Scriptures is that of the Christian Scientists. Of their doctrine I know but little; whether their interpretation of the Scripture is true I know not. Like many of you, I accepted without question and without reason the simple faith of my mother, and have been reared under a different doctrine. But be this doctrine true or false, or that doctrine true or false, the liberality of thought of our age and the religious tolerance of our time constrain us to hear with eagerness and reverence the exposition of the sacred Scriptures by any earnest and able man, whatever his sect or creed. And this is the spirit we should have. We cannot be a great people unless we are always ready to hear and accept the truth, however much it may conflict with or destroy our preconceived opinions; for after all there is nothing sacred but truth.

We have in the city of El Paso what is known as First Church of Christ, Scientist. This church was organized in 1903. From its organization it has had a rapid growth. It now has a membership of forty persons, composed of as cultured, as intelligent, and as worthy citizens as we have among us.—*Correspondence.*

CENTRALIA, ILL.

Edward A. Kimball lectured on Christian Science at the Opera House, Sunday, Jan. 27. He was introduced by C. H. Howard of St. Louis, formerly of Centralia, who said in part,—

When Christian Science found me it was in a business transaction. The railroad man with whom I was dining had an order that I wanted. I was quite willing he should talk Christian Science to me if he would give me the order, but soon my interest in this subject far exceeded my interest in the order. I remained with him till his train left the Union Station at 2.30 A.M. During said time I discovered that there was a Principle of being, the understanding of which was as applicable to my business, social, and home life as is the knowledge of mathematics to the mathematician. I was delighted; for those dear to me were in sore need of help, though they could not at first see that Christian Science had any good in it. I reached a place where darkness hung heavy and where I needed help. While I felt that Christian Science was right, I turned to the Bible and found that beautiful verse, "Except ye . . . become as little children, ye shall not enter into the kingdom of heaven [harmony]." I pictured myself as a little child in the woods without path or light, having no preconceived ideas or knowledge. Then I turned to God with an earnest prayer, that if Christian Science were the teaching of Christ Jesus and would save me and mine—would bring health and peace into my home and business—then I wanted to be led into it; if not, then away from it. The light and assurance that came convinced me that it is the teaching of Christ Jesus; and it did restore harmony and health, for which I am glad to bear grateful testimony.

I am satisfied that every man, woman, and child wants what Christian Science will give them. They do not want what many think it is,—their misconceptions are more absurd to us than to them,—but they want what it really is. If any one will take the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy, earnestly endeavoring to get what the author has to give, they will be convinced that Christian Science is the truth which will heal and save.

I like to think of this as a business man's religion; it is so practical for seven days in the week. It teaches us how to take the stingers out of business, in letters and instructions. For example, let the president of a company write a letter full of stingers to the general manager; it goes down the line, and every man thinks he must put more in for the next one, and so on; but Christian Science teaches us to correct all this and gives us greater business capacity and makes it possible to deal in a more brotherly way with our fellow-men.—*The Centralia Sentinel.*

BAKERSFIELD, CAL.

Hon. Clarence A. Buskirk delivered an address last night [Jan. 31] at the Bakersfield Opera House to a large audience. Frank Newell acted as chairman of the meeting and introduced Mr. Buskirk, saying in part,—

The past forty years has been a remarkable period in religious history. During this period the people so long fettered by ritualism and a traditional concept of God began to awake to an age of practical Christianity. At the beginning of this period a New England woman with a gracious fitness for the understanding of spiritual things, made a spiritual discovery of the greatest importance. She named it Christian Science. It was Christian because it healed the sick and reformed the sinner. It was scientific because the results from its rule of practice were as unquestionable as the results obtained from the application of mathematical formularies. It is evident, therefore, that Christians need no longer rest their faith on "analogies and probabilities." An understanding of the truth that makes free is taking the place of mere belief.—*The Echo.*

ITHACA, N. Y.

Monday evening, Feb. 4, in Barnes Hall, a lecture on Christian Science was given by Mr. Bicknell Young under the auspices of the Christian Science Society of Cornell University. Mr. Young was introduced by Mr. Thayer, the Secretary of the Cornell Christian Association, who said in part,—

I imagine many of you are here to-night for much the same purpose that I am, to hear the truth about a subject which at present is attracting a great deal of attention. We are continually hearing much concerning Christian Science, and much of what we hear we are not sure is correct. To-night we are to have the privilege of listening to Mr. Bicknell Young. Mr. Young is eminently fitted to speak on the subject and can tell us the truth in regard to Christian Science.—*Correspondence.*

A NEW PAMPHLET.

The lecture by Francis J. Fluno, M.D., C.S.D., "Christian Science: a Reasonable and Rational View of All Things," has been published in pamphlet form and is now on sale. Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Send orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

GENERAL STREETER'S STATEMENT.

[We are glad to give place to the following statement from General Frank S. Streeter, Mrs. Eddy's counsel in recent proceedings in which her name has been used.—Editor.]

Early Saturday morning [March 2] I sent to Mrs. Eddy a copy of the bill in equity as published, but not yet served upon any of the defendants so far as I am informed. I have since had a long personal conference with her, at which this proceeding and matters connected therewith were fully discussed.

In common with her many friends she believes that the initiative in these proceedings was not taken by her son or other relatives, but by others who in a markedly unusual manner and by unique methods are undertaking under the guise of court proceedings to continue the persecution begun some time ago.

From my conference with her at this time, and on other recent occasions, I am able to speak definitely and positively. Her clearness of mind and resolution of purpose have been in no respect impaired by her advanced years. Her capacity to think clearly, and to deal accurately and justly with important business affairs, has never been more perfectly demonstrated than in her conferences and acts within the last two weeks, and in numerous business letters in her own handwriting, which I have received from her during that time.

The amount of Mrs. Eddy's property has been grossly multiplied by rumor and unfounded report. She is not possessed of large wealth, as the term is used. Mrs. Eddy receives no income from the Church, nor from the publication society connected with the Church. Her sole income for many years has been from the copyrights on her own books, and the amount from this source has been grossly overestimated.

Mrs. Eddy's business affairs have been managed by herself, with the aid of Mr. Frye, her devoted and loyal servant, and under the oversight and personal audit of another gentleman, whose name has not been mentioned, but who stands for all that is honorable and of good repute in financial circles in Concord. Accurate accounts of all her property and investments, as well as of her annual income and expenditures, have been carefully kept and frequently audited. The last audit was in October, 1906. None of the defendants named, except Mr. Frye, have any connection with the management of her property or investments or have any knowledge whatever in reference thereto, nor have any of said defendants ever received any property of Mrs. Eddy which they hold in trust or otherwise, except in one instance for the benefit of her relatives.

Inquiry has been made whether the various defendants would accept service of the proceeding. I cannot say as to that. With my partner, Mr. Allen Hollis, I am counsel for Mrs. Eddy alone. While the defendants would undoubtedly be guided largely by Mrs. Eddy's wishes with respect to these proceedings, I cannot, as her legal representative, undertake to speak for them.

With reference to the report that within a few days Mrs. Eddy has placed in the hands of trustees a large amount of money, to be held and used for the benefit of her son and her grandchildren, I have nothing to say. Whatever Mrs. Eddy may or may not have done toward providing for her family is a matter which ought not, for the present at least, to be discussed by me.

It is obvious that I ought not to talk about the legal aspects of the case, nor what will be the course of the proceedings, so far as Mrs. Eddy is concerned. The proceedings are unusual. So far as this case can be considered a legitimate proceeding in equity, it seems to be an attempt to have the personal rights and privileges of a citizen adjudicated in a way unprecedented in New Hampshire, so far as I am aware, and if it shall appear that these proceedings have been instituted for purposes other than the ascertainment and protection of the plaintiffs' legal rights, the method of dealing with such a case will be carefully considered by Mrs. Eddy's counsel before making any public statement.

THE HIGHER MORALITY.

Awaken the man's dormant sense of moral obligation.—**Mrs. Eddy.**

As regarded by many, morality signifies purity, freedom from all grossness of life and thought, and Christian leaders and teachers have always stood for a noble ideal in this particular. Respecting the higher moralities of the spiritual life, however,—its veracity, consistency of thought, justness, non-resistance, unselfishness, altruism, etc.,—the Christian Church has not only come far short of the Christ ideal, but it has been made apparent that there is little real conviction of the practicability of this ideal.

Take the matter of war. All Christians will allow that whether between men or nations, the resort to physical force for the settlement of differences is entirely out of keeping with the spirit of Christ, and yet the military instinct and impulse is nourished, and its agencies are exploited not only in our public schools, but in the religious press and in religious institutions as well. Further, while Christian sentiment has condemned and abolished the wrong of chattel slavery, there still remains in Christian countries types of enslavement which are pronounced by many no less cruel and degrading. Few would hesitate to concede the right of every willing toiler in the world to a fair chance,—opportunity to enjoy and possess his share of nature's rich abundance; and yet how many of us have been too indifferent even to raise our voice in protest against conditions which render it possible for the few to deprive the many of this right!

These things, and the kindred wrongs inflicted by social caste, unfair commercialism, etc., furnish abundant proof that men are either ignorant of the uncompromising and universally-related morality which Jesus inculcated, or else that they are sadly irresponsive to its appeal. There are, however, yet more subtle and serious facts in evidence. The very generally accepted thought of God,—that while infinite in purity and goodness, He is nevertheless the source and support of the materiality in which sin, disease, and death inhere; that He ordains and executes the punishment of the innocent for the guilty, and has made a supreme expression of this manifest injustice the ground of the atonement,— these and other like concepts place the judgments of heaven under the condemnation of even a human sense of consistency and right. An awakening protest against the further rule of this thought of God was voiced recently by an Evangelical clergyman, who said, "It was absolutely untrue that Jesus ever paid the penalty of human sin in the legal, external, institutional way. It was more than untrue: it was immoral."

It is further to be noted that there are many who regard

Digitized by Google

man as having a capacity to do wrong, though divinely begotten and sustained. They think of good and evil as being counterparts, necessarily associated and mutually dependent, and declare that materiality is antecedent and essential to spirituality, thus disclosing that undiscriminating and unethical mental state which always presages stumbling and disaster. In opposition to all this, Christian Science teaches that "we approach God, or Life, in proportion to . . . our fidelity to Truth" (Science and Health, p. 95). It stands for a morality which relates itself not only to our conduct and our concepts of God and man, but to the honesty, sincerity, and veracity with which we give direction to every thought and activity.

Speaking of the intellectual predisposition of Christian people as a whole, the editor of *The Hibbert Journal* has said, "The habit of professional belief in religion is loose, vague, equivocal. The habit of science is straightforward, exacting, uncompromising, direct. Therefore the conscience of mankind is on the side of science. . . . It is a perilous situation, and one without parallel in any previous age."

This is a severe rebuke, but it supports the persistent contention of Mrs. Eddy that "spiritual reality is the scientific fact in all things" (Science and Health, p. 207); that in so far as men are loyal to the demonstrably scientific statement of truth, *i.e.*, are both ethical and exact, the reflection of Truth is attained. Christian Scientists are thus called, both by the word of Truth and by human conditions, to a moral sense so fine, so scientific, and so inclusive, as to leave its impress not only upon their bearing and conduct, but upon their every word and thought,—a morality that is revealed in the continuous integrity of attitude and aspiration which befits and honors an ambassador of Christ. JOHN B. WILLIS.

SUBSCRIPTION PRICE FOR THE SENTINEL FROM APRIL 1, 1907.

Single copy one year, $2.00; 10 copies or more, to one address, for one year, each copy $1.90; 25 copies or more, to one address, for one year, each copy, $1.80; 50 copies or more, to one address, for one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add $1.00 for postage on a single subscription, and 75 cents each for postage on two or more subscriptions.

Six-months subscriptions received at half the above rates.

No subscriptions received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the wrapper. No other notice will be given.

TERMS OF SALE FOR THE SENTINEL FROM APRIL 1, 1907

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; 25 copies, $1.00; 50 copies, $1.80; 100 copies, $3.00.

In all other countries, seven cents a copy, postpaid to any address: 25 copies, $1.40; 50 copies, $2.60; 100 copies, $4.75.

Subscriptions to the *Sentinel* which were sent us before the notice of the increased price, mentioned editorially in the *Sentinel* of March 2, will be accepted at the old price without regard to the date on which they begin. Therefore it will not be necessary for those of our friends who have sent in their subscriptions recently, and without knowledge of the increased price, to send us additional money, unless they are requested to do so.

LETTERS TO OUR LEADER.

Boston, Mass., March 3, 1907.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—The Directors are pained to learn of the cruel, unjust, and wholly baseless attacks made upon you, and they desire by this letter to express their love for you, and their unbounded faith and confidence in your wise Leadership of the great Christian Cause which you have founded. They appreciate their association with you, as Christian Scientists under your instruction, guidance, and direction, and they are glad to testify, from their personal and business relations with you, to your exalted Christianity, and to your wisdom and ability, now and at all times, in the management of your affairs and the affairs of your Church. With love,

Your students,

IRA O. KNAPP, JOSEPH ARMSTRONG,
WILLIAM B. JOHNSON, STEPHEN A. CHASE,
ARCHIBALD MCLELLAN,
The Christian Science Board of Directors.

[We are glad to publish the following letter, since it illustrates our Leader's teaching that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love" (Science and Health, p. 201).—EDITOR.]

Richmond, Va., Feb. 18, 1907.

Mrs. Mary B. G. Eddy.

Beloved Leader:—At this time, when you are being so cruelly maligned and persecuted, it seems to me that if each one of your followers would send out some Christian Science literature it would help to keep down the falsehoods about you and crush error with Truth. I have lately sent out one hundred copies of the *Sentinel* to friends and acquaintances, fifty of which contained your dignified and Christian reply to the article in the January number of *McClure's* magazine. Our church has sent out one hundred copies of the January number of *Human Life*, and forty of *The World To-day*. Your teaching grows clearer and dearer to me each day I live, and back of this Christ-knowledge I feel the love of the woman who hid the leaven in "three measures of meal." My prayer is to so live that I may be worthy of the beautiful name Christian Scientist.

Reverently and lovingly yours in truth,
MRS. HELEN L. YOUNGER.

[From the *Concord* (N. H.) *Daily Patriot.*]

Chattanooga, Tenn., Feb. 20, 1907.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—"Now also many nations are gathered against thee, that say, Let her be defiled, and let our eye look upon Zion. But they know not the thoughts of the Lord, neither understand they his counsel: for he shall gather them as the sheaves into the floor. Arise and thresh, O daughter of Zion: for I will make thine horn iron, and I will make thy hoofs brass: and thou shalt beat in pieces many people: and I will consecrate their gain unto the Lord, and their substance unto the Lord of the whole earth" (Micah, 4 : 11–13). Only love that is the reflection of Love can grasp the magnitude of your work for mankind, —and Love is all. Respectfully,

The Board of Directors,
First Church of Christ, Scientist, Chattanooga, Tenn.

Boston, Mass., Feb. 2, 1907.

Mrs. Mary Baker G. Eddy.

Consecrated Leader and Teacher:—Again you have put the world under obligation in a notable way by your recent

Digitized by Google

revision of Science and Health, the book which heals and reclaims. While efforts were being made to identify Christian Science with the prince of this world, you were lovingly and patiently at work blessing your enemies by this revision. I see in this action of yours a new example of the right way of returning good for evil. A life like yours, filled with such acts of charity, must be instinct with happiness and supreme joy. The little glimpses I get of God as Life assure me that you have found the secret of perennial gladness. Yours gratefully and faithfully,

W. D. McCRACKAN.

Chicago, Ill., Feb. 11, 1907.

My Dear Mrs. Eddy:—The newly revised Science and Health is only an added proof, if such were needed, of your faithful, loving vigil on the watch-tower, of your discernment, and your desire to show the "things which must be hereafter," and which really are now. Your clear, strong statements of the absolute must encourage the student of Christian Science to come out and be separate, and to count himself happy to be found one of the wise men seeking the Christ.

You say in Science and Health [p. 192] that "we are not Christian Scientists until we leave all for Christ;" and in doing this we are really leaving nothing, but we are getting rid of a wrong sense of God, man, and the universe. As I see it, Christian Science is the right understanding of God, in other words, the consciousness of the oneness, the allness and the supremacy of Mind; it is the Christ which comes to human consciousness, dispelling the illusion of life and mind in matter, and establishing in consciousness the oneness and allness of Mind, good, and the nothingness of matter or error. Then it follows that Christian Science is the only thing to be desired, the only thing worthy of thought and endeavor.

You have come with a message of love and peace to suffering humanity, and for this you are being stoned; in return for this, you only love. What an example for the world, and dear Leader, while the Herod thought is seemingly active, hundreds of thousands of living, walking monuments to the efficacy of Christian Science, constitute an unanswerable argument on the side of Truth. As a beneficiary of Christian Science, and one who had drained the cup of materialism to the dregs in a fruitless search for peace and happiness, I desire to be worthy to be counted one of your true followers, and to live my gratitude.

Sincerely and lovingly yours,

R. M. STROTHER.

Chicago, Ill., Feb. 23, 1907.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—Representatives of the six Churches of Christ, Scientist, of Chicago, in conference assembled, have instructed the undersigned to convey to you the assurance of the unfailing love and loyalty of their respective churches and of the students of Christian Science in this field. Deeming it well to make a sturdy effort at this time against the tide of error, the churches have united in a lecture on Christian Science, to be given in the Auditorium on the evenings of March 7 and 8. This is in addition to our regular semi-annual lectures.

We are cheered by the knowledge that you are divinely sustained, and confident of the fact that you are divinely directed. Our gratitude for and appreciation of your untiring labor and wise Leadership of our Cause is unbounded. We are not dismayed by the vicious attacks which the evil one has made on Christian Science. The enormity of these attacks but warns us to be more watchful and obedient. We are thus impelled to greater activity and compelled to seek security and salvation in a better understanding and more perfect demonstration of the Science of spiritual healing which you have revealed to the world in "Science and Health with Key to the Scriptures."

Sincerely yours,

CAROLINE D. NOYES,
GEORGE SHAW COOK,
Committee.

Los Angeles, Cal.

My Dear Mrs. Eddy:—To-day I have read Mr. Klein's article in the February *Cosmopolitan*, and I felt a deep sense of thankfulness that such a scientific, just acknowledgment of good received, and love expressed, could be placed before the public at large. Words fail me when I think of the heights in raptured thought—nearness to God—which I have been able to reach, all through the realization of a loving Father-Mother God, that has been revealed through you. O the peace and joy that has come to us through this revelation, in place of sorrow and trouble! Each day brings new victories, new glimpses of God—a fuller revelation of His all-presence and all-power. In every way I have seen the overcoming of evil and the predomination of good,—in physical health, in business life, in the protection of property from fire and earthquake,—all through the knowledge that God is a very present help in trouble.

Anything and everything I might say seems inadequate to express the joy, the thanksgiving, the praise I give to God and His divine Son, Christ Jesus, for revealing His great truth to you, His beloved child, to give to the world. My daily prayer is that I may express my thankfulness in deeds and to have the same Mind "which was also in Christ Jesus." With a heart overflowing with love and thankfulness,

Humbly,

MRS. JOSEPHINE KENT.

Vancouver, B. C., Jan. 31, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Leader:—I desire to thank you from the bottom of my heart for your life-work and its fruits. The blessings which have come into my life through reading Science and Health have enabled me to know in a degree what Christian Science has done for the world and is doing. May God help us to be grateful for the work already done, and to take up the cross and go forward, preaching deliverance to the captives and recovery of sight to the blind. While I realize that you have been much blessed in your work, my earnest prayer is that your cup may be full, which I feel can only come through the salvation of the world.

Yours in obedience and love,

GEORGE SPRUNG.

Rome, Italy, Jan. 31, 1907.

Dear Mrs. Eddy:—Ever since I first saw the truth of Christian Science—that it was indeed the truth, manifested to the world through your pure thought—I have wished to thank you in some way. For the first few years I read of the many beautiful gifts that were bestowed upon you, always wishing that I, too, might be privileged to do something for you—to give you something that would be precious to you. It was not then possible to do this, and since that time I have come to feel that the most precious gift that can be offered you—and the one most useful to you as well—is the gift of impersonal love and appreciation, with the constant, honest desire to live a Christianly scientific life. This is now, as then, all I have to offer, for I well know that you wish for no earthly thing,—only obedience and faithfulness. With deepest gratitude,

EDNA H. HOSMER.

AMONG THE CHURCHES.

CHICAGO, ILL.

Preparations are completed for the dedication to-day [Feb. 17] of Fourth Church of Christ, Scientist, Harvard Avenue and Sixty-seventh Street. The edifice was erected at a cost of one hundred thousand dollars and is reputed to be one of the finest of its kind in the city. Four services will be held, in order to accommodate all those who desire to attend. One will be at 9.45 o'clock in the morning and the next at 11.45. The afternoon service will be 3 o'clock and the evening one at 7.45. The church was organized seven years ago by a number of the members of First Church who lived south of Fifty-fifth Street and west of Cottage Grove Avenue. The membership is about five hundred and the seating capacity of the building is one thousand.

The Chicago Chronicle.

NEW LONDON, CONN.

The opening of the new Christian Science headquarters on Sunday [Feb. 24] was an important event in the history of the local church. Greatly increased interest in the movement was evidenced by the large attendance at the three services, held respectively at 10.45 A.M., 3, and 7.45 P.M. Mrs. Rosemary O. Anderson officiated as usual as First Reader and Mr. James E. Comstock as Second Reader.

The property recently known as the "Lippitt homestead," at the corner of Hempstead and Granite Streets, was purchased by the Scientists in the fall of last year, and after extensive alterations suited for the use of the church, the building was opened for public service. The auditorium, which faces Hempstead Street and includes the entire first floor of the main body of the building, has a seating capacity of about two hundred. Opening out of a hall in the rear of the auditorium is a Reading Room, with entrance on Granite Street, which will be open to the public each day. The building is lighted throughout with electricity.

First Church of Christ, Scientist, of New London, Conn., was organized and chartered under the laws of the State in the year 1898. The church has had a remarkable growth in the short time it has been organized and is rapidly increasing in membership.—*New London Globe.*

BROCKTON, MASS.

The new edifice for First Church of Christ, Scientist, is ready for occupancy, and services will be held to-morrow [Feb. 24]. The edifice has been constructed by combining what was the D. H. Cobb house, 30 North Main Street, and the barn on the same estate. This estate was purchased several months ago by Mrs. George G. Snow, one of the original members of the Brockton branch of The Mother Church, The First Church of Christ, Scientist, of Boston, and was presented to the society as the site for a church edifice. The property was assessed for twenty thousand dollars. It is an ideal location for a house of worship, being on the main street, almost directly in the center of the city. The next building to the north is the Commercial Club House, one of the handsomest buildings in the city. The edifice is situated opposite the Porter Congregational church and faces the east. On receiving the property, the society immediately set to work to have a house of worship of its own, although not attempting at this time to erect the building which it will some time possess. The result is an edifice which is very satisfactory architecturally and which will serve the needs of the society for the present.

The church has an auditorium with a seating capacity of two hundred and six. A spacious Reading Room is at the front of the edifice. On the second floor are two rooms for the use of the Sunday School, coatrooms, and other conveniences. A fireplace adds to the cheerful appearance of the Sunday School room. The average congregation at the services of late has approached a number sufficient to tax the seating capacity of the new edifice, and it is planned to hold two services on Sundays when the demand is felt, and more if necessary. When the permanent edifice is erected it will be of stone, in all probability.—*Exchange.*

MONTREAL, CANADA.

About a year ago some of the church members thought that to conduct the Reading Room through an association would be a desirable method of uniting all in the church interested in spreading the "Gospel of Good Cheer" (Retrospection and Introspection, p. 72). The business part was carried on by monthly contributions from the members of the association. The year's sales were satisfactory, and we have a comfortable balance and considerable stock. The monthly meetings have been very instructive; the working members or committees have brought cheering news to report. We have placed Science and Health and "Miscellaneous Writings" for the first time in some libraries, and renewed copies in other libraries.

The chaplain of the Protestant jails for male and female prisoners kindly admitted our periodicals to both jails, and Science and Health to that for women. There were other institutions where the same contributions were accepted. There was also much literature circulated piece by piece. The blessing of activity along these lines has been great, and to know that those who are temporarily shut in can enjoy with us the regular periodicals, together with our text-book, is a joy to all.

We are grateful to Mrs. Eddy for all that we have received through precept and example; and are reminded that through their Founders Christianity and Christian Science have lifted out of the rough and rugged way any stumbling-block which might obstruct those who come after. We enjoy the reports of other Reading Room work in the *Sentinel,* and add this item to the list.—*Correspondence.*

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

TESTIMONIES OF HEALING.

It is with a heart full of gratitude and love that I send these lines testifying to the all-healing and saving power of Truth and Love. My home is in Mobile, Ala. Ten years ago I went to Americus, Ga., to visit a married daughter, and in this place there came to me all the happiness of a new-found existence,—for it was then that Christian Science found me. Previous to that time I had never heard of it, and had for twenty-five years or more been a constant sufferer from what my physicians called chronic liver complaint, stomach and bowel trouble, etc. My diet had been reduced to the simplest foods and even these gave me intense suffering. Insomnia was added to my long list of ailments and this last almost reduced me to despair. I had the very best of medical attention,—in fact had tried everything that was suggested to me. My drug bills were very large, my doctor's bills ran up into the thousands, and yet I grew worse all the time. My last doctor urged a sanitarium. I felt that this meant death, that it was the last resort of *materia medica;* but "man's extremity is God's opportunity," and right here Christian Science found me,—a woman without God and without hope in the world. Through the strong, high realization of divine Love, the holy work began, and step by step I was led into this wonderful truth that has healed all my diseases and forgiven (destroyed) all my iniquities. I felt from the first treatment that I had found the great Physician, for the quiet sense of peace and joy that came into my life passed all human understanding, and a new life dawned upon me. In less than one month I found myself a strong, well woman, sleeping like a child, eating with a relish what was set before me, never fearing any bad consequences.

The blessings that have come to me through Christian Science cannot be numbered; words would fail me to tell of the numberless proofs of God's loving care in the overcoming of sickness and sin, both for myself and others. Through this wonderful understanding of Truth I was enabled to lay aside glasses which I had worn for fifteen years. This was eight years ago and I have never felt the need of them since,—reading and sewing with perfect ease. The past ten years of my life seem to be the only reality of me, for old things are passing away. Since this wonderful light has dawned on me I have never turned to a drug nor a material remedy of any kind; Truth has been my only remedy for every ill. In the old thought I was always sick and troubled; now I am well and happy. I have gained everything since coming into Science, and now know that I never possessed anything until my blinded eyes were opened to find Christian Science, the pearl of great price. I am daily a debtor to this wonderful revelation of divine Love. The spiritual uplifting has been far more to me than the physical healing, for it is revealing to me God's creation, whereby we cry "Abba, Father." Christian Science has brought me out of such seeming darkness into this marvelous light, that I long to tell the good news of the Christ-manifest; but I am learning that it is only as we bring the truth into our daily lives that we can help others out of their seeming bondage. "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven." Proportionately as we follow in the footsteps of our beloved Leader can we know the divine Truth which makes us so free. Christian Science has put a new song in my mouth. "O taste and see that the Lord is good: blessed is the man that trusteth in him." My daily prayer is that I may become more and more worthy of my sacred calling.

MRS. EMILY H. WYLIE, Mobile, Ala.

As I think over the wonderful success of Christian Science, of its practical benefit to all mankind, and of the inestimable value and help it has been to me, a great sense of gratitude and love compels me to express my thanks to Mrs. Eddy for her great gift to all mankind. I write this testimony with a desire to encourage those who are in doubt as to the practical benefit and regenerative influence that Christian Science has upon all who sincerely seek its aid. Many who hesitate to put all their trust in the demonstrable truth taught by Christ Jesus and discovered in this age by Mrs. Eddy, are restored to mental and physical health through the results of her unceasing toil and self-sacrifice, and encouraged to press on until the goal is reached. When a child I met with an accident which necessitated a most serious amputation. As I grew towards manhood I was more conscious of my seemingly great loss, and I became morbid and melancholy. My mental suffering was greater year by year, until at last in desperation I traveled from place to place, seeking something to distract my thought from this unbearable condition. As a more acute sense of suffering came from time to time, I would seek relief in drink, so that I might, if but momentarily, forget my great distress. I was aging rapidly; I had no sense of rest or peace; no friends; no love. I was so lonely that I appeared to myself to be the only human being on earth.

I belonged to an orthodox church, and I tried to live up to its teachings, but I seemed to receive no help. I was unable to overcome sin. I had been taught that as God is almighty He made all there is, including sickness and disease; that it was God's will that I should be in this condition, and that I should not murmur at what God chose to send me. In reading the Gospels one day, I asked myself why the professed followers of Christ Jesus do not heal the sick, the lame, the halt, and the blind as he did. My interest in the church waned; I felt that I had received more than my share of troubles; I even felt that God was an unrelenting taskmaster; that my earthly parents seemed to have more love for me than God had, for they would gladly restore me if they had the power. Life seemed a burden to me, and I wished it was ended. I asked for death; I saw no hope in life.

In this condition, this darkest hour in the depths of mental suffering, divine Love heard my cry and led me to the home of a Christian Scientist. There I met a lady whose attitude was a revelation to me. She did not regard me as an outcast; she treated me as a brother; with gentleness, kindness, love, she patiently showed me the unreality of the conditions which surrounded me; pointed out to me the great fact of being, that "man is not material; he is spiritual" (Science and Health, p. 468). Gently she led my thought from the material to the spiritual, and loaned me a copy of Science and Health to read. What attracted me first of all, was the positive statement of Mrs. Eddy that the works done by Christ Jesus could be repeated today; that is, the healing of the sick, the lame, the halt, and the blind. I began at the beginning and read the book carefully, with the result that I was cured from a chronic ear trouble which had been contracted in childhood. I was thankful indeed for this healing and desired more. I have since overcome the tobacco habit and other false appetites. With the aid of my practitioner I began to improve mentally and gained some wonderful glimpses of man's real being. I was beginning to see the real, the perfect man, as God created him in His own image and likeness.

My heart goes out with gratitude and love to our Leader, Mrs. Eddy, for pointing out the way and showing us with scientific certainty how to escape from the miseries of mortal belief. Bidding us with hope and good cheer to be not weary in well doing, for a crown of righteousness awaits all who faithfully follow Christ Jesus, she has made known to us the true man and his relation to God.—JOHN O. ZUCH, Kalamazoo, Mich.

About eleven years ago I was wonderfully healed in Christian Science. I had been an invalid almost from childhood, and had suffered much under many physicians, besides an operation, which left me helpless for weeks. I had been in a sanitarium, had taken treatment of a famous specialist, had spent my summers in the East and winters in Florida, and had been pronounced incurable by both eastern and western physicians. One physician said I was liable to become helpless at any time. I could neither eat nor sleep, and for a year took opiates to quiet me. It seemed as if I had every ill that flesh is heir to. I had tried to be patient, for I thought (in my ignorance) it was God's will for me to suffer. When Christian Science was presented to me I refused to have anything to do with it, but at the earnest solicitation of my husband I consented to try it. I said to the practitioner that I was prejudiced against Christian Science. She asked me if I believed in God. I said yes. When she explained that it is God who heals, I lost all doubt and fear, for I had faith in God's power, even if it was a blind faith. I asked her what I should eat, and she told me to eat anything I wished, as God never made anything that could harm us, for He is good. I ate freely that evening with no bad results, although for years before the same food had seemed to act as a poison, but now I had learned that God is all powerful. I lived in Science and Health, often reading until late at night. I was "hungering and thirsting after righteousness," but I needed to know God aright, also man's relation to God, in order to have health, peace, and rest.

I was healed in six weeks. I had worn glasses for five years, but have never used them since my healing, for I found sight in God, and good sight. I have proven daily and hourly that God heals the sick and cleanses the sinner. I never told the practitioner all that I wanted to be healed of, for my diseases were legion. I did not even know, and the physicians themselves admitted that they did not; but the Christ-healing is full and complete, making me "every whit whole." I feel so grateful and thankful to our dear Leader, Mrs. Eddy, who has reflected in her life and example enough of the divine nature to stand alone with God and to prove that one with God is a majority. I pray that I may help rather than hinder this grand and glorious Cause, which establishes the supremacy of good in human consciousness.

MRS. HELEN S. PENNELL, Atchison, Kan.

For perhaps fifteen years in my early life I was employed by the Esterly Reaper Works, and during the greater part of this time I was obliged to run a machine which compelled me to stand on one foot while I worked with the other. I am a very heavy man, and the constant strain caused my ankles to become affected. About twenty years ago I became so bad that I was obliged to give up my work, and I then engaged in the grocery business, hoping the change would prove beneficial. In this, however, I was disappointed, and two years later I found my ankles almost useless. During all these years different doctors were employed, but to no purpose. The case was variously diagnosed. The last physician said there was no hope of saving the feet, and made arrangements with a specialist from Chicago for their amputation. I also suffered intensely at times with rheumatic trouble.

Just at this time a friend persuaded me to try Christian Science as a last resort. I had never heard of it before, but was willing to try anything that would save my feet. After the second treatment I was able to discard the rubber stocking which I had used to support the ankle for some time. In a very few treatments the rheumatic trouble and minor ills were wholly relieved, but the weakness was slower in yielding; however, it has been entirely overcome. For twenty years Christian Science has been the only physician in our family, and never once has it been found inadequate to meet the demands made upon it, no matter how serious the trouble seemed to be. For all this we are indeed truly grateful; and especially to Mrs. Eddy, for showing us how to unlock the treasures of the kingdom of heaven, which this understanding of God and the Bible surely brings.—WATSON L. COWLES, Beloit, Wis.

A sense of justice prompts me to acknowledge the debt of gratitude which I owe to God, to Mrs. Eddy, to the publishers of this paper and its contributors. Since I earnestly and honestly entered upon this way, about a year and a half ago, Christian Science has never failed to meet my need. Each step has brought me a little nearer to God, the giver of all good; and I have a deep appreciation of the loving, unselfish efforts of our Leader, who through the wilderness and the Red Sea has borne the banner of Truth. I wish to acknowledge gratefully the increased understanding which came to me through the healing of a severe illness, about six months ago. I have suffered in the past from the same ailment, and under *materia medica* it always held me fast for four or five weeks, and was followed by more weeks of suffering. Christian Science has utterly removed the fear of this disease, as well as the long weeks of suffering. One night I had awakened with alarming symptoms, and I unfortunately threw wide open the door to fear,—fear of the past bondage, and this was at a time when I most earnestly desired freedom. For two nights and a day I tried to realize the nothingness of error and the somethingness of the truth, but with only the apparent result of increased distress. In the midst of this seemingly trying condition, it was with much gratitude that I thought of the loving help which Christian Science extends; and to my request for aid, over the telephone, a dear Scientist instantly responded, in loving, joyful obedience to the divine command, "Heal the sick." Immediately the effect of Truth understood was made manifest, for the fear departed at once. The outward symptoms remained a few hours longer, and in deference to another's wish a second treatment was given; but I knew the unreality of the symptoms, for I was entirely free of any fear of bondage, and absolutely felt the power of Truth, which had lifted me into an atmosphere of Love divine, and filled me with the glad assurance that this healing was accomplished through the grace and power of Truth and Love. Thus this seeming affliction proved to be merely a stepping-stone to a higher consciousness of God, which fitted me to comprehend more fully and appreciate the wonderful meaning of the Bible, as revealed by our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. My gratitude is of daily growth, and goes hand in hand with the unfolding to my sense of the absolute power of God, as sole cause and creator.

MRS. HETTIE M. MURDOCK, East Orange, N. J.

During the last three years my wife and I have had the pleasure of visiting The Mother Church in Boston and five Christian Science churches in Chicago. We wish to express our gratitude to God, to Mrs. Eddy, to the Readers, and to the lecturers, for the many beautiful and uplifting thoughts which have been given us; and to acknowledge the reflection of divine Love through these channels, which has given us a quiet peacefulness that surpasses all human understanding. As we entered The Mother Church on June 10, to attend the first of the six services held there on that day, the morning light had broken, symbolizing the awakening of enlightened and liberated thought, and as the sunlight of Truth streamed in through the windows, it seemed as if every one in that vast audience was filled with thankfulness, reverence, and consecration to God. The grand, majestic, towering dome spread over us as a canopy of Love, the beautiful organ and silver-toned chimes sending forth sweet strains of music

Digitized by Google

to the praise of God.—every part and feature of this magnificent building spoke to us of the temple not made with hands.

When I first began to read Science and Health I decided not to take any more medicine, as I wanted to give Christian Science a fair trial, and this thought came to me,—If God created man, He certainly is able to keep him in health; and I find that He can and does. I am more prosperous since I became interested in Christian Science, because I used to be sick a great deal; but now I know that God is all, I am well, and as health is a capital to any one, prosperity is the divinely natural result. I used to be afraid to eat certain kinds of food, but we read in the Bible that Jesus said, "Take no thought for your life, what ye shall eat, or what ye shall drink;" again we read, "Thou shalt have no other gods before me." What was I doing? I was making a god of food by giving it power to distress me, and I was working from human theories instead of from the understanding of divine Principle. Now I am not afraid to eat or drink anything, and nothing distresses me. The spiritual food is always ready for those who are willing to accept it, with its animating and uplifting power. This is the best of all, and he who partakes of it is like an eagle that spreads its wings for a loftier flight, until all sense of sin and disease is lost to sight.

E. W. Bowles, Chicago, Ill.

It is over thirteen years since I first called upon Christian Science for help. I feel that I am a living monument to its healing power, as the demonstration of healing was made for me when I was under the fear of death. I have often wished to testify to the great blessing that Christian Science has been to me. Through its teaching I have found many times, since my first experience in healing, that God is an ever-present help in trouble, sickness, and sorrow, as well as in accidents. Daily I return thanks to the giver of every good and perfect gift for the great good of Christian Science, as it has reached me through our dear Leader, Mrs. Eddy. There is much love in my heart for God, and I am grateful to all who serve Him in this great Cause.—Mrs. Mary F. Parker, Kansas City, Mo.

About six years ago, while suffering with severe stomach trouble, I was suddenly stricken with a paralytic attack, which affected my left eye. I had been in a distressing condition about five months when my case was put in the care of a practitioner who lived about three hundred and fifty miles distant. I was healed through Christian Science in about one month, and am deeply grateful to God for this manifestation of His omnipotence and omnipresence. I also desire to express my gratitude to our beloved Leader, Mrs. Eddy, who is so unswervingly showing us how to obey divine Principle as revealed to her, and through her to us, in Christian Science.

H. S. Fliesbach, St. Louis, Mo.

I have always looked to what I thought was God, and prayed to Him, but never until I knew that sin had to be overcome before it could be forgiven, did I find Him; and in the degree that I follow Christ do I realize what God is, and that all sin and disease can be healed. Poverty had followed me all my days, and was in my mother's family before me. When I began to study Science and Health, eight years ago, I was destitute; my furniture was mortgaged; I had nothing in the house to eat, and no work. I earnestly sought help from God, and took my Bible and went away by myself. In that hour I was directed to go to one who gave me a desirable position. I have since been promoted, and all my debts are paid. Now I live without fear of want, and in the understanding that in God is my supply. In the mean time all my physical troubles are disappearing. I have been healed of a chronic sense of melancholy; of female trouble of all kinds; of liver trouble, etc.; and best of all, I have learned to know in a degree what divine Love is, and can demonstrate my understanding in the healing of disease. Instead of getting up in the morning with a load of care and misery, I rise with joy and thanksgiving for all God's goodness and lovingkindness to the children of men.

It is vain for me to attempt to express in words my gratitude and love to our dear Leader, who has brought all this to me and a waiting world. In The Mother Church in Boston I prayed in deepest humility to be able to so live that I may heal the sick and sinful; and this is her wish for all her followers.—Ella G. Holtzman, Washington, D. C.

Eight years ago I was healed through Christian Science. I had been from childhood more or less delicate, and after marriage my husband took me to Colorado to live, expecting the change of climate would prove beneficial. For a time this seemed to bring some relief, but after a few years stomach trouble reappeared in a more aggravated form. At the time I sought Christian Science I had been for more than a year living on a very limited diet, and was much emaciated. I suffered greatly, although I had received the best medical attention; had tried many remedies, as well as change of climate; so that the future seemed dark and without hope. One evening, in despair, I asked a dear Christian Scientist, whom I had met a few days before, to help me if she could in Christian Science. Through her clear realization of the allness of God, I was able the next day to eat what was set before me, and have done so ever since without any unpleasant results. For a few days there lingered some fear of eating certain foods, but this soon disappeared, and the other diseases left me about the same time. A young daughter, who had been subject every winter to serious throat trouble, and who in summer was frequently ill with bilious attacks, has been free from these troubles since my own healing in Christian Science.

I have had many proofs of the power of Truth, not alone in the healing of physical diseases, but have rejoiced to witness, under the rays of Truth and Love, the melting away of hatred and strife. There has been some severe wrestling with attacks of error, but out of these experiences needful lessons have come to me, followed by a stronger and more enlightened faith in the power of God, good, with a larger sense of gratitude to our dear Leader, Mrs. Eddy, and a better appreciation of her mission and work in the world. I owe much also to our periodicals, which so often bring cheering words at a time of need.

Mary M. Norris, Baltimore, Md.

For seven and a half years I was an invalid, not being able to walk in that time, although not confined to my bed all of the time. The doctors called the trouble a disease of the spine and female weakness. I had tried a number of physicians without realizing any permanent relief, although I think they all did the best they could for me. My body had become much distorted and my limbs were very much emaciated. In the spring of 1889 I decided to try Christian Science, although I knew nothing about it, but I had lost all faith in material remedies. A Christian Science practitioner came to see me on a Saturday and gave me treatment. The next Tuesday I began to walk a little, and in a week I could walk about the house and out of doors. I had many kinds of medicines in the house, but I had no further use for them and they were all thrown away. I have not needed any material remedy since being healed, sixteen years ago, and I have been able both to walk and to work ever since that time. I have found Christian Science a present help in every time of

Digitized by Google

need, and I thank God for our Leader, and for the understanding which I have of Christian Science.

MRS. A. A. WADE, Fairmont, Minn.

I first heard of Christian Science in 1889, at which time several members of my family were on the sick list, and we were large contributors to doctors and drug stores. A Christian Science practitioner came and gave treatments to my wife, who had been unable to walk for seven and a half years, and she was healed in less than one week. It seemed wonderful to me. I had suffered from stomach and heart trouble for many years, also severe headaches. The attacks were becoming more frequent and more serious; the pains became so severe that it was feared I would pass away during one of these spells. I had consulted a good many physicians and tried many prescriptions, but received only temporary relief. I entered a class for instruction in Christian Science, and before it was ended I was entirely relieved from those troubles. I have witnessed many demonstrations of the truth of Christian Science in my own family during sixteen years' experience, and in my judgment it is the one thing to bring peace as well as healing to all mankind, so that all may live the Golden Rule. I am profoundly grateful to our Leader, Mrs. Eddy, for the wonderful work she has done and is doing.

EDWARD F. WADE, Fairmont, Minn.

I have long wanted to tell the world of my healing through Christian Science, something over seven years ago. I was healed of asthmatic trouble, from which I had suffered for ten years. I had this most distressing ailment, with many others, but thanks to God, and to our dear Leader, Mrs. Eddy, I am to-day perfectly well. I had tried all the remedies I could hear of, and many doctors; I had traveled from place to place, trying to find a climate which would help me, but found only temporary relief, and I had spent a small fortune in this way before I was led to Christian Science through a very dear friend. How thankful I am for this, and I deem it a great pleasure to tell what this blessed truth has done for me. A mortal sense of life and being has yielded to a clearer spiritual concept of God and man, and has enabled me to realize, in a degree, that the truth expressed in "Science and Health with Key to the Scriptures" is indeed the voice of divine Love. That this message of Love may reach every one in the land is my daily prayer. I pray that my whole life may attest my gratitude for the good which has come to me through Science and Health.—B. A. HOPKINS, Denver, Col.

I wish to express in a small degree my gratitude for what Christian Science has done for me. I never was a healthy child, and gradually grew worse until I was ten years old. I was always tired, could never play, and was thought to be in a decline. In the spring of 1901 I took a bad cold, with an annoying cough, and one evening I became very ill. My parents were alarmed and sent for a Christian Science practitioner. The symptoms were alarming, but in less than an hour's time I had relief, and with two weeks' treatment was thoroughly healed. I have not had a symptom of the trouble since. I began to eat and grow, and I am now a strong, healthy girl. I cannot be too thankful to our Leader, Mrs. Eddy, for bringing to us this great truth.—MABEL YOUNG, Peterboro, Ontario.

My healing through Christian Science has been so beautiful to me, that I wish to express my thanks to God, and to our dear Leader, Mrs. Eddy, for having shown us the way into this truth which makes us free. I was nervous and irritable; I thought life not worth the struggle. I called in a physician who had treated our family for twenty years, for at that time I would not give Christian Science any notice. The physician commenced to treat me, but I grew no better; in fact I became worse. I then took electrical treatment, which was very severe and painful, and did me no good whatever. In spite of all this I continued treatment of every kind under my physician, until his sudden death compelled me to look for aid in another direction. My sister-in-law had often spoken to me about Christian Science, but I would ask her not to speak on that subject in our home. The passing on of our family physician, however, came when my mental and physical condition was certainly alarming, and my family told me I must decide to do something. I then did not know which way to turn, but I sent for my sister-in-law and commenced treatment. I also started to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to improve from the very first. I continued to do so, until I was able to attend the Sunday services, also Wednesday evening meetings, and now I am a well woman. Not only am I a well woman, but I am a happy wife and mother. I see life in quite a different light, and for my healing I am so thankful to God, and to Mrs. Eddy, the Discoverer and Founder of Christian Science, and my greatest desire is to know more of this healing truth and to live it.—MRS. LAURA W. RENZ, St. Louis, Mo.

My heart overflows with grateful love to God for His tender care in making known to us in this age the evangel of peace known to all the world as Christian Science. I owe all I have and am to the truth taught in Christian Science. In the seven years that I have known this truth it has healed me of severe nervous and other troubles; destroyed in a good measure the fear of hereditary diseases, and given me a greater confidence in God and understanding of man's relation to Him. Through my healing nearly every member of my family has become more or less interested in Christian Science and has been healed by it.

Far above all of these blessings—the realization of better health and freedom from the bondage of fear—is the knowledge of divine Love and Truth that is here and now for all mankind, giving us a higher sense of the universe, of our fellow-men, and a deeper charity for all. For all of this I feel the sincerest gratitude to God, and also to our faithful Leader, Mrs. Eddy.

EURITH F. FETTY, Kansas City, Mo.

[Written for the *Sentinel.*]

A HYMN.

CHARLES A. STEBBINS.

LIKE as the early autumn breeze
Goes chanting through the hilltop trees
  Its joy and happiness,
Let me my voice, like David, raise
In psalms of thanks and grateful praise,
  And Thy great goodness bless.

Like as the distant casement-pane
Reflects the golden sun, I fain
  Would glow more holy-wise;
And let my heart an altar be,
Where pure and perfect thoughts of Thee,
  Like incense, endless rise.

Give me to feel Thy presence near,
To know the nothingness of fear,
  The faith that never dies;
And thus approach Thee, more and more,
Until the last remaining door
  Swings into Paradise.

FROM OUR EXCHANGES.

[William Jennings Bryan in *The Commoner.*]

We cannot much longer delay consideration of the ethics of money-making. That many of the enormous fortunes which have been accumulated during the last quarter of a century are now held by men who have given to society no adequate service in return for the money secured, is now generally recognized. While legislation can and should protect the public from predatory wealth, a more effective remedy will be found in the cultivation of a public opinion which will substitute a higher ideal than the one which tolerates the enjoyment of unearned gains. No man who really knows what brotherly love is, will desire to take advantage of his neighbor, and the conscience when not seared will admonish against injustice. My faith in the future rests upon the belief that Christ's teachings are being more studied to-day than ever before, and that with this larger study will come an application of those teachings to the every-day life of the world. In former times men read that Christ came to bring life and immortality to light and placed the emphasis upon immortality; now they are studying Christ's relation to human life. In former years many thought to prepare themselves for future bliss by a life of seclusion here; now they are learning that they cannot follow in the footsteps of the Master unless they go about doing good.

[*The Outlook.*]

There are many affirmations in the old theology, as popularly defined, which no longer appear thinkable to men of the new school of thought. Such are the doctrines that the Bible is verbally inspired and in all its parts equally authoritative; that man was made perfect, committed four thousand years ago an act of disobedience in the Garden of Eden, and all the sin and misery of human life have followed in consequence; that God's wrath burns with an unquenchable flame against the human race because of that first sin and the hereditary sinfulness which has resulted; that the just punishment for sins, large and small, is an eternity of torment; that it is just to transfer the punishment of sin from the guilty to the innocent; that this has been done, and that thus and only thus can a way of escape from torment be found by guilty man.

[*The New York Observer.*]

To sum up: Certain movements in modern religious thought have altered in no slight degree the manifestations of faith. There is probably less unquestioning acceptance of doctrine, less consideration of this life as a preparation for eternity, and less effort to please God by ecclesiastical virtues in order to win heaven; but there is, in our judgment, a widening and deepening vital faith on the Lord Jesus Christ, manifested in following in his steps; there are more people who live day by day in eternity, and there is a marvelous extension of consideration, kindness, and sacrifice toward God's children in the effort to give them what Christ came to give us all—more abundant life.

[*The Universalist Leader.*]

What we learn of God and His truth in this world is so much knowledge laid up for eternity. We shall not have to unlearn it in the world to come. This knowledge over there is no different from what it is here. The laws of the everlasting life are everlastingly the same. All the wisdom and goodness we get in this world is so much soul-wealth to start business with in the world to come. The future need not give us a moment's anxiety. This is all safe in the hands of God.

[*The* (London, England) *Church Times.*]

What the world-spirit has destroyed is humility. It is the lack of this that makes men question whether sin is, after all, exceeding sinful.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Seventeen million acres of forest lands have been added to the forest reserves of the United States by proclamations issued by President Roosevelt, made public a few days ago. Thirty-two forest reservations are created or increased in area by these proclamations. There was under consideration by Congress a proposal to change the law so as to require Congressional action upon the establishing of additional forest reserves. The President in a memorandum to the public bearing on the subject said, "If I did not act, reserves which I consider very important for the interests of the United States would be wholly or in part dissipated before Congress has an opportunity again to consider the matter; while under the action which I propose to take they will be preserved; and if Congress differs from me in this opinion it will have full opportunity in the future to take such position as it may desire anent the discontinuance of the reserves, by affirmative action, taken with the fullest opportunity for considering the subject by itself and on its own merits. . . . Failure on my part to sign these proclamations would mean that immense tracts of valuable timber would fall into the hands of the lumber syndicate before Congress has an opportunity to act, whereas, the creation of the reserves means that this timber will be kept in the interest of the home-maker; for our entire purpose in this forest reserve policy is to keep the land for the benefit of the actual settler and home-maker, to further his interests in every way and, while using the natural resources of the country for the benefit of the present generation also to use them in such manner as to keep them unimpaired for the benefit of the children now growing up to inherit the land."

Consul General Amos P. Wilder reports that a new flour mill completed in Hongkong is the first one in South China. In Shanghai there are some five flour mills, with individual capacities running up to six hundred barrels a day, in the main owned and operated by Chinese, although one is run by Germans. These use wheat from the Soochow Creek district and even as far as Hankow, some six hundred miles. Recently, however, a cargo of nineteen thousand bags of Tacoma wheat was received by one of these mills. They have been very prosperous for three years past—some of them having been in operation for six years—but during the past year there has been a big shortage in native-grown wheat, and the high rate of exchange at present seriously affects them. The Hongkong mill is located on Junk Bay, some hours' ride by launch from the center of the city of Victoria (popularly called Hongkong), on the Kowloon (mainland) side. The moving spirit in the Hongkong project is a Canadian, who for a dozen years has done a very large business in this section for the Portland Milling Company. Some years he has sold nearly two million sacks of flour, of forty-nine pounds each. He was one of the first to introduce the cheaper grades of American flour.

The two-cent-per-mile-fare bill, recently passed by the Legislature of Nebraska, has become a law. The railroads in that State, including the Union Pacific, the Chicago, Burlington, and Quincy, the Chicago and Northwestern, the Missouri Pacific, and the Chicago, Rock Island, and Pacific, have issued circulars absolutely abolishing all classes of reduced fares, such as clergy permits, reduced rate orders, charitable rates, etc. The circular says that it is the purpose to make the two-cent rate the only possible rate to apply on Nebraska passenger fares.

It is said that a bill will be introduced into the Tennessee Legislature seeking to regulate the charges made by the telephone companies operating in that State. Under the proposed plan charges will be regulated by the number of subscribers to each exchange. To this end the bill will divide the exchanges into five or six classes, and will seek to make the minimum rate smaller in proportion to the larger number of 'phones to the exchange.

The steamer Prinz Joachim with delegations representing the Commercial Clubs of Boston, Chicago, Cleveland, Cincinnati, and St. Louis, has touched at Porto Rico, the Panama Canal Zone, and Jamaica. A number of days was spent at Panama in examining the work at the Canal.

The eighteen-hour trains between Chicago and New York may be abolished, it is said, because excess fares are illegal under the new two-cents-a-mile law enacted by various States.

The public debt at the close of business Feb. 28, 1907, less cash in the Treasury, amounted to $920,644,854, a decrease of $6,797,352 as compared with Feb. 1, 1906.

The Ship Subsidy Bill has again failed of passage by Congress.

Foreign.

Russia's second Parliament was opened March 5 without disorder. Immediately after the members were sworn in the Opposition took control of the Chamber, electing as President Feodor Golovin, a Constitutional Democrat, and a man of character. There are indications that this Douma will demand virtually all that the first Douma asked, but with more moderation.

Sir Henry Campbell-Bannerman, the British Premier, has published in the *Nation* an article in which he indicates his reasons for holding as baseless those objections brought up at home and abroad to raising the question of the limitation of armaments at the approaching Peace Conference at The Hague. He contends that the original Hague meeting was convened for the very purpose of discussing this question, and, because of the delicate and complex nature of the question, failed to reach an agreement.

Lord Newton has introduced in the English House of Lords a bill proposing the reconstitution of the House on a partly elective basis. He seeks to remove the excessive preponderance of hereditary peers by stipulating qualification through service to the State or previous election, and provides for a certain number of elected peers and for the nomination by the Crown of life peers, these not to exceed one hundred in number.

The National Assembly of Persia has agreed to the proposal that the new National Bank of Persia advance the Government the sum of $3,900,000 to be used for the payment of the army, to meet the cost of diplomatic missions, to pay the expenses of the court, and for the purpose of refunding private bank advances.

A system of irrigation which will cover nearly one hundred thousand acres of land and will cost about $2,000,000 to construct, is being laid out by engineers of the Sinaloa Land and Water Company in the valley of the Culiacan River in Mexico. It will be one of the largest systems of irrigation in Mexico.

The China Association is co-operating with the Chamber of Commerce and American, German, and Japanese Associations in arranging the International Exposition to be held in Shanghai in the autumn of 1908. Exhibits from Europe and the United States will be invited.

The cost of placing the scheme of workmen's pensions into operation in France is estimated between eighty and ninety million dollars.

A railway tunnel will soon undermine the great wall of China.

Industrial and Commercial.

The Standard Reduction Company of Chicago is erecting the largest fullers' earth plant in the world at Hurricane, Ala., where the clay deposit on one thousand acres is found to contain the standard chemicals necessary to produce the desired article. The daily capacity of the new enterprise will be one car-load.

The salaries of all Postal Telegraph Cable Company operators, traffic chiefs, wire chiefs, assistant chief operators, chief operators, and managers were increased ten per cent on March 1, and this increase applies to all offices of the company in the United States.

Several sponge farms, all of which are paying concerns, are to be found in the Mediterranean. Until recently sponges have been simply collected from the sea floor, where they have flourished in a wild state, but of late years they have, like oysters, been cultivated.

The leather industry contributed $150,000,000 to the foreign commerce of the United States in the year 1906, against less than $55,000,000 a decade earlier.

The manufacture of wire fence by the nine plants in Michigan last year amounted to 4,581,280 tons.

General.

The highest price ever paid in this country for a painting, $65,000, was received recently at New York for a Troyon. The picture was "Le Retour a la Ferme," a canvas, fifty-three inches in height by thirty-eight in width. It depicted two cows on their way to pasture, one white and the other dark brown, two sheep, and a vista of green pasture land.

In the Vatican at Rome is the largest topaz in the world. It weighs seven pounds and has carvings upon it that occupied three Neapolitan lapidaries sixty-one years.

In Santa Rosa, Cal., is a church with a seating capacity of two hundred, which is built entirely of timber sawed out of a single redwood tree.

Sixty years ago there were only one hundred and fifty thousand children at school in India. Now there are four million.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NOT A MATTER OF OPINION.

SAMUEL GREENWOOD.

THE decision as to whether or not Christian Science is true does not rest with the opinions of men, however eminent in their own line some of them may be; and those who attack it or its believers from no better motive, or upon no more reliable basis than their difference of opinion, have no reasonable justification or defense. A difference of opinion indicates nothing more than that all but one of the disputants are in error, and who that one is can be settled only by an appeal to the facts involved. That others believe differently from us does not necessarily prove them in the wrong, and until one can furnish definite proof of his position he had better maintain that generous, unbiased attitude of mind which welcomes truth even at the expense of cherished opinions. The almost countless phases of belief that have emanated from the popular concept of God should preclude mutual intolerance or antagonism, so long as these beliefs are honestly held and their influence is for the betterment of mankind. If one is confident that he is right, he can well afford to leave the establishment of this fact to divine wisdom and the fruits of experience; whereas the manifestation of bigotry or uncharitableness towards the views of others is a sure sign that if one's beliefs are right at least his practice of them is not.

The Leader of the Christian Science movement in a recent article sums up the entire wisdom of the question when she says: "It is of comparatively little importance what a man thinks or believes he knows; the good that a man does is the one thing needful and the sole proof of rightness" (Mrs. Eddy in *The Independent*). If this rule were the guide of judgment, the attacks upon the Christian Science movement and its revered Leader would cease, and the great blessings which they have bestowed upon humanity would be recognized and acknowledged. And what other right way is there whereby to judge of one's own or of others' beliefs than by the good resulting therefrom? Men do not abandon the opinions of a lifetime, nor leave the legacy of their ancestral faith, without a weighty and sufficient reason. They do not change their beliefs for the mere love of change, and the very fact that they have done so should appeal to the considerate judgment of others even if it does not win their approval. Those who have turned from their former beliefs to accept the teachings of Christian Science have done so because of the larger good received by them, and for nothing else. If they are deriving more help, physical, moral, or spiritual, than they found possible before, what rational cause is there why they should not make the change? To pass upon their course from any other point of view than the welfare of those most concerned, is to be guilty of the overweening dogmatism that says, "No one can be right that does not believe as I do."

Is it not true that humanity would never have progressed out of its cruder conditions had not some brave spirits dared to cross the boundaries of popular opinion and open the way to better and higher things? One has but to look back to the darker ages of the race to see that the spirit of intolerance is the spirit of savagery and of animalism. Had mortals remained content with existing opinions regarding the universe and the so-called laws of nature, we should never have had the telephone or a railroad, we should never have had the Copernican system, nor the discovery of our western hemisphere, nor the Reformation. Think of this, and what it means! Coming to our own age, if Mrs. Eddy had not dared to cross swords with popular material and theological opinions, the world would not have received Christian Science at this time; but that she had the courage to do this, and to give to mankind the results of her discovery, delivering thousands from sin and suffering, should forever shield her from persecution in a country whose people have struggled through oppression and bloodshed for their liberties.

After all, a mortal's opinions are the least part of him, and the part he can afford to lose with least loss. One needs no opinion and has none concerning what he knows; and hence opinions are little more than confessions of ignorance or uncertainty. An opinion may be right or it may be wrong, one cannot decide which until the truth is learned and demonstrated. One's opinion concerning Christian Science proves nothing either way, and is an impossible basis for correct criticism. That one may or may not believe a thing, is of no value in determining the actual truth of the matter. One may sacredly cherish the religious beliefs of his fathers, and feel firmly convinced of their truthfulness, and yet have no ground of practical certainty to stand upon with regard to them. Such a position does not warrant him in attacking the beliefs of others, and especially when proof is offered in support thereof. One may with dignity and respect differ with the teachings of Christian Science, if in broad-minded hospitality he recognizes the right of all to worship God after the manner that appeals most to them; but to aggressively antagonize what we may not understand and cannot disprove, is at best unwise and unjust. The enmity of any person or persons against any cause, no matter what their position or reputation, does not in any degree determine its worthiness; its own nature and its influence upon its followers alone decide if it be good or bad.

It is possibly a matter of opinion, with an individual or a body, as to what extent the truth of God's omnipotence shall be accepted and practised; but the whole world's opinion does not affect the fact itself, nor its availability in mortals' behalf. The fact, and not the opinion entertained of it, is the one important thing. It were a sad outlook for the salvation of the race if Christianity were founded upon human beliefs and conclusions, instead of upon the actual demonstration of the eternal verities of divine Truth. Mortal opinions are ever changing, but there

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

is no change in the fundamental facts of being which Jesus relied upon and taught. Even the best human belief or opinion is not the interpreter of Truth. The teachings of Christian Science are not the outcome of personal belief; rather are they the revelation of God's omnipresence, omniscience, and omnipotence,—of His allness. These truths are the essentials of Christianity, and who shall weigh his opinions in the same scale with them?

The only justification for assailing a cause is that of wrong-doing; but even its opponents admit the good results that flow from Christian Science. Many medical men even admit that it does heal disease in many cases where they have failed; some of our foremost clergymen admit the moral reformations it is accomplishing and the peace and harmony it has brought to many lives, and all classes of observers have noted and admitted its Christian and beneficent influence upon its adherents. These must be the things that decide its truth and worth, and not the pronouncement of adverse opinions, formed and maintained through ignorance of the subject by those who are culpably negligent of opportunities to learn. One may become familiar with a house as it appears to him from the outside, but from that point of view would it not be folly to declare what are or what are not its interior arrangements? Yet this is the method of some who attempt to analyze Christian Science, or claim to write its history.

In view of the fact that in nearly every community there are numbers of Christian Scientists of unimpeachable integrity, many of whom are in the higher walks of life, who stand ready to testify of the uplifting and ennobling influence of Christian Science upon their lives,—their health, their character, and their home,—and will gladly assist in any honest investigation of their belief and practice; in view of this palpable fact, the continued misrepresentation of Christian Science or of its Leader can have no other animus than malice and hate. Such procedure must stand self-condemned before all fair-minded and just men. In the name of humanity, and in common love of our kind, why not let every good work, of whatever name, go on, and in the name of God do with its might what it can toward the alleviation of the world's misery?

Differing opinions may be entertained concerning a tree, but when the fruit turns out to be good the decision is beyond dispute. All honest opinions yield to proof. Opinions adhered to in the face of fact are essentially dishonest, they are inconsistent with moral uprightness. The history of the Christian Science movement is being written in the good it is accomplishing in the healing of disease and sin, in the overcoming of all the phases of the belief in evil. The whole nature and purpose of this movement is toward the accomplishment of these things in conformity with Jesus' command, and to write or attempt to write its history apart from or in belittlement of this fact, is as vain as would be the attempt of a botanist to describe a tree accurately without considering its fruit. As the bearing of fruit is the whole life-purpose of a tree, so the redemption of mankind from all evil, moral and physical, is the all-inclusive purpose of Christian Science; and all the efforts of its detractors cannot make bad this tree that bears such good fruit.

HUMAN SENSE CONTROLLED BY TRUTH.

REV. G. A. KRATZER.

To human sense some of the errors of mortal mind had their beginning in an indefinite past, and have been believed to be truth ever since. Other false beliefs had a later apparent origin, and others have arisen within the last century, some within the last year, and some within the last hour. In Christian Science we learn that error has no real existence, even though mortals believe it to be true; and that the apparent existence of an error is completely destroyed when it is universally discovered to be an error and not the truth, and further, when it is universally forgotten. It is surely best, therefore, for the individual thinker who has discovered the truth, to take the strict scientific ground that error does not exist and did not begin, and so cease to inquire into its supposed origin or to think about it. The thing for us to do with error is first to know it for what it is; viz., error, and then drop it absolutely, forgetting it as soon as possible. All that is real, all that exists, abides in the consciousness of God. God knows all that exists; but God is not conscious of error; He does not think error; if He did it would be the truth. Hence, from God's standpoint, which is the only true standpoint, error, false sense, does not exist and never began. Truth is comparable to light, and error is comparable to darkness. "God is light, and in him is no darkness at all." God is "of purer eyes than to behold evil, and canst not look on iniquity." If our thoughts were absolutely pure and true, as is the case with God, we should have no consciousness, concept, or remembrance of error in any form; hence there would be no question of how or when it began. In Truth there is no mortal mind, and therefore it has had no beginning.

Mortal sense is simply an aggregation of errors. Some of them are from time to time discovered to be errors, not the truth, and are forgotten and thus destroyed. Mortal mind is a changeable nonentity, having nonentities continually stricken out of it by the destruction of error. When it is discovered that in reality there is no mortal mind; that there is but the "one Mind, and that one perfect" (Science and Health, p. 249), then all error will have been forgotten, destroyed.

The stream of human consciousness consists partly of the truth and partly of false belief. Truth and error seem to meet in human consciousness just as oil and water seem to meet in the same vessel, but they do not mix or mingle. In proportion as human beings learn the ideas of Truth, and thus displace, forget, destroy, opposite thoughts of error, in that proportion they destroy mortal mind and acquire the "one Mind," "the mind of Christ." In our text-book we read that "the action of mortal mind needs to be controlled by the divine Mind" (Science and Health, p. 400), and this control is secured in the degree that its errors are destroyed and forgotten. The less of poison or of any obnoxious thing that we have, the better.

PROTECTION.

KATHERINE WHITE.

In reading the Bible one cannot fail to notice that from beginning to end it is full of accounts and promises of God's protection and guidance. Patriarch, prophet, psalmist, apostle, evangelist; those in high position, or men of low degree, all proclaim, out of their own experience, a power to save in every emergency. The promises in the 91st Psalm alone, to those who dwell "in the secret place of the most High," assure of deliverance from almost if not every kind of disaster which seems to fall upon humanity.

One is therefore constrained to cry out, Where is the secret place of the most High, in which mankind may dwell in safety? What ark will carry us triumphantly over the floods of adversity which threaten to engulf humanity? It is the great fact of man's at-one-ment with God; a fact which we have so dimly understood, so waveringly believed, and to which we have held with such feeble, tentative grasp. Who can measure the debt of gratitude which we owe to the Discoverer and Founder of Christian Science, for her clear explanation and strong emphasis of man's unity with divine Principle, for teaching us how to make practical in daily life the Science of Being? For there is all the difference in the world between the one

Digitized by Google

who believes himself a separate entity from God, having a life of his own, a mind, a will, and a way of his own, all apart from and independent of God, and the one who realizes man's at-one-ment with his Maker, and who works out this "scientific unity" in his "life-practice" (Science and Health, p. 202). The one is the sport of circumstance, his existence as precarious as that of the sunbeam separated from the sun; the other has guidance in difficulty, wisdom in perplexity, safety in seeming danger, courage in adversity, comfort in sorrow, victory in every battle.

Step by step, through the study of their text-book in connection with the Bible, Christian Scientists are gaining this "mount of vision" where man's at-one-ment with God is revealed to consciousness; and as we come to realize what it means to live, move, and have our being in God, we do find the promises of guidance and protection fulfilled, and prove the truth of Jesus' words, "Nothing shall by any means hurt you."

"LEAD THOU ME ON."

W. PETCH.

SOMETIMES I think one is too much inclined to look at the life of Jesus as though it had all been comprised in the three glorious years of his public ministry. We rightly hold them as ideal, but we are apt to forget or overlook the preparation for those years. Students of Christian Science would like to reach at once the heights and depths of its meaning; the beginner is impatient of delays, and of his own slowness in proving the truth; but later on there comes to each of us a more sober stage, when we begin to realize that only "goodness attains the demonstration of Truth" (Science and Health, p. 2), then we see that we must seek goodness first if we would find the right way towards the source of all good—God. Sometimes when the way seems long and we are tempted to be weary because of the many burdens that seemingly must be carried along the road, we may well stop and think over Jesus' thirty years of preparation for his mission of teaching and healing.

Mrs. Eddy's words have many times cheered and comforted me. She writes, "Three years, he went about doing good. He had for thirty years been preparing to heal and teach divinely; but his three-years mission was a marvel of glory: . . . Only three years a personal Saviour! yet, the foundations he laid are as eternal as Truth, the chief corner-stone" (Miscellaneous Writings, p. 163). This has helped me to be patient, and it will help us all. If we know that we are working well and honestly; if we are confident of God; if we are learning day by day to practise more perfect obedience to the divine Principle of being, surely in God's own time we will be ready to heal quickly when called upon for help. Even now the purification of our own thoughts and the spiritualization of our own lives—in seeking and finding the ideal manhood and womanhood—is pointing the way for others more wonderfully than we ourselves can tell. Our Leader says in the article already quoted, "This spiritual idea, or Christ, entered into the minutiæ of the life of the personal Jesus. It made him an honest man, a good carpenter, and a good man, before it could make him the glorified" (*Ibid.*, p. 166). What could be more simple than these words?

What we each need and should desire most of all is to be made good—Godlike—in whatever state we are, be it that of carpenter or king; and this is what we must attain before we can become qualified to teach and heal as did Jesus. Let us think of those thirty years, according to human sense, and will we not be patient? Then let us think of those thirty years, according to spiritual consciousness, in which "one day is with the Lord as a thousand years," and will not this inspire us to be active, that we too may reach this glorified understanding? Patience and activity, hand in hand, guide us onward to the realization of that perfect Truth which must fit us—aye, compel us—to fulfil the Christ-mission for which we long.

GOD'S WAY.

DAVENPORT BROMFIELD.

For my thoughts are not your thoughts, neither are your ways my ways, saith the Lord.—ISAIAH, 55:8.

WHAT a wonderful difference there is between God's way as taught in Christian Science and mortal man's way, which is really no way, although we are sometimes deceived into thinking it is. How often we hear the statement, "Each must work out his own problem in his own way." This is good advice, providing the student understands what the true way is. Paul says, in his Epistle to the Philippians, "It is God which worketh in you both to will and to do of his good pleasure." There are earnest students of Christian Science who are working faithfully in the way which seems to them right, yet who fail to receive that rest of which we read in the Scriptures,—"There remaineth therefore a rest to the people of God." This condition probably arises from the lack of a proper conception of what is meant by working out one's own problem. The problem of the student of Christian Science is so to study the Scriptures and his text-book that he may see more clearly each day God's way; for there is only one way in which anything can be accomplished successfully; viz., in God's way; and the sooner we learn this fact the better.

God's way is the way of peace. There is a little word which appears in the first chapter of the book of Genesis fourteen times, and in the text-book of Christian Science over ninety times. This word is *let*, and it is a very important word to the student of Christian Science. Each student must work for that condition in which he will be willing to let God's will be done. This work involves the casting out of self with its erroneous beliefs and practices, and in proportion as this is done will there be experienced that peace "that floweth as a river." In the journey from sense to Soul we meet with problems which are individual and which must be worked out individually, but we need to watch in this good work lest we lose sight of the glorious fact that God's work is complete, and is good, and that the student's greatest problem is to let this truth be manifest in his thought and action. The great need is to let that Mind "which was also in Christ Jesus" govern us in all our affairs. The reason we should let this Mind govern is because it is God, divine Truth, and our text-book declares that "what God cannot do, man need not attempt" (Science and Health, p. 231). Should the erroneous suggestion come that we are not able or willing to let God govern us, we need to cast out this error.

[Written for the *Sentinel*.]

COMPLETE IN THEE.

FRANCES MACK MANN.

COMPLETE in Thee, we do not see
The petty things that gender strife;
Broad grows the outlook, boundless, free:
Eternal good the only Life.

Complete in Thee, we do not hear
The human will's discordant sound.
High on the mount His voice is clear:
In true obedience God is found.

Complete in Thee, we now do feel
The tenderness our Master taught.
It makes us whole; and doth reveal
Completeness as the perfect thought.

LETTER FROM A CITIZEN TO A LEGISLATOR.

[We have been given the privilege of publishing the following protest against class legislation. The writer is a well-known banker and business man who has been healed by Christian Science.—EDITOR.]

Great Falls, Mont., Feb. 7, 1907.

Hon. Fred Whiteside, House of Representatives,
Helena, Mont.

Dear Sir:—There has just come to my notice the rough draft of a proposed medical bill to be introduced in the House by Representative Campbell. There is no doubt in my mind but that this bill is given sufficient latitude to embrace Christian Science, and while it is cleverly drawn, no doubt with a view to escaping the notice of the unwary, it must be plain to even the casual observer that great danger lies in the amendments which may be made, and thus uncover the true aim and object of this bill, which in its present form leaves much room for doubt as to the motives of the framer.

It is not my purpose to burden you with details setting forth the merits of Christian Science, nor to particularly defend it against the unscrupulous and unwarranted attacks of its self-styled critics. The truth needs no argument nor defense. It is open to the honest investigator, and those who do not choose to avail themselves of this privilege have no right to enact laws whereby we are to be governed and denied the right to choose for ourselves and our families the means of alleviating pain and disease.

There is ample proof of its healing power, and we desire to protest vigorously against the enactment of laws depriving us of our rights and privileges in these matters. We compel no one to accept our views. All we demand is to be left alone, asking only for ourselves the same rights we are willing to extend to others—the constitutional right of freedom to worship God. Through this constitutional authority we claim the privilege of applying our religious beliefs to the healing of disease to the exclusion of material remedies, if we so desire.

To refer briefly to my personal interest in this matter, I desire to say that this interest is measured by the depth of gratitude for personal healing from chronic ailments of several years' standing, which had defied the most conscientious and intelligent efforts made in my behalf on the part of some eighteen or twenty physicians, surgeons, and specialists of note. This is regardless of what others may say and think, and there is plenty of similar evidence to be had. I was also a scoffer of the worst type previous to investigating its claims for myself.

If this bill is amended to embrace Christian Science treatment, it is a blow at religious liberty, and we hope that the days of religious intolerance have been relegated to the dim and distant background of conditions outgrown.

Your record in Montana legislative halls has left a deeper impress than you can imagine, and with this knowledge of your record for honesty and the desire to see justice prevail, I have full confidence in your ability to sustain that reputation by using your best efforts to prevent legislation antagonistic to our personal freedom or which tends in any way to curtail our religious liberties.

Yours truly,

A. E. SCHWINGEL.

[Rev. A. J. Haynes in the *New Haven* (Conn.) *Journal and Courier*.]

During the last three decades the Christian Science movement has passed through an amazing growth. Making allowance for all exaggerations of doctrine, all extravagances of speech, all the crudeness of every sort incident to any new movement, the hard fact remains that there must be something of good in a religion which has changed the lives of tens of thousands of people from a tragedy into a song of praise. It is that kernel of good that we are after. I know not how other ministers may feel, nor other churches. But for us there would seem but one course to follow. It is that of open-mindedness to every new fact of the religious life which presents itself. . . . Indeed, I think I may say that I go so far as to approach this subject with a kind of eager sympathy. Perhaps I have been peculiarly happy in my acquaintance with Christian Science people. At any rate, I have never found my nature up in arms, so to speak, either over their teachings or their lives. To say that I accept the Christian Science system of thought as a wholly satisfactory interpretation of the New Testament would not be true. At the same time I believe most sincerely that these people are emphasizing certain religious facts, the importance of which cannot well be overestimated. It is these facts that I would point out. It is these facts that I would have the Church receive, thereby, as I believe, greatly enriching its own life. If their teachings, as they claim, are derived from the New Testament, then surely they are a part of our inheritance. We have no need to go outside our own fellowship to appropriate and practise them. I move on from this point in my sermon with full assurance, for I cannot be mistaken in assuming that it is the disposition of all who are under my ministry to approach this whole subject in a perfectly frank and fair-minded way. You and I are agreed in this: We would take hold of our investigation in that scientific spirit which asks only for the facts, and in that Christian spirit which would lead us to accept and hold fast to those conclusions that the facts fully warrant. . . .

Turning to the affirmative aspect of Christian Science, let us ask ourselves wherein lies its living power? Many answer, "In its healing." It is freely charged that Christian Science is not a spiritual movement; that it cares only for the loaves and fishes of physical health. So fair-minded a man as President Hyde of Bowdoin College seems to fall into this view of Christian Science. In a recent discussion of this subject he writes: "Healing is not, like love, joy, peace, modesty, fidelity, sacrifice, an essential manifestation of the Christian spirit." This may be true. But does he mean to imply that Christian Scientists confine themselves to the healing aspect of their ministry, while they disregard these fine graces of the spirit? If that is the implication I think it wholly unjust. Where is the evidence that they are lacking in the Christian spirit of love? Do they not keep the peace? Are they not law-abiding citizens? Do we find them lacking in fidelity and in patience? To be sure, they cling tenaciously to their beliefs, but since when has it become a crime to believe as a man chooses to believe? To be sure they are enthusiastic, almost to the point of fanaticism, in allegiance to their Church and Leader; but who, that loves our own Congregational fellowship, would not be glad to have our membership fired with this same intense spirit of loyalty? If I am capable of any fair judgment, Christian Scientists magnify first of all the graces of the Spirit. They love one another. They are creators of joy. They keep the peace. Over-modest we may not call them, but their assertiveness has this redeeming quality, it springs out of a deep faith. As to fidelity in all family and social relationship, I cannot see that they fall below the standard set up by other Christian bodies. Doubtless there is much to desire in their exemplification of the virtue of self-sacrifice, but that is as true of us as of them. A "peculiar people" they most certainly are, but so were the early Christians, and so are any people who undertake in a crooked world to walk according to some deep Principle of faith.

And this brings me straight to the thing I desire most of all to say. . . . What is the one great truth that we may speak of as the religious handle of Christian Science? What is it that they emphasize above everything else: far

Digitized by Google

more, as it seems to me who would be just, than they emphasize their work of healing? As I speak a hundred are answering, "It is their teaching of the great truth of the immanence of God." No! it is not that; it is something infinitely more vital than that; it is what the Scripture calls the presence of God—the living presence of God. The teaching of the immanence of God is a profound philosophical truth, but it is not a truth that gets hold of the hearts and lives of men. It is the presence of God, made known to us in the redeeming, healing, uplifting, loving, and sanctifying power of the Christ—it is this, and this alone, that sways and turns the lives of men. The weakness of the teaching of the new theology has been in this, that it has said too much about the immanence of God as a cold, philosophical abstraction, and too little about the actual presence of God as a living power at the heart of life. The Scripture never talks about the immanence of God in His universe; its one life-breathing utterance is this: "Emmanuel—God with us." . . .

As those who bring torches into a dark cave, these people have come into this materialistic age bearing aloft living flames of spiritual reality. Their talk is of God. They invent all sorts of strange and grotesque figures of speech by which they would express their consuming thought of Him. Their language is the language of those who wrestle in travail of mind, trying to make words that are heavy with the usages of many generations of materialistic thought—to make these words tell the story of the vision that has come to them. To all who have lost their sense of an underlying Spirit, to men like those at Ephesus who said of themselves, "We have not so much as heard whether there be any Holy Ghost," to all such these people seem like crazy fanatics, creating confusion among themselves, trying once again to build that Babel tower that shall lift itself above the clouds of heaven. The one splendidly assertive fact of the whole movement is overlooked, the fact that God is real to them; not real in a poetic sense, but real in a Christian sense—a living presence, a triumphant power, a constant comfort, and an ever-springing fountain of eternal life.

This, then, as I understand it, is the explanation of the Christian Science movement. The secret of their power is to be found in the word "reality." These people have taken hold of that word, and as the swinging limb of a giant tree lifts the boy at play, this word lifts them to new heights of experience. Their souls kindle. God is no longer a doctrine to preach about; He is a living power working in every part of them—hand, and mind, and heart, and will, and conscience. From childhood they have listened to arguments as to whether there be any God; now they have discovered Him for themselves. And the discovery seems so strangely revolutionary in their lives—as indeed it is—that they can think or speak of nothing else. Thus it happens, as critics say of them, that they talk about their religion all the time. So real is it that nothing else seems real. So deep and vast is this spiritual essence that the very earth itself becomes an unsubstantial shadow. So vital and restorative is the presence of the Divine nature that they hesitate not to claim more for God than He actually claims for Himself. "These people affirm too much," the world says. I have no doubt of it—none at all. What else would you expect? Did not the quickening of the Divine presence at Pentecost—what men have called the "outpouring of the Spirit"—did not this lead to the same extravagances of speech, the same assumption of all-conquering power? Go to your homes and read the second chapter of the Acts. Where in all literature will you find another such wildly impossible piece of writing? As we read the record of that seemingly lawless upheaval of spiritual power, we do not wonder that the onlookers "were in doubt, saying to one another, What meaneth this? Others mocking said, These men are full of new wine." Yes, indeed, they were full of new wine. It was the wine of a new presence and a new power in life. It was the wine of a great love that filled their days with a tireless effort to create a heaven on earth, and filled their nights with the dreams of that heaven attained. Truly these people were full of new wine—intoxicated with the quickening, restorative, soul-refreshing sense of God.

What more can I say to make my message clear this morning? God forbid that I should seem to imply that there is no sense of spiritual reality, no sense of the living presence of God, in our own churches. Such an implication would be utterly false. At the same time it must be admitted that in many a Christian church the people have no pervading realization of their oneness with God. In a general, vague sort of way they believe that such a being exists. But that He is one with them,—they in Him, and He in them,—how deeply-rooted is this conviction? How many have come to see that our limitations limit God, and that He can do nothing for us except that which He does in us and through us? Seventeen years I have been trying to preach the gospel of Christ; and I should not dare to tell you this morning by what spiritual tragedies I have been led to the conviction that a vast deal of our conventional Christianity is worldly and unspiritual. There is no burning sense of reality in it. The things of the Spirit are not the things of supreme importance. Religion is looked upon as a good thing, a safe thing, an altogether respectable thing; but that it can make people who are poor happy, that it can make those who are sorrowful rejoice, that it can take the worry and anxiety out of the soul, that it can be made a living, onrushing, triumphant power in life—where are the hosts of people who believe this? Shall I, then, in an unspiritual age, raise my voice in protest against a people whose peculiarity consists in this, that they emphasize the spiritual alone? Shall I not rather say to myself and to you, Let us learn what it is that is making the Bible, the church, the religious life attractive to these people. As I meet them I ask them questions; and I find to my amazement that they are those who have gone out of our churches. Would I not be the poor part of a minister if this discovery did not drive me to my knees to ask of God what it is that the soul of man needs that I have not been giving it? Can I do less than make an appeal to you as a church that we move out into a larger appropriation of those vital truths of Christ's gospel that have to do with the actual presence of God in human life?

[Editorial in the *Spartansburg* (S. C.) *Journal*.]

This newspaper has no quarrel with the doctors. They do a great deal of good. They give their time to much study and work to prepare themselves for the safe administration of drugs. They should, of course, be skilled in the use of drugs and medicines. Those who are surgeons should have knowledge of the construction and action of the human body, that they may use the knife and scalpel with safety. The world is not yet ready to get along without doctors. Therefore the laws should and do provide for the regulation of the practice of medicine, which is an important profession.

Let the doctors keep on doing all the good they can. But they should not forget that others also are doing good. There are many schools and systems of healing, all of which do some good and many of which do much good. These should not be interfered with. The doctors should not entirely monopolize the business of healing. People should be free to have any sort of treatment they may prefer, provided it is not dangerous or plainly fraudulent. . . .

Our friends the doctors are the most numerous and influential perhaps in the healing profession, but we respectfully submit that they are not the whole thing. There are others. These should be let alone. The laws already amply provide for keeping out fakirs and charlatans, and properly so. But section 2 of the medical bill now in the

Digitized by Google

Legislature would simply abolish every form of treatment, with or without medicine, and put the entire business of healing disease under the control of the State Medical Association, composed entirely of allopathic physicians. This we have stated, and still state, is not desired by many physicians, who already have all they can do and are not envious of practitioners of other schools of healing. Some of them have told us so. Section 2 of the medical bill has its foundation in selfishness. It is not for the benefit of the people, for whom the Legislature is acting. It is not even for the real benefit of those doctors who think they desire it, because nothing can be good which is not right.

Therefore, with great respect for the doctors, many of whom are our personal friends, and for their excellent and useful societies, county, district, and State, we are compelled to voice what we know to be right when we oppose this restrictive, reactionary, and monopolistic legislation. We wish every doctor to be qualified, and willing to take advantage of every opportunity that comes his way to do good. We wish those who give their lives to this profession to be fully rewarded for their time and their work and their talents and energies. We would not place an obstacle in the way to keep any doctor from having his full and rightful reward. That reward, however, does not properly consist in being given a monopoly of the profession of healing diseases, and we do not believe the people of our State think the public welfare in any sense requires it.

[Willard S. Mattox in the *St. Albans* (Vt.) *Messenger*.]

Far from confusing "the creator with His creation," Christian Science throws more light on the nature of God, the nature of His creation, and their mutual relations, than has ever been afforded by any previous attempt to explain them. Is it, after all, pantheistic to say, as Mrs. Eddy does say, that "nothing possesses reality nor existence except the divine Mind and His ideas"? (Science and Health, p. 331). If this is not true, then its opposite must be true, that something besides God does possess reality and existence; a conclusion which is destructive of the supremacy of God, and whose author is plainly the carnal mind, "which is enmity against God." It is not pantheism to preach the oneness and allness of Deity. That is the rock upon which Christianity is founded. It is the primal statement in Christian Science. Once we agree that God is what the Scriptures describe Him as being, the only creator of the only universe, then every conclusion reached by Mrs. Eddy in her book Science and Health becomes inescapable.

[Editorial in *The Boston Herald*.]

Let's hang on to the Constitution of these United States! No paternalism, if you please. Think as you like; practise the religions that best help you; live where and how you prefer, provided it is decent, and be content that every one else should have the same privileges. That is the true essence of the idea embodied in that priceless birthright of the American nation.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

THE LECTURES.

LANCASTER, N. H.

The lecture on Christian Science by Mr. Bicknell Young of Chicago, at the Opera House last Thursday evening [Jan. 24], was much enjoyed by those who were present. The lecturer was introduced by Col. Henry O. Kent, who said in part,—

As an outsider, I am interested with you in hearing of this movement whose progress has been the wonder of the times—Christian Science—or, as I suppose, the beliefs and methods of applied scientific Christianity. Its growth is asserted to be sure and its devotees are certainly among the most worthy of every community. To us of New Hampshire this movement has especial interest, in that its Discoverer and Founder is one of our own people, a kindly, helpful woman. Mrs. Eddy was born and reared among us. She has broadened in thought and scope as years have passed, doing only good to those about her in endeavors to alleviate mental and physical suffering, until she is regarded with veneration by millions. The rude and unkind criticism to which she has sometimes been subjected has but resulted in raising up friends among the communities which have known of her patient, helpful, and blameless life.—*The Lancaster Gazette*.

SANTA MONICA, CAL.

Hon. Clarence A. Buskirk spoke to a crowded house last Saturday evening [Jan. 26] in the edifice of First Church of Christ, Scientist, of Santa Monica. In introducing him Attorney W. M. Palmer said,—

Truth is eternal. Man hears the rustling of her robes and stands in the presence of his Deity; he seeks her and is called a philosopher; he makes practical application of the laws by which she governs, and the world greets him as a genius; he loves her, and he assumes the likeness of a God. In search of truth man crosses the snow-capped mountain-ranges of the world, he braves the dangers of the deep, his way is groped through jungles, and he feels the scorch of desert sands. Then, when truth reveals herself to him, man turns aside with cowering brow, lest he might learn to know himself. God help the man who is afraid of truth, who lets "the substance of things hoped for" separate him from his God.

To aid us in our efforts to find the truth, to encourage us in making our lives the exemplification of those truths established from the beginning by Him who said, "Let us make man in our image," we have with us one who seeks to aid in calling men back to Eden, knowing that the truth shall make us free.—*The Outlook*.

CITY OF MEXICO, MEX.

A lecture under the auspices of First Church of Christ, Scientist, was delivered last evening [Feb. 16] before a large audience in the church rooms in the Stilwell Block, by Miss Mary Brookins of Minneapolis, Minn. The lecturer was introduced to her audience by A. L. Van Antwerp, Second Reader of the local church, who said,—

Time is said to be the supreme test of any great world movement, but it has occurred to me that perhaps there is still a better test, namely, results, for "by their fruits ye shall know them." The Science of Christianity, that complement of Christian cognitions, is the doctrine of the Christ, given to the world some nineteen hundred years ago, and taught by Jesus on the shores of the Galilean lake, in the temple at Jerusalem, and on the cross. It controlled the hearts and minds of men for about three hundred years, but with the conversion of Constantine it seemed to fall into disuse and became hidden, buried under a mass of tradi-

Digitized by Google

tion, theology, agnosticism, and even atheism. It was discovered, or better, exhumed, in the second half of the nineteenth century by a woman, Mrs. Mary Baker G. Eddy, who has brought to light the teachings of the great Master, Christ Jesus. This discovery she has called Christian Science. It is science both applied and pure; there are thousands of persons, and some of them are in this audience, who to-day are gladly, gratefully bearing witness to the beneficent effects and healing powers of Christian Science as applied in their hearts, in their minds, and in their lives. We who are Christian Scientists are proud to be such, happy to be so called. And why not? Our sick are being healed from all manner of disease; we are being cleansed from the leprosy of evil thoughts and desires; those dead in trespasses and sins are being raised, and the demons of envy, hatred, malice, and all uncharitableness are being cast out. What more, I say, can we ask?—*The Mexican Herald.*

HOUSTON, TEX.

Mrs. Sue Harper Mims delivered a strong and impressive lecture on Christian Science at Turner Hall last night [Feb. 11], before an attentive and appreciative audience. The lecturer was introduced by Mr. Joe H. Eagle, the well-known lawyer of this city, who said in part,—

A peculiar fortune befell me this afternoon. I quitted my office sooner than usual and took the Christian Science text-book home with me to look up some parts which a friend had suggested would be helpful, and began reading. I became so deeply interested that I continued until dark, and never found the marked places. I speak as a citizen of Houston in welcoming this lady here, and by request. And yet, I have no apology for it, but happiness in doing it. Christian Science to me, as perhaps to many of you in this audience, is a thing the true meaning of which is as yet unknown.

From our infancy up through our lives we are fed on frauds almost as our daily food. I remember distinctly that in my backwoods home in southern Kentucky, where I was reared, we were taught that there is a God of vengeance, who, if we will supplicate Him, will occasionally pardon us of our iniquities. I felt at the time, and I have felt ever since, that God is a God of love, and not a God of hate. We were taught and, in short, it is the prevalent teaching of this hour, that God is a policeman with a stick in His hand; and surely not a one of you believes that. But you are bound to believe that God is Spirit; that God is Mind; that God is everywhere; that God is the creator of all life; that God is substance; that God is perfection; that, therefore, He is in no sense the author of evil, of sickness, of sin, or of death. The great problem, my friends, from the time we come into this world until the time we quit it—is how to live right here.—*The Houston Chronicle.*

AMERICUS, GA.

Rev. William P. McKenzie lectured on Christian Science Feb. 11. He was introduced by Rev. Stanley Manning, pastor of the Universalist church, who said in part,—

The religious history of the last quarter or half century has been characterized by an increased emphasis upon practice, instead of upon theory as in earlier days. Abstract theology, which has little or no bearing upon practical life, has comparatively little interest for us; but the religion which leads one to visit the fatherless and the widows in their affliction and keeps a man unspotted from the world is welcomed gladly. This change has been felt in every denomination, and is in part, I believe, due to the Christian Science movement. Certainly they, above all others, have insisted that religion is a practical thing right here and now, something to be used seven days in every week. The influence of the Christian Science thought and practice is not confined to those who have allied themselves with its organization, although their numbers have grown at an astonishing rate in recent years. It is an influence which will be felt in increasing measure as the years go by.

I have personally known many who have been helped and healed by Christian Science. No reasonable person can doubt the testimony that has been presented. He may doubt this or that individual case, perhaps, but it is impossible to question the validity of any considerable proportion.—*Correspondence.*

FLUSHING, N. Y.

Armory Rink was filled to the doors yesterday afternoon [Feb. 10] with a highly attentive and appreciative audience to listen to a lecture on Christian Science by Frank H. Leonard of Brooklyn. He was introduced by Mr. Francis H. Sisson of Manhattan, who, though not professing to be a Christian Scientist, expressed his concurrence with the views of the editor of a leading New York newspaper that this is to be a Christian Science year. He said further:—

Christian Science has arrived. Whether we curse it or bless it, praise it with the enthusiast or laugh at it with the cynic, it has come and it is therefore worthy of study. From time immemorial man has been seeking to scale the heights of truth, ever listening for the music of the choir invisible, ever seeking for that which will give us joy and peace. It is therefore time that we should hear of Christian Science from one who is qualified to talk, one who has studied it from the inside, who has tested its doctrine by application, its philosophy by life, who has seen the results achieved, the sick made well, the feeble made strong. Let us judge Christian Science thus, in the words of its great Leader, Mrs. Eddy, who has said, "It is of comparatively little importance what a man thinks or believes he knows; the good that a man does is the one thing needful and the sole proof of rightness" (*Sentinel*, Dec. 1, 1906). The same may be said of any organization. We find among Christian Scientists a church that has no creed save the teachings of Christ, which has reduced his teachings to the last analysis—love. What this church has done and is doing is surely worthy of thought.—*The Flushing News.*

LAWTON, OKLA.

A good sized audience greeted Judge William G. Ewing at the Opera House Friday evening [Dec. 21]. He was introduced by the Rev. Oliver B. Loud of the Congregational church of Lawton, who said in part,—

Among my Christian Science acquaintances are men and women who stand high in the community, who are of a high order of intelligence, and who are an ornament to the community. I am now and always have been in favor of everything that will promote morality, intelligence, and Christianity. No doubt the people of Lawton will be glad to learn more of a religion that helps build up a community, promotes virtue in the home, and heals the sick.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

"THE LORD REIGNETH."

DURING the past two weeks Christian Scientists have been much discussed by the newspapers, and we are glad to see that they have refrained from taking part in the exploitations of sensational journalism which so largely assume to forestall or even supplant our judicial system. When the aid of a court has been invoked in any matter, the only proper time and place for the discussion of the persons involved and the issues to be determined is in the properly constituted tribunal voluntarily selected by the parties who have alleged that the intervention of a court is necessary.

We have seen no evidence that Christian Scientists, individually or as a body, intend to depart from the well-settled rules of decorum which have marked their conduct heretofore, and which should be especially observed by all good citizens in matters relating to the administration of justice. The court will do what is right in the matter now pending, and our people need not be disturbed about the outcome. God is ruling His universe, and truth and justice will prevail on this occasion as on all others.

ARCHIBALD MCLELLAN.

"THE LORD IS THE STRENGTH OF MY LIFE."

BY a devious path, and after many a stumbling, David reached a consciousness of Truth, a sense of the presence and availability of the divine Life which accounts for his reputation as "a man after God's own heart." The calm, decisive way with which he expresses this sense in the opening lines of the 27th Psalm goes to show that his varied experiences, in mounting from a shepherd's cot to the king's palace, had brought him the clear, unquestioning realization that a simple and abiding confidence in God is humanity's only sure refuge and adequate support.

Prior to the awakening to this truth one's sense of strength is grounded in self-assertion, influence, muscle, or money. Upon these he depends, and if he reach his goal he wins the world's applause, and in its glamor there may reign for one brief hour the ego of self-sufficiency. Yet, however buttressed by human wisdom or will-power, this self-satisfied "I" is speedily proven to be a very ordinary affair,—yes, weakness itself in the presence of the brawling Goliaths which infest the path of spiritual advance. Christian believers have never questioned the all-power of God, but many have sadly failed to relate themselves thereto. They have not demonstrated Truth's practical availability in the human struggle with error.

An electric bulb, though insignificant in itself, becomes a veritable wonder when related to the sun. Through dynamo, steam-engine, coal-beds, and primeval growths, we trace its connection with the glowing center of our system, and find thereby the explanation of its marvelous efficiency; the sun has become its light and its strength. Thus may we also be linked to the infinite, through Christian Science. In the consciousness that was in Christ Jesus our articulation with the unfailing source of strength is effected, and this is the secret of true living which Jesus came to teach. "My Father worketh hitherto, and I work. . . . The Son can do nothing of himself." In these words the great Nazarene discloses the relation of the Father's wisdom and power to his own personal overcoming and redemptive ministry, and to ours as well; and it is to the realization of this tremendous truth that all men are called in Christian Science.

The approach to this understanding is metaphysical. It is through the recognition of the inseparability of divine Principle and its idea,—that man is the present and potential manifestation of God. Having reached this perception, the naturalness, the legitimacy, and the emancipating inspiration of David's great thought about God begins to dawn. As never before we understand the sublime egoism of St. Paul, when he cries, "I can do all things through Christ which strengtheneth me." The impulse of vicarious enterprise, the spirit of undertaking for God and for humanity, thrills the heart, and the endeavor to fulfil our Lord's commands to heal the sick, cast out demons, raise the dead, no longer seems presumptuous. "This is the work of God, that ye believe,"—how manifest the Master's meaning now, and how comforting to think of the greatness of this strength of God which is our strength!

Sometimes we have been foolish, as was the traveler who, having accepted a friendly invitation to get into a passing wagon, declined to lay down his pack lest he might trespass upon unmerited kindness! We have sometimes consented to cares, assumed responsibilities for others with an altogether Christlike willingness to do, perchance, but without the Christlike realization that God's great strength is available in solving every problem, in carrying every load, so that we may be relieved of the burden and our every worthy undertaking be brought to the desired end.

There are those who, in a time of health and prosperity, have no impelling sense of the need of a strength that is neither physical nor financial; but for them as for all there comes an hour when it is seen that the strength of God alone is sufficient. In the experience of all true Christian Scientists this realization has been reached, and the oft demonstrated fact that the divine strength is indeed theirs, brings a quieting reassurance and support whose value is above rubies. Committed to a sublime endeavor to lift humanity's weary load, they may well remember the heroic overcoming of their Leader, in all the years of her sacred endeavor, through her trust in Truth, "the strong deliverer" (Science and Health, p. 226). With the poet, they may be sure that "God ne'er dooms to waste the strength he deigns impart!" and with him say,—

> I can abjure the idle arts
> [The] pedants strive to learn and teach;
> . . . too intimate a tie
> Connects me with our God!

JOHN B. WILLIS.

HELPFUL KNOWLEDGE.

IT is well known that the most thoughtful and conscientious physicians refuse to discuss their patients' diseases with them, sometimes greatly to the annoyance of the latter, who naturally feel that they ought to know all there is to be known about themselves. As a result of observation and experience, however, it has been found that information of this sort has an injurious effect, hence many medical doctors withhold it, even though the patient is dissatisfied and disturbed by this reticence. In many such cases the sick one imagines that his condition must be very serious, because he is not told what the doctor thinks; and on the material plane it is perhaps difficult to see which course is the more harmful, to tell the patient about the disease, or to keep him in a state of ignorance which is not bliss. The so-called human mind is conscious of its own lack and craves knowledge. In the treatment of disease a knowledge of evil on the part of the doctor is considered of prime importance, even while the harm-

Digitized by Google

fulness of such knowledge on the part of the patient is generally admitted.

Now there is nothing wrong in any one's wishing to know all about himself; the only question is how this may be brought about so as to help and heal the sufferer. Happily for suffering mortals, Christian Science has come to supply this desire for knowledge of themselves, and in such a way as to make the knowledge a means for their healing. Physicians have always admitted the desirability of turning the patient's thought away from himself, and to this end the sick have been advised to seek entertainment and amusement, devices which, in most instances, not only fail to accomplish the desired result, but are felt to be "stale, flat, and unprofitable."

So much for material means; and what is to be said respecting the spiritual means employed in Christian Science? Here the patient is not kept in ignorance; his eager desire to know the truth about himself is supplied by knowledge, not of the mortal body, but of the ideal man, —the likeness of perfect Mind; and in spite of the possible prejudice with which the sufferer may have come to Christian Science, he soon learns that this ideal is no mere abstraction, but a fact of such importance to himself that his interest in material things, including his disease, pales before it. Many a one who had turned wearily away from the proffered gayeties of the world, will spend days and nights in the study of the Christian Science text-book, "Science and Health with Key to the Scriptures," drinking in its life-giving message, and even forgetting to think about the discords which had been absorbing nearly all of his time and thought. When he begins to think about himself it is with the newly-awakened sense that this ideal is now his ideal; and that its realization is possible here and now. He begins to see that we must either accept Mrs. Eddy's declaration of "perfect God and perfect man,—as the basis of thought and demonstration" (Science and Health, p. 259), or we must go back to the position of the Epicurean, "Let us eat and drink, for to-morrow we die."

When the searchlight of Truth is turned upon human consciousness, whether in sickness or in health, the distorted outlines of the mortal concept are seen for what they are, and in this way one begins to know all about himself. This view would not be at all consoling were it not for the declaration of Science that God's ideas alone are real; and when the unreality of sin and sickness is scientifically discerned, these dark shadows of material sense begin to fade out in the dawning light of Truth and Love. The knowledge that as a mortal one is unlike the ideal man, only serves as an incentive to "put off the old man with his deeds" (and his sickness), and to heed Paul's admonition, "Be [ye] renewed in the spirit of your mind." His stirring words, "Put ye on the Lord Jesus Christ," only express in another way the central thought of Science, that when we know and accept the Christ, we find in him "all the treasures of wisdom and knowledge," and this knowledge fully satisfies the desire to know all about one's self, for it reveals man's true selfhood,—untouched by sin, disease, or death.

ANNIE M. KNOTT.

MEDICAL BILLS DEFEATED.

Bills number 722 and 997, introduced by petition in the Massachusetts Legislature at the present session, have been adversely reported by the Committee on Public Health, and as the report has been concurred in by the Legislature the bills are now finally disposed of. The Committee held a public hearing, as required by law, and within a few days thereafter submitted its report. The petitioner was emphatic in saying that his attack was directed against the practice of Christian Science, thereby raising the issue squarely, and the action of the Legislature was therefore most gratifying.

LETTERS TO OUR LEADER.

[Telegram.]

Chicago, Ill., March 10, 1907.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

We, the charter members of Seventh Church of Christ, Scientist, of Chicago, as our first act, in deep gratitude to God, express our love for and loyalty to you, our beloved Leader, and to the Cause of Christian Science.

HARRIET R. WHITE, *Committee.*

[Telegram.]

New York, N. Y., March 10, 1907.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Second Church of Christ, Scientist, of New York City, desires to express continued loyalty to you, our dear Leader, to the Cause of Christian Science, to the Directors of The Mother Church, and to further state that it holds itself in readiness to obey any request that you in your reflected wisdom and love may see fit to make.

Faithfully and lovingly yours,
Second Church of Christ, Scientist.
M. E. WINSLOW, *Clerk.*

Joplin, Mo., March 4, 1907.

Dearly Beloved Teacher:—Just a word, in this hour of your supreme persecution, to assure you of our undying love and gratitude. You have fought, are yet fighting, and will continue to fight a good fight, or fight for good; and a glorious reward is yours. God does not leave you nor forsake you. Truth is triumphant, and God is just. I could write pages, but may this be regarded as volumes in the substance of Love.

Most sincerely your student,
S. J. HANNA.

Boston, Mass., March 6, 1907.

Beloved Leader:—I wish to convey to you my deep sense of love and gratitude and to say that I am thankful to be one of your students. I consider it an honor and a great privilege. I know that you are God's chosen one to bring to humanity His messages of Truth and Love, and that Christian Science is the way of salvation from every claim of evil. The world owes you a debt of gratitude it can never repay. When I think of your unbounded faith in God, your marvelous courage, and the years of unselfish, patient, loving work, which you have given for the betterment of mankind, my sense cries out that you deserve from all something better than unjust criticism. No sacrifice has been too great for you to make in your ceaseless efforts and work to help and benefit others. I have not forgotten my stay of about three months in your home at Pleasant View, a few years ago; your sweet, loving thought, and the many kind things you did for me and all those in your household. Your thought and desire is always to help and bless others, even those who think they are your enemies. I know this is true, and in the words of our Master, I can only say of those who are trying to persecute you,—their best friend and the friend of humanity,—"Father, forgive them; for they know not what they do." You, dear Teacher, will surely be sustained and protected by divine Love in doing just what God wishes you to do. I desire to say at this time that if there is anything I can do for you, let me know and I will try my best to do it. I send you much love and thank you for all you have done for me.

Lovingly and gratefully yours,
THOMAS W. HATTEN.

Digitized by Google

New York, N. Y., March 6, 1907.

My much-loved Teacher and Leader:—These must be the latter days so clearly revealed to your prophetic vision, and described on page 223 of Science and Health,—the turning and the overturning which must come to human consciousness before the Christ is seen "whose right it is to reign." As you rise higher in spiritual conception, and more of the dazzling glories of the eternal are revealed to you, error is spurred on to fresh endeavor, and a constantly increasing determination to destroy Truth's highest manifestation. It gives me great joy to know that its darts fall harmless. Like Paul you can say, "Henceforth know we no man after the flesh;" and having ceased to personalize, you have no personality to be injured. The garments of one who looks beyond the veil cannot be soiled by any taint of error. The light of eternity is shining all around you; you are in "the secret place of the most High." How glad you must be that so many eyes have been opened, that so many are waking up from sleep. I thank God from the depths of a consciousness which is learning its lesson of love and humility. I thank Him that even as I write to you I know Him better than I have ever known Him, and this clearer sense of Him enables me to see you more correctly than I have ever seen you. Through your spiritual revelation, through your immortal book, "Science and Health with Key to the Scriptures," the Christ has come again, but alas! he has not found "faith on the earth." Again the cry rings out, "Crucify him," just as it did nineteen centuries ago. Again human consciousness believes, in its blindness, that if it can get rid of the personality it can destroy the Principle. Is it possible to fight against God and expect to win the victory? All the powers of heaven are working for you. The innumerable company of angels, the thoughts of divine Mind, are holding you up in their hands,—"Not a weapon that is formed against thee shall prosper." God is omnipotent—almighty. As your student for almost a quarter of a century, I want you to know how thoroughly I trust and honor you; how faithful and true I believe those are who have helped you for so many years.

Beloved, out of a full heart I have written this. Remember if there is anything I can do for you in this hour of solemn import, call upon me.

Your loving student,
LAURA LATHROP.

Rome, Ga., Feb. 10, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

My Dear Leader and Teacher:—Please accept this expression of gratitude from one of your humble followers, for what Christian Science has done and is doing for the world. The Bible, and Science and Health, with all your other works, have been my only instructors. But what a blessed Teacher! Not person, but Principle, has guided me through many deep waters. I am especially grateful to you to-night for a victory over the thought of hatred, which your teaching has helped me to win. While error was battling hard to shut out good, I picked up "Miscellaneous Writings," and on page 9 I read, "'Love thine enemies,' is identical with, 'Thou hast no enemies.'" I pondered over those beautiful lines (so very *apropos*), and immediately that peace "which passeth all understanding" filled my consciousness, and I knew you were right. I have had so many proofs of God's allness, in mental, moral, and physical demonstrations; and I thank "God, from whom all blessings flow," that one was found good, and pure, and brave enough to lead all those who "have eyes to see" and "ears to hear" out of the wilderness, into "the vestibule in which a material sense of things disappears, and spiritual sense unfolds the great facts of existence" (Science and Health, p. 597).

Lovingly and gratefully yours in Christ,
MRS. CARRIE YOUNG.

Chicago, Ill., March 3, 1907.

Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—The current press despatches would denote another attempt of the common enemy, the one evil, to disturb the harmony and serenity of your life, but remembering well your memorable words, "Our Father is at the helm," we take fresh courage, and beg to assure you of our loving loyalty, and to proffer you any service that we might be able to render you at this time. You should have, and assuredly will have such a wealth of support as will render you immune from the supposed effect of such pretenses; God reigns, and He who has ever been your strength will not forsake you now, but, on the contrary, even this instance of "the wrath of man" shall praise Him whom you have for so long time served so well. During nearly twenty years—eventful years—we have observed sublime trust in His goodness, and now feel sure that you will come out "more than conqueror." In behalf of Mrs. Kinter as well as myself, I remain, ready for instant service anywhere, Faithfully your student,

GEORGE H. KINTER.
ELIZABETH L. KINTER.

Cleveland, O., Jan. 14, 1907.

Beloved Leader:—We, First Church of Christ, Scientist, Cleveland, O., in our regular quarterly meeting held to-day, express to you our deep love and gratitude. We assure you that your life-work has stirred within us a devotion to the Cause of Christian Science, an earnestness of purpose, a consecrated zeal, and a fervent prayer that we may be found worthy followers of Christ and his sacred teachings. We rejoice in the "signs of the times,"—of the earth helping the woman. With tender love and loyalty,

HARRIET L. SLINEY, CLARENCE H. STOCKWELL,
CORA BOWLER MALONE, *Committee.*

SUBSCRIPTION PRICE FOR THE SENTINEL FROM APRIL 1, 1907.

Single copy one year, $2.00; 10 copies or more, to one address, for one year, each copy $1.90; 25 copies or more, to one address, for one year, each copy, $1.80; 50 copies or more, to one address, for one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add $1.00 for postage on a single subscription, and 75 cents each for postage on two or more subscriptions.

Six-months subscriptions received at half the above rates. No subscriptions received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the wrapper. No other notice will be given.

TERMS OF SALE FOR THE SENTINEL FROM APRIL 1, 1907.

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; 25 copies, $1.00; 50 copies, $1.80; 100 copies, $3.00.

In all other countries, seven cents a copy, postpaid to any address; 25 copies, $1.40; 50 copies, $2.60; 100 copies, $4.75.

Subscriptions to the *Sentinel* which were sent us before the notice of the increased price, mentioned editorially in the *Sentinel* of March 2, will be accepted at the old price without regard to the date on which they begin. Therefore it will not be necessary for those of our friends who have sent in their subscriptions recently, and without knowledge of the increased price, to send us additional money, unless they are requested to do so.

AMONG THE CHURCHES.

CHICAGO, ILL.

The edifice of Fifth Church of Christ, Scientist, of Chicago, 4840 Madison Avenue, was dedicated Sunday, Feb. 24. The three services which were held, at 10.45 in the morning, 3.30 in the afternoon, and 7.30 in the evening, were exactly alike, and at these services there was no departure from the usual simple form, except that just before the singing of the second hymn a letter written to Mrs. Eddy by a committee from the Boards of Directors and Trustees was read, and in place of making the usual announcements, the First Reader, Mr. John Stuart Coonley, gave a short church history and dedicatory address. The simplicity and sweetness of the service was remarked by many. At the three services there was a total attendance of more than three thousand persons. This church was organized Jan. 9, 1903, with 273 members, and held its first service in a rented hall Sunday, Jan. 11 of the same year. On July 28, 1904, ground was broken for the edifice just dedicated, the corner-stone was laid Oct. 8, 1904, and the first service was held in the completed building Aug. 20, 1905, at which time the membership was 494 and has since increased to 618. The Sunday School in connection with the church was opened Jan. 11, 1903, with an enrolment of 49 children, which has increased to 229 at the present date.—*Correspondence.*

ROCHDALE, ENGLAND.

There was a remarkable meeting in the lecture room of the Rochdale Public Hall on Saturday afternoon, "to hear testimony of healing and other benefits derived from Christian Science," the system founded by Mrs. Eddy of Concord, N. H., U. S. A. It will probably be news to most of our readers that a Christian Science Society has existed in Rochdale for three years. Services are held at the Public Hall every Sunday, and the members have a Reading Room in Baillie Street. Testimony meetings are held twice monthly. A great deal of interest centered in Saturday's meeting, and the lecture room was densely crowded. It was a representative gathering, in which members of all classes were present, from fashionably dressed ladies to humble working-class folk. The company was, however, far from being confined to Rochdale people. Visitors came in fairly large numbers from Manchester, Liverpool, and other places. The meeting began with the singing of Mrs. Eddy's hymn, "Shepherd, show me how to go;" followed by the reading of passages of Scripture and extracts from the Christian Science text-book, "Science and Health with Key to the Scriptures." The reading was followed by a period of silent prayer, after which the Lord's Prayer was repeated audibly. Then came something like an hour devoted to testimonies.

A gentleman, who was described to our representative as a Manchester doctor, said that though his father was cured by Christian Science of an organic trouble, he (the speaker) was for a long time skeptical. Subsequently his own daughter was dying of tubercular disease in the hip joints and the lungs. She had wasted to a weight of twenty-nine pounds, though eight years of age, and it seemed absolutely hopeless that surgery or medicine could save her. He tried Christian Science treatment—even then without much faith in it—and the result was more than one deserved. The healing went on gradually but continuously, and to-day, six years later, his daughter is a perfectly healthy child. That showed to him that Christian Science had a greater power of healing disease than he, trained in medicine, had ever supposed. It could heal where medicine could not. Another case happened in his own practice, a patient, suffering with no hope of recovery for six or seven years from organic disease of the valves of the heart, being quickly healed. After the first treatment by Christian Science she refused the bath chair in which she had been taken to the train, and her mother had to wheel it home empty—"and so overjoyed was the daughter that her mother, pushing the empty bath chair, could not keep pace with her in the race for home!"

Colonel Hobart of Liverpool told the meeting that he was brought into Christian Science about four years ago through the magnificent recovery of his eldest child when all material remedies had proved absolutely unavailing. Since then his second boy, who had previously had two bad attacks of appendicitis, had been instantly cured of a third attack by Christian Science. "The first attack," said the Colonel, "was taken in hand by a kindly medical man, and the lad was brought round after a time by the application of practically boiling hot fomentations. Eighteen months after that the lad had a second attack. Our old doctor had left the town, and a new one took the case. He applied ice bags! [Laughter.] A cure was in time effected, but in each case the boy passed through a long period of weakness and convalescence. Since we came into Christian Science the lad has had a third attack. This attack was cured by Christian Science without medicine. It was an immediate cure. About eleven o'clock in the morning he was in agonies of pain. Under treatment, in half an hour he was sound asleep; at one o'clock he ate his midday meal; at three o'clock he was playing football."

A lady from another town expressed pleasure in again visiting Rochdale, where she first heard of Christian Science from a friend with whom she was staying about three years ago. She was then suffering from a spinal complaint, and she was told by a doctor that she was likely to be paralyzed from head to foot. Christian Science cured her. A middle-aged man told of the joy and happiness and peace which Christian Science had brought into his life. It had cleared away worry, fear, and disease. He believed in having a heaven here. He congratulated Christian Science on such a meeting. Christian Scientists were to be found everywhere, and it was astonishing how their number was growing. A lady testified to her own cure of an illness, and also to that of her eldest girl, a delicate subject who was under the doctor from birth up to three years ago, when the family embraced Christian Science, and she was now a perfectly healthy, strong girl. A business man, who said he had been healed of chronic dyspepsia while reading Mrs. Eddy's book, praised Christian Science also for the relief it gave him from business cares and worries. "It has cured me," he added, "of a most ungovernable temper."

Lady Victoria Murray declared that she owed everything she was to Mrs. Eddy's book, which had brought so much health and happiness into so many lives. Only the previous day she had a talk with a woman who, at Christmas time, wrote a most unhappy letter, saying that she was suffering from cancer and that the doctor had sent her to London to see a specialist and to be operated on immediately, if the case was not too far gone. She took time and had several days' Christian Science treatment before seeing the specialist. When she did see him he found nothing but a little inflammation, which he said would go in six weeks or two months. Under Christian Science it was gone in a week, and the woman was now strong and healthy. This was what Christian Science was doing all over the world, healing the sick and reforming the sinner. "When I came to Manchester," said Lady Victoria, "everybody thought I would not be able to live in such a damp place. I had wintered abroad for twelve years, always in sunny climes. I suffered from spinal disease and consumption. Now, thanks to Christian Science, I am better, and am able to lead a useful life, trying to help others to understand how they can gain their freedom." Lady Victoria Murray also spoke of the great spiritual mission of the Christian Scientists, which she said was more to them than physical freedom.—*Rochdale* (England) *Observer.*

TESTIMONIES OF HEALING.

In the spring of 1893, while studying for the ministry, Science and Health was placed in my hands, and the truth contained therein at once became to me the pearl of great price. I literally devoured the book, reading it about eighteen hours a day. Its originality was startling; it upset my preconceived opinions of God, man, and creation. Two sentences especially appealed to me: "The foundation of mortal discord is a false sense of man's origin," and, "For right reasoning there should be but one fact before the thought, namely, spiritual existence" (pp. 262, 492). I had found the key-note to the Science of being as taught in this marvelous book, and persevered until a glimpse of the new heavens and new earth came, for the old were passing away.

All my life had been spent in semi-invalidism, and I seemed destined to a continuance of suffering, but in three weeks after beginning to read Science and Health, to my joyful surprise I found myself a well man, sound physically and uplifted spiritually. Life was being lived from a new basis,—the old things of personal sense were passing away, and all things were becoming new. I learned that God,—infinite good,—is the one friend upon whom we can call at all times, an all-powerful, ever-present help in every time of trouble; that His children are really governed in peace and harmony by spiritual law, and as the right understanding of it is gained, the other things soon follow, bringing a peace which the human concept can never know. For the last twelve years my whole time has been devoted to the practice of Christian Science, and I have seen nearly every so-called incurable disease healed by its beneficent influence. God bless our dear Leader! She has set before us an open door which no man can shut, and it is but a question of time when the world will know her better and love her more.

EDWARD EVERETT NORWOOD, Washington, D. C.

There is no doubt that by far the greater number come to Christian Science by the way of physical healing, but there are those to whom this does not particularly appeal. In the hope that it may be of benefit to some such, and in gratitude for help received, I submit my own experience. Three years ago I knew nothing of Christian Science, aside from the knowledge gathered from the daily papers and current literature. When I thought of the subject at all, it was to class Christian Science with various human theories with which I could not be in sympathy, for they seemed to rely upon both good and evil. I had never known of a case of healing, had never read the text-book or heard of the *Journal* or *Sentinel*, but I would sometimes see people going into the Christian Science church. I was tired of trying to find anything satisfactory in religious belief, for it seemed as if God either could not or would not bring into harmony the terrible conditions existing in human society. I had quit using any form of prayer except the Lord's Prayer, and even then omitted the words "lead us not into temptation." How I longed to know just a little of the "why?" and "wherefore?" of it all.

Here is where Christian Science found me. I was thrown in contact with a dear friend of whom I had seen very little for a year or more, a thoroughly educated woman and a thinker. She told me she had taken some treatments in Christian Science for a physical trouble, and had become very much interested in the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. She asked me if I would like to look at the book, and I said I would be glad to do so. The first chapter, "Prayer," appealed to me from the first, and when I came to Mrs. Eddy's spiritual sense of the Lord's Prayer (Science and Health, p. 17), my interest was fully aroused. I knew that in a dim way I was learning what it means to "pray without ceasing." Very soon I bought a book of my own, and with the help of our Lesson-Sermons, as given in the *Quarterly*, I began in earnest the study of Science and Health, in connection with the Bible.

I stood very much in need of physical healing at this time, having suffered for several years from an obstinate form of stomach trouble. So far as I know, I gave no thought to the benefits I might derive physically from the study, but I did believe this Science held the truth of things, and I was so absorbed in getting an understanding of the Principle that I thought very little of myself. After about three or four months' study I realized that the stomach trouble was gone, and with it went other physical troubles, which have never returned. This healing was brought about by the earnest, conscientious seeking for the truth, as contained in the Bible and interpreted by our Leader in our text-book, Science and Health. I have since learned more of the Science of healing and have been able in a small way to help others in need. I have also learned that in living and loving is healing realized, and in reflecting divine Love I have the "signs following."

When we think of the pure, loving, unselfish life Mrs. Eddy must have lived in order to become conscious of this truth and give it to us, words are a poor medium through which to express the gratitude which her followers feel for her. It is best expressed by obediently following her, even as she is following Christ.

HENRIETTA TIPPERY, Omaha, Neb.

My case of healing is somewhat exceptional, and I write of it hoping to benefit some who are hungering and thirsting for Truth, as I was, and to point them to the way by which I was led from darkness into the marvelous light of Christian Science. For many years I was afflicted with divers diseases, among them chronic stomach and throat trouble, etc. After exhausting the resources of allopathy and homeopathy, and being finally advised that a surgical operation was necessary, I was appalled and hopeless. I was also afflicted from birth with what was called constitutional near-sightedness. During a visit to Texas I heard of Christian Science from a lady who had been healed, but I returned home before investigating it. On returning to Memphis I learned there was a small band of Scientists here, and sought them out. Through them I heard of Science and Health, and bought the "little book" that has proven its power to offer the true healing for the nations. I read it faithfully—often all night, when my ailments made me wakeful. Soon error fled before the dawn of Truth; disease after disease disappeared; I laid aside both reading and distance glasses, and could sew and read, even at night. I can now walk any distance necessary for business or visiting, in fact I can say I am "every whit whole," and for thirteen years have had no return of any of the ills that then afflicted me. I have been a Reader in First Church of Christ, Scientist, here, and my eyes had to be in normal condition for this work. This blessed condition is wholly due to Christian Science, and was gained from reading our text-book, unaided by any one, and my own application of the truth therein taught. This may encourage those who are in bondage to fear to read this book and to apply for themselves the truth that makes free.

MRS. M. E. CALDWELL, Memphis, Tenn.

For years I was a hopeless sufferer from a disease of the bone in my left limb, which had been fractured when I was about eight years old. Every few years this limb would cause me so much pain that I would be compelled to have it operated on in order to gain relief. Five operations in all were performed, the last being a little over four years ago. A number of surgeons informed me at different times that I would either be compelled to give up my profession or else my limb must be amputated; it must be one or the other. I lived in constant fear of this trouble at

Digitized by Google

all times, expecting at any moment to be taken down again, and always used extreme care during the interval between these operations, but to no purpose. Often, when I have been in my bed suffering from this trouble, I prayed to God to let me die, so that I would be away from it all. The last operation was very painful; indeed, words cannot express how I suffered. When the wound was being dressed my cries could be heard for one or two blocks, and my parents would go out in the barn adjoining the house and stop up their ears.

This trouble returned in April, 1905, and during the following four days I suffered very much. I telephoned to a physician, and he instructed me to use certain applications; but it was to no purpose. Then my wife suggested that I try Christian Science. I informed her that it was absurd to think for a moment that Christian Science could help me. It might be very well for a person who had nothing the matter with him, but it could not help me.

But, thank God, my wife continued to speak of it, and I at last consented to have a practitioner come to my home. She came the early part of the evening and talked with me for over an hour. Upon getting up to go, she said that I could come to her office the following evening if I decided to have treatment. When the door closed on this good woman, I immediately walked to the kitchen, and my wife wanted to know if I was trying to fool her by not limping, a question which surprised me, but I admitted that I was better. I took the treatment at the time set, and in a few days was entirely well. I should say that the practitioner left a copy of "Science and Health with Key to the Scriptures" for us to read, also a *Christian Science Journal*. We purchased a copy of Science and Health later, and commenced to study this wonderful book, and the Bible is grand and helpful to us now. We became members of the local Christian Science church, and we feel so grateful to our beloved Leader, Mrs. Eddy, for the great and good work that she is doing in teaching us how good God is, and that He did not make evil. It is a pleasure to me to go to our testimony meetings on Wednesday, they are so helpful and benefit us so much.

By reading Science and Health I have been cured of heart disease, after having suffered from it all my life. My wife was informed by a physician who had examined me that I might drop off at any time. Stomach trouble in the worst form also vanished as a mist. I had carried medicine with me all the time, trying to prevent attacks of this sickness, but it always failed, and I never expected to get any better. All material remedies have gone out of our home now, and we are in better health than we have ever been in the past. My oldest boy (past six) we never expected to raise, but thanks be to Christian Science he is a well boy to-day. For all these blessings I am very grateful to God. Christian Science has not only made me much better physically, but it has uplifted me in a spiritual way. Everything looks so beautiful to us now, that it seems almost like heaven. God bless our dear Leader.

LOUIS F. MCLAREN, Eureka, Cal.

Nineteen years ago I was a chronic invalid. The physicians said my case was an unusual one; they did not seem to understand it at all. It was laid before the Medical Board at Kansas City, and only one physician knew of a similar case. Every function and organ of the body seemed to be involved, and though all known remedies had been tried, all had failed. I then refused to be tortured any longer; I gave up my drugs and turned with my whole heart to God. On bended knees I promised Him that if He would only send some one that could heal me, I would devote the rest of my life to His service. A short time after this a lady gave me an article on Christian Science, and it proved to be my "straw." I grasped it at once, and made my arrangements to go to Kansas City to see a practitioner. I told her I had come to be healed, and I thought God had sent me to her. She asked no questions, and I told her nothing about myself, as I was so tired of talking about sickness. After three days' treatment I bought a copy of Science and Health and began to read and ponder with wonder over its strange language. Oh, how I wished I could prove it all to be true, that I could get something that would give me peace and rest.

At the end of three weeks' treatment I was indeed a "new creature;" "old things" had passed away. I believed this to be the truth, and I wanted to *know* it. I went home to tell the good news to others; to try to prove that I did have something which the world could not give or take away. As this wonderful Word began to light up the dark places in my thought my delight knew no bounds; I had prayed so many times that the Christ would not come to me "as a thief in the night," for I felt that this would be the greatest calamity that could happen to me,—not to be able to recognize our Redeemer when He came. I have been able to prove to family and friends that Christian Science does heal the sick and reform the sinner. I was the first person in the city of Liberty, Clay County, Mo., to take treatment in Christian Science, and it attracted a good deal of attention. Our family physician thought it impossible for me to be really cured, and said I would soon collapse, and could never rise again, but I soon learned that the belief in human bondage must be cast out. Our dear Leader has shown us how to do this, and that each one must learn to do his own work, for God works with us, and the sooner we begin our work the better.

MRS. KATE PETTY, Little Rock, Ark.

It is a great pleasure to me to be able to testify to the blessed fact that Christian Science has healed me. I was the victim of several diseases, and I had scarcely ever been free from distress, caused by heart and other troubles; but, thanks to Christian Science, I feel that I have been born anew, as it were. I had suffered so much that I had concluded this was my cross to bear, that I never would be well; nor could I die, though sometimes I felt like destroying myself, because I was such a burden and so unhappy. I know now that it never was my real self, for man is always "hid with Christ in God." I am grateful that I accepted Christian Science when it was first presented to me. My healing was almost instantaneous, for I never had another attack of my trouble, though I had been subject to these attacks about once a week, and the doctor had told me they would prove fatal unless I submitted to a serious operation at once; but having passed through one, I had no desire to repeat the experiment. I have much to overcome, but know that I have found the way to grow better, and a good Friend to guide my every step. How close God is to us, yet how little some of us realize it, how little we know the Christ-love that yearns to bless all.

Words are inadequate to express my gratitude to Mrs. Eddy, but I am trying to show it by striving daily to walk close to God and follow our Leader's teachings. She is certainly leading us to the "light of life."

GRACE VAN PETTEN, Pond Creek, Okla.

I began the study of Christian Science for the sake of my young children. I wanted to keep them well and to keep them good, and my fears were many. The first marked demonstration was the healing of a badly sprained ankle in one night. My husband then said that Christian Science was the strongest medicine he had ever known. On several occasions—once with an eruptive fever, once with blood-poison, and once with an abnormal condition of the palate—the healing was delayed and we were tried, but a sudden return to health came at last. As a rule, one treat-

Digitized by Google

ment has restored harmony, and many little ailments, including two cases of severe cough, have melted away before being recognized by more than one; but the protection afforded by Christian Science is what we are all most thankful for. Sickness, accidents, and other troubles have been forestalled by a conscious trust and by the prayer of Christian Science, when in seeming exposure or danger. Before coming into Christian Science I was not very strong and was sometimes sick; now I am strong and well, and although in the sixteen years two children have come to me, I have spent but one day in bed and have suffered very little pain. For such peace, health, and happiness, good works alone can express my gratitude to God and to all those who reflect Love. I am indeed thankful to live in an age when Truth is revealed through our dear Leader, Mrs. Eddy, whom we love, even though many of us have never seen her.—ALICE BARTON JONES, Denver, Col.

It is now nearly five years since I first heard of Christian Science, and my heart overflows with love and thankfulness for what it has done for me. I was for nearly fifteen years a great sufferer from a complication of diseases, supposed to result from a severe fall. I had tried a number of physicians and remedies, but I was not healed by any of them. I could walk only a very little at a time, and then I would suffer greatly; and I could not do any hard work. Some of the time I was not able to leave my bed for three to four months together, but through Christian Science I am now able to walk anywhere, and can work every day; for which I am very thankful, as I had given up all hope of ever being able to do so again. I thank God, and also Mrs. Eddy, the Founder of Christian Science, for this great blessing. As the years have passed many demonstrations have been made and Christian Science has been the means of bringing help to many of my friends.

The physical healing is only a small part of the good that comes as a result of the constant study of the Bible and Science and Health, and the effort to live the true life. The teaching given us in our text-book has lifted me into a better understanding of Life. I have no anxious or fearful thoughts regarding the future, knowing that God is the only power; and I take great pleasure in telling what Truth has done for me. The blessings I have received are many, and I would say to all, Do not falter nor turn back, no matter how hard or long seems the way. I hope that this expression of gratitude from an overflowing heart may be of help to some one.—STELLA CARLISLE, Waupun, Wis.

It is a little over three years since Christian Science made its effective appeal to me, through my reading in the *Sentinel* of the rapid recovery of a very dear friend, from a fall. Since that time I have not used medicine of any kind, and have enjoyed the best health of my life. Many physical ills, among them rheumatic and bowel trouble, have been quickly proven unreal and have vanished into their native nothingness through the power of Truth. The spiritual uplifting gained through this healing truth has indeed been a revelation to me. Several years prior to taking up the study of Christian Science, I had given up reading the Bible, declaring it to be contradictory, illogical, and untrue, for so it seemed from my intensely material view-point. This mental attitude landed me in the pit of agnosticism, where I remained until that wondrous book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, came to me with its uplifting message, clearing my vision and enabling me to enjoy the study of the Bible in this new and true light, through which has been destroyed the drinking habit, profanity, hatred, revengeful thoughts, —in fact, a long list of encumbrances emanating from mortal mind. To the thought unacquainted with the Science of being there is always something appalling in an earthquake, and in this country, where these disturbances are of very frequent occurrence, it is not unusual to see people rushing into the street from their homes and offices, in terror at the rocking of the buildings. Here again, as in all other incidents of human life, Christian Science is a sovereign remedy, allaying fear and teaching us that God is All in all.

Any attempt on my part to measure the benefits I have received from the study of this great truth only makes me realize more and more that I really began to live only three years ago; and for the many blessings which I have received, I feel impelled to exclaim, in unison with an ever-increasing multitude of beneficiaries, All love, honor, and gratitude to our noble-hearted Leader, Mrs. Eddy.

H. H. BEERS, Yokohama, Japan.

Through the healing of my mother I became interested in Christian Science, and while reading Science and Health I was healed of several ailments, one being a trouble for which the doctors had said the only remedy was an operation. Until this time I did not know that any one could be healed without treatment. My mother, who had been given up by doctors, was perfectly healed in a few months, for which I am very thankful to God, and also to our dear Leader, Mrs. Eddy. The understanding of Christian Science has been of great benefit to me; it has given me a better knowledge of the Bible, and shows me how the truth makes us free.—CASSIE COLE, Toronto, Canada.

I wish to express my heartfelt gratitude for what Christian Science has done for me. It has saved me from a drunkard's grave; it has cured me of the tobacco habit, which seemed to have a very strong hold upon me; it has cured me of using profane language, in which I indulged so much at times that my wife made the remark that I would soon have to be put in an asylum. I came into Christian Science through my wife, who had been doctoring for several years and with no success. She was advised to try Christian Science, and went to see a practitioner. As she did not understand English, I went with her to save her from possible fraud; but instead of finding evil, the good seed was sown in me. My wife did not take an active interest in Christian Science, but she has been relieved of most of her trouble by my reading to her at home, and the truth has done exactly what that kind lady told me it would do. My own healing has been seemingly slow, but I was almost blind to the truth. I thank God that the truth could be revealed to us through our beloved Leader, Mrs. Eddy. I do not know how to express my gratitude for the little book, "Science and Health with Key to the Scriptures," also for "Miscellaneous Writings," and the rest of our Leader's works. Almost all that I know I have learned since I came into Christian Science. I wish to say further that the *Sentinel*, *Journal*, and the *Quarterly* Bible Lessons are food to me. I give this testimony to acknowledge the truth of Christian Science.

CHARLES W. CHESLEY, Chicago, Ill.

I desire to give a testimony which I hope will encourage beginners in Christian Science. From early childhood I was very delicate, having all kinds of trouble, which kept me out of school a great part of the time. I was under the care of different doctors, and at this time we were living in the South. After coming West I seemed for a time to be benefited by the change, but in 1902 I had a very bad attack. It was pronounced by the doctor a dangerous condition of the stomach and throat, complicated with heart trouble. April, 1904, found me confined to my bed, and I was given up several times. Some Christian Science literature was then brought to me by a friend, but I would not accept it

Digitized by Google

or even read it, as I did not see how it could cure physical diseases. I went on with the doctor, and continued to suffer a great deal, until at last the medicine seemed to aggravate the troubles, and I also became greatly reduced in flesh. Christian Science literature was again brought to me, and after reading it I became very much interested. "Science and Health with Key to the Scriptures" seemed to bring me new life, and I wrote to a practitioner for absent treatment, as I was still suffering. The following night I awoke at half past eleven, and told my mother that I was hungry. I ate heartily, and then got up and walked about the room. I said to my mother, "I am well, and God has healed me!" Next morning I ate breakfast with the family. Although my healing was almost instantaneous, I had later some trouble for which the doctor said I must have an operation. This, however, yielded to Christian Science treatment in a short time.

I am very thankful for the spiritual uplifting, as well as for the physical healing. Words cannot express my gratitude to God, and to our beloved Leader, Mrs. Eddy, for the many blessings that I have received through Christian Science.—JULIA SNELL, Nampa, Idaho.

My attention was first called to Christian Science by friends. For over ten years I had been a sufferer from a distressing kidney trouble. I tried many noted physicians,—in fact, practically everything that came to my notice, but all these efforts and remedies failed. It was in this condition that Christian Science found me, when I knew there was no help for me in medicine. I was healed of the worst form of kidney trouble, and the greatest of all the blessings which Christian Science has brought to me is that it has led me to my heavenly Father, and has given me implicit trust in His loving care. Words can never express the gratitude which I feel to God, and to our dear Leader.

MRS. MARY E. MATHENY, Laurel, Miss.

With a grateful heart I exclaim with the psalmist, "O give thanks unto the Lord: for he is good: for his mercy endureth for ever;" "Bless the Lord, . . . and forget not all his benefits." Five years ago I was led to behold the love and mercy of God, and since then have striven to avail myself of the cleansing power of Truth as revealed in Christian Science. Delicate from childhood, I was battling constantly with lung and stomach trouble, and later with various ailments peculiar to my sex. I could never say I had good health. As one physician expressed it, I had not a "sound thread" in my system. During one of the attacks I was obliged to drive to town to dispose of our farm and dairy produce, and while delivering some at the house of a Christian Science practitioner my suffering was noticed, and here I heard for the first time of the healing power of Truth and was helped at once. This new-found friend loaned me a copy of Science and Health, which I subsequently bought and would not part with at any price. I came to town in the greatest agony, with a high fever, and returned home the same afternoon completely healed of both acute and chronic diseases. Words are inadequate to express my gratitude to God, and to Mrs. Eddy, our beloved Leader. I realize that with God's help my present health and conduct must prove to others the healing power of Christian Science. Through the earnest daily study of Science and Health, and my German Bible, I am now able to help myself and others. The Lesson-Sermons have been especially helpful to me in gaining a demonstrable understanding of Christian Science, though I have never attended a school where English was taught. I mention this to encourage others who wish to learn English with God's help, for with Him "all things are possible." The *Sentinel* is a welcome guest each week, and a great help.

MRS. MARY B. REIM, De Funiak Springs, Fla.

Early in the autumn of 1903 I began to have a peculiar trouble at the corner of my mouth, which resulted in an abnormal growth. A prominent physician of this place was consulted, and after several examinations he informed me that this growth would continue to increase in size, that the hemorrhagic attacks would become more and more frequent and dangerous, and that the only thing he could do would be to remove the growth by an operation, which would of course leave a scar. When he had assured me that this was his ultimatum I went to a Christian Science practitioner and asked for treatment. This trouble had continued for over a year, growing steadily worse. It was late one afternoon when the practitioner took the case, and I did not look at my face again until the following morning, when on looking into a mirror I was overjoyed to discover that I had been perfectly healed in that one treatment. There was no sign of the trouble left. This is only one of many blessings I have received through Christian Science, and I am filled with gratitude to God that through Mrs. Eddy we are enabled to realize this truth.

MISS GERTRUDE FREEMAN, Asheville, N. C.

I am very grateful for the many blessings which Christian Science has brought into my life. About four weeks before Christmas, 1900, I was suddenly taken with a very severe attack of lung trouble. My mother, not knowing much of Christian Science, called in a doctor, who said it was a very bad case indeed. My mother then asked a Christian Scientist to help me, and this she at once consented to do. When the doctor came on the following Saturday he said that I had improved wonderfully. On the fourth Saturday he was surprised to see me so well, as he did not know that I was under the care of a Christian Scientist. At this time I had to pass a medical examination for my work, and did so satisfactorily. I am very pleased to state that I now know there is but one healer,—divine Mind,—and that this Mind alone governs the universe. I cannot express my very deep gratitude to our dear Leader, Mrs. Eddy, who brought to us this living truth, which lifted me out of the shadow of death into this glorious light of Life.—E. STEDMAN, Kingston-on-Thames, England.

[Written for the *Sentinel*.]

THE CHRIST-DAWN.

LILLIAN MATHER LATHROP.

THE Love-light breaks!
Across the deep of sin's black night
I see the priceless pearl of light
Gleam tenderly with hope's soft ray—
The far-off promise of the day.
I feel the holy hush of morn,—
The child of Spirit, newly born,—
The sacred stillness of the dawn.
The shadows of the night are gone;
My thirsting sense drinks in
The fresh, sweet dew of Life,
And in the waiting silence
Of God's ever-presence,
To my listening ear
Speaks the low voice of Spirit,
"I am here."
The Love-light breaks!
Across the ages of eternity
The Christ-dawn wakes
My sleeping sense to immortality.

FROM OUR EXCHANGES.

[Rev. W. C. Wendte, in *The Universalist Leader.*]

A man is not liberal simply because he holds advanced or radical opinions. Whether he is liberal or not will depend upon the spirit in which he holds them. If that spirit is narrow, unsympathetic with others' thought, scornful, intolerant, and irreverent, such a man is not a liberal. He is a bigot, no matter how freely he has discarded the traditional creeds or how vehemently he denounces the authority of pope, council, church, or priesthood. On the other hand, a man who still clings to these, who accepts the old dogmas and cherishes the traditional forms of piety, if he displays a broad and kindly temper toward those who differ from him in opinion, if he is ready to believe in others' sincerity and is charitable toward their views,—if, in a word, he is "reverent toward others' reverence," that man is a liberal, no matter how orthodox his creed may be. For it is not the holding of this or that set of opinions, however advanced, but the spirit in which they are held, which marks the true liberal. It is a great misfortune for the cause of freedom in religion that this is not more generally recognized by the advocates of a rational faith. The mistaken notion widely prevails among them that a man is liberal simply because he is opposed to orthodox forms of belief. The man who vehemently denounces the inherited traditional creeds and institutions of Christendom, and ridicules and heaps scorn upon those that uphold them, usually justifies his course on the ground that he is a liberal.

[*The Standard.*]

There are many things the matter, and not least is an inadequate conception of the Christian life. Men view it as transactional rather than vital. It is easy to sing, "'Tis done; the great transaction's done." They have made a profession of religion; they have united with the church; their salvation is assured. Salvation is escape from hell, not redemption from the power of sin. They need to learn that no man is saved who has not come to share in the purposes, the longings, the spirit of Jesus Christ. They need to learn that salvation is not the result of a legal verdict rendered by the Almighty, in which the man who holds selfishness and unkindness and unforgiveness and indifference in his heart is declared righteous and given a certificate of admission to heaven. The Lamb of God came to take away the sins of the world, not to give men a chance to go on in sin and escape the consequences.

[Rev. R. J. Campbell, in *The British Congregationalist.*]

You will be able to recognize that your bitterest enemy is after all only a wayward and foolish child, and that he can do you no real harm unless you descend to the level upon which he is assailing you. If you can keep your own heart free from the taint of bitterness, you will be nearer the truth not only about yourself but even about him, and in the end the higher is always stronger than the lower. Fight with the weapons of love and you will soon find out that there is no foe, for in heaven, where the angel of the soul doth always behold the face of the Father, all is harmony. And heaven is not in some distant corner of the universe of God. It is here, it is within you, it is wherever love is, it is wherever the spirit of Christ is to be found.

[*The Outlook.*]

The supreme concern of prophet, apostle, and of the Master himself was to make men understand the spiritual meaning and quality of life, and to so clear their vision and reinforce their wills that they might live as the children of God. For us all the one vital matter is to live every day in the light of immortality, not to frame theories as to our occupations and resources in other stages of that life.

THE CHRISTIAN SCIENCE TEXT-BOOK.

AN EDITION OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES" PRINTED FROM NEW PLATES HAS JUST BEEN ISSUED. THIS EDITION CONTAINS MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The elections for the first Philippine Assembly, which is to convene in September, will be held July 30. The Assembly will consist of eighty-one members, apportioned on the basis of one delegate for each ninety thousand persons, and provision is made to increase this number to a total of one hundred. It will, in a general way, correspond to the American House of Representatives, while the Philippine Commission will correspond to the United States Senate, and the acts of the Assembly must secure the approval of the Commission before they become laws.

In a letter to Secretary Garfield, President Roosevelt has directed modification of the orders, issued under his direction last year, withdrawing certain lands from coal entry. In conformity to the President's directions about twenty-eight million acres of coal land will be immediately opened with other lands to be opened as rapidly as the geological survey can make the proper examinations.

The wireless station at Point Loma, Cal., on a recent Sunday night caught the Navy Yard at Pensacola, Fla. At the moment when Pensacola was taking a message from Washington, D. C., the operator at Point Loma caught Washington and also a wireless message from the battleship Connecticut, then on the Atlantic Ocean, which was communicating with Washington from New York harbor.

The Postmaster General has decided to add a five-cent stamp to the ones and twos already determined upon to constitute the commemoration series for the Jamestown Tercentennial Exposition. The five-cent stamp will bear a likeness of the head of Pocahontas printed in blue. Eight million stamps of this denomination are to be issued.

The report of half the members of the Committee on Public Grounds and Buildings, recommending the removal of the Maine State capital from Augusta to Portland and providing for a referendum vote of the people on the subject, was accepted in the State Senate last week.

Representatives of the Jamestown Exposition management will offer special inducements to the National Association of Amateur Oarsmen to hold their National regatta at Jamestown. Other places in the field are Philadelphia, Boston, and Saratoga.

The Harvard Board of Overseers has concurred with the vote of the Corporation in reference to intercollegiate sports. This means that football and other sports will be continued at Harvard, although under stricter regulations.

Foreign.

Negotiations have been concluded at Rome for the formation of a medieval museum in the castle of St. Angelo, which was originally a tomb erected by Emperor Hadrian for himself and his successors. The museum will include an immense amount of medieval material which is now contained in many different collections and stored by the authorities in buildings that are closed to the public.

The Settsu Spinning Company, operating 103,600 ring spindles, at Osaka, Japan, paid a forty per cent dividend for 1905 and fifty per cent in 1906. The Kanegafuchi Spinning Company paid a twenty per cent dividend. The Kyoto Cotton Flannel Company paid thirty per cent dividend and proposes to increase its capital from $800,000 to $2,500,000.

The "Woman's Enfranchisement Bill," which came up for its second reading in the English House of Commons last week, provides that women shall have the franchise on the same terms on which it is granted to men. The aggressive conduct of the women suffragists has given the question unusual prominence.

A Bavarian wine dealer has been sentenced to two months' imprisonment and to pay a fine of $2,500 for adulterating wine. It was proved that he manufactured fifty-five thousand gallons of "wine" in one year by means of chemicals, not using a single drop of grape juice.

A movement in favor of sending an English crew to America to compete against college or amateur crews in one or more races is again being agitated in England in university circles.

Whatever may be said of the lower classes, it is quite certain, says *The Gentlewoman*, of England, that the taking of strong drink in the upper circles is immensely on the decrease.

Count Itagaki, according to Japanese newspapers, has launched a propaganda for the abolition of titles to nobility in Japan beyond the lifetime of present holders.

Harland & Wolff, the Belfast shipbuilders, have decided to expend $1,250,000 in the establishment of ship engine repairing works at Southampton, England.

The Tokio, Japan, municipality will endeavor to arrange a loan of $25,000,000 for a scheme of harbor improvements.

Industrial and Commercial.

Another big plant is to be erected by the General Electric Company at Erie, Pa., on about seven hundred acres of land east of the city, extending from the Lake Shore Railroad to the lake front. Arrangements for acquiring the site have been completed. The present rate of growth of business of the company requires the provision of additional manufacturing facilities each year, which will employ between four and five thousand additional hands. The present plants will not be affected by the new one. About four hundred acres of the site will be set aside for residences of employes. It is the intention of the company to have comfortable and attractive homes built.

The *Manufacturers' Record* says: "Since the opening of the vast coking-coal fields of Pike and adjoining counties in Kentucky two years ago by the Chesapeake and Ohio extension up the valley of the Big Sandy River, industrial developments on a large scale have followed. . . . Eastern and northern corporations with millions of dollars of backing have secured hundreds of thousands of acres in the heart of the coal fields, and some of the largest mining plants in the South are now being installed in the sections where transportation facilities make industrial developments possible."

The one hundred and fifty-three fire and marine underwriting companies doing business in Connecticut during 1906 aggregated $225,310,949, an increase of $125,304,979 over the previous year. "The Connecticut companies alone paid in round numbers, on account of the San Francisco disaster, $18,000,000, and all of these companies are still in sound financial condition, with no doubt as to their ability to protect their policyholders the country over. The record is unrivaled in the history of insurance," says the Insurance Commissioner.

Notices were posted by the W. J. Rainey Coke Company, Cambria Steel Company, Washington Coal and Coke Company, and the Pennsylvania Coke Company, announcing that on March 1 they would pay the same wages as received by the employes of the H. C. Frick Coke Company, which had previously announced an increase. It is said all the coke companies in the Connellsville region will ultimately adopt the new wage. Upwards of sixty thousand men are affected by the increase.

Papers have been filed at Lansing, Mich., for the organization of a $15,000,000 telephone company. The Michigan Telephone Company, with its elaborate system, now has a practical monopoly of the long-distance business in the State. The independent companies have no working agreements with it, and therefore cannot maintain long-distance service. It is the aim of the new company, it appears, to unite the independents into a sort of co-operative body and to provide for them a material extension of their business.

The Carnegie Steel Company, of the United States Steel Corporation, has already booked in contracts more domestic tonnage in steel rails for delivery in this year than it did during the whole of 1906. The total tonnage taken for last year was 454,851 tons, and already in this year 458,407 tons have been closed in contracts. The above applies to heavy rails of standard gauge for steam railroads.

From acceptances already received by those having charge of the formal opening of Andrew Carnegie's $15,000,000 institute at Pittsburg, Pa., on April 11, 12, and 13, it would seem that the greatest gathering of notables ever brought together under one roof on an educational occasion will be present. Delegates are coming from France, Germany, Great Britain, and Holland.

General.

Workmen at Ancona, Italy, have recently discovered two ancient tombs of extraordinary value and interest while excavating for the foundations of a hospital. These tombs date from the third century B. C. They contained some beautiful silver vases, a pair of gold earrings set with emeralds, and a gold ring set with a carved stone. Orders have been given that search be made for other antiquities.

The fishhook cactus is literally a compass in the desert. No matter how glaring the rays may be that are reflected from the soil in which it grows, it always tilts its head to the southward.

A picture of the Holy Family recently discovered in Belgium is believed to be a painting by Raphael.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

APPRECIATION OF OUR LEADER.

[THE following letter is so expressive of heartfelt love for our Leader and appreciation of her work that we give it first place in our columns.—EDITOR.]

Cambridge, Mass., March 14, 1907.

Mrs. Mary Baker Eddy,
Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—At a business meeting of this church on March 13, the first motion recorded the desire of the members that a letter be sent to you, our beloved Leader, to express our appreciation of your fidelity, courage, steadfastness, and love. We perceive that the best way to correct misrepresentation is to represent what is true, and we are grateful because of "the beauty of holiness" which shines forth so continually in your life. At every testimonial meeting, and noticeably of late, there have been expressions of love from those who have been healed of sin and sickness through your teachings, who have thus gained an understanding of your true character. A great multitude have come to know you through the blessings brought to them in this way, and misrepresentation is powerless to make falsehood seem real to them.

We rejoice that men of honest heart, not yet identified with our Cause, are coming to the defense of that ideal of practical Christianity which you have given to the world. They without having known you have high appreciation of your character, but some of our members who have known you, who have sat under your teaching, who have been in your household, are able more fully to know how consistent with your teaching is your daily life. You have constantly exemplified the teaching of the Master, "who, when he was reviled, reviled not again;" and you are teaching us how to love our enemies,—how to vanquish in our own hearts the resentment that is aroused by injustice, and how to replace it with goodwill and kindness, so that all hatred everywhere shall eventually be annulled by love.

As a church we are growing and prospering. We recognize that the foundation of this prosperity was laid by you, that this church is being built up by obedience to your teachings, and that your love is an inspiration to our members and workers. With grateful love,

First Church of Christ, Scientist, Cambridge, Mass.
EMMA EASTON NEWMAN, H. LLOYD,
WILLIAM P. MCKENZIE, *Committee.*

THE BODY'S BEST FRIEND.

CLARENCE W. CHADWICK.

OUTSIDE of Christian Science we find many people who have awakened to the injurious effects of the drugging system, and who are quite ready to condemn the use of drugs even before becoming practically acquainted with the body's best friend. The discovery of the transcendent power of divine Mind cannot be made until one comes face to face with Christian Science, for there is no other teaching, religious or otherwise, before the world to-day that advocates and practises the healing efficacy of Spirit or Mind.

Christian Science discards all material remedies; not simply because these remedies have been tried and found wanting, but because the Principle of right thinking and its activity in individual consciousness has revealed the unbroken spiritual friendship existing between Mind and its own ideas or embodiment. For nineteen centuries this friendship had practically been lost sight of by suffering humanity, when Christian Science voiced to the world, through its Discoverer, Mrs. Eddy, the momentous fact that all causation is mental. This naturally leads to the conclusion that it is just as erroneous to feed the body on wrong thoughts and beliefs as to dose it with poisonous drugs. When this conviction obtains, one is ready to prove to his entire satisfaction the available supremacy of divine Mind and to decide once for all that the best and only friend of the body is Mind.

The world owes a debt of gratitude to Mrs. Eddy for this much-needed discovery and for her practical presentation and demonstration of its claims. Thousands of earnest Christian people are daily adopting it into their lives, with more satisfactory results than they ever experienced through the use of drugs or any other material remedies. They are learning to give no power to matter for good or for evil, since finding out that all power belongs to Mind, God. This is the reason that Christian Scientists think and speak kindly of the advocates of *materia medica*, knowing that it is only through ignorance of the nature and power of divine Mind that they are led to look into matter for cause and cure, or to persecute those who believe in and practise Christian healing.

Because the Christian Scientist eschews all material means, this should be no excuse for thinking that he has discarded something for nothing, for the Scientist is already in possession of an unseen spiritual agency, a trusted and true friend of the body, and one that can always be relied upon to do what a lifeless, powerless drug cannot do. The new garment of Spirit or Mind is proven tangible and available before he discards the old, regardless of what the materialist may think to the contrary. It is only because he has undeniable proof of the willingness and ability of Mind to heal and control the body, that he can look back upon the experiences of the past and realize that his long and faithful devotion to drugs was but obedience to false law and evidence, and that he was really relying upon an enemy to do for the body what a friend alone could accomplish. Christian Science frees him from that which is unfriendly to the body, not by condemning the advocates of material systems, but by bringing him into contact with

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

the law of kindness, the perfect law of liberty, through which he discovers the operation of Divine power that corrects and nullifies all false thinking, thus dealing primarily with mental causation. Simply believing that drugs are not friends of the body, does not free him from the fetters of so-called material laws; he must know that the body is not under any law of condemnation, and that matter is not a lawmaker, before he can partake of the friendship of divine Mind. Since causation is mental, the only positive cure there is must be mental.

When matter has once been proven to be non-causative there can be no longer any conscientious appeal to drugs for healing. The enlightened human thought is divinely impelled to look up and not down in its journey Mindward. It must constantly say of the true spiritual idea, "He must increase; but I must decrease." He who clings to matter for help practically denies the healing mission of the Christ, and so remains in ignorance of the blessings that divine Mind is ever ready to bestow upon the body. His province is to let Mind exercise its lawful and normal control by renouncing all faith in matter. Right at this point the Christian's faith and understanding are tested. If he is on friendly terms with matter and its so-called laws, he will still cling to the latter, even while praying to God for deliverance and salvation, not knowing that this robs him of the friendship of Mind, which demands whole-hearted obedience. So long as matter is regarded as a friend, he has no possible excuse for denying friendship with sin, disease, or death; but the moment the mythical nature of matter and its claims has been proven through "signs following," he has divine authority and understanding to overcome this unchristian triad of errors.

Christian Science is stoned to-day because it refuses to make friends of sin, sickness, and mortality; because it refuses to give power and jurisdiction to that which the Saviour proved to be devoid of mind or power. He gave no power or intelligence to matter, placed no dependence upon the human will or upon hypnotic suggestion, never used or advised the use of drugs, but reckoned himself to be the conscious exponent of Divine power, the perfect expression or reflection of omnipotent Spirit, the complete manifestation of the wisdom, power, and strength of God. "I and my Father are one" was his mental abode. Had he for one moment lost sight of this all-important spiritual fact he would have been found doing what frail humanity is trying to do to-day, mixing mind and matter, good and evil.

God speed the day when the professed benefactors of mankind will grasp the practical import of Mrs. Eddy's declaration that "mortal mind is the worst foe of the body, while divine Mind is its best friend" (Science and Health, p. 176); when they will cease "from man whose breath is in his nostrils" and will look to divine Mind for all information concerning man's constitution, health, and well-being; when they will lean not upon the finite human understanding, but will seek the understanding that comes from above; when they will cultivate the friendship of that which is unseen to the outward senses, and turn away from that which is material, transient, and unreal.

As time passes Christian Science is becoming more generally recognized, by those who are thinking their way out of so-called physical conditions, as the most efficacious healing agent known to the world. All the wisdom of the ages cannot endow matter with something which precludes the existence of matter. And because divine Mind is unquestionably proven by Christian Science to be the best and only true friend of the body, it is incumbent upon all who profess to be ministering to bodily needs to investigate the practical claims of Christian Science with true sincerity and honesty of purpose, before condemning it or attempting to legislate against it because it makes certain radical but necessary departures from established theories and customs. Every step forward in the history of the world has embodied less of matter and more of Mind.

OUR CHURCH SERVICES.

ERNEST C. MOSES.

DURING years of travel and investigation of various ethical movements at home and abroad, I attended many services designed to afford opportunities for the public worship of God or to proclaim the nature and rationale of various organizations aiming at the betterment of human existence; and the atmosphere of the assemblages usually made the distinguishing impression. Meetings which were characterized by relatively satisfactory degrees of harmony left a mental impression which endured and gave impulse to further inquiry,—intellectual manna gathered from human premises in a wilderness of ignorance, doubt, and flickering hope. But circumstances and constant seeking indicated a deep necessity for something adequate to meet the needs of a sense of cause and effect which suffered and chastised every pleasurable indulgence. Twenty-five years of alternating hope and smothered despair, impelling a continual search for health and harmony, had not brought permanent or even temporary relief. Neither the religious services attended nor the literature perused had appealed enduringly to reason or submitted encouraging evidences of substantial character. Hills and valleys were explored, seas traversed; Syria was visited because of the remedial promises of its Pharpar and Abana; oriental dreams and legendary lore were lightly invoked with no results but latter states worse than the first. *Materia medica* could only predict a hopeless ultimate, and as not one ray of cheer came from the material side, the wellsprings of consolation indeed seemed barren of refreshing waters. Salvation, even from fleshly ills, was an intangible dream of uncertain futurity.

In the midst of the apogee of these dreamland experiences came a loving message of possible healing in Christian Science, through a dear friend and neighbor, but not until four years later was the first step taken, of inquiry into the nature of this message. This step was my attendance at the Sunday morning service of The Mother Church in Boston. No words of tongue or pen can fittingly describe the penetrating sweetness of that service, and its refreshing influence upon a greatly impoverished thought. The service was incomparably soothing, dignified, and beautiful, leaving an enduring impression of harmony which had never been experienced before. Upon the arching wall of the auditorium appeared the acceptable message accentuated in these latter days as the most profound fact ever revealed to human-kind,—"God is Love." This declaration of the divine character settled into my consciousness, because the eye had not only seen the golden letters, but at the close of the service heart and mind had experienced the truth of the words through the affirmations of some of those present who rejoiced in a sure understanding of their import. The reflection of this universal truth penetrated a mental armament riveted and bound with fear, self-will, pride, and ambition, and the slumbering selfhood was awakened to drink in the genuine gladness which characterized the mental atmosphere of that service of good-will and peace. I had often heard God described as loving, but had never before been touched with a gladdened sense of the substance faintly symbolized by the word Love. No glory of golden sunrise or silver-tinted sunset on land or sea; no irradiance of arching rainbow; no royal hue of October's golden and scarlet vesture; no pomp of ecclesiastical assemblage or jubilee of music can compare with the memory of that dawn of Truth's eternal day,—the first gleam of Love's sunlight thus revealed to a spiritual vision all but obscured by heavy slumber.

Strange to say, that which had touched and vibrated the hidden chord within the better nature was not then understood, but three years later the reading of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," quickly healed the suffering physical sense and gave the "oil

Digitized by Google

of joy for mourning, the garment of praise for the spirit of heaviness." It became apparent in due season that the first true illumination had been received in The Mother Church three years before, when thought was touched and awakened to higher issues through the ministrations of witnesses divinely appointed to attend the meeting for the purpose of giving,—not alone for the purpose of getting. The command, "Freely ye have received, freely give," was lovingly obeyed in the service mentioned, and my heart was quickened to gratitude for this priceless experience. The impressions then implanted remained in consciousness for several years, until the " 'seven thunders' of evil" (Science and Health, p. 559) had tortured material sense to the very limit of human endurance and the darkness of a hopeless night gave way to the rising sun of righteousness with healing in its wings. When the imperishable idea of Truth falls upon the mortal sense, upon self-will, stubborn self-righteousness, ignorance, and sloth, it will grind the false sense to powder,—to nothingness.

Untold numbers have been drawn in a similar way to attend the services of The Mother Church and of its branch churches, and thus have first seen with clarified vision, heard with a quickened ear, and felt with a new correspondence of head and heart, the good news of the risen Christ, forever sought and forever welcome to honest seekers after Truth. The memory of such experiences should always quicken our sense of gratitude, which may be expressed in part by attending all our services and meetings, with the purpose of giving, of reflecting to all who come to them that realization of Love which is given to us in proportion as we reflect it to others. With this privilege always available to those who are situated so that they can respond, we should most carefully guard against all suggestions to remain away, or to use the meetings as occasions in which to discuss or promote secular affairs, or to admit any thought of discord to disturb the harmony of the various services. If we are conscious of inharmonious conditions, we should have recourse to a clearer realization of our right and privilege to reflect that omnipotent Love which "restores the lost and heals the spirit-broken" (Christian Science Hymnal). Otherwise we are asleep to the import of Section 5 of Article XX. of the Mother Church Manual. Mrs. Eddy has always assured her followers that they are all capable of much more than they accomplish. (Science and Health, p. 89.) Her definitions of "Church," as given on p. 583 of the text-book, clearly indicate that the truth reflected during the services should heal the sick and awaken the sinner. While the larger definition of church service is by no means limited to the assembling of ourselves in the edifice, nevertheless, at the present time these services are of vital importance to our Cause.

If in the press of the crowd at our church services we feel the touch of error, we should face and destroy it through the realization of Truth's all-power. This may be accomplished in part by following more closely the reading of the Lesson-Sermon and other declarations of the Word, realizing their force and application to all who come to hear and to learn. This is what makes our services the place where sin-tossed mariners who are seeking, find the true light which will guide them to the haven of Soul.

Our individual contributions to the work of our Church rest very largely on what we place first,—self or Science, mine or thine, absorption or reflection. Countless seekers are now coming to our services as we once came, and our gratitude to God should prompt us to carry the first fruits of our increased understanding of Truth to these gatherings for their benefit, knowing that God is all and does all. The mission of Christian Science is primarily for the regeneration of material sense, as a necessary prelude to the higher realization of the transcendental idea of God which it reveals. It is therefore of the utmost importance to the members of our beloved Church and to all mankind that its services should express an ever-advancing approximation of divine Love, the Father who has given us all and to whom we owe our very best. Our individual and collective necessity is that our public services shall increasingly heal the sick, thus demonstrating the verity of Christian Science and its true worth to humanity. In his letter to the Corinthians, Paul says,—"For all things are for your sakes, that the abundant grace might through the thanksgiving of many redound to the glory of God."

OBEDIENCE.

LIEUT.-COL. W. E. FELL.

In England one of the most frequent charges leveled against Christian Scientists by other Christian believers is that they are "disobedient." Disobedient to some one or something, but to whom or what is not defined. That this arraignment is not true from a Christianly point of view—and there is no other—should be patent to all who have made a study of Christian Science. It is noticeable that error does not formulate definite charges against Christian Science, but contents itself with what it might term damaging generalities. The inefficacy of this mode of attack is amply evidenced by the daily increasing number of adherents to this freedom-bringing truth.

Christian Science refutes by its "fruits" (results) the imputation of disobedience, but would it not be well for those who make this charge to consider to whom or to what they themselves render obedience? Paul said, "Know ye not, that to whom ye yield yourselves servants to obey, his servants ye are to whom ye obey?" To whom or to what are we to yield obedience in order that we may be found as the honest servants of the right master? The Way and Wayshower answers this question for us in these words, "I am not come to destroy [the law], but to fulfil." What law? The Mosaic law, "An eye for an eye, and a tooth for a tooth." This is the antithesis of Divine law as given us by Christ Jesus,—the law of infinite Love, that requires us to love one's neighbors as one's self, to resist not him that is evil, when reviled to revile not again, when smitten on the right cheek to turn the other also, when robbed to resent it not, and to forgive until seventy times seven. Is the Christian Scientist disobedient to this law? And what of this other law to which Christ demands obedience, to "love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind,"—the first commandment, "Thou shalt have no other gods before me"? Let our critics say in all fairness whether Christian Scientists are not striving in season and out of season to keep intact this first and great commandment. Do they not refuse to acknowledge any god, any power other than God, good? Is it not their incessant, prayerful effort to rise into this consciousness of the allness and oneness of Deity to the exclusion of all that cannot be said to belong to omnipresent good? That which is unlike God is given no power, no place, no intelligence. Does not the Christian Scientist know that God is all the power there is, that He fills immensity to the exclusion of all other presence, that He is the one Mind, the one intelligence, the knowledge of good and good only, or as Scripture says, "of purer eyes than to behold evil," and is not this the God in whom "we live, and move, and have our being"?

If the allegiance of Christian Scientists is given to these two great commandments, how do they manifest disobedience? Are not some offended because others think on different lines from those that they have laid down for themselves? Could our brothers agree amongst themselves as to which of the many scores of Christian denominations the Scientists should give their obedience? No, for their doctrines are in large part opposed. Then why express thoughtless and indiscriminate criticism of their brothers in Christian Science? These things should not be. "Live

Digitized by Google

and let live" is a good proverb, or as Abraham said to Lot, "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren." All the Christian Scientist asks of his kind neighbors is to be left alone to work out his own salvation, —to be obedient to the commands of the Master that we preach the gospel, heal the sick, and reform the sinner. The Scientist has found in his religion health, prosperity, happiness, and, greatest good of all, a spiritual uplift that in his wildest dreams he could not previously have conceived to be possible. Can any one of his Christian brothers offer him more than this? Does not much of this harsh criticism, so hurtful to the critic, arise from ignorance of what constitutes the Church of Christ? Is it possible that they think that God is influenced by a man's denominational proclivities? or, on the other hand, is it true that God, speaking through the prophet Micah, having denounced ceremonial worship as useless in His sight, sums up His requirements in these majestic terms, "He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?"

In "Science and Health with Key to the Scriptures" (p. 583), our Leader, Mrs. Eddy, has defined Church for us as follows:—

"The structure of Truth and Love; whatever rests upon and proceeds from divine Principle.

"The Church is that institution, which affords proof of its utility and is found elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas and the demonstration of divine Science, thereby casting out devils, or error, and healing the sick."

To the Church, as thus defined, Christian Scientists are striving to be obedient.

"FORGIVE US OUR DEBTS."

ARTHUR E. JENNINGS.

THE terms of our forgiveness are clearly and definitely set forth in the Lord's Prayer. Before we may ask to be forgiven we are told that we must forgive our debtors. "And forgive us our debts, as we forgive our debtors." This rule is self-evidently proved to be true. It expresses Love. God is Love, and they who reflect Love reflect God. Jesus said, "If thou bring thy gift to the altar, and there rememberest that thy brother hath aught against thee; leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift." These and all other commands of Jesus were given to us because they are capable of demonstration.

It is quite a common thing to hear the remark, "I will never forgive so and so;" or, "I can forgive, but not forget." Neither of these statements expresses Love, and both are in direct disobedience to the Master's commands. Once a patient went to a Christian Scientist to find fault with the treatment. The practitioner asked: "Do you hate anybody?" and the patient replied with an emphatic "No!" Then the practitioner added, "Do you think anybody hates you?" "Yes," the patient responded; "hundreds hate me." The practitioner lovingly explained how this belief might be operating in consciousness, and having the same effect as hatred when entertained toward another; that the Master's words,—"and there rememberest that thy brother hath aught against thee," were not yet understood. We are harmed by believing that some other person can hate us, as well as by hating another. Both show that the omnipresence of Love is not recognized. Evil can only be impersonal. Apprehending this, the patient was relieved and went away rejoicing. In Christian Science we learn to forgive quickly. All condemnatory thought must cease. Then it is not only easier to heal the sick, but also the suffering sinner.

SELECTED ARTICLES.

[Rev. Dr. S. Edward Young in the *Pittsburg* (Pa.) *Dispatch*.]

This is a good hour for Christians in general to manifest a Christlike spirit toward Christian Scientists. We should remember that passing through sore trials is no proof of the divine disapproval. These people have been prospered more proportionately than any other religious denomination of our generation. I have known of a great many husbands and wives and sons and daughters made happier and better by accepting the teachings of Christian Science, and I have found many of them, I could almost say all of them, singularly sweet-tempered in the face of stinging criticism and what nearly amounted to persecution. I hope the rest of us may always prove as patient and as forgiving toward our enemies.

[Editorial in the *Concord* (N. H.) *Daily Patriot*.]

Few things emphasize more pointedly the growing power of Christian Science and the multiplying number of Christian Scientists, than does the effort being put forth by magazine publishers to cater to their wishes. For February and March it is the *Cosmopolitan*. In the former number was an interesting article by Mr. Klein, the celebrated playwright, and for the March number is a communication on Christian Science from the pen of the Earl of Dunmore, who is nominated one of England's influential men and literary lights. The *Cosmopolitan* informs us that in order to supply the demand for the number containing Mr. Klein's article its regular and special editions were entirely exhausted, and it was forced to put out a reprint in booklet form to meet the requirements. Its advance sheets for the March number indicate that the publishers anticipate a still greater demand for that edition than for the February number.

And all of this is interesting, because it points the drift of thought, the awakening of a world to different ideas, a different moral and religious sense, differing conceptions of moral and religious duty. It indicates a breaking away from the old; a restlessness on the part of the many with established conditions; a desire to branch out on new lines; a wish to explore new paths; to blaze new trails through the wilderness of speculation. This is not only true of the religious side of our life, but of the civic side as well. In fact it is true about all lines. Take it in politics: the radical democrat of to-day is the more conservative democrat of to-morrow, and the more conservative democrat of to-morrow becomes the still more conservative democrat of a few days hence, or a few years hence; and he in time—and it does not require much time, either—becomes the aristocrat of the future.

Then what? A fever of restlessness seizes on the mind of the populace. Some intellectual giant comes out of the darkness, some one capable of perceiving that custom can never make right intrinsic wrong. He exposes fallacy; shows unto the many that the special privileges to class deprive them of the most common rights; rolls the stone from off the path of plain duty, and convinces the many that if they would enjoy freedom they must not be afraid to walk uprightly. New thought is awakened, new ambition aroused, and the great wheel of change turns on its axis once more. Then some one relying on himself and the God-given right within him; some one who is not afraid to depart from the beaten track, whose courage has not been driven out of him by custom and subservience; some one true to his highest instincts is born, and strikes out boldly and stands prepared to sacrifice himself for that which he knows to be true. Then the established order of things has to give

Digitized by Google

way; the aristocrat and the conservative democrat have their hold on things broken, and the order is again changed; the wheel turns as before.

In the religious world it has ever been so. The time was ripe for Luther; and Luther came, and the world listened and the world followed. The same was true of Wesley and Knox, and it is true again to-day, and the reasonable expectation is that it will be true through the centuries yet unborn. That is the philosophy behind the demand for the *Cosmopolitan* just now: new trails are being blazed in the religious world; new beacons are being lighted; independent speculation along different lines in religious thought is being premiumized; new realms are being opened, and the world wants to peep in and see.

[William Royle in the *Rochdale* (England) *Observer*.]

May I be allowed to correct your contributor, "Man About Town," on one or two points in his notes upon Christian Science, where he has given a meaning not in accordance with what Christian Science is, or what it claims to do? The basis of the movement is entirely Scriptural, and it is not founded on any one passage of the Scriptures, as he alleges, but as defined in the Christian Science text-book, Science and Health (p. 497), by Mrs. Eddy, its Founder: "We take the inspired Word of the Bible as our sufficient guide to eternal Life."

Christian Scientists differ from the orthodox understanding of the Scriptures, in that they accept the commands of the Master, "Go ye into all the world, and preach the gospel to every creature," "Heal the sick," as binding upon all and for all time, and not merely in the Master's day and generation; and that the healing of sickness is just as incumbent upon his followers as the preaching of the gospel. The Christly garment cannot be divided.

The cures wrought by Jesus and his apostles which the orthodox term miracles are to Christian Scientists the natural demonstrations of Divine power, available now, as in the days of the Master, when rightly understood, for divine Love, the Principle of all things, never changes, and is the same "yesterday, and to-day, and for ever." We have the assurance of Jesus: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

Christian Science, as propounded in "Science and Health with Key to the Scriptures" by Mrs. Eddy, has nothing in common with "faith-healing," as practised by other denominations, as it is the only system with a scientific basis; and the proof that the teaching is the truth which makes free is in the signs following them that believe, as promised by the Master. Although Christian Scientists at present are but touching the hem of Christ's robe in their demonstrations, they are proving daily in Rochdale, as well as in other places, that Christian Science is the solution of every problem of life; that it is healing not only sickness, but sin, despair, sorrow, and other human woes. And let me correct our critic in this, that the healing is not based on the influence of the human mind or on will-power, but as expressed in Science and Health, Pref. p. xi.: "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation."

The incredulous may continue to scoff because of their misunderstanding, but Christian Science will continue its healing and reforming mission; and grateful old-time sufferers, many of whom were pronounced incurable by their skilled medical advisers and came to Christian Science as a last resort, many of them quite without hope, will not cease to testify joyfully of their release from physical bondage, and bear constant witness to the reality of the promise of the Christ, Truth, "And, lo, I am with you alway, even unto the end of the world."

[Albert E. Miller in the *Evening Genius*, Uniontown, Pa.]

Some time ago—or to be exact, in your issue of Jan. 28—appeared a letter signed by a local physician, setting forth his views in support of the then pending medical bill in our Legislature. It would not be very difficult for a Christian Scientist, or in fact any enlightened citizen, to agree with much that our medical friend said in his letter, but the bill in question having since been withdrawn and another substituted in which no attempt is made to interfere with Christian Scientists, the higher class of physicians throughout the State are no doubt glad to see the question settled in this way.

Irrespective of what future sessions of the Legislature may do to safeguard properly Christian Science practice, it must be quite evident to all that the least practical way in which to procure these safeguards is to insist upon Christian Scientists qualifying as practitioners of medicine. A recent attempt to settle the question in this way in one of our Western States brought forth such a flood of protest that the members of the Legislature were glad to drop the bill out of sight.

As an eminent member of the New York bar recently said, in discussing this question: "The Christian Scientist who professes a religion under the Constitution, and who heals only by admonition, counsel, and an adjuration to good conduct, exercises a right which is inherent in him as a citizen and not as a Christian Scientist, and to restrain him is to confuse the liberty of the citizens under the organic law that such an act must be unconstitutional." This seems to be a very practical view of the question, and the problem may be safely left to work out its own solution.

[From the *Berlin* (Wis.) *Journal*.]

Last evening, following the regular Wednesday evening testimony meeting, Berlin Christian Scientists held a short business meeting and voted to start a fund to build a church edifice by setting aside the regular Sunday collection the first week in each month. When the small number identified with this sect in Berlin is known a smile may pass over the face of the reader. However, when the accomplishments of these people elsewhere is remembered, it would seem that there is no cause to smile. This is not said boastfully. Little Oconto had the first Christian Science church ever built. Green Bay, with fifty members, has an $18,000 outfit—a handsome Bedford stone church of Carnegie library style. Elkhorn, smaller than Berlin, with less than a score of members, has recently dedicated a pretty little church building. These people do things differently than others, but they do them. There is no soliciting (sometimes unkindly called begging by persons who grudgingly subscribe to church funds). There are no entertainments or sales to raise money, no supreme effort on dedication day by a professional collector. And yet the money comes, and no Scientist church can be dedicated until it is wholly paid for. No one impoverishes himself or herself contributing, no one in or out of the church is urged to contribute. There is no "have to" about it. That old adage, "God helps those who help themselves," is put this way by the Scientists: "God helps those who let Him." The Scientist holds that the (so-called) mysterious Power Supreme, commonly designated as God, is the unfailing source of supply: that the Principle which is Life, Truth, and Love has no knowledge of poverty and want. "The Lord shall open unto thee his good treasure, . . . and thou shalt lend unto many nations, and thou shalt not borrow." "Yea, the Almighty shall be thy defense, and

Digitized by Google

thou shalt have plenty of silver." This to the materialist may sound absurd; but that is the way Scientists look at it, and it works out with them. They know that when the proper time comes to build a church, they can do so and pay for it.

[From *The Springfield* (Ohio) *News*.]

This is certain: Christian Scientists are growing in numbers at a greater rate than anything else we know of. Christian Science can no longer be ridiculed off the boards. The opposition it has met in pulpit and press and the professions has not stamped it out. It is flourishing as much if not more than any other church. It is getting into its congregations persons whom the world is bound to recognize and whom the world does recognize as intelligent, thoughtful, honest people. These people are no longer ashamed to admit they are Christian Scientists. And, so far as we are able to judge, either Christian Science or something else has made an improvement in their lives. They pay their debts and attend to their own business and are happy—so far as we know. A congregation of Christian Scientists is not an aggregation of long-haired cranks, it measures up with the congregation of any other sect. And if they suffer from the many petty diseases that other people suffer from, they keep the fact to themselves and do not burden their neighbors with a relation of their aches and pains, and that in itself is worth something to society.

The *Chicago Chronicle*, referring to a recent attempt to obtain legislation against Christian Scientists, said: "The movement savors of persecution and of paternalism. If the people of this country are not competent to select their own physicians and cures without any help from the Legislature, it is time to fence the country in and call it a lunatic asylum."

SUBSCRIPTION PRICE FOR THE SENTINEL FROM APRIL 1, 1907.

Single copy one year, $2.00; 10 copies or more, to one address, for one year, each copy $1.90; 25 copies or more, to one address, for one year, each copy, $1.80; 50 copies or more, to one address, for one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add $1.00 for postage on a single subscription, and 75 cents each for postage on two or more subscriptions.

Six-months subscriptions received at half the above rates.

No subscriptions received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the wrapper. No other notice will be given.

TERMS OF SALE FOR THE SENTINEL FROM APRIL 1, 1907.

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba; 25 copies, $1.00; 50 copies, $1.80; 100 copies, $3.00.

In all other countries, seven cents a copy, postpaid to any address: 25 copies, $1.40; 50 copies, $2.60; 100 copies, $4.75.

Subscriptions to the *Sentinel* which were sent us before the notice of the increased price, mentioned editorially in the *Sentinel* of March 2, will be accepted at the old price without regard to the date on which they begin. Therefore it will not be necessary for those of our friends who have sent in their subscriptions recently, and without knowledge of the increased price, to send us additional money, unless they are requested to do so.

THE LECTURES.

GENEVA, N. Y.

In Smith Opera House last evening [Feb. 1] Bicknell Young gave a lecture on Christian Science. Attorney E. A. Griffith presided at the meeting, and in introducing the lecturer spoke in part as follows:—

I am not a Christian Scientist, but I number among my best friends several who are firm believers in Christian Science, and whose lives, so far as anything I have been able to observe, are as pure and exemplary as that of the members of any religious sect. In them I have noticed rules of conduct and a manner of living in some respects superior to those exemplified in other religious sects, and many things that are very commendable. If Christian Science tends to uplift mankind, makes better men and women, truer citizens and better homes, it surely has a place as a religion among the people of all nations. I have seen the exemplification of the teachings of Christian Science through its devotees, my neighbors and friends. I hope to know more about the Principle of Christian Science after hearing the lecturer, and it gives me great pleasure to introduce to you Bicknell Young.—*Geneva Times*.

PACIFIC GROVE, CAL.

The free public lecture at the T. A. Work Hall last evening [Feb. 4], by Hon. Clarence A. Buskirk, was listened to by a large and deeply interested audience. He was introduced by Prof. A. T. Merrill, who said in part,—

In this day and age of many and varied interests men and women are not content to lie dormant. They are not content to let movements spring up about them, of which they are ignorant. In consequence of this a Renaissance has sprung up in our own time, which in its way is as broad and important as that peculiar movement of the sixteenth century to which the name is particularly applied. This new activity may be termed The New Birth of Inquiry. The thirst to know and to be sure of what we know has never been stronger than it is to-day. And the first requisite to arrival at the truth is fair and open mindedness,—what Wordsworth calls a "wise passiveness." It is a casting aside of prejudice, and a prayer for absolute truth.

In this way we should approach all movements founded upon sincerity and a search after what is best for man's intellectual and spiritual welfare. Carlyle tells us that no institution or movement in human history can grow into power or influence that is not based upon absolute sincerity. Let this, then, be the touchstone that we apply to the movement that is to be considered to-night.

That its growth has been phenomenal, no observant or well read individual can deny. That it numbers among its adherents a vast following of the thinking people of society, the earnest and the aspiring, no one can gainsay; that the lives of the professors are happy, cheerful, and helpful, is also as evident. A religion that embraces such followers and produces such results is certainly worthy of attention. It is with this attitude that I take pleasure in presenting to you the speaker of the evening.—*The Review*.

ASHTABULA, O.

The City Hall contained a goodly-sized audience on Monday evening [Feb. 18], when Edward A. Kimball of Chicago lectured under the auspices of the local Christian Science society. Dr. W. W. Totheroh introduced the speaker, saying in part,—

It is gratifying to see here assembled this large audience of intelligent and interested hearers. For many of us our presence does not argue that we are of this way concerning

Digitized by Google

which things new and old are to be spoken, but it does give evidence of the recognition of the fact that the men of the past did not apprehend all the truth, so that nothing remained to be uncovered in these later days, and of a desire to honestly investigate what others hold to be truth.

As to Christian Science, about which we are to hear this evening, it is to be said to its credit that it comes to mankind, saying, "Come now, and let us reason together;" that it appeals to the Bible, and especially to the words and works of Christ, as authority; and points to its fruits—where it has made the vile, noble; the mean, generous; the base, magnanimous; the thief, honest; the irascible, gentle; the faultfinding, considerate; the desponding, hopeful; and the afflicted, whole.

Naturally, as something different from the religions which have long held sway, Christian Science has encountered much, and not a little unreasonable antagonism. But this opposition, so often taking on the forms of simply misrepresentation and ridicule, has herein only been a confession of weakness, and an involuntary acknowledgment of the actual production of good fruit.

While I am not here either as an exponent or a defender of Christian Science, except as I stand for progression in truth and liberty in religion, I cannot but remark that it partakes of the ridiculous when men who have not made an intelligent and careful study of Mrs. Eddy's work, wave it aside as merely nonsense, when thousands upon thousands of educated, thoughtful, conscientious, and reputable people, throughout America and beyond the seas, have discovered therein what affords them satisfaction. It is for such reasons, then, that I take pleasure in introducing to you the honored representative of Christian Science, Edward A. Kimball.—*Ashtabula Record-Herald.*

NEW BEDFORD, MASS.

A lecture on Christian Science was given at the North Congregational Church last evening [Feb. 11] by Rev. Arthur R. Vosburgh. The subject was "The Idealism of Jesus." In introducing Rev. Mr. Vosburgh, George S. Taber, First Reader of the local Christian Science church, spoke in part as follows:—

You have been invited this evening to listen to a lecture on a subject which I presume is occupying the thoughts of more people than any other question before the public at the present time; namely, Christian Science. Why? Because it is the unfolding of the truth of God to humanity in this age in a way the world has not known since the advent of Jesus Christ. Christian Science makes no claim to the creation of truth, for truth always has existed and always will exist; but it is the practical application and realization of the truth of a Principle that enables us to demonstrate that Principle.

The Standard.

PITTSFIELD, MASS.

About eight hundred representative Pittsfield citizens attended the Christian Science lecture by Bicknell Young of Chicago in the Colonial Theatre yesterday afternoon [Feb. 17]. The speaker was introduced by Rev. C. C. Cook of this city, who said,—

In the Acts of the Apostles there is a very striking account of the healing by Peter and John of a certain man who had been lame from his birth. This incident excited so much interest in the minds of the people of Jerusalem that the chief priests and rulers, conferring together, said among themselves, "What shall we do to these men? for that indeed a notable miracle hath been done by them is manifest to all them that dwell in Jerusalem; and we cannot deny it." Everywhere to-day throughout the civilized world, in increased and ever-increasing numbers, are living examples of the healing, saving power of Christian Science; and its opponents are finding themselves in the predicament of the priests and rulers of old, in that they "cannot deny it."

Indeed the time has arrived when denial, ridicule, or misrepresentation will not avail and the living vital issues of this Science must be fairly faced. Under these circumstances it would seem that every intelligent lover of truth should be eager to learn everything possible concerning so important a subject as this, and believing as we do that the discovery and promulgation of Christian Science are God-inspired protests against the gross materialism of this age, and knowing as we do that its teachings are proving the "power of God unto salvation" to all who accept and live them, we have invited to address you a distinguished lecturer who can intelligently and authoritatively elucidate its claims.—*Pittsfield Journal.*

BRADFORD, PA.

A large and appreciative audience greeted the Christian Science lecturer, Edward A. Kimball, last night [Feb. 11] in the Theatre. The speaker was introduced by John T. Melvin, Esq., of the McKean county bar, who said in part,—

I am not a believer in all the teachings of Christian Science, nor have I decided in my own mind that the creed of any denomination contains all the truth regarding the relations existing between man and his creator. Any system of theology that emphasizes the fatherhood of God and the brotherhood of man; that demonstrates that the kingdom of heaven is not some place far away in the clouds, but is wherever we choose to make it, or rather that it is within ourselves; that tends to make this world a better place in which to live, appeals to me, and in my opinion is entitled to a respectful hearing whether we can agree with all its doctrines or not. It does not make so much difference to me what any denomination believes to be the true religion, but rather I would consider what it is doing for the world. Is it upbuilding character; is it making better homes; is it producing good citizens; is it strengthening the weak, and is it raising the fallen? We are all scholars in the school of the universe,—some are in the primary department, some in the high school, and some in college. We are searchers after the truth and the truth can never perish. The form of its expression may decay and pass away, but truth itself will live forever. We have assembled here this evening to receive a lesson in the study of life and truth.—*Bradford Star.*

LECTURES AT OTHER PLACES.

Pensacola, Fla.—Rev. William P. McKenzie, Feb. 7.
Cambridge, Mass.—Edward A. Kimball, Feb. 15.
Spokane, Wash.—Clarence C. Eaton, Feb. 17.
Aberdeen, Wash.—Hon. Clarence A. Buskirk, Feb. 21.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

"THY SON LIVETH."

A NEWS item which we copy from the Hamilton, O., *Republican-News*, answers in part at least the question so frequently asked, Why are so many persons attracted to Christian Science, and why do they become members of the Church? This paper says,—

Hamilton friends were informed this morning that Mayor and Mrs. William F. Thomas have joined First Church of Christ, Scientist, of Hamilton. It has been known for some time that both Mrs. Thomas and the Mayor were interested in Christian Science, but their intention formally to embrace its creed was not definitely confirmed until to-day. Mrs. Thomas said to the *Republican-News* to-day:—

"It is true that Mr. Thomas and I have embraced Christian Science. Our little son had been from his earliest infancy delicate and anemic, so that we feared he could not live to maturity. Friends suggested to us that we try the methods of Christian Science on his behalf, and this led us to an investigation of the subject. To-day our son is a perfectly healthy boy, and we feel that he has been restored to us through Christian Science. It was this that led us to embrace the faith."

And is it not also an answer to the protests that have been made by opponents of Christian Science against the treatment of children by this system? The experience of Mr. and Mrs. Thomas as told in the *Republican-News* is similar to that of thousands of other parents, and it is not surprising that they should have embraced a religious faith which gives proof of its Christianity by doing the works which the Master said should follow them that believe. But the healing of the sick is not the sum-total of achievement of this new-old faith. It is no rare thing to hear men say that they have been redeemed from sinful lives, from intemperance, debauchery, and dishonesty by this same faith. In fact the entire gamut of human misery, pain, and woe has been run by many who could find no relief until Christian Science restored them to their rightful place and dominion.

The Toledo *Press*, commenting editorially on the attacks made upon Mrs. Eddy and the religion she has taught and practised, says,—

That Mrs. Eddy's interpretation of the Scripture has made an impression, even taken a deep hold, upon thinking people is certain. That her following is largely among thinking, educated, and moral people is significant. That no argument yet presented has been able to reason a Christian Scientist out of his belief is also significant.

Up to date Christian Science has not been met by appeal to reason. It was at first hooted and ridiculed. The next move was to show that some persons whom the Scientists treated died. The inference sought to be drawn was that *materia medica* would have cured these patients. But were this test turned on the medical profession, where would it stand? Suppose that the situation were reversed and the claim made that every patient lost by the doctors could have been saved by Christian Science? What then?

Christian Science has outlived ridicule, and misrepresentation, too, for we must admit that many things said against it were not true. Now it has entered on the stage of persecution, under the pretext of protecting the public health. Christian Scientists are the only workers in this broad land who are denied compensation by law. But even this does not stop them. They go along just as zealously as ever.

Opponents of Christian Science should remember that ridicule, calumny, and persecution constitute one of the signs that follow the true faith. And the fact that it flourishes under these adverse conditions is another ominous sign.

The *Press* is not an advocate of the new cult, but it believes that every one should have a square deal. Above all things the *Press* opposes persecution as a means to any end. It is very evident that some other than the means thus far used must be employed to controvert the tenets of Christian Science.

ARCHIBALD MCLELLAN.

"AND BE YE SEPARATE."

SINCE truth and error are opposites, they have no affinity, and hence there can be no companionship between them. The general thought of their collusion or combination in consciousness is therefore illegitimate in a moral order, however paradoxical this statement may seem to render all human experience. The spiritually impelled have always felt the incongruity of that seeming association of good and evil which led the great Persian poet to exclaim, "I myself am Heaven and Hell," and asceticism in its various forms has witnessed to a great deal of honest but unprofitable effort to escape from evil by getting away from the world. It has made the mistake of assuming that it must reckon with externality, with persons and powers, physical conditions and forces, when in fact its goal, separation from the world, is to be reached through the elimination of a false sense, of which the world is but an "objective state" (Science and Health, p. 283). It has failed to perceive that the arena of vital and successful struggle is not without, but within; that we are to escape from the world not by running away from things, or by stifling "divinely implanted impulses," but by the transformation of consciousness.

No one will question the fact that the world needs most those who are most separate from it, and hence our removal from men should be that only which enlarges both our capacity and our opportunity to minister to them. The spiritualization of sense, the separation from the old man and his deeds, which is no less our problem than theirs, must be wrought in us if we would aid in effecting it in them. The writer of the Epistle to the Hebrews compasses both the problem and the means of its solution when he says, "God's message is full of life and power, and is keener than the sharpest two-edged sword. It pierces even to the severance of the soul and spirit . . . it can discern the secret thoughts and purposes of the heart" (Weymouth's translation). Christian Science has enabled its students to see this as never before, that the only world we have to overcome is the world of pride, selfish impulse, superstition, fear, unbelief, and dependence on materiality, which constitutes mortal sense; that we have simply to part company with a false, unworthy self ("soul"), and that the seeming tie is to be sundered by "God's message," the word of truth, spoken, spoken again, and spoken forevermore in the silent corridors of thought.

The spiritual illumination of Christian Science, the coming of the Christ-idea, enables one to perceive the virginal incorruptibility of truth; that it is eternally separated from error in man, even as it is in God, and the abiding recognition of this glorious fact is the vantage-ground on which this separation is brought into demonstration in our present thought and experience. The level of immunity from sin and stumbling is an exalted spiritual plane, and it can be reached only by climbing, but no one can turn his steps thitherward, in joyous hope and expectation, without speedily reaching the region of which Tennyson has sung:—

> I wondered as I paced along:
> The woods were filled so full of song,
> There [was] no room for sense of wrong.

In an hour of great trial, and of great weariness and discouragement as it would seem, Paul symbolized the self of mortal sense in a very startling way when he cried, "Who shall deliver me from the body of this death?" and the possibility of "laying aside" all the malice, guile, hypocrisy, envy, and evil speaking, thus prefigured, is realized as never before, if not for the first time, when there dawns in human consciousness the true estate of man in divine Mind. Separation from a false self is begun the moment we recognize its falsity; it is advanced as truth is poured into mortal mind through "floodtides of Love" (Science and Health, p. 201), and it will be completed when the sinlessness and sovereignty of "man in God's image and likeness" shall have been fully realized.

"He that dwelleth in the secret place of the most High

Digitized by Google

shall abide under the shadow of the Almighty," and shall be separate from all error. The sanctuary of man is his consciousness of God. JOHN B. WILLIS.

TRUTH ALL-SUFFICIENT.

MANY will undoubtedly read with interest the recent statement of a Boston clergyman, that "people generally feel the need of getting more from religion than in the past; and we need to find more in it, in order to meet our present sociological problems." To this he adds, "We believe that the religion of Christ is adapted to sickness as well as to health;" an admission which will be gladly received by all Christian Scientists, since they have for many years been proving that the "religion of Christ," scientifically understood, is the only means by which healing in its true sense can be realized. There is nothing more sure than that divine law, as demonstrated by Christ Jesus, does heal the sick, and until this law is clearly understood and applied intelligently, attempts to do this much-needed work will result in disappointment.

No one can consistently deny that it is our materiality which obscures for us the light of Spirit, God, and thus hinders the universal demonstration of health and holiness; that our belief in material law interferes with our full recognition of spiritual law and its health-giving power. Further, no one can deny that it was the spirituality of Christ Jesus which brought healing to the needy thousands in his day. This being admitted, it would seem that all his sincere followers must be led to see the necessity of emergence from material belief in order that the same spirituality may be unfolded in them, for thus only can his mighty healing work be repeated. That all Christians will sooner or later recognize this necessity there can be no doubt, for an era of great spiritual unfoldment is unquestionably here, and it only remains for them to grasp the laws by which Truth operates in bringing to humanity salvation from sin, disease, and death.

While many have denied that healing by spiritual means is any part of the religion of Christ Jesus, this mistaken belief has been almost entirely swept away by the floods of testimony to the contrary which have come from Christian Scientists, and it is at last being admitted, even by some of the most conservative of religionists, that this healing should have a place in the Christian Church. The foundation for spiritual healing was laid long since in the ministry of Christ Jesus, and we may well remember the words of St. Paul, "Let every man take heed how he buildeth thereupon." The foundation is spiritual, and if any one attempt to build upon it the "wood, hay, stubble" of material theories and beliefs, the apostle tells us that "the day shall declare it," and the fire shall try it. Of the one whose work will not stand this test, Paul says, "He shall suffer loss." To the votaries of material sense the knowledge of evil—of sin and disease—still seems a thing "to be desired to make one wise," but Paul's words may well be deeply pondered, "If any man among you seemeth to be wise in this world, let him become a fool, that he may be wise. For the wisdom of this world is foolishness with God." The knowledge of disease and its asserted laws has not saved mankind from disease and death, because disease and sin have no principle; hence evil is not in the true sense a subject of knowledge, although in the material treatment of disease the contrary belief is the basis of practice, and theories of disease absorb almost the entire attention of the medical student, to the exclusion of spiritual law, which alone can bring healing worthy to be called Christian.

In spite of human opinion the day speeds on in which "the unity of the faith, and of the knowledge of the Son of God" will be realized, and Mrs. Eddy will be justified in her insistence that this unity must be based upon a recognition of the "perfect man" having "the measure of the stature of the fulness of Christ."

ANNIE M. KNOTT.

SUCCESS MAGAZINE.

Success Magazine announces that it has in preparation two articles on Christian Science, the first of which will appear in either the April or May issue. We are informed that they will be truthful and authentic presentations of the subject, and we commend them to our readers. We quote as follows from the editorial announcement:—

An organization which has, practically within a quarter of a century, established some six hundred churches, some of which have cost over a million dollars each; an organization which numbers hundreds of thousands of intelligent adherents, and which has gained a firm footing among the best classes of people in America, in England and several other foreign countries, must be of great interest to every intelligent American, regardless of his own religious faith. No other religious organization within the life of its founder has ever made such a remarkable advance among the English-speaking people of the entire world as has the Christian Science Church. The entire absence of ceremonial or liturgical forms of worship in the Science faith, the simplicity of its teachings, which are based on Truth and Love, have given it a peculiar hold upon multitudes of people who had never before affiliated with any of the existing forms of worship. It is the religion of optimism, of cheerfulness, of hopefulness, of brotherly love. Its essence is in the Golden Rule and the Sermon on the Mount.

NOTICE.

We assume that Christian Scientists who have received postal cards from a man who claims to be "giving instruction to Science students," of methods practised by his "brethren in India," will understand that such instruction is not Christian Science nor in any wise connected with our faith.

LETTERS TO OUR LEADER.

Edinburgh, Scotland, Jan. 14, 1907.

Dear Leader:—At this Communion season we, the members of First Church of Christ Scientist, Edinburgh, join in expressing our ever-increasing love, gratitude, and loyalty to you, our Leader and friend. Having proved yourself a servant of the "one Lord" by the persecutions that you have lovingly withstood during the past few months, as well as by forty years of selfless service for mankind, we rejoice with you in the fulfilment of the promise that "if they have kept my saying, they will keep yours also." Already the Cause of Christian Science is a vital part of the world's history, and your "Harvest" song is being repeated in our hearts to-day.

We are sure you will be glad to know that Christian Science is getting a firm hold in this country. Scotsmen have always been lovers of metaphysics, and the clear, logical deductions of Christian Science satisfy their reason, while the faith in the Bible which has so deeply influenced their individual and national life is now being illumined and placed on a sure basis by the spiritual interpretation given in your books. Copies of our text-book have been accepted by eight of the principal libraries in this city, and by the prison, and the *Sentinel* is supplied every week to ten hotels and to the station waiting-rooms. It means a great deal to have the literature thus widely circulated in a city which used to be so full of prejudice as Edinburgh. We feel that the barriers are breaking down all around, and everywhere are proofs that the harvest time is come.

Yours lovingly in truth.

E. ROSE COCHRANE, C.S.B. T. T. LAIRD, C.S.,
C. LILIAS RAMSAY, C.S.B., *Committee.*

San Francisco, Cal., Jan. 11, 1907.

Mrs. Mary Baker Eddy,
Concord, N. H.

Our Dear Leader:—This church, in annual meeting assembled, wishes to add its grateful testimony to your harvest of Soul. At the Wednesday evening meeting last

Digitized by Google

week a request was made that all present who had reason to be grateful for Christian Science should rise. The large congregation rose in a body, only a few remaining seated. Then followed twenty-five individual testimonies, covering all manner of diseases and afflictions healed and spiritual benefits received. The Christian Science Church is indeed built upon the Rock. Through all the storms that come it stands and rejoices in the living God, His ever-present, healing Christ, and the inspired Messenger who has brought to light the scientific understanding of divine Truth. Through the prism of Christian Science we see the fair colors of God's bow of promise spanning our country from the New England hills to the golden shore of the Pacific; then completing the circle, uniting all nations in the unity of Spirit,—one Mind.

You have, through your writings and teachings, awakened us to a more spiritual view of life and living, thus giving us much freedom from the ills of the flesh, much courage to grapple with the problem of man's redemption. We are not disturbed over the question of your personality and its history, nor do we feel we need to go to Concord to learn what you are, for you have risen sufficiently above mortal personality to present to our view man's individuality and character in God's own image, and its possible present practicability. This has changed our standpoint and reconstructed our living. It is meet that we should acknowledge our debt of gratitude to you and assure you of our loyalty and tender love.

First Church of Christ, Scientist, San Francisco, Cal.
THOMAS H. LORD, *Clerk.*

New Britain, Conn., Feb. 22, 1907.

Beloved Teacher:—The message which you sent me by brother August concerning my recent letter to you, I deeply appreciate, and I return to you this word of heartfelt thanks. Since you saw fit to do so, I am especially thankful to have you share with the world my feeble expression of gratitude. My prayer, dear Leader, is that my life and works, in emulation of what I know to be yours, may evince sufficient gratitude to you to compensate for the lack expressed by the unjust criticism sent out against you and your great Cause, by the worldly wise and the culpably blind of this hour.

All who read, study, and compare with former editions your newly-revised book, Science and Health, must see the spirit of the Christ in your patiently continued life-work. In every change the student of your book will now see more clearly the divine Light,—the spiritual meaning as it is revealed to your pure vision; and this spiritually clarifying work you were doing in your closet, for the world,—not for yourself,—while the world was stoning you! The sick, and those who feel themselves to be sinners, will now more than ever find healing in your book; and they will gain from every change and added word a clearer spiritual sense of the Christ-spirit which you exemplify,—the spirit expressed in Jesus' words from the cross, "Father, forgive them; for they know not what they do."

I thank you for the unfolding blessing coming to me from our newly-revised text-book. Many a new sentence, or even a new word, that I have found, is worth more than the price of the book. God bless you,

Lovingly and gratefully your student,
JOSEPH G. MANN.

Saginaw, Mich., Feb. 1, 1907.

Mrs. Mary Baker G. Eddy.

Our Dearly Loved Leader:—We, the members of First Church of Christ, Scientist, of Saginaw, Mich., send to you our heartfelt greeting and sincere gratitude for the many blessings that have come to us through the study and practice of Christian Science. We have a small but constantly growing church and Sunday School, and we maintain pleasant Reading Rooms, from which have been sold in the last two years over one hundred copies of your marvelous book, "Science and Health with Key to the Scriptures," also much of the other literature written or authorized by you. The help which comes to us through the periodicals and lectures, and the study of our text-book, freeing us from the bondage of material beliefs and increasing our spiritual understanding of Truth, enables us to comprehend in some degree the deep, far-sighted love and wisdom which have inspired your great work,—the establishment of the kingdom of God among men. We desire that we may be ever ready to follow and obey our wise Leader, for all the events of the past, both recent and remote, have shown us that "his everlasting arms" are indeed around you.

With love and allegiance from the Saginaw branch of your Church,

MARY M. MITTS,
KATE A. M. HILL,
Committee.

Portsmouth, N. H., Jan. 21, 1907.

Dearly Beloved Leader:—I am but one of the multitude who have stood on the brink of the grave, with every so-called material support fast crumbling away. Then the "little book" came to me, with healing in its wings, and I found within its sacred pages Life not death, Truth not error, Love not hate; and the heavy garment of fear, alone, fell into the grave, while I arose into "newness of life," and with an earnest prayer to become as a little child in purity, in love, and in an abiding trust in the omnipotence, omnipresence, and omniscience of our Father-Mother God. My heart overflows with love and gratitude as I realize how completely you are rising above the illusions of so-called mortal sense, and how divinely you have turned your thought, and thus the thoughts of your true followers, away from personality to Principle. At this hour my thought turns often to these words in "Miscellaneous Writings" (p. 276): "In the dark hours, wise Christian Scientists stand firmer than ever in their allegiance to God. Wisdom is wedded to their love, and their hearts are not troubled. Falsehood is on the wings of the winds, but Truth will soar above it. Truth is speaking louder, clearer, and more imperatively than ever. Error is walking to and fro in the earth, trying to be heard above Truth, but its voice dies out in the distance."

Truly the prophecies of the Bible and of your writings are being fulfilled. The earth is helping the woman, and the "signs of the times" are that your great and glorious life-work, beloved Leader, will be "perfect and entire, wanting nothing."

With deep and abiding love and gratitude,
GRACE E. ALLEN.

Cleveland, O., March 2, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—If I ever prayed with heartfelt fervor to divine Love, to touch with love-energy the heart of every Christian Scientist, rousing us to loftier purpose, to unity of thought, to consecrated zeal for God and humanity,—I prayed to-day, after reading in the morning paper this fresh attack—the most cruel of all—upon you, my beloved Leader, and upon your assistants, laboring loyally with you. May we learn to love and bless your enemies, as you have loved and blessed them. Only as Christian Scientists rise to a truer consciousness of spiritual law, and unite as one for the annulment of material belief, can its disappearance be accomplished or even expected. With our faces continually towards the light, and our hearts true to the one Mind which is Truth, no darkness can stay, but we shall behold and enjoy the illumination of God's day, wherein justice and righteousness reign.

With reverent love,
HARRIET L. SLINEY.

AMONG THE CHURCHES.

ATLANTA, GA.

During my absence of three weeks in Texas, somewhat brilliant and sensational articles appeared in our papers, regarding a new church, in which I was given undue credit. Our Cause is growing so rapidly over the whole world that it is quite natural our trustees should have a splendid hope in connection with such a prospect, and far be it from me to limit this hope and promise. Has not all the sin and suffering of humanity arisen from the one error of limiting "the Holy One of Israel"? Our church is a democratic body, and it remains for the church as a body to project and carry out, through its committees, any need of the church. All of my love and sympathy are with any progressive and enlarging movement, but it must be in the divine order. The methods of Christian Science are modest, quiet, steady, scientific. "Not by might, nor by power, but by my spirit, saith the Lord of hosts."

Mrs. Eddy has written an immortal book, that will be studied, utilized, and demonstrated so long as there is a sick body to be healed, a sorrowing heart to be comforted, or a diseased mind "to be ministered unto." Lord Dunmore's manly, strong, magnificent tribute to Mrs. Eddy and her writings, in the March number of the *Cosmopolitan*, shows clearly the power and the mission of our text-book.

"Science and Health with Key to the Scriptures," by its spiritual interpretation of the inspired Word, explains to us how to follow Jesus in his demonstration over all materiality,—how to follow him in all the ascending scale of being, until we awake or rise to conscious unity with God, infinite good, our divine Principle. Mrs. Eddy says, "The scientific unity which exists between God and man must be wrought out in life-practice, and God's will must be universally done" (Science and Health, p. 202). We rejoice in the light that flows through her spiritual consciousness, illumining earth and dispelling the shadows of mortality.

MRS. SUE HARPER MIMS in the *Atlanta Georgian*.

MANCHESTER, ENGLAND.

Seven years ago Christian Science was practically unknown in the North of England, while to-day flourishing churches and societies are established in Manchester, Liverpool, Hull, Leeds, Sheffield, Bradford, Rochdale, Blackpool, Southport, and in many other towns. If a book were offered to you promising salvation from suffering in this present state of existence, you might read it with hope and an open mind, and yet with many doubts, but if at the same time you had the proof of its power established for you, through the restoration to health, or release from habitual sin, of yourself or some one dear to you, you would find it hard to stop at the reading of the book; you would feel an inherent desire to study its teachings. Thus it was that Christian Science found its ready converts in Manchester. In January, 1901, Lady Victoria Murray and her co-worker, Miss Coutts Fowlie, came with the Bible and this book, Science and Health by Mrs. Eddy, offering it to those willing to read it, and at the same time establishing its Christlike truth by performing the works of Christ and his omnipresent healing power. Many marvels were performed, as week by week other sufferers would tell their story of escape from bondage; thus spreading the truth of Christian Science, which says to every suffering heart, Christ is ready to save you to-day, and the kingdom of heaven is at hand. Christian Scientists are thus proving that there is no need to wait till we have passed through death to obtain the salvation that comes through the atonement of Christ—no far-off heaven to be gained only in the future, but all at hand, a present possibility, a living reality.

Lady Victoria Murray conducted services for nine months after she arrived in Manchester in a wareroom, situated in the busiest part of the city, where it was easy for the business men and women to drop in. At the end of the year there were many earnest adherents; those who had come out of curiosity had continued to come with ever-deepening feelings of reverence and gratitude for the new mind and body that the teachings of Christian Science inevitably bring. The desire was expressed that there should be a public Reading Room opened, where they might study the literature of this new-old religion, and so for the next eighteen months Lady Victoria Murray and Miss Coutts Fowlie opened their house for services and a Reading Room for the use of the public. Very soon there was not room enough to seat those desiring to attend, and therefore, in 1903, a site comprising 2,503 square yards in Victoria Park was purchased, and on May 30 of that year the corner-stone was laid of the first Christian Science church in Manchester. In 1904 the present part of the church edifice was opened for services, and in the following year a free Reading Room for the use of the public was built. In 1906 the Christian Scientists found themselves obliged to take another step; namely, the enlargement of their church to the fullest capacity of the site, which will more than double the present seating accommodation.

There is no debt on the church, the land having been paid for, as well as the present part of the building, comprising church, Reading Room, and school rooms. Lady Victoria Murray has been a most ardent and active worker in this field. She has been, and is still, Chairman of the Building Committee and Treasurer of the Building Fund. The Christian Scientists in Manchester realize that it is entirely due to the healing of the sick, the reformation of the sinner through her labors, as well as through the labors of her co-workers, who work together for the amelioration of sin and suffering, that the money has been so gratefully and generously donated. For four years Lady Victoria Murray personally conducted all the services, but after the completion of the building and the organization of the church, she retired from this post at her own desire. The present Reader, Mr. B. Tatham Woodhead, is a member of a well-known Quaker family, and was a very active worker in his former society. All the stained glass windows in this church illustrate the miracles of Jesus and his disciples. Christian Science teaches that the works of Jesus are as important to the Christian as his words.—*The Onlooker*, London, England.

[The appended editorial note appeared in the same issue of *The Onlooker*.—EDITOR.]

Lady Victoria Murray is a daughter of the Earl and Countess of Dunmore, and joined the Christian Scientists at the same time as her parents, as a member of the church in Bryanston Street. From London she went to Manchester, and has since remained there, actively engaged in fostering the spread of the work she has at heart, some account of which appears in this week's number of *The Onlooker*.

PERCEPTION.

MARION COOK.

WHEN birds are gone from bush and bough,
God's music is not fled;
Nor when embosomed in the snow,
Are tiny green things dead.
Thro' veils of finite sense we peer,
Nor view the perfect whole,
Till we hear unguessed melodies,
And love revealeth Soul!

TESTIMONIES OF HEALING.

[The following testimony comes to us in the form of an affidavit made by the step-father of the patient, and verified by the oaths of five other persons whom we are told are among the best known citizens of Houston. The fact that other testimonies are not verified in this way does not detract from their value.—EDITOR.]

State of Texas, County of Harris.

Charles Winkler, being duly sworn, states on oath that on or about the year 1902, his step-son, Charles Winkler, aged eight years, was totally blind, and was pronounced so by physicians of Houston, Tex., who had treated him unsuccessfully, and who stated that his case was such as entitled him to admission to the Blind Asylum in Austin, Tex.

His mother was advised to take him to a Christian Science practitioner, Mrs. Lulu H. Bond of Houston, Tex., which she did, stating that they had no money to pay for Christian Science treatment. The case was accepted, the boy given daily treatment, and perfectly healed, and to-day is able to see better than ever before.

CHARLES WINKLER.

Sworn and subscribed to before me, this 9th day of March, 1907. M. G. FAKES,
Notary Public, Harris County, Tex.

We, the undersigned, have read the above statement, and solemnly swear to its truthfulness, having seen the boy when he was blind and since his recovery.

R. G. ASHE. CHAS. A. FLAGLER.
JOS. PEREIRA. MRS. G. C. RUBY.
MRS. EMMA J. BUJAC.

Sworn and subscribed to before me this 9th day of March, 1907. M. G. FAKES,
Notary Public, Harris County, Tex.

About nineteen years ago I was operated on at St. Luke's hospital, Richmond, Va., said operation resulting in a condition which led to several incurable diseases, so pronounced by eminent physicians, and making me a semi-invalid for fourteen years. During that time of great suffering relief through *materia medica* was only temporary. On the 16th of November, 1901, I arose from my bed and locked my door, that I might not be disturbed while reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I began reading about eight o'clock in the morning, and became so absorbed in this spiritual thought that it was noon when I was recalled to myself, but not the old self.—I was well and happy. I may add here that I had never been in a Christian Science church, never met a practitioner, nor spent a penny for literature. It is true I had read Science and Health once before, but had seemingly received no benefit. I thank God we have a Science given us by our Leader that is doing such marvelous healing.

IANTHE YELVERTON SAULS, Norfolk, Va.

I am not a Christian Scientist but I wish to corroborate the above testimony. My wife was in the hospital in the July preceding her healing, but was given no permanent relief, for in October she succumbed to a general breakdown, all the old troubles reappearing, seemingly as bad if not worse than before. I am delighted to say that no symptoms of her diseases have ever returned.

J. S. D. SAULS, Norfolk, Va.

About thirty years ago, when but a child, I had a very severe attack of rheumatic trouble, was in bed for a year, then was hauled around in a little wagon, and finally walked on crutches for about two years. This left me with what the physicians called a disease of the bone, which troubled me more or less all the time, although I was taking medicine almost constantly and had at least five operations at the hands of physicians during a period of twenty years, some of them very severe. The last physician who had my case was one of the best in the city, and did everything in his power for me. My wife, being very anxious about me, had asked another doctor to find out what my physician thought of the case. The report was that he had given me all the remedies of which he knew for the disease, and the next thing would be the knife again, but with little hope of an operation proving successful. As soon as my wife learned this, she went in her trouble to her mother, who at that time was learning of Christian Science, but knowing of my great faith in *materia medica* she had said but little to me on the subject. Her mother said she would have a talk with a Christian Scientist about me, and consulted with a practitioner that afternoon, asking her if she would take my case without my knowledge. The lady replied, "He must seek this truth for himself. Ask him to call and talk with me." She gave her some Christian Science tracts for me to read, and these my mother-in-law gave to my wife and told her what the practitioner had said. My wife hardly knew how to broach the subject to me, fearing that I would ridicule Christian Science, but that evening she asked if I would read some tracts on the subject of Christian Science, and finally asked me to go and see a practitioner. I promised that I would, and to please my wife I kept my word.

I appeared at the office of the practitioner, discouraged and dejected, little dreaming of what was really in store for me. At first I was very much afraid some friend would see me while talking with the practitioner, but the truth voiced soon removed my prejudice, changed fear into hope, and gave me my first glimpse of the truth which "healeth all thy diseases." "Science and Health with Key to the Scriptures" by Mrs. Eddy was placed in my hand, and I was asked to read it carefully, prayerfully, and without prejudice. After two weeks' treatment, without the dreaded operation, without any material medicine, a running sore on my side was healed up entirely. I received in all about four weeks' treatment, part present and part absent; and went ahead with my work, not losing a single day. We had a great deal of antagonism to meet, as we were living in the same house with a nurse and a doctor; also from my own people. My mother told my wife that if anything happened to me, she would never forgive her; but I am glad to say that nothing happened but good, and we know that nothing else can happen, for we trust in God, who is our Life, the source of our health, and our strength all the way. Many obstacles have crossed our path, but Christian Science shows us how to overcome every one of them. At first we kept our Science and Health and other Christian Science literature out of sight, as we did not want any one to know we were studying it, but that did not last long, for soon we were glad to tell what Christian Science had done and was still doing for us, and will ever continue to do if we practise it aright. This is our first testimony for publication. It will be nine years ago next October since I took up Christian Science and was healed, and I have had no return of the old trouble.

When I began treatment I was a constant user of tobacco, both chewing and smoking,—had used it ever since I was ten years old. I had tried on several occasions to give it up, but failed in each attempt and started in harder than ever. The practitioner referred me to Science and Health (p. 404), and told me that one could not use tobacco and read "Science and Health with Key to the Scriptures," at the same time, without losing all desire for tobacco. I made up my mind this should be my own demonstration through the reading of the book. How well I remember

Digitized by Google

trying to read and smoke at the same time, but it was not long before I would forget all about the pipe in reading that precious book, and it was not a great while before all sense of pleasure in using tobacco left me entirely. One evening, about six years ago, I listened to a lecture on Christian Science. The lecture was just grand, and how I did enjoy it, but from that day to this I have never had the least desire for the weed, and this demonstration seemed to me almost greater than my former healing.

Words fail me when I try to express my gratitude to God, and to our dear Leader, Mrs. Eddy, for this blessed truth. I can say that I owe everything—my health, happiness, all—to Christian Science. I could fill page after page, telling of the many proofs we have had of the efficacy of this healing truth which is with us to-day. I feel so grateful that my wife and eight-year-old boy are with me in this truth, and we are each striving to have that Mind in us "which was also in Christ Jesus."

HARVEY L. DENNY, Des Moines, Ia.

It is with deep thankfulness, and also with the thought of helping some one who may be striving for health and happiness, that I write these lines. Nearly fifteen years ago I was healed in Christian Science of a very painful disease of the stomach and liver, accompanied by terrible headache. I had been treated for years with material remedies, under the care of some of the best doctors, but the complaint was gaining all these years, until I became interested in Christian Science through the healing of my sister of a serious stomach trouble which the doctors had failed to relieve. She came to visit me, and brought with her "Science and Health with Key to the Scriptures" by Mrs. Eddy, to give to me. I had read it but a few days when it came to me very plainly that it is the book spoken of in St. John's Revelation. I had always been a student of the Bible, and I could see at once how this book illumined its teachings, making it more blessed to me. Sayings that had seemed to me obscure, now became clear, and I wondered that I had not been able to see them before, especially the teachings of our Saviour. Science and Health is indeed a "Key to the Scriptures" to all who study the Bible with our textbook. I hold the two books together in my affections. I was healed in two treatments; all pain being destroyed. My baby, then about six weeks old, was healed of a bowel trouble. She is now nearly fifteen, and has never taken any medicine since she was healed in Christian Science. We have had many demonstrations, which prove the power of God, through Christian Science, to heal and to help. While I am thankful for the physical healing, it is indeed the smallest part, for the mental awakening and the spiritual uplifting are much more. I am thankful to God, and my love and gratitude go out to our revered Leader for this understanding of the healing power of Truth and Love, made known to us by her.

MRS. ADA UPDEGRAFF, Cheyenne Wells, Col.

In reading the testimonies in the *Sentinel* and *Journal* I am reminded of my own experience in coming to Christian Science. In 1903 I noticed that my hearing was affected, and later on it became so bad that I could not hear ordinary conversation. I went to one of the leading eye and ear specialists, who told me that I could not very well regain the hearing I had lost, but could protect what was left. This was not satisfactory to me, and in the mean time my case got worse, so that I could hardly hear anything at times. I had learned of Christian Science through my sister, who had received some benefit through studying it. I concluded to try it and took treatment; but owing to the fact that I was not willing to do as the practitioner directed me, I could not see at the end of three months that I was improved. I discontinued the treatments and went back to *materia medica*, until I was fully convinced that I could not be helped by man-made remedies. In 1905 I sent for the text-book, Science and Health, and this was the best investment I ever made in my life. I read it carefully, and I found that it was exactly what I was looking for. I studied it for about three months, then went to a Christian Scientist; and this time I was fully convinced that I would be healed. I began treatment in September, 1905, and was almost entirely healed in one week, although I continued treatment for several months. After I was well my friends would ask, "Do you hear all right again?" My reply was that I had found the truth, and the truth had made me free; that I had also found the pearl of great price, and that it was rising daily in value with me.

My mother was also healed by this truth. She had been an invalid since 1884. We had paid out hundreds of dollars for medical treatment, but she got well in a short time by Christian Science treatment. My brother-in-law was saved from the grave. He had seven different doctors and preparation had already been made for his death, but at this point Christian Science healed him. To-day he is in good health, his healing having occurred in the spring of 1905. If any one has reason to be grateful for the truth, I have, for what I received can never be repaid in money. My case was entirely hopeless from the material standpoint. I am thankful for the truth that Mrs. Eddy has revealed to the world, the understanding of what life really is. If any one wants further explanation about my case I will gladly give it. I not only believe, but I know that deafness can be destroyed by Truth,—that truth which heals the sick and reclaims the sinner as well now as in Jesus' time, and by the same method, by understanding that God's power is all.—JOHN T. NEU, Bellevue, Ia.

Christian Science has done so much for me during the three and a half years in which I have tried to follow its teachings, that I wish to express my gratitude to God, and to Mrs. Eddy for this wonderful truth. When Christian Science came to me I was laboring under a heavy burden,—one which only those can know who have had a member of the family stricken with a fatal illness, and who have very little means to employ help. For more than two years my mother, who was in a condition that rendered her perfectly helpless, had required my constant care. Through the study of Science and Health the load of care was lifted. My concept of God was changed, courage took the place of depression, and with this new thought came a knowledge that He is a very present help in time of trouble. As our Leader says, "With the understanding of Scripture-meanings, had come physical rejuvenation. The uplifting of spirit was the upbuilding of the body" (Miscellaneous Writings, p. 169.) Through the application of this truth I was able to care for my mother two years longer, and do all the housework that was necessary. I had several minor difficulties to overcome, such as sore throat, toothache, etc., and they were all met by the power of Truth. I wish to relate the chief demonstration I had. While taking a walk one evening, I fell on an icy sidewalk, seemingly injuring my spine quite severely. It seemed as though I could not walk or even rise again, but I knew that Truth and Love are all-powerful, and with this knowledge I was enabled to go on and do all that was required of me night and day, without letting any one

Digitized by Google

know I had met with this accident. After a short time the trouble left me and never returned.

I came to realize that a knowledge of Christian Science was the best thing I had, and through this understanding I was able to keep well and strong. I have great reason to be grateful, and to love Mrs. Eddy for her life of faithfulness to God, whereby she was enabled to be a channel for this glorious truth. It is hard to estimate the blessing Christian Science was to my mother, both physically and spiritually. She was kept free from pain, and finally passed peacefully away. Through the days of grief that followed, the study of the Bible with Science and Health brought the comfort and peace that I so much needed. In writing of the physical benefits I would not forget the spiritual uplifting, for I know that only through the spiritual understanding of God have I been able to receive these physical helps. Having been a member of an orthodox church for several years, and a teacher in the Sunday School, I believed that the spiritual sense should be brought into use in our Christian life, and not buried, but I did not know how to make the needed application of the Scriptures. I believed that a Christian should have the Mind that was in Christ Jesus and be Christlike, and in studying Science and Health I found the light which I was seeking. The Bible became a new book; I rejoiced to know the allness of God and the nothingness of evil, and I desired to follow this light unto the perfect day. The *Sentinel* and *Journal* bring food and drink to those who are hungering and thirsting after righteousness.

FLORENCE A. HATCH, Syracuse, N. Y.

Through gratitude to God, and to our Leader, Mrs. Eddy, I gladly testify to the healing power of Truth as taught in Christian Science. About the 3rd of January, 1904, while working in a saw-mill, I slipped and my hand was terribly injured by a spiked roller. As soon as it was done the power of Truth was realized, and the sense of pain quickly stopped. Every one who works for this company is compelled to be insured, and as soon as my hand was injured the doctor was sent for. Meanwhile I went home, and when the doctor arrived his services were refused, but he said I could not draw any insurance unless I had medical attention. The doctor asked to see my hand; in fact, he was compelled to do so in order to make out the insurance report. He examined the hand, and said it was in a bad condition, and that I had better have something done for it. The doctor made the statement to a friend of mine, that if I had my hand taken off I could save my arm, but that otherwise I would lose my arm and perhaps my life. Christian Science treatment was, however, secured and relied upon, and all the torn flesh came off, the loose bones came out, and the severed fingers grew to the hand again. I did not suffer any pain whatever, nor lose any sleep on account of this severe injury, and by the first of April my hand was healed. I am very thankful for the truth revealed in Christian Science.—J. A. BRINKLEY, Laurel, Miss.

In looking back over my experience, say for the past twelve years, I note with a thankful heart the good that has come to me through my acceptance of Christian Science. I name twelve years, although it is just six years since the new life began for me; but by comparing this with an even period preceding, the evidences of growth are the more notable. These are a few of the errors that have been corrected or wholly destroyed in my consciousness in the time named: irritability, indifference to the interests of those around me, faultfinding and worry, delicate physique and many chronic physical ailments, all of which conspired to plunge me deeper and deeper into the quicksands of fear and discouragement. To-day I rejoice in a growing sense of patience, love for my fellows, an unforced cheerfulness of disposition, better morals, and perfect health. And what can I say to express the gratitude I feel for the spiritual awakening that has wrought this transformation, in that where I was once blind (non-church-going and ignorant of God and the Scriptures), I now begin with an absorbing interest to perceive the light, and to take an ever-growing interest in the Church of Christ, Scientist, of which I have the privilege of being a member. Perhaps I can best express this acknowledgment of benefits received in the language of David: "Bless the Lord, O my soul: and all that is within me, bless his holy name!" "Who forgiveth all thine iniquities; who healeth all thy diseases." My gratitude also extends most reverently to Mrs. Eddy, who has brought God's healing message, Christian Science, to me and my house.

ARTHUR L. HITCHCOCK, Washington, D. C.

I have long thought of expressing my gratitude for all the good that Christian Science has brought to me. I very seldom have a chance to be with Scientists, but the *Sentinel* is like a weekly visit from many of them. When I read the articles, so full of spiritual good, I often long to talk about them to some one. Our dear Leader's inspired article, "Personal Contagion," has helped me to see that I should not long for person but Principle. Science and Health by Mrs. Eddy, has made the Bible plain to me, and helped me to realize some of its promises. Its teachings have enabled me to destroy many seeming troubles for myself, and I long to so live that others may be blessed by my understanding of Christian Science.

MRS. BERTHA LILIAN HURLBURT, Black River Falls, Wis.

In February, 1905, Christian Science was brought to my attention by my sister-in-law, who lives in Brooklyn, N. Y. She was not aware that I was seriously ill at this time, but hearing that I was soon to undergo an operation she wrote, requesting me to do nothing further in the matter until I heard from her again. In the mean time she had sent to the Christian Science Reading Room, asking that a practitioner be sent to my house at once. When he arrived he found me in a very critical condition. I had lung trouble, besides all the old ailments: I had been unable to sleep night or day for several weeks, and consequently suffered very much. The doctor had told my nurse that my heart was very weak and had left a stimulant for me. I was not able to eat solid food at all, and I weighed only eighty-seven pounds. The practitioner treated me Thursday afternoon and again Friday morning. The doctor told the nurse that I was a very sick woman, and if she saw the slightest change in me to send for him at once. Soon after the doctor had left the practitioner came, and while he was giving me treatment I went to sleep and slept for some time. When I awoke it was to a new sense of life; I was rational, the disease gone, and I was free. I awoke with a smile and said, "I must have been asleep." The practitioner asked me if I did not want something to eat, and the nurse gave me some food, which I ate and was still hungry. That evening my husband on his return from business brought me a large basket of fruit, of which I ate freely.

On Saturday morning the doctor called again, only to find a happy, smiling face instead of the feverish one he had left the day before. He took my pulse and temperature and found them normal, stood at the foot of my bed and looked at me for quite a few moments, and then said. "This is beyond me: I guess my services are not required any longer." On Sunday I walked the length of our flat and back again; on Monday I dressed myself and baby, and when the doctor called to attend the nurse, who had burned her hand, he shook hands with me and congratulated

Digitized by Google

me on my wonderful recovery. One week from that day I went to my practitioner's home, where I was received like an old friend. To me this meant a great pleasure indeed, for his wife and he both looked the picture of health and seemed so happy. The trip both ways was about twelve miles and it was a very cold day, but I felt much stronger both mentally and physically on my return home. The treatment was continued for about six weeks, off and on. All the old trouble for which I was to have the operation was healed, and my eyes, to which I had not given a thought, were also healed. Fourteen years before I had had two serious operations performed on them, and had worn glasses ever since, but last summer I was at the office of one of our best eye specialists, with a friend, and he examined my eyes and pronounced them normal. To-day I am a well and happy mother, doing my own work and caring for my three little ones. Words cannot express my gratitude to God, and to Mrs. Eddy. I feel like one that had been called back from the grave.

MRS. EDITH M. GREENE, Buffalo, N. Y.

At the age of five years our little son was taken with severe stomach trouble, accompanied with fever and headache. In about two weeks he had another attack, and we called in the nearest physician. The attacks gradually increased in violence, until at the end of four years we were nearly distracted at his condition. Christian Science was brought to our notice at the end of the second year, by a dear sister whose case of healing was very beautiful, but I spurned her advice, and said that if I were to put my boy in a Scientist's hands, and anything should happen to him, I could never forgive myself. I did not then realize that it was in God's hands I should be placing him. Five of the best doctors had treated the case, and all were agreed that the symptoms were very alarming. When all hope had gone, and when we thought he must leave us, my sister came again with the Christ-message, and we were then ready for it. We placed his case in the Scientist's hands, but with little or no faith that this would help him. I am thankful to add that the child was healed, to the doctor's amazement, and without one drop of medicine. It is now four years since then, and he still continues to be a very healthy child. A few months ago we met the doctor who had his case last; he smiled, laid his hand on my boy's head, and said, "And you have had nothing but the Scientist's treatment?" and when I said "No;" he remarked, "I am glad for you; he surely looks healthy enough now." Surely "if God be for us, who can be against us?"

This wonderful truth has gained such power in our consciousness that its light is our light, and it is leading us "into all truth." We have had many proofs of Truth's power over all error, showing us that God is Love, and now I am eager to point the way to others. Our lives have been greatly benefited; the way is much brighter; and Christian Science has indeed made our home a very different one. I wish to return thanks to God for this great blessing, also to Mrs. Eddy. Here words fail me, and I can only say God bless her.—MRS. JENNIE DU BOIS, Calamus, Ia.

This testimony is given as a slight proof of gratitude for benefits received through Christian Science. I was an invalid for five years, and scarcely knew a moment free from pain. Doctors tried one remedy after another, but the relief was only temporary. I had several diseases, including an abnormal growth, rheumatic trouble, and deafness. Christian Science was presented to me, and I attended a Wednesday evening meeting. While there such a sense of peace came to me that I decided that I wanted to know more of Christian Science. I continued going to the meetings and borrowed a copy of Science and Health by Mrs. Eddy, which I read like one starved for the truth (as I then was). My first thought on awakening every morning was to read more about God's world, and to find my place in it, where I could praise Him for giving us this truth through our dear Leader, Mrs. Eddy. I soon gave up the doctor and medicine and took Christian Science treatment. The healing was slow, but the joy that came with it was something I had never before known. I was perfectly healed, and now after six years I can say the Scripture has been fulfilled for me, as I can "walk and not be weary" and am in better health than ever before. I owe everything to Christian Science, and my gratitude is too deep for words.—MRS. IDA C. WHITE, Jersey City, N. J.

It is with a deep sense of gratitude that I acknowledge my healing through Christian Science. I received treatment in August, 1898, and I have never taken any material remedies since. I was healed of many ailments, among them lung and heart trouble. The doctor said that the lung trouble was very serious, and I had a continual pain in my side. The doctor told me that I would have to use morphine all the time, as I could not stand the pain without it. Although I have had a great sorrow, my Bible gives me strong assurance of God's presence in all times of need. I was under medical treatment constantly for over twenty years, and I can now say that Christian Science has completely healed me, and this is only a small part of the work it has done for me. The greatest of all is the spiritual uplifting—the knowing that God is no respecter of persons, and that "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I am indeed grateful for Christian Science.

MRS. BELLE C. REED, Canon City, Col.

I was afflicted from 1887, until healed by Christian Science in 1903, with what was pronounced to be stomach and bowel trouble in its worst form. A prominent physician pronounced the disease incurable. I was attended by nine physicians at different times, and was constantly taking medicines, but without benefit from them. The stomach trouble was healed at once by Christian Science treatment, and though the other was slower to respond it finally yielded and completely disappeared. I am now in perfect health.—MRS. MATTIE ZIMMER, Erie, Pa.

Two years ago I had very severe trouble with a tooth, which yielded to treatment in *materia medica* only after six weeks of suffering. This summer (1906) the same trouble again appeared, accompanied with severe pain and swelling. I called in a Christian Science practitioner, and after two treatments the pain subsided and the abscess broke. Thus was accomplished in twenty-four hours what had before taken six weeks of pain, although I had two doctors. Most gratefully do I testify to God's healing love.—MRS. AMY T. BAILEY, New York, N. Y.

For fifteen years I suffered from stomach trouble, and from the supposed effects of sunstroke, these troubles becoming chronic and causing constant suffering. I was treated by thirteen doctors during this period, but was not cured. Seventeen years ago my mother first heard of Christian Science, and she begged me to try it. To please her I did so, and in less than one year I was perfectly free from both of these troubles. I have not used any medicine in the past seventeen years, and I am now in good health.

WILL WALLACE, Marshalltown, Ia.

FROM OUR EXCHANGES.

[Rev. Edward Everett Hale in *The Christian Register*.]

Say what you choose and think what you choose of the verbal inspiration, of plenary inspiration, of universal inspiration; separate the history of one book from another as carefully as you please, the certainty professed by all men is that in the Old Testament we have an unending variety of the religious thoughts or hopes or guesses, really of thousands of people. In the New Testament we have even more, we have the book on which the practical ethics and social conditions of the twentieth century have been forming themselves, or pretending to form themselves, as nineteen centuries have gone by. While the minister is reading the Bible, he is, or he may be, bringing the hundreds of people before him into the closest possible relations with hundreds of men whose statements about God and man have gone far in creating the daily life in which we all live.

[*The Universalist Leader*.]

Our age still longs for God and searches after Him. "As the hart panteth after the water brooks," so panteth our souls after the most High. Hither and thither we wander, almost aimlessly searching for the fountain in the desert. Few people of our times find the waters, which to drink is to satisfy forever our thirst for God. Just now there is wisdom in remembering the advice of Paul, "Covet earnestly the best gifts: and yet show I unto you a more excellent way." And that is the way of love. Another day we will try and find out this other way, which, though the world too often misses it, is yet so broad that even the simple-minded may find it if they will.

[*The Congregationalist*.]

Theology translated into experience becomes religion. One need not be a theologian, but only a believer in Christ through experience, in order to apprehend the meaning of the Christian religion. It is not described by all persons in the same language, because experiences differ. But the testimony of experience may be given and received among Christians without bitterness or accusations, because it is the testimony of what grateful human love has learned of the forgiving love of the holy God manifested in Christ Jesus our Lord.

[*The Standard*.]

When the minister of the gospel seeks first and all the time to present Jesus Christ in such a way as will turn men unto him, he can safely accept for himself all the admiration and love that his people are disposed to give. When he fills the whole horizon, when the thoughts of the hearers never get beyond the man who is standing before them, his eloquence, his learning, his grace, his wit, no large work for the kingdom of God is possible.

[*The* (London) *Christian World*.]

The church which gives its pulpit the liberty to utter its full mind will be the church to survive the storms that are coming. For this freedom is, as we have said, an indispensable condition of high efficiency, and it is only by efficiency that the church will win. The notion, which has been at the bottom of all the cramping limitations of the pulpit, that doctrine must be shielded from inquiry, is the worst and most hopeless of all infidelities.

[The "Undistinguished Heretic" in *The Independent*.]

Orthodoxy is continually overtaking heresy, and was never closer on the vagrant's heels than to-day. Let advanced men wait a bit and be patient; it is quite probable that in later years they will themselves be fearsome lest the younger men are running ahead too far.

THE CHRISTIAN SCIENCE TEXT-BOOK

"SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," PRINTED FROM NEW PLATES AND CONTAINING MANY IMPORTANT CHANGES AND ADDITIONS BY THE AUTHOR.

THE OLDER EDITIONS WILL NOT BE TAKEN IN EXCHANGE.

THE CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

CHURCH MANUAL.—Containing all the By-laws to date of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, $1 per copy; $5 per half dozen; $9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CARDS IN THE GERMAN PERIODICAL.—Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their names and addresses inserted in the advertising columns of *Der Herold der Christian Science*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be $2.00 for the first line, and $1.00 for each additional line. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, $2.40 per annum; $1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science.

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, and Mexico, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Pamphlets

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., C.S.D. 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. 50 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The long-looked-for indictments in the municipal graft cases in San Francisco were returned last week. Seventy-five indictments, charging bribery, were found on evidence presented to the Grand Jury after six months' probing into the municipal affairs of the city. Sixty-five are against one man, a leading politician, and ten against another. A number of big corporations are involved in the bribe giving. It is alleged that the United Railroads Company paid each supervisor (alderman) $40,000, and the two indicted men $400,000; that the Pacific States Telephone Company paid ten supervisors $5,000 each; that the Home Telephone Company paid ten supervisors $3,500 each, seven supervisors $6,000 each, and the two indicted men $150,000 (estimated); that the San Francisco Gas and Electric Company paid the supervisors $750 each.

In an interview respecting the Ohio River floods, the chief of the Forestry Service said: "The great flood which has wrought devastation and ruin in the Upper Ohio Valley is due fundamentally to the cutting away of the forests on the watersheds of the Allegheny and Monongahela Rivers. . . . The area of these watersheds is given by the United States Geological Survey as about nineteen thousand square miles. Not more than half this area would necessarily have to be in forest. Great floods are becoming common occurrences upon the eastern rivers which have their sources in the high mountains. Such floods, with increasing intensity, must be expected from year to year until the important watersheds are protected."

The contentions of the attorneys for the Standard Oil Company, that the Government, which is now prosecuting the company at Chicago on indictments charging it with accepting rebates, had not proven the existence of the route by which it claimed the alleged shipments in violation of law had been made, were swept away by Judge Landis in the United States District Court, who held that the Government had proved the existence of such a route. This decision opens the way for the introduction by the Government of evidence to the effect that freight had been handled for the oil company in the illegal manner charged in the indictments, and this phase of the trial has been entered upon.

President Roosevelt has issued an executive order directing that Japanese or Korean laborers, skilled and unskilled, who have received passports to go to Mexico, Canada, or Hawaii, and to come therefrom, be refused permission to enter the continental territory of the United States. This is the outcome, except so far as the question may be taken up in treaty negotiations with Japan, of the issue growing out of the differences with that country over the action of the San Francisco authorities in prohibiting Japanese school children attending the schools set aside for the whites.

The National Arbitration and Peace Congress meets in New York, April 14 to 17. Among the subjects to be considered, according to the provisional program are: International views of the peace movement; women's relations to the peace movement; wage-earners in relation to the peace movement; legislative and judicial aspects of the peace movement. There will also be a "Young People's Meeting" and a "University Meeting."

Passenger traffic managers of all Western lines met in Chicago recently to discuss plans to reduce the speed of passenger trains. Their conclusions will be presented to the officers of the operating departments. It is probable that some of the accommodation trains which have been operated at a loss will be discontinued. The operating officials contend that the move is not so much an economic measure as one of safety.

The lower branch of the Maine Legislature, by a vote of 65 to 72, defeated the bill for the removal of the seat of the State Government to Portland and a referendum vote on the subject. The bill had been passed in the Senate.

The United States Congressional party who have been inspecting the work done on the Panama Canal, declare themselves highly satisfied with the progress made in the construction work.

On Saturday, March 23, Secretary Taft started on a trip to the Canal Zone, Cuba, and Porto Rico. Later he will visit the Philippines, and possibly Samoa and Alaska.

Extraordinary expenses to the United States up to date, caused by the sending of an army of pacification to Cuba, aggregate about $2,500,000.

A committee is investigating alleged extravagance in the expenditure of $1,000,000 for furnishing the new Pennsylvania capitol.

Foreign.

Lord Kurzon of Kedleston, ex-viceroy of India, has been elected Chancellor of Oxford University by eleven hundred and eleven votes, against four hundred and thirty cast for Lord Rosebery. Hitherto in the history of the University chancellors had always been chosen without a contest. The polling was held in the Sheldonian Theatre, from two until four o'clock in the afternoon, during which appeared eminent voters from all parts of the country,—peers, members of the House of Commons, archbishops and bishops, in addition to other men who have attained prominence in all professions,—the contest exciting the keenest interest.

A representative of the Prussian Ministry of Education, addressing the Appropriations Committee of the Prussian Diet recently, announced that the Ministry intended to see if any arrangement could be made with the school authorities in the United States for an exchange of language teachers, some Germans being assigned to teach German in American schools and Americans detailed by the school boards to teach English in German schools. Such an exchange, the speaker added, had been found to work admirably in France, but the plan had not proved so successful in the case of Great Britain.

The lower house of the Russian Parliament acquitted itself creditably in its first encounter with the Administration, and adhered to the decision reached in caucus to proceed with as little delay as possible to the program of constructive legislation. Premier Stolypin's second speech was a plain warning to the political heads that no playing with fire would be permitted, and that the Douma must confine itself strictly to its legitimate functions if it does not wish to be dissolved.

Prince Kanin last week opened the Tokio Industrial Exposition in the presence of a brilliant assembly composed of military officers, members of the diplomatic corps, and a throng of invited guests representing officialdom and the various commercial interests. The exhibition was designed as the celebration of peace, with a special view to stimulating local industrial enterprises which had suffered on account of the late war.

Emperor William has given his consent for Dr Muck, director of the Royal Orchestra, who is now conducting the Boston Symphony Orchestra to stay another year in the United States. The Emperor only consented to this further stay abroad when he was informed that the orchestra was maintained, not for profit, but for the benefit of musical culture.

The first Parliament of the Transvaal Colony, under the newly granted constitution, met in Pretoria, March 21, in the hall in which the late President Kruger presided for so many years over the sittings of the Upper Volksraad of the South African Republic.

Ambassador Leishman of the United States has had an audience with the Sultan concerning the recognition of the American schools and missions in the Turkish Empire. The question appears to be approaching a satisfactory solution.

Industrial and Commercial.

An automobile highway between New York and Boston has been proposed. The highway is to run from a point near the boundary line of Brookline and Newton as nearly in a straight line as possible to Mount Vernon, N. Y. The entire distance is one hundred and seventy miles and it is estimated that the cost will be more than $70,000 a mile. It is proposed to construct two thirty-five-foot roadways, one for south and the other for north bound traffic, with a thirty-foot space between and a ten-foot space outside between the outer edge of the roadways and the fence. The road will be built of macadam. The promoters estimate the tolls from five hundred cars a day passing over the highway will make it a paying proposition.

The shipments of Egyptian cotton to Great Britain from Sept. 1 to Dec. 27, 1906, amounted to 215,074 bales, or an increase of 45,814 bales on the shipments for the corresponding period in 1905. The shipments to the continent, India, and Japan amounted to 143,238 bales, or an increase of 20,584, and to the United States, 39,370 bales, or an increase of 7,808. The total to all parts shows an increase of about 74,000 bales.

Seventy thousand passengers are fed every month on the dining cars of the Pennsylvania Railroad alone. The monthly receipts amount to $65,000, and the amount of money spent on supplies to about $35,000. In the dining car crews there are four hundred and thirty men.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

MAKING EVIL UNREAL.

WILLIS F. GROSS.

THAT humanity is progressing spiritually and gaining a higher standard of moral attainment and efficiency, few will deny. More subtle and hitherto unknown manifestations of evil are constantly appearing, but there is also a more spiritual discernment of good wherewith to master the evil propensities. Even though spiritual progress may seem to be retarded by the efforts of evil, it is not defeated and hope does not give place to despair. Humanity's faith in good, and the abiding conviction that good will finally triumph over evil, was never stronger than it is to-day. There are few who can discern aright the signs of the times and comprehend the invisible agencies at work for the salvation of the world, but the signs are portrayed and the spiritual, energizing forces of the unseen are uplifting and elevating the race.

Wherever there is a sincere desire to be better, or an earnest longing to help another, there is felt the influence of that something which is not of the "earth, earthy." A man may not have the true concept of good, and he may entertain a false sense of evil, but it is evident that whenever he has followed the leading of good he has departed from evil. In proportion as good has come into his life, evil has ceased to be a part of it. All the progress he has made is the result of separating himself from evil and identifying himself with good. That he has not progressed more rapidly is due either to his unwillingness to part with evil or his sense of inability to do so. If it be true that his progress has been hampered in this way, then that teaching which increases his desire for good and enables him to overcome the evil from which he longs to be free, bestows a blessing upon him, the value of which can hardly be estimated. That Christian Science is doing this two-fold work is proven by the testimony of thousands who have experienced its refining and elevating influence. Christian Science has presented to these persons such a concept of good and of evil as has enabled them to succeed in a much greater degree in attaining the one and overcoming the other.

One of the things most difficult to understand by those unfamiliar with Christian Science, and especially by those who have not in some degree proved its teachings by demonstration, is the attitude of Christian Science toward evil. If Christian Science is to enable a man to accomplish that which he has hitherto been unable to perform, it must of necessity present a somewhat different view of things. A new method of doing anything must in some way differ from the method previously employed. If it does not, it is identical with the old and can therefore be no more successful.

The average man needs only to consider his own experience in contending with evil, his successes and his failures, to be convinced that for him at least a new viewpoint is needed. His present concept of good and his attitude toward evil are not what they should be if he is to attain the freedom he desires. His attitude toward evil is in accord with his belief in evil. If he has believed in the reality and power of evil,—and such is probably the case,—his efforts to overcome evil have been hampered by his belief. It may be that in the beginning his desire to depart from evil was occasioned by nothing more than the fear that the indulgence of evil would result in suffering. He believed there was pleasure and satisfaction in wrongdoing, but the fear of punishment was for the time being sufficient to restrain him. His moral progress was of necessity slow, but it was better for him to refrain from evil for no other reason than the fear of consequences, than to give himself up to the indulgence of that which would lower his moral standard. The law with its "thou shalt not," and the fear of punishment, have served and are still serving their purpose, but they have not sufficed for humanity's need. If they had been sufficient, then the preaching of the gospel would be unnecessary.

While the preaching of the world is usually far in advance of its practice, are there not good men and women whose practice, in some respects at least, is in advance of their preaching? Many of these persons will contend as strongly for the reality and power of evil as they do for the reality and power of good, but they will not permit evil to be as real and powerful in their lives as good is. It has been said most truly that what a man does determines what he believes; not what he says he believes, or thinks he believes, but what he does declares his real conviction.

Primarily the belief that there is pleasure in evil is the sole reason for its indulgence, and this belief—not the evil itself, but the belief in evil—constitutes the only power the evil seems to have over any one. Where can you find any one in bondage to a particular form of sin, who never believed that this sin could be the source of pleasure, satisfaction, or benefit to him? Where is there one who never believed that there was pleasure in the use of intoxicating liquors and yet became a drunkard? Thus is it with every form of evil,—only those who believe in the pleasures of sin become its victims.

The question then arises, Is there pleasure in evil or is there not? Ask one man this question regarding a specific sin and he will say there is satisfaction in that sin; another will declare there is not. The chances are that the former is in bondage to the evil, while the latter is not. Which one, think you, has the concept of sin which is more nearly correct; the one who believes there is pleasure in some sin and gives himself up to its indulgence, or the one who sees clearly the utter falsity of the claim of satisfaction in it and acts accordingly? The latter, you say. Now ask this person if he believes that sin is a reality; he will probably tell you that he does. Ask him if he believes there is pleasure in sin, and he will declare there is not. But if there is no pleasure in sin, how real is sin? Does not the belief of pleasure in sin lead to the belief in its reality? How much of a place has a specific sin in the life of the one who thoroughly believes there could be for him no pleasure or satisfaction in the indulgence of that sin? What would become of sin if all mankind were to lose their belief of pleasure or advantage in sin?

Copyright, 1907, by Mary Baker G. Eddy.

Digitized by Google

If a man by reason of his moral and spiritual growth is able to see the falsity, unreality, of the belief of pleasure in one form of sin, will not a more spiritual consciousness reveal to him the unreality of other evils? If his spiritual growth continue, will he not some day reach the point where he can see the unreality of all claims to pleasure or gain in sinful indulgence? Is it not evident that the man who is in bondage to sin has not gained the correct view of sin; in other words, does not see sin as it is?

The declaration that God is infinite good, that He is all, necessarily includes the correlated statement that the opposite of good, termed evil, has no existence in fact. Its seeming is an illusion, and when it is seen as it is, it disappears; but so long as one chooses or is content to believe in its reality, it appears to be real, and to mortal sense its influence and power are in proportion to its seeming. The denial of the reality of evil does not leave one free to indulge the belief that it is real. On the other hand the indulgence of evil is proof positive that one has not accepted the scientific denial of the reality of evil, even though he may declare to the contrary. We repeat that what a man does, and not what he says, determines what he believes.

Right talking and right doing insures the greatest degree of success, but it is no difficult matter to decide which of the two is more important. One of the Master's parables is to the effect that a man having two sons said to each of them, "Son, go work today in my vineyard." One replied, "I will not: but afterward he repented, and went." The other said, "I go, sir: and went not." Neither expressed the loving obedience that could be reasonably expected, but the first was commended for what he did while the latter was severely condemned for what he said and did not. The one might be regarded as representing those good men and women who may in word declare for the reality of evil but whose lives testify to the reality of good and the unreality of evil. The other would be a type of those self-deceived mortals who profess to believe in the unreality of evil, and yet, regardless of their profession, give themselves up to its indulgence. The Scriptures plainly teach that the doers of the Word are saved, while those who are hearers only are rewarded according to their deserving. Paul declared that God will render to every man according to his deeds. Of the Gentiles he said, "For when the Gentiles, which have not the law, do by nature the things contained in the law, these, having not the law, are a law unto themselves."

The Science of Christianity is needed; both the letter and the spirit are necessary. Any one will be more successful in his efforts to overcome evil if he sees that evil's claim to intelligence, power, and reality is false, than he will if he begins his work by acknowledging its validity. Has not the good man been endeavoring to do just what Christian Science demands; *i.e.*, make good real and evil unreal in thought, word, and deed? Why, then, should the teaching which ascribes all intelligence, power, and reality to God, good, be regarded with suspicion when it demands and makes possible the doing of good and the overcoming of evil? If a tree is to be known by its fruits, let a man ask himself, What would probably be the result if I should accept the teaching of Christian Science regarding good and evil? If he cannot satisfy himself as to what effect it would have on his life, then let him put that teaching to the test and "prove all things," holding fast only that which is good. That which is true will stand the test of honest, sincere, and faithful application. It invites such a test on the part of all men. The Master said of his teachings, "My doctrine is not mine, but his that sent me. If any man will do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." In like manner it is possible for any honest, fair-minded man to prove for himself whether Christian Science is of human or of Divine origin.

THE TRUTH FOR THE CHILDREN.

MARTHA J. VOGELL.

MRS. EDDY'S beautiful and helpful advice to the Field, under the heading "Christmas for the Children" (*Sentinel*, Jan. 6, 1906), vividly recalls an experience which occurred in our home about eight years ago. Our little son was then four years old, and was attending a kindergarten in the neighborhood. As the children in the kindergarten were busy with the preparation for Christmas, much was said and thought about Santa Claus. One or two of the older boys endeavored to enlighten the younger children respecting this myth: but the majority of them would not admit for a second that there was not a real old man Santa Claus, for had not their parents and grandparents and other relatives and friends assured them of the existence of this wonderful and much-loved person? The teachers did not enter into the argument, for they would hardly dare deny what so many of the parents chose to have the children believe to be true.

When our little lad came home that noon, he seated himself in the depths of a large armchair, and looking me squarely in the eyes asked, "Mamma, will you tell me the really truth about something?" I promised to do my best, and he asked, "Well, is there a really old man Santa Claus, who comes down the chimney with a bag on his back, every Christmas eve?" For a second I hesitated, having been brought up as a child to believe in Santa Claus, and laboring under the delusion that there was so much pleasure for the family, as well as for the boy, in having him believe a falsehood about this subject; but remembering my promise to "do my best" in response to his request for the "really truth," I answered, "No, there is not a really old man Santa Claus with a bag on his back, but there is a love in the hearts of people that moves them to spend time and work and money to make others happy on the day we call Jesus' birthday; so you, and papa, and mamma, and all who are working to make somebody happy on Christmas day are part of the great love that some people call Santa Claus."

The child listened attentively, made no response for a few seconds, then with questioning eyes and eager, hopeful voice—showing that it was a question of grave importance to him—he asked, "But there is a really truly God, isn't there?" I was startled for a second, then silently thanked God that I had not been led to deceive the child. We had a happy little talk about God as the Bible teaches, and then the little lad ran off to his play with blocks and toys, merry as could be.

We have never found that this knowledge about Santa Claus made him enjoy his Christmas any the less. Each year he delighted in the Christmas tree, and took his part joyfully in the preparations for the day. We had, however, some trouble trying to keep him from telling his friends what he had learned; and several mothers came to me and declared it was a shame to spoil all the fun of Christmas by telling such a little child the truth about Santa Claus. When I explained to my child that some parents preferred to have their children believe in Santa Claus, and that we have no right to interfere with the opinions of others, he promised not to intrude his knowledge of the subject upon his little friends; but he remarked, "Why, mamma, when those boys grow big and find out that their mothers don't tell them the truth, they will cry."

Now some may say that is not an ordinary case, that most children would not take it so seriously; but I know of at least two similar cases. One was that of a girl twelve years old, who had placed implicit confidence in her mother's word, and when it became necessary for her mother to speak the truth to her concerning the Santa Claus story, the girl was bitterly disappointed and rebellious. With tears and sobs she declared she would never believe the Bible story about Jesus, if the story about Santa Claus was not true. The other case was that of a grown boy

Digitized by Google

who had chosen to believe his parents' story of Santa Claus, regardless of all that his boy friends had said to the contrary, and regardless of their ridicule; but when he learned the truth, he refused to believe anything that his parents had taught him about God and Jesus. In each of these cases the parents were deeply grieved, and thoroughly convinced that they had made a great mistake in abusing the confidence of their children.

Another case presents itself, showing a different form of error which may result from deceiving the little ones. A girl of eleven years of age told me that her mother and older sisters thought they had great fun in deceiving her about Santa Claus, but all the time she was taking great pleasure in deceiving them. She said she asked them silly questions, all the time feigning innocence; and their answers were a source of great amusement to her. Thus was sown in that child's character a foundation for deceit; and by the very people of whom she had a right to expect help in gaining truthfulness and purity of thought.

These observations were made before I became interested in Christian Science, and while I was a Sunday School teacher in an orthodox church. A superintendent, under whom I once served as a teacher, tried to incorporate the Santa Claus story with the Christmas story, and some of the children demurred audibly. He told them he was sorry that they did not believe in Santa Claus, for his own children knew it was all true; and his children, a girl of eleven, and a boy of nine years, sat before him in their classes, nodding hearty assent to their father's words. A few other teachers besides myself felt that it was a grave mistake to drag this myth into the Sunday School, and so confuse the children's sense of truth with error. I am sure that all this deception of the little ones by parents and teachers is wrong; and it seems to me that in this connection it would be well for us to ponder Jesus' words in Matthew, 18 : 6.

As Christian Scientists—parents and teachers of children—we surely have reason to be grateful for the wisdom with which Mrs. Eddy is leading us; and a study of her words, in the article mentioned above, will indeed be profitable to all of us: "A deceit or falsehood is never wise. Too much cannot be done towards guarding and guiding well the germinating and inclining thought of childhood."

LOVE.

JESSIE KYNOCH.

A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another.—JESUS.

As we study the life and teachings of Christ Jesus, thought is awakened to the need of more love. His ministry on earth was full of compassion, tenderness, and pity for sin-laden humanity. St. John, the beloved disciple, caught a sense of the wondrous power of love that flowed through the Master's teachings, and he never ceased his endeavor to awaken others to this consciousness. In his first Epistle we read, "He that loveth not knoweth not God; for God is love." Thus Love's power is the key-note of all spiritual progress, and he who would follow in the footsteps of the lowly Nazarene must let Love dominate all his life-work. It is only by striving to do this that we can learn to know God aright. We must throw open the door of our consciousness, that the Christ-love may flow in. It may be there are many weeds in our heart's garden, that only its radiant light can reveal; and we would have only immortal flowers growing there.

As the light of divine Love dawns upon us, we earnestly desire that more of the Christ-spirit may be manifested through us day by day, enabling us to follow more closely in the footsteps of him whose whole work on earth was doing good. Our Leader says, "Desire is prayer" (Science and Health, p. 7), and in trusting God with our desires we know, as a new understanding dawns upon our consciousness, that the false desires of the human heart give place to that which is true. Gratitude for this uplifting can only be expressed in self-abnegation and by a constant endeavor to reflect the Christ-love at all times,—alike in church and home, in business and in pleasure.

Constant vigilance on our part is needed to guard the door of thought against the intruding errors of mortal sense, of which one of the most insidious, perhaps, is that of unconsciously relying on personality instead of on divine Principle. Let us then turn away from the sense of personality and fix our gaze steadfastly on the perfect ideal. Through the inspiration of Love we gain the constant assurance that infinite wisdom is guiding every footstep, and though on our pathway we encounter many obstacles, we must press on, fearing nothing, for the star of divine Truth is ever before us and the light of divine Love is ever shedding its radiance on our way.

Many of us, weary of earth and tired of its battles, have turned to Christian Science, and found in Christ, Truth, that joy, peace, and rest which the world can neither give nor take away. Surely the sweetest song that can ascend to the great Father is loving gratitude expressed in a life of Christliness. Every effort so to live makes for the advancement, in some measure, of God's kingdom on earth, the kingdom of Love. "My little children, let us not love in word, neither in tongue; but in deed and in truth."

[Written for the *Sentinel*.]

"THE CARNAL MIND."

BEN. HAWORTH-BOOTH.

FAREWELL forever, evil counselor,
Henceforth be separate thy ways and mine.
My heart—thy foolish yoke-fellow of yore,
To sow the sands and drink the poison wine
Of earth's disquietude—hath prayed at wisdom's shrine.

And how doth wisdom cry, and lift her voice
Amid the warring tones of worldly things?
She bids the sons of earth awake, rejoice,
And cast away thy cords and binding-strings.
Their sickness and their sighs and vain imaginings.

Farewell forever! May the memories
Of thee and thine, and my benighted past,
Be all forgotten as the dream that dies
When morning lamps upon the clouds are cast.
Dark enemy, farewell; be this farewell the last.

Whence camest thou we need not pause to think,
Begone, depart upon the shuddering blast!
False flatterer, we part upon the brink
Of falsehood's ocean, whither Christ did cast
Thee and the herded swine, while mortals gazed aghast.

Seek then the swine; or seek the lowering sea,
Of strife the symbol and dark brooding fears:
These thine abode. And may the thought of thee
Be crucified, with earthly joys and tears,
Earth's loves and lies, her hopes and hates, her praise and sneers.

And now that he hath gone, my heart, assume
White robes, a semblance of the seamless dress;
New hopes, like rosy wreaths of sweet perfume,
With thankful thoughts in place of thanklessness.
And peaceful, pure desires that Love delights to bless.

SELECTED ARTICLES.

[Editorial in the *New York Journal.*]

Some time ago we mentioned the interesting fact that Christian Science enabled a nervous woman to sit in the dentist's chair and smile in spite of pain. A celebrated dentist, who is not a Christian Scientist, said: "The most nervous girl that I ever saw, unable to stand pain of any kind, and whom I finally refused to treat, came back to me one day smiling. She asked me to give her another trial. I did so. She didn't move, she sat perfectly quiet while the work was being done. When it was over I said to her: 'I know what's the matter with you; you have been talking with the Christian Scientists.' She told me that she had. I don't believe in Christian Science, but I know that it can get a nervous girl in a frame of mind that enables her to endure the horrors of the dentist's chair with a smile."

That was one surprising feature of Christian Science. Now comes another, the fact that a man can actually go in a cheerful frame of mind to the electric chair with Christian Science behind him. A young man, George Granger, was put to death in Sing Sing Prison yesterday. This youth, guilty of murder, had sobbed and wept, and wrung his hands during his trial, presenting a pitiable spectacle of terror and lack of self-control. After his trial and condemnation, he was converted to the new ideas of Christian Science, and yesterday the formerly nervous boy stepped into the electric chair, was strapped down, and died as calmly as the young Christian Science woman had stepped into the dentist's chair.

A great many religions have been started in this world. The vast majority have died out. It is interesting and instructive for those interested in great movements of the past to study this Christian Science movement, this birth of a new religion, and to speculate as to the forces within it and its probable lease of life. Remarkable tributes to the Christian Science idea, and to Mrs. Eddy, the originator of the faith, come from remarkable people and remarkable places. The girl in the dentist's chair smilingly tells that she has become a Christian Scientist and doesn't mind pain. The young man in the electric chair helps to fasten the straps around him, and announces that he considers death no longer important, because he has been taught to see how little it all amounts to. At the same time, from the gloomy depths of the solemn British peerage, there comes a testimonial as to the power of Christian Science.

In the *Cosmopolitan* magazine for this month there is an article on Christian Science written by the Earl of Dunmore. In his article the "belted" earl pays an extraordinary tribute to the Christian Science faith and personally to Mrs. Eddy. This man declares positively that his wife was dying in Kashmir in 1892. Doctors told her that her death was certain. Then she began reading Mrs. Eddy's book—that is what nearly all the converts to Christian Science say of themselves—and "by dint of that study she learned that there was no necessity for her to die," and she did not die.

This British Christian Scientist is certainly an enthusiast. His daughter devotes her life to Christian Science. The Earl of Dunmore declares that he was cured by Christian Science of a serious ailment declared by surgeons to be incurable. It had all disappeared when the life insurance people examined him later on.

For the present, it is enough to say that the article by the Earl of Dunmore in the March *Cosmopolitan* proves that an American woman, Mrs. Eddy, has been able to evolve a religious health idea that has gone practically all over the world, and has made of her an extraordinary power.

[Editorial in the *Torrington* (Conn.) *Register.*]

There are many present indications of a popular revulsion against the attacks made by sensational newspapers and magazines upon the Christian Science Church. This is a favorable fact. It is but fair that the Christian Science Church should be accorded the same respect which is given to all other religious denominations in this country. The religious atmosphere of America is not yet filled. There is always room for another sect. . . . It is a surprising fact that the Christian Scientists have borne the bitterest kind of criticism without showing signs of losing their dignity. Whenever a reply has been issued to an attack, that reply has been made in carefully considered terms of argument. Denunciation of its assailants has not been a feature of the Christian Science Church's method. . . . Attacks upon a religious sect have been met usually with such a display of rancorous spirit by the assaulted sect that the dignity of self-control has been lost; but the Christian Scientists have fought for their religion with a calmness that is commendable. . . .

It is only in accord with the spirit of our Constitution that we should treat the Christian Scientists with the same toleration which we accord to all other sects with whose teachings we may not agree even in the slightest extent or to which we may be theoretically opposed. If there are millions of people in this country—and there are that many—who find great pleasure in accepting the theories of Mrs. Eddy, we ought to let them follow their way in peace. If we were to fight every religious sect with which we are not in sympathy this country would soon become a most unhealthful place of residence. It is only by the policy of absolute toleration that the atmosphere of America can be kept clear of baneful religious controversies. There is nothing more dangerous to national peace than a disposition to stir up religious rancor, and there is just such a disposition evident in this Christian Science agitation.

[Editorial in the *Carthage* (Mo.) *Democrat.*]

A bill numbered 123, which has passed the Missouri Senate and is now pending in the House, is one which is attracting attention all over the State. The bill is drawn and is being pushed by members of the medical fraternity and purports to be an act to regulate the practice of medicine and surgery. In fact the bill not only prohibits the practice of medicine and surgery without a license which the State Board of Health is authorized to issue only to graduates of medical schools who stand a rigid medical examination, but to prohibit the treating of the sick and afflicted by any one without such a license unless such treatment is gratuitous. In other words, the bill is obviously drawn for the purpose of preventing any but licensed practitioners of the medical schools from charging fees, and is generally considered to strike directly at Christian Science healers.

It is the province of the State to provide that none but competent persons schooled in all the knowledge the present-day medical colleges can give, should administer drugs or use the knife on the sick and afflicted. Poisonous drugs and knives in the hands of the ignorant and unskilful are dangerous. The State should protect its citizens from incompetence in the use of drugs and knives, but the State should also be careful to avoid any attempt to compel its citizens to accept any particular mode of treatment for illness or affliction, or to compel any citizen to accept the services of those only who use drugs and knives in the treatment of the sick and afflicted. Medicine, like all the sciences, is continually changing. The old school fought the inroads of the new school, yet the new school of homeopathy has established itself firmly by proven success, while osteopathy, the last candidate for admission, has worked many reformations, but it has its ardent believers and its record of many remarkable cures. The State cannot afford to discriminate by empowering any group of physi-

Digitized by Google

cians or any school of medicine which presumes to be superior, and discourage and cut off the practice of others which may be as good but newer.

There is a growing sentiment, which must be recognized, against the use of drugs. The Christian Scientists have obtained excellent results through their so-called drugless healing, and have been the pioneers in medical therapeutics and the mental modes of healing the sick. But other church denominations believe now and have believed in spiritual methods of healing the sick. The State should at least respect the convictions of these citizens who believe they have found something better than drugs. The right of a citizen to choose his own method of being healed should not be invaded or ignored. The practitioner who desires to heal without the use of knife or drugs could of course take the training and examination and receive the permission to practise and receive fees under this act; but why should one who does not believe in drugs be forced to take this superfluous training, if he can heal those who apply to him for treatment, in order to receive legally the fee for services which might prove as valuable to the patient as those of the old-school practitioner. Compulsion of the conscience of persons of religious faith, or the convictions of any man with regard to what treatment that man must secure and pay for, is tyranny. The State should protect the public from dangerous instruments or poisonous drugs in the hands of incompetent persons, encourage wise sanitary regulations for preservation of public health, and leave the matter of choosing and paying for whatever medical attention or healing that is desired by the citizen to the citizen himself.

[Editorial in the *St. Joseph* (Mo.) *Gazette*.]

There is pending in the lower house of the State Legislature, the Senate having already passed the measure, a bill designed ostensibly to regulate the practice of medicine and surgery, but in which there is a hidden purpose quietly waiting against the time when the bill shall become a law. The bill was drawn and is being pushed by members of the medical fraternity, who assert that it is for the protection of the public from charlatans and quacks, who under the guise of physicians are constantly preying upon the gullible public. It provides that no one shall practise medicine or surgery in Missouri who has not first secured a license from the State Board of Health, which board is forbidden to grant such a license except to graduates of recognized medical schools. At least no one without such a license as is thus required, may practise either medicine or surgery for fees, while gratuitous treatment of the sick or afflicted is prohibited entirely.

The hidden purpose above referred to has been discovered by the Christian Scientists, who, should the bill become a law, will be prohibited from practising their particular methods of treating the afflicted, without first having been graduated from some medical school recognized by the State Board of Health, and securing a license to practise. There are also other persons, holding similar views in regard to the treatment of the sick or afflicted, who would find themselves in the same fix as our Christian Science friends, the right to use the surgeon's knife, to administer drugs of any character, or to treat the sick in any way, and charge for their services, being limited to graduates of certain schools alone,—a thing that is so preposterous as to be unreasonable in the extreme. There has always been more or less feeling between medical practitioners of the different schools, each holding to the peculiar method of treatment in which he happens to have been educated, and insisting that all others are wrong and should be refused the right to practise. It is to such narrowness and bigotry as this that such measures as the proposed bill must be attributed.

It is proper and right for the State to provide that none but competent persons shall administer drugs or practise the science of surgery. The surgeon's knife as well as most drugs are very dangerous things in the hands of one who does not thoroughly understand their use, and the public should be protected from this sort of quackery by the State. There are, however, a growing number of people in this country who do not believe in the use of drugs at all and who never submit themselves or their friends to the hands of a surgeon. Marvelous results have been secured in the healing of the sick through mental processes, some of our most eminent physicians themselves using drugs as sparingly as possible. Many people have religious views which prevent them from employing physicians of certain schools, a faith they have a perfect right to follow, so long as they do not enforce it upon others. In view of these facts it is not right for the State to compel this class of people to employ physicians from certain recognized medical schools or do without such treatment as they admittedly stand in need of. Limit by the law the right of incompetent persons to prescribe drugs or practise surgery, but in doing so it is not necessary or right to trample upon the rights of those who desire to do neither.

[Editorial in the *Puyallup* (Wash.) *Tribune*.]

Physicians seem to be of all persons most jealous of their rights. This is well enough until they attempt to hedge themselves about with special privileges supposed to be conferred by diplomas given from certain schools. Now, in point of fact, as one contemporary correctly puts it, no one man knows, and no set of men know, all that there is in the wide world of science as applied to the alleviation of physical ills. Hence, when a man with rising choler and bitter denunciation seeks to prevent others who do not see things as he sees them in the realm of therapeutics, from practising the science of healing, either by the administration of drugs, by manipulation of the patient's body, by a system of dietetics, or by the process known as mental healing, he assumes an attitude of intolerance and of persecution that is wholly at variance with the enlightened spirit of the age. Patients die under all manner of medical and so-called scientific treatment. Why concern ourselves more earnestly about the child that dies without medicine than about the child who was given bitter and nauseous potions as long as it could swallow? Or why gird at the man or woman as a quack who does not succeed in rubbing pain and disease away, and laud as a skilful practitioner the man or woman who has experimented in vain in *materia medica* for a remedy that would restore the patient to health?

Surgery claims to be an exact science, and the skill of the man who practises it should be judged according to the most rigid standards of surgical knowledge; medicine, on the other hand, is but a series of experiments, some of which apparently succeed, but many of which signally fail to bring relief and restore the patient to health. Of course certain facts have been established by long juggling in the realm of experiment. Cathartics and emetics and lethal drugs usually do what is expected of them; but beyond this, absolute results cannot be promised. This being true, the doctor who calls any system of treating the sick—except his own—"quackery," and the death of a patient who was not treated according to a certain formula "murder," is manifestly more concerned for the infallibility of his profession than for the public weal. And when he appeals with denunciatory language to the law-making body to place Christian Scientists under the ban of the law, he assumes before the world the pose of the dogmatist rather than that of the humanitarian. The editor of this paper is not a Christian Scientist, nor is he a dogmatist as to any other system of mental or physical healing. Many are helped by Christian Science. As much may be affirmed as to the efficacy of several other methods of treatment. More cannot be affirmed; and of

Digitized by Google

some not as much. They all have their virtues—some, more; some, less.

[Editorial in the *Aberdeen* (Wash.) *Bulletin*.]

It is peculiar how readily a false impression is picked up and assimilated, and how hard a time truth has to find lodgment in the average mind, especially if it pertains to some new doctrine that is opposed to our early teachings and our opinionated prejudices. We do not belong to the Christian Science Church, and have no further interest in it than we have in every other organization which is striving earnestly for the betterment of society and the amelioration of human suffering, but we do feel that it should have the same consideration that is accorded others. It should have the credit of being sincere, and hostile criticism should be withheld until the critic knows what he is criticising. At the lecture last night, Judge Buskirk outlined in an earnest and logical way the plan of salvation as followed by his Church, and there was nothing in his argument that was at variance with the Scriptures. He maintained that theirs was a religion to live by, so that one might be the happier on earth and the more fully prepared to receive his reward in the world to come. Of course he claimed that Christian Science could cure all manner of ills that flesh is heir to, and though as yet we are not ready to discard the services of a physician for the various contagious diseases, when it comes to a question of contentment of mind we feel that this new doctrine will be of inestimable value. If the belief will bring comfort and peace of mind, as the judge assured us, we are for that religion, and want it applied where it will do the most good. Judge Buskirk says that Christian Science, in presenting its case to the world, has the best evidence, the evidence of the witnesses' own experiences. Because we do not find this relief, and because we do not believe this new doctrine, is no reason why we should deny the relief and the belief to others who can get comfort from it. Christian Science has become an acknowledged fact, and it is making itself felt as a living, breathing religion, and there is no doubt in our mind that it is doing and will continue to do much good in the way of restraining men from evil, lifting up dejected mortals, and bringing comfort and peace to many a weary soul; and that is the object of all true religion.

[Editorial in the *East Oregonian*, Pendleton, Ore.]

From the narrow, orthodox standpoint it [Christian Science] may not be a religious doctrine. From the blindly bigoted standpoint it may not be strictly "scientific," but if it answers a call of the human heart and feeds the mind with a satisfying nourishment, it is worthy of a place among the creeds of the world. When you see a neighbor made well by it, through honest, conscientious, sincere practice of simple laws of health which God has given for the use of man, is not that a sufficient reason for looking upon Christian Science with a degree of charity?

There is good in every creed. Like the trees of the forests, the creeds of the world all have some redeeming features. If this one comes to the aid of the sick, the feeble, the suffering, and relieves them, is not it a part of human worship to believe in it and love it and practise it? If any creed promises to make man's condition better now, to-day, here, let us embrace it, for the earth is filled with God's creatures, all of whom have a right to the best that there is in the mind of God and man for them.

We have just as much religion as we get into our week-day life, and not a whit more.—J. R. MILLER.

THE LECTURES.

NAPA, CAL.

Hon. Clarence A. Buskirk of St. Louis addressed a large audience at the Hayes Theater Sunday afternoon [Feb. 10] on the subject of Christian Science, and his discourse proved to be a most interesting one. Hon. Theo. A. Bell presided, and in introducing Mr. Buskirk said in part,—

It is perfectly proper for me at this time to express my hearty sympathy with the objects of the Christian Science Church. Its aims are such as to challenge our deepest respect and admiration, and we cannot in justice refuse to commend its works. Not being a member of this Church myself, I am unable to speak with that accurate knowledge that the subject demands; but a general acquaintance with its purposes and the basic teachings upon which the Church is reared, impels me to say that it is most worthy of our endorsement and of our active co-operation.

We live in an age of wonderful discovery, and of insight into the spiritual workings of the universe. Much that was once regarded as occult, mysterious, and supernatural, is now found to rest upon laws as certain and unchangeable as the laws that govern the procession of the seasons, the alternation of day and night, the ebb and flow of the tides, or the revolution of the spheres. We are molding into exact sciences the intuitions of the soul. As a Franklin successfully aspired to bring down the lightning from the clouds to serve mankind, so does a Mrs. Eddy convert the flashes of Soul into an eternal source of light and power. The formulation of a newly discovered law and the reduction of it to a working basis, is the greatest service the human mind can perform. It matters little whether you catalogue a law as spiritual or as natural, so long as it serves the practical purpose of improving human conditions. In addition to physical energy and mental strength we undoubtedly possess, each and all of us, the power of an immortal soul, and we cannot learn too soon how we may best use that power to fill our own lives, and others', with contentment and health.

A tree is to be known by its fruits; and Christian Science, by its works, has already won a commanding position in the world of thought and action, and if we decline to be frank and fair we do so to our injury and loss. Let us open our minds to the reception of all truth, that we may learn and profit thereby.—*The Napa Register*.

HAVERHILL, MASS.

Mr. Edward A. Kimball lectured on Christian Science Feb. 14. He was introduced by John M. Harrison, who said in part,—

The world concedes to-day that the best man who ever trod the globe, the wisest man, the man who knew more about the universe, the creator of it, God, His laws which govern it; who lived closer to God and manifested more of His power, is Jesus of Nazareth, the Christ. Yet how was he treated in his time, and how were his teachings received? He was ridiculed, defamed, persecuted, and finally subjected to the greatest indignity of the age, nailed to the cross between two thieves, and the charge was blasphemy. From that day to this, a like fate, in substance, has befallen each of his followers who has been good enough to gain a higher perception of Truth and brave enough to proclaim it to the world. Hence, to those of us who are familiar with her teachings and know their import to humanity, it is no strange thing that the Discoverer and Founder of Christian Science has been so misrepresented and maligned in this her own age. It is but history repeating itself.—*Correspondence*.

BEAUMONT, TEX.

Mrs. Sue Harper Mims lectured for us Feb. 15, before a fair-sized audience in the Y. M. C. A. Auditorium. She was introduced by Hon. Hal W. Greer, a prominent attorney, who said in part,—

I am not a devotee of Christian Science, but I hasten to add that I wish I were good enough to be one, for those I know are all good people, whatever may be said of their opinions and their faith. To my mind they are certainly doing no harm, and every one of average intelligence knows they have accomplished and are accomplishing a great deal of good. Every progressive thought has been confronted by two great obstacles; one is prejudice and the other is contented conservatism, sheltered under centuries of custom. No one can convince prejudice, because it is the antithesis to reason and logic; conservatism may be convinced, but is always a follower, never a leader in the advancement of the human family. From my reading, however, I am convinced the world has advanced in thought, in enlightenment, in true science, in mechanics, and perhaps in art, more rapidly within the last one hundred years than during the preceding thousand years. New philosophies, new theories, and new schools of thought have made wonderful strides against prejudice within the last few decades; and it is not surprising that we should be told Mind controls matter or the physical essences called the body.

Whatever else may be said of Christian Science, every man and woman of average intelligence knows it has two highly commendable qualities, or rather, characteristics. First, you never hear its members criticise, detract from, or defame any individual, either as a unit, or in the aggregate, nor any sect or denomination or school of thought differing from them. This in itself is a virtue as attractive as it is unusual, and they are often sorely tried under the vituperation and ridicule cast upon them. Second, every moderately well-informed person in this audience can call to memory some marvelous cures they have wrought upon people whom the regular or *de jure* scientists have pronounced incurable. In fact, without medicine, without surgery, without violent rubbing or the usual methods of applied science, they have turned despair into hope and disease into health. Considering these two characteristics, I, for one, fail to appreciate and understand the bitter opposition they encounter.

The lady who will proclaim their tenets to-night comes from a splendid old Georgia family. She is a lady of culture and refinement, and I feel safe in saying you will have an hour's entertainment which you will remember with pleasure. Mrs. Mims is sister-in-law to the late Chief Justice Asa H. Willie of Galveston, a man who was universally respected by all who knew him, and was loved by every lawyer in this State.—*Correspondence.*

MANSFIELD, O.

The Y. M. C. A. Auditorium was well filled Sunday afternoon, Feb. 24, by those anxious to hear Judge William G. Ewing lecture on Christian Science. He was introduced by Robert E. Hutchinson, attorney-at-law and a member of the Ohio Legislature, who said in part,—

In view of the fact that I am not a Christian Scientist, I was somewhat surprised when I was requested to preside on this occasion. However, I accepted the invitation without reluctance; for, while I am not fully advised as to the teachings of Christian Science, I have observed some of the benefits that have accrued to its disciples; and I know, as do all of you, that any one who will conscientiously study and endeavor to practise the lessons taught by the lowly Nazarene cannot go far wrong. These people are Christians, serving the same God and looking to the same Mediator as other Christians. They are not peculiar, more than was Jesus Christ when he proclaimed the gospel of love. They are not heretical, more than was Martin Luther when he posted his ninety-five theses on the door of the Wittenberg cathedral. They are not radical, more than were Calvin and Knox inveighing against the established Church and scattering the seeds of the Reformation. Attracting, as it does, some of the brightest and most pious people in all Christendom, Christian Science cannot longer be denied respectful and intelligent hearing; and I therefore take pleasure in introducing to you this afternoon Judge William G. Ewing of Chicago, who will address you on this subject.—*Correspondence.*

PICTURE OF THE MOTHER CHURCH.

The picture of The Mother Church which The Christian Science Publishing Society now has for sale is a half-tone reproduction, 12 x 15 inches in size, of a view giving the St. Paul Street frontage and Falmouth Street side.

The picture is mounted on a white mat, 21 x 25 inches, and will be sent to any address in a mailing-tube for fifty cents a copy. A dozen copies will be sent to one address for $4.50. Souvenir postals of the same design as the large picture are for sale at twenty-five cents per dozen.

Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

ADMISSION TO MEMBERSHIP

The next admission of candidates to membership in The Mother Church will be June 4, 1907. Applications must be in the hands of the Clerk of The Mother Church on or before May 20, 1907. Application blanks may be had by addressing William B. Johnson at the church edifice, Falmouth, Norway, and St. Paul Streets.

IMPORTANT NOTICE TO BRANCH CHURCHES.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, a report of its total membership (not a list of its members), as on record April 1, 1907, to William B. Johnson, Clerk of The Mother Church, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. ***Beware of counterfeit letters.***

A GRAVE RESPONSIBILITY.

In an appeal to Governor Campbell of Texas for a veto of Senate Bill No. 26, recently passed by the Legislature of that State, the Christian Scientists say in part:—

The purpose of a medical practice act should be to regulate the practice of medicine. When it attempts to go beyond this by subtle wording, or improper definitions of words, the bounds of propriety are overstepped, and the law becomes tyrannical. The objections set forth in this paper are not against the one-board medical bill or any just medical bill, but against the wording of section 13 of the bill, which reads as follows: "Any person shall be regarded as practising medicine within the meaning of this act who shall publicly profess to be a physician or surgeon, or shall treat or offer to treat any disease or disorder, mental or physical deformity or injury, by any system or method, or to effect cures thereof and charge therefor, directly or indirectly, money or other compensation." It is obvious that this wording is designed to include healing the sick by any method whatsoever, even the method of prayer or purely spiritual ministration. It is to that feature of the bill that this protest is especially offered.

Thousands of the citizens of this State hold the conviction, based on both experience and religious teaching, that healing the sick by spiritual means is the most effective way known to humanity. It is part of their religious belief and practice, and any infringement of their rights in this direction is directly against the provisions of the Constitution. Among no people is the practice of healing the sick as well as reforming the sinner by purely spiritual means, of greater consequence in the exercise of their religious faith than among the great body of religionists known as Christian Scientists. The fundamental teaching of their Church is that the same God who heals the sinner of his erring ways, also can and does restore the harmony of the body. Thousands upon thousands of cases where health has been restored through the agency of prayer after all human means had failed, can be cited in support of these views.

When the Constitution declared that the State should have the right to regulate the "practice of medicine," the word "medicine" was used in its ordinary meaning. The practice of medicine is ordinarily understood to be the administration of medicine or remedies for the cure or alleviation of diseases. (See Anderson's Law Dictionary.) When the Constitution has used a word in its ordinary meaning, the Legislature has not the power to define the word as is done in section 13 of this bill. It is plain that the framers of the Constitution had in mind the meaning of the word as it is ordinarily used, and when permission was given to regulate the practice of medicine, permission was not given to define the word or to use it differently than it is ordinarily used, and as it was understood by the framers of the Constitution. Therefore the act of defining the practice of medicine as it is defined in section 13 of the bill, is unconstitutional, and legislative enactment cannot make that the practice of medicine which is not the practice of medicine. (See Holley *vs.* State, 14 Ct. Cr. App.; *ex parte* Brown.)

The only claim upon which the medical profession can seek to justify its demand for legislation which would in effect give it a monopoly of the ministry to the sick, is that it is a tried, certain, and successful system; not only scientific and exact in its theory, but also uniformly successful in its practice. That the medical practice of to-day is not the medical practice of ten years ago or even one year ago, and that no physician expects that the practice of to-day will be the practice of ten years or even one year hence, would seem to dispose of all claims to a scientific foundation for the present-day system of medicine. That this practice is uniformly successful, or even that it is successful in a large majority of cases, is not claimed by physicians themselves; and in view of the large number of diseases which they class as incurable, it would be useless for them to claim anything of the kind. Not only is the practice of medicine variable in its results on different persons, but still another element of uncertainty is injected into the situation through the variation in quality of the drugs used. *Apropos* of this point, we cite the following statement, taken from an advertisement which appears in one of the leading American medical journals. Parke, Davis & Company is one of the largest, most reputable, and most widely known drug manufacturing concerns in the country, therefore it is fair to assume that the statement quoted is one of fact. Under the heading, "Shall the Doctor Trust to Chance?" they say:—

It is a fact—not so well known to the medical profession as it ought to be—that *there are upon the pharmaceutical market to-day quantities of so-called therapeutic agents whose medicinal value is essentially a matter of conjecture.* Some of these preparations are wholly or partly inert; others are abnormally, dangerously potent—conditions due primarily to variation in the active constituents of crude drugs, and secondarily to the fact that certain manufacturing pharmacists cannot or will not standardize their products.

When a Legislature enacts a law upon the request of the physicians,—for there is no popular demand for such a law,—turning over to them the entire care of the sick, it has taken upon itself a grave responsibility; and if the statement of this old and reputable firm of manufacturing chemists is true, it is difficult to say where this responsibility ends. Even if such a law as Senate Bill No. 26 were constitutional and just, any body of men might well shrink from the responsibility which its passage entails.

ARCHIBALD MCLELLAN.

TRUTH'S TRIUMPH.

In the earthly history of our Lord there is the record of one signal triumph,—his entry into Jerusalem accompanied by his disciples and a great throng of pilgrims who strewed the way with palms, while their loud hosannas roused the whole city and led its people to ask, "Who is this?" Although nearly two thousand years have rolled by since that momentous occasion, it is not forgotten, and the Master's brief triumph is recalled by Christian Scientists as marking an outburst of gratitude for the blessings received through his ministry. As we read this story we instinctively contrast his triumph with that of the Roman emperors,—the thousands of captives following the imperial chariot and the loud acclamations of the populace because thousands more had been slain. In the procession which followed Jesus of Nazareth on that eventful day there were doubtless the blind who through him had received their sight, the lame who could walk, the dumb singing his praises, and perchance Lazarus, whom he had so lately called back from the tomb,—a multitude to whom he had brought freedom from sin, disease, and death by his demonstration of the omnipotence of Truth.

We may well ask what the result would have been if all who had been healed by Christ Jesus, and who strewed his way with palms, had stood by him in the judgment hall where he faced alone the opponents of Truth a few days after his triumph. If all who have remembered Jesus since that day could but have known that the truth for which he stood, and by which he healed the sick and the sinful, has never been absent from the world; that the Christ has been with us "alway," even as he said, would not Christian history have been written in letters of light? But there are unnumbered thousands who know this to-day, and because of their knowing rejoice and give thanks. When the call came to lift again the standard of Truth, our revered Leader heard and obeyed, and those who have been set free from sin and disease know the divine Principle which heals and the spiritual law by which their freedom is gained and maintained. Mrs. Eddy's discovery of the Science of Christianity has placed Christian healing upon a permanent basis, and though the human mind may resist the truth, may even deny its power, as in Jesus' time, the spiritual enlightenment inseparable from Divine Science is fast overcoming prejudice and bigotry and preparing the way for the universal recognition of the healing and saving power of Truth.

Digitized by Google

The healing of the sick and the sinful is inseparable from Christ's Christianity. With the great Teacher it was the constant going forth of the Life which animated him. We read in the Gospels that at the close of the triumphal entry into Jerusalem he went into the temple and resumed the healing work which was the proof of his Messiahship, and which led to the worship of God in spirit and in truth.

That Christian Science links us anew to the Master, bringing as it does the proof of Immanuel,—God with us,—thousands bear grateful testimony. One of these was a woman who in an hour of deepest sorrow sought healing through her pastor, only to be told that it was not for us today. A little later she found this blessing through one who for years had called himself an agnostic, but who had found the Christ through Mrs. Eddy's teachings. When he said, with the deepest conviction, "I *know* that Jesus lived and did what the Bible says of him, for in Christian Science I have learned of the Principle of his work and have daily proofs that the truth can do all that he said it would do," a new vista was opened up, and it was not long until the weary seeker for Truth echoed these words and rejoiced in telling their import to all who would listen.

As one after another accepts the message of Christian Science and is healed, we are reminded of that great multitude which John prophetically saw,—those who were clothed with white robes, and with palms in their hands, who ascribed "salvation to our God" and joined in the eternal triumph of Truth. ANNIE M. KNOTT.

THE TRUE SELF-IDENTIFICATION.

Born, not of blood, nor of the will of the flesh, nor of the will of man, but of God.—ST. JOHN.

IN the wondrously beautiful passage which opens the third chapter of the beloved disciple's First Epistle, he refers to true self-identification as a possible, present experience. "Beloved, now are we the sons of God." It is the recognition of individuality as a divine idea, and the teaching of Christian Science lays great emphasis upon the vital need of this self-recognition, because of its practical relation to the solution of the least as well as the largest problems of human life.

Though much given to the apotheosis of personality, until it would "bestride the world like a colossus;" and though still lending a willing ear to the mesmeric assurance "Ye shall be as gods," material sense readily accepts the proposition that man is a sequence, an unfinished product of evolution; that he is beholden to heredity, environment, natural law, fate. This conclusion of world-philosophy has molded general mentality until men have acquired the habit of obsequiously linking themselves to all sorts of undesirable conditions and things. They identify the "me" with the weakness rather than the strength, the evil rather than the good, of their antecedents, as well as with present susceptibility to the sickness and death from which they long to flee, and to the sin which at a given moment they may either love or hate.

That we are unlikely to rise above the level of the things with which we closely associate ourselves in thought and habit, is the universal teaching of human experience, and even more surely do we become at-one with and subject to that with which we identify ourselves in substance and nature. The facts of human life thus bring the metaphysical oneness of cause and effect into demonstration, and make plain the moral hazard of consenting for a single moment that man is a product of aught but infinite good. Christ Jesus always declared that he was from above. He identified himself with the ideal, the highest, even God, and this it was that gave sure promise and prophecy of the glorious triumph of that first great Easter Day. Had he associated himself in any sense with materiality, had he recognized the intrusive and presumptuous authority of the flesh, the asserted laws of human procreation, or the generally accepted propriety and power of heredity and animal impulse, he certainly could not have achieved that consummate overcoming which won for mankind their richest inheritance, the Easter assurance and joy.

To perennially honor and declare our true individuality, regardless of all sense-seeming and seduction, is to lay hold on that divine idea which is mighty to save. It is to have part in the first resurrection, and it is to fulfil our Leader's injunction, when she says, "Rise in the strength of Spirit to resist all that is unlike God. He has made man capable of this, and nothing can vitiate the ability and power divinely bestowed" (Science and Health, p. 393).

This is the practical, immediate, and continuous appeal of Easter's glad song, "The Lord is risen." This is its meaning for us, that the ideal of an exalted, spiritual aspiration may and shall become transmuted into concrete spiritual supremacy; that henceforth we shall know no man after the flesh, but identifying selfhood with that alone which is of God, find our Easter triumphs ever multiplying as we arise with Christ. JOHN B. WILLIS.

LETTERS TO OUR LEADER.

[Telegram.]

Denver, Col., March 17, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—The congregation of First Church of Christ, Scientist, Denver, Col., desires to express its love and its unwavering allegiance to you as its divinely inspired guide. Through the injustice of the present persecution of you and your work, people are awakening to the truth of Christian Science, which you have discovered, and are exclaiming with the Samaritan woman, "I perceive that thou art a prophet."

And "we ourselves glory in you in the churches of God for your patience and faith in all your persecutions and tribulations that ye endure."

Loyally,

FIRST CHURCH OF CHRIST, SCIENTIST, Denver, Col.

Philadelphia, Pa., March 14, 1907.

Beloved Leader:—A long time ago you wrote me in one of your letters that you hoped I might be spared the cup which you had been given to drink. Dearest friend and counselor, I have been spared this cup because of the loving sacrifices you have made, but now I wish that I might, even in the smallest way, share with you this hour. I am anxious to do your slightest bidding, to go anywhere, to do anything that you may ask or require. The love which flows to you from the hearts of the countless thousands you have saved, helps to show the truth of your prediction: "Clad in the panoply of Love, human hatred cannot reach you" (Science and Health, p. 571). Try me and see if I cannot serve you in some way. Mrs. Miller joins me in boundless love. Ever loyally,

ALBERT E. MILLER.

Passaic, N. J., March 5, 1907.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—We, the members of First Church of Christ, Scientist, of Passaic, N. J., in annual meeting assembled, lovingly tender you our gratitude for your selfless life and your wonderful writings, which have made it possible for us to demonstrate unity of thought at this meeting in the election of Readers and church officers. The Christlike spirit with which you have met the recent persecutions show us that you are fulfilling the Scriptural

Digitized by Google

statement, "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you." The way for us has been literally through fire (purification) and water (over error), leading us at last to discern somewhat of the spiritual idea, and God as infinite Person. Our prayer is that we may be obedient to this high behest, and meekly but mightily demonstrate the power of God to heal sin and sickness through the understanding of Christian Science. We rejoice that some have been healed at our meetings, through the reading of the Bible and "Science and Health with Key to the Scriptures" of which you are the author. We also give thanks for signs of instantaneous healing in our midst, through Christian Science treatment.

Our desire is that we may discern more of Truth's appearing by casting out error and healing the sick.

In constant love and gratitude,

First Church of Christ, Scientist.

MAYME M. HARMS, *Clerk.*

Omaha, Neb., March 10, 1907.

Beloved Leader and Guide:—We love you and are deeply grateful for your revelation of the infinite understanding of God and His universe. We recognize that you, so good and pure, did pray aright, and that the answer to your prayers was Christian Science, the inspiration from Truth and Love which has lifted thousands upon thousands from sickness to health, sin to purity, and darkness to light. We desire to follow you, beloved Leader, in overcoming hatred with love, and we are striving to realize that there is no evil mind to injure the Truth, its Revelator, or those who are being reviled with her in their stand for Christ. It is our prayer that God may bless our inspired Leader and dear Teacher, who has so patiently and bravely guarded and guided our sacred Cause, who has shown by example and precept how to live aright and "to find Christ, the real man and his relation to God" (Science and Health, p. 316).

Tender love from the children, officers, and teachers of the Sunday School of First Church of Christ, Scientist, Omaha, Neb. EVA W. MURTEY, *Superintendent.*

Wilmington, N. C., March 11, 1907.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dearly Beloved Leader:—First Church of Christ, Scientist, of Wilmington, N. C., sends to you this day, and every day, a message of boundless love and gratitude, together with the assurance of renewed endeavor to aid you in our humble way, in your holy work of breaking the fetters of a sin-bound world. It is written, "And the serpent cast out of his mouth water as a flood after the woman, that he might cause her to be carried away of the flood" (Revelation, 12 : 15). To-day is this prophecy being fulfilled in our midst, and the dragon is trying to send forth a flood of falsehoods to drown "the woman." But no weapon that is formed against the "Holy One of Israel" shall prosper. Again, it is written: "What if the old dragon should send forth a new flood to drown the Christ-idea? He can neither drown your voice with its roar, nor again sink the world into the deep waters of chaos and old night" (Science and Health, p. 570).

In this sweet promise are all of your loyal followers resting, while pressing "toward the mark for the prize of the high calling of God in Christ Jesus."

Lovingly yours,

BOARD OF TRUSTEES.

First Church of Christ, Scientist, of Wilmington, N. C.

Cambridge, Mass., March 3, 1907.

Dear, Dear Mrs. Eddy:—It has been in my heart for the last four weeks to express to you my great gratitude for the chapter in your "Miscellaneous Writings" entitled "Love Your Enemies." Until this morning I had not found words to give adequate expression to my thankfulness for the living example which your life affords of the truth applied to these twentieth-century problems, to which any one can turn for help and encouragement. This Sunday morning, impelled by my appreciation of your simple and yet profound explanation of a text which had always sounded to me hypocritical when it came from my own lips, I no longer hesitate to tell you that to understand that to "Love thine enemies' is identical with, 'Thou hast no enemies,'" has changed my life of swinging between doubt and calm trust into one continued song of praise and thanksgiving to God for giving us His Son, Jesus the Christ, to manifest to the world that divine "Love is the liberator" (Science and Health, p. 225). And now, as I go about my every-day tasks in the presence of the seething waves of human opinion, I find in your words, "The only justice of which I feel at present capable, is mercy and charity toward every one, . . . taking special care to mind my own business," the "peace, be still" of the Master. How could I feel other than grateful to you, our beloved Leader! Most sincerely,

SUSIE HULL HIBBELER.

Minneapolis, Minn., March 4, 1907.

Mrs. Mary Baker Eddy, Concord, N. H.

Dearly Beloved Leader:—My heart goes out to you today in most tender and grateful love, as the blows of evil intent repeatedly beat about your path. The sense that takes cognizance of these unwarranted and inexcusable attacks cries out in righteous indignation at the culpable blindness and maliciousness of mortal belief, that will not even be just. But, though mortal mind may assume a thousand guises of evil or of good, or of both combined, it can never hide one ray of God's benignant light of Love, which you are reflecting to a sin-beclouded world. When I read your answer to *McClure's*, I felt as if I had never half appreciated you before. Those terse and clear-cut statements of facts shine out as beacon-lights above the clouds of falsehood, and illustrate the all-compelling power of Truth. And then appeared the wonderful revision of our precious text-book, illuminating afresh the Word of Life, Truth, and Love, which you have proclaimed; shedding new light on darkened human paths, and showing how you were spending your time in Godlike service to mankind, even while the missiles of malice were falling thickly about you.

I am not trying to tell you in words, dearly-loved friend and guide, how thankful, how grateful I am. Attempts to do that are always flat failures, but if any loving thought or appreciative word of mine, or any act of helpful service to humanity that I may render, can be of the smallest comfort or assistance to you, may I be ever ready and prompt to so indicate my loyal love and thanks. I have just returned from a long journey to the Republic of Mexico, where I gave two lectures, one in the capital city, and the other in San Luis Potosi, where are located the only duly authorized organizations of our denomination at present existing in Mexico. These lectures were well attended, and in both instances close and respectful attention attested the genuine interest already felt there in the blessed message we have to give. My lecture was printed almost in full by the *Mexican Herald*, nearly a page being devoted to the report. You have a large number of earnest, devoted followers in that sunny land, who honor and rejoice in your leadership and who are faithfully "breaking the bread" to the hungry hearts under their care.

With ever-growing appreciation and tender love,

Your student,

MARY BROOKINS.

AMONG THE CHURCHES.

PENSACOLA, FLA.

The Christian Scientists of this city have united, and the first service since the amalgamation of the two churches was conducted last night [March 4] in the Armory Hall, and largely attended by those of the faith. Heretofore there have been two churches in the city, First and Second, but recently it was decided to consolidate the churches, and this was done last night. A number of residents of this city are members of the church.

Montgomery (Ala.) *Advertiser.*

WILMINGTON, N. C.

A beautiful model, showing in fine detail the perfect architectural lines of the new Christian Science church which is soon to be erected in this city, has been received and placed in the Christian Science Reading Rooms, where it has been greatly admired by all those who have seen it. It is the plan at the present time to have work begin on the new building some time during the present month. The church will be two stories in height, the rooms on the first floor to be used as Reading Rooms and for other purposes, while the auditorium will be on the second floor. The edifice is to be built of Indiana limestone. The seating capacity of the auditorium will be about five hundred.

Wilmington Messenger.

BATAVIA, N. Y.

First Church of Christ, Scientist, Batavia, has purchased property as a site for a church. The society closed a contract this morning [March 12] whereby it becomes the owner of the Haywood residence property at 217 East Main Street. The house will be fitted up for church purposes, and later, perhaps in two or three years, the society will erect a fine edifice there. All of the partitions on the first floor of the present house will be removed and an auditorium will thus be made with accommodations for about two hundred people. Possession will be given to the church people on May 1. The property has a frontage of eighty-five feet and is two hundred and forty-nine feet deep.

Christian Science services have been held in Batavia about twelve years, but it was not until four years ago that the society was incorporated. Its present membership is about forty, but it is said that the average attendance at its services is nearly seventy.

Batavia Daily News.

DOVER, ENGLAND.

On Wednesday evening [March 6] the recently formed Dover Christian Science Society met at Arthur's Rooms, St. James' Street, for their "first monthly testimony meeting" as to the value and effectiveness of Christian Science. Major Standen, Army Service Corps, conducted the meeting, others present being Captain Wilkinson, late of the Royal Engineers, Major Bainbridge, Messrs. Buchanan, Woollett, P. E. Moring, and a number of ladies. The hall was well filled. These testimony meetings are devoted all over the world to the purpose of listening to and telling of what Christian Science has done, physically, morally, and spiritually. The first Christian Science Church was formed in 1879. There are now about seven hundred Christian Science churches, and over three hundred societies similar to the one which has just been inaugurated in Dover.

Captain Wilkinson said, "I should like to testify to what Christian Science has done for me. It was about three and a half years ago that it first came to me, and at the time I was a very severe sufferer from eczema in its worst form. I don't know if any here have suffered from this complaint. I can hardly imagine anything more terrible. I had practically no hope of ever being free from it. It is, I suppose, one of those diseases which, if not quite incurable, are practically so. The prospect for me was altogether hopeless. I am glad to say, thanks to Christian Science, I am free from this terrible disease. My healing was slow, and I am really glad now that it was so, because it made me strive all the harder. If we are ready for the healing we get it quickly; if we are not, we have to get into that state of mind in which we deserve the healing. As my consciousness became imbued with the truth, I got the healing. Christian Science helped me physically on other occasions. In fact, one finds it a very present help in time of trouble, because it can be applied wherever one is. Morally it would be very hard for me to say what it has done for me. Perhaps I owe more to it in this respect than any other. It has given me a religion in which I have not simply 'belief.' It is a case of understanding and proving. One cannot be said to believe in mathematics. We can give proof to them, and there is an end to it. So it is in Christian Science. It is a demonstrable religion.

"At the time I became a Christian Scientist I was, as many people are, an agnostic. I did not believe in anything. When I came to Christian Science I discovered it was something which could be proved, in which belief was not necessary. The light thrown on the Scriptures is marvelous, and especially on the teachings, life, words, and work of the Master. It is very hard to express the gratitude one feels for such a marvelous teaching. It seems to remove all fear. We know we have nothing to be afraid of, for God is Love. Our future is what we care to make it. If we stick to Principle everything will go right; if we depart from Principle, everything will go wrong. Thus, if we act up to our higher understanding of God, we know we have absolutely nothing to fear."

Mrs. Standen said, "I am very glad to have the privilege of expressing my gratitude for what Christian Science has done for me, and for all in my family. It has brought me happiness. My family have never had anything else but Christian Science treatment. In trouble we have had strength to rely on God alone, and He has never failed us. It is a joy, too, to be able to help others, and I know that in giving them a slight understanding of Christian Science I am doing the best that can be done. I am grateful to God that my eyes have been opened, and that through Christ Jesus we are shown the way to go. I also thank Mrs. Eddy for her life of unselfish devotion, and for bringing the Comforter—Christian Science—so clearly before the world. My deep and earnest hope is that I may know more of Christian Science, and live it more truly every day."

Mr. Buchanan said, "I should like to testify to the many benefits I have received from Christian Science. Some three years ago I had an accident which resulted in concussion and blindness in one eye. By material means I was partially cured of the blindness, but the result was paralysis of the lower half of the body. I went to a practitioner in Christian Science, and he helped me. I am now practically cured. At first it was difficult for me to understand; I was always having attacks in the head. Now I go without any fear of having any. Also my eyes have got much better. I am grateful for what Mrs. Eddy has done for me." Others also testified to the benefits they had received from Christian Science.—*The Dover Express.*

Each of us needs at times to have a helping hand stretched out to him or her. But if it is done in a spirit of condescension it will be better never to attempt it. It is almost as irritating to be patronized as to be wronged.

THEODORE ROOSEVELT.

TESTIMONIES OF HEALING.

At the close of a year of school work, my gratitude for Christian Science is beyond measure. Well do I remember the time when four o'clock would find me thoroughly discouraged about my work and too weary physically to do anything but go home and rest. Then came this new understanding of God, gained from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the joy of making it practical. To know that the Divine activity which brings success and gladness is ever available and ever applicable, and that the utilization of this activity does away with useless endeavor and misdirected effort, was a wonderful blessing in my school life. By knowing that "in the Lord Jehovah is everlasting strength," and that "the highest and sweetest rest, even from a human standpoint, is in holy work" (Science and Health, p. 520): by recognizing that I was a necessary, individual factor in God's universe, and could do intelligently, easily, and joyously whatever was right for me to do, my cloud of weariness began immediately to lift.

One of the most difficult of school problems is usually the maintaining of discipline. Not that there should exist a solemn stillness, produced by fear, but a controlled activity, wherein each pupil is self-governed. It means to have each member of the school actuated by a love for the right, and obedient to his highest sense of right, so that all will be working together in harmony,—no self-will, no interference, no self-seeking, but an earnest, active desire for the manifestation of good. I was led to see that the children were not to obey me personally, but to obey divine Principle; that there was but one right way for me, as well as for them, and that each one possessed the ability to discriminate and to decide aright, as well as the power to follow out this decision. The thought of the universal gift of wisdom and intelligence has also been of great benefit. The pupil could readily understand that what is true for one pupil is true for all, and that this was applicable to the most difficult problems.

We had short morning talks along these lines, and the children (from eleven to thirteen years of age) made splendid efforts and progress toward self-control, individual thought, and individual work. We kept before us constantly the idea of the perfect school, where each member was governed by right, and was strong, courageous, and loving, where dishonesty, evil-speaking, and criticism were shut out, and where all were filled with a sense of love and helpfulness. The result of this regular work has filled me with thankfulness, for the strain attendant upon thinl ing I had to control these forty restless boys and girls has disappeared. The fear, the fret, and the dissatisfaction has given place to a sense of increasing freedom, both for the children and for myself. The revealing of individuality and self-reliance has been marked in the pupils, and I trust in the teacher, for the promise is, "They shall be all taught of God."

C. F. MacKay, Fort William, Ont.

I wish to testify to what Christian Science has done for my daughter. About two and a half years ago, when she was thirteen years old, she had a severe illness. After she was able to go out a little, she began to complain of her back. Our doctor pronounced it rheumatic trouble, and in a few days it developed into fever and a lung trouble. This kept her in bed for three months and left her with a severe nervous disorder. Shortly after getting up from the fever, the heart became affected and she was ill about three months, during which time, in spite of all that medical skill could do, she grew worse. Kidney disease then developed, and for seven weeks she was in a distressing condition. Three different physicians treated her, and each pronounced her incurable. At last the doctor refused to respond to a hurried call, saying he could do nothing for her. At this time every appearance seemed to indicate that the end was near, but, thank God, we then thought to call in a Christian Scientist, who had been recommended to us by a dear friend. It was done only for the purpose of getting spiritual comfort and prayer for our child, as we had no hope for anything more. The first night after this treatment she was able to lie down and sleep, and from that time on she gained steadily and rapidly, until she was pronounced well and strong; and she has remained so. Her former physician called recently, as he was in the neighborhood, and was dumbfounded to see one whom he had thought was dead looking so well. We can never express our deep gratitude to God, to our dear Leader, and to Christian Science for the life of our child.

James Dalton, Bliss Corners, South Dartmouth, Mass.

I wish to add my word to the volumes of testimony telling of the works of Christian Science. It is now six years since my little daughter, then two and one-half years old, developed a severe throat trouble. It proved to be a very stubborn case, and was followed by another illness of a most serious nature. Our physician did everything in his power, but the child lay paralyzed and unconscious and with a high fever. At the end of the second week she was losing strength fast and there was no apparent change except for the worse. I became perfectly discouraged, and my brother then begged me to try Christian Science. I had been interested in it for some time, and had read Science and Health, but would not have had the courage to put aside all material means had I not felt desperate. My husband was willing to do anything I thought best, so we explained our feelings to the doctor and my brother went at once for a Christian Science practitioner.

Almost before I knew it relief came. The child's room was cleared of all material remedies, and a jacket that the doctor had said she must wear for months was removed. The Scientist said, "Just make her comfortable." The day following the first treatment the nurse was dismissed. The work of Divine healing went steadily on, each day showing marked improvement, and no one who has not been through such an experience can realize the thankfulness and joy we felt when motion came to the helpless side, and when she could drink again without difficulty. She soon learned to walk, and although the power of speech was slower to return, all harmony was soon realized, and treatment discontinued at the close of the third week. She was left with no ill effects, and as we said at the time, she was peacefully, satisfactorily, and perfectly healed and has stayed so. I hope this may give courage to some doubting hearts, that they may turn to Truth in their hour of need.

Florell T. Atwater, Lockport, N. Y.

In the third chapter of Jeremiah we read, "And I will give you pastors according to mine heart, which shall feed you with knowledge and understanding." Who can doubt that this prophecy had its fulfilment when our divinely inspired Leader appointed the Bible and Science and Health to be the Pastor of the Church of Christ, Scientist, throughout the world? The steps by which she was led to this decision are told in her "Miscellaneous Writings," on pages 158 and 159. Not only are the Bible and Science and Health our Pastor at the Wednesday evening and Sunday services, but they serve as our guide,

Digitized by Google

comforter, and friend whenever and under whatsoever circumstances we may turn to their pages, proving Mrs. Eddy's declaration to be true, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I recall an instance of instantaneous healing several years ago which was effected by reading one sentence in Science and Health. I had awakened in the morning with unpleasant symptoms of illness, and while solicitous members of the family gathered around the bedside, my seven-year-old son, who has often experienced the healing power of Christian Science, handed me the "little book," Science and Health, which I opened, read one statement of truth, and was healed. All symptoms vanished then and there.

Although no words can express all the blessings and benefits I have received through the better understanding of God as taught in Science and Health, this was one of the most convincing and uplifting experiences I have had. In this case of illness human sympathy might temporarily have soothed the afflicted sense, but it could not have accomplished the result of the inspired thought, which was like an angel,—"a message from Truth and Love" (Science and Health, p. 308),—although this time not entertained unawares, as I was conscious of the holy impartation. Who can doubt that the inspired teachings of the Bible and Science and Health will forever feed us with knowledge and understanding, as Jeremiah avers?

MAZIE J. ALEXANDER, Chestnut Hill, Philadelphia, Pa.

In 1896 Christian Science found me a physical wreck, with no hope of receiving any aid from mortal man. Nine years previous to that time, through a fit of impatience I lifted a heavy weight, which two physicians said produced a severe injury, and for this trouble they had me wear a supporter for eight years, at the end of which time I had become very nervous. After this trouble began my eyes gave way; I could neither read nor sew, nor could I go in bright sunlight or stand over a heated stove. I was tested by three experienced oculists, two of whom pronounced the trouble beyond help, and warned me that I might expect to grow worse as years passed by. I was a young lady at the time, living on limited means, and during the preceding nine years the greater part of this had gone to physicians, although they had been very kind to me and considerate in their charges. Their sentence cast a very gloomy shadow over me; the thought of life-long dependence on others, and possible blindness in the end, was anything but pleasant to contemplate.

In this condition I earnestly besought God to spare my eyes, and in answer to my prayer He sent me Christian Science. The first letter written to a practitioner was penned by a friend; the next contained a few lines written by my own hand; at the end of four weeks I could read two hours with ease, and at the expiration of ten weeks I was a well woman, every disease having yielded to Truth. I now use my eyes just as I wish, both day and night. Would I not be very unworthy if my heart did not go out in gratitude to our Leader, Mrs. Eddy, who by her faithful trust in God has made it possible for me to know Him as my Physician? The physical healing is small when compared with the spiritual uplifting, for to know God is "life eternal."

MISS NANNIE FRIZZELLE, Snow Hill, N. C.

I first heard of Christian Science in 1886. One of my children was suffering from a nervous disease, which three well known physicians in Denver had failed to cure; in fact, the child had grown steadily worse. One day a friend told me of Christian Science, saying that this method of healing was a mental process, and that no medicines were given. She also told of the cure of cripples, and many others, all of which seemed strange to me. I was advised to take my child to a practitioner, and being discouraged with *materia medica* I readily agreed to try Christian Science, little dreaming that it was the Christ-cure until so informed by the practitioner. It is needless to say that the child was healed; indeed, after the first treatment she never had another paroxysm, and they had previously lasted for hours. Rejoicing over the child's recovery, I decided to try the treatment for myself, and I was healed of severe headaches and bowel trouble from which I had suffered for years. My physical healing, however, was the smallest part; the worry, fear, and despair were removed, and I was a new creature. I was firmly convinced that at last I had found the truth for which I had so long been seeking. I have since been enabled to overcome disease, both for myself and others. It would be impossible to enumerate the many blessings which have come to me and to those of my household through this truth—moral, physical, and financial; but the greatest healing of all is the spiritual regeneration, and my heart overflows with gratitude to our beloved Leader for this understanding of Life, Truth, and Love gained from the study of our text-book.—CAROLINE GLAZE, Denver, Col.

I would like to express my gratitude and love to dear Mrs. Eddy for the help received in our Sunday School; it has been such a blessing to me. Every breath I draw, all the strength and happiness I have, have come to me through Christian Science. From infancy I had the worst form of asthmatic trouble, suffering continually. I did not know what it was to run, laugh, and play like other children until I was healed in Christian Science. Now I am well! Any error that creeps in is always met by Christian Science. Where there seemed to be nothing but illness and worry and trouble in our home, now all is joy and love. We as a family know that Christian Science is the truth that makes free, and we feel that the only way to show our gratitude to God, and to our dear Leader, is to live a life so good and true that those who may be watching will say Christian Science is of God.

DONNA MARIE GEORGE, Brookline, Mass.

[Translated from the German.]

With a glad heart, filled with gratitude for all Christian Science has done for me, I testify of my healing. During the autumn of last year I was taken with severe nervous trouble supposedly caused by overexertion. The physicians advised me to go into the country for rest, or else to a sanitarium. As I desired to be freed from this trouble as soon as possible, I decided to go to the latter, hoping thus to be entirely well in at least six weeks, as the leading physician told me that I would surely be restored in that time, but after those weeks had passed my trouble proved to be no better; indeed it seemed worse. I therefore determined to leave the sanitarium and continue my treatment at home. Troublesome days and hours followed; one ailment after another crept in, and existence became a torment to me.

I knew but a very little of Christian Science, and although a relative had been entirely healed by it of a severe malady, yet I could not make up my mind to seek help in this way. I endeavored to forget my suffering through travel, work, and pleasure; and did experience some well days, but a severe relapse soon followed. One day when I was suffering terribly, I cast aside all doubt about the efficacy of Christian Science and turned to it for treatment. A few days later I journeyed to Berlin to receive present treatment, and I must confess that I have found more than I could hope for. I arrived on a

Digitized by Google

Wednesday and attended the Christian Science meeting in the evening. It made a never-to-be-forgotten impression upon me. In looking around I saw happy and joyful faces everywhere, and a desire rose within me to find the same happiness and contentment. To-day I am just as happy, and I have this happiness through Christian Science. After the first few treatments a blessed sense of restfulness came to me, which I had not felt for months. The thoughts of fear disappeared more and more, and on the fifth day I was amidst the turmoil of a large city for six hours. I improved every day, and after four weeks' treatment I was almost entirely well and could joyfully return home to my family. I wanted to work out the rest myself through the study of Christian Science and the reading of *Der Herold*. In this I have been successful, and now I have been active again for six months in my professional work. Everything is easier for me; I do all my work with more joy, and all my actions are prompted by nobler motives. I am deeply grateful to God for Christian Science and its noble Discoverer, Mrs. Eddy, and I am endeavoring to understand Christian Science better. It is a precious thing to know the truth, and still more precious to live it.

H. ZIEBELL, Falkenburg, Pom. Germany.

I am indeed thankful for even the small knowledge I have of Christian Science; it has often helped me to see the unreality of evil in many ways. Two and a half years ago I was healed of a very bad case of kidney disease. I was in a terrible condition, but divine Love was my shepherd, and gave me an understanding of Truth. I suffered greatly at night, until I had treatment by a dear Scientist, which brought speedy relief. The trouble seemed very stubborn for the first few days, but when the fear was met it soon left me, and in two weeks from my first treatment I was well. I have not had any return of the disease, and thanks to Christian Science I have had better health than ever before. About two months ago my little girl, five years old, had a serious attack of fever; but I had no fear, and asked my wife to help me realize the truth, and that she would be all right. We put her to bed, and gave her treatment, and an hour later she was free; the trouble had been met. In the morning she had no fever, and in two days she was herself again. Words cannot express my gratitude to God, and to our beloved Leader for Science and Health, through which I have gained an understanding of this great truth. I am certainly waking from the mortal dream, to find that God did create all things good.

OSCAR D. SIRES, Charleston, S. C.

Twenty years ago I was an invalid, given up by physicians. For seven years I had been a great sufferer from female weakness, unable to do any work, or even to be about but very little of the time. I employed eight physicians in all; I tried every remedy I could hear of, and at last my family physician advised me to go to the Maine General Hospital in Portland. I did so, and had two operations performed. I stayed three months, having the attendance of all the physicians there, besides a specialist who was called in. Twice during my stay there it was thought I would die, and I finally returned home in a worse condition than when I went. Then, after seven years of suffering, during which I had spent a great deal of money for physicians and remedies, a friend who was not a Christian Scientist advised my trying Christian Science. I was not able to go to a practitioner, but sent word to her to come to me. After a few treatments I was healed of my troubles, including what one doctor had pronounced an abnormal growth. I had also been suffering from a severe bronchial trouble, but this, too, was overcome by the truth, and I began at once to attend to my household duties. More than fifteen years after this healing, another trouble came up, so that I was not able to walk without the use of a cane; but I held to Christian Science and called on a practitioner for help, and was at once released from bondage. A short time after this I walked over five miles through the woods without the slightest thought of my crippled condition a few months before.

Too much praise cannot be given to our Leader, Mrs. Eddy, the Discoverer and Founder of Christian Science. My own thankfulness cannot be expressed in words. To-day the Bible and "Science and Health with Key to the Scriptures" take the place of all other books for me. Christian Science has not only helped me physically, but spiritually as well.—ROSE E. ESTES, Skowhegan, Me.

I would like to add my signature to the long list of grateful people who have been healed by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. Six years ago last spring a lady sent me a copy of *The Christian Science Journal* and one of the *Sentinel*, in which I took so much interest that I read them a second time. I then felt sure I could be healed as others had been, although I had used medicine, from the time I was fifteen years old till I was forty-five, with no lasting benefit. The doctors I had were very good and kind and did all they could for me. I had heart, stomach, and bowel trouble, etc.; indeed it seemed as if I had all the ills that could be placed upon any one, but they were all overcome by the truth. When I got a copy of Science and Health I could not hold it up to read, but it was not long before I was able to be up and about the house, and then I wanted to go to the Christian Science services. I am truly thankful to God for giving us our dear Leader, Mrs. Eddy, who has made the way so plain for us to be free. I am also grateful for the *Quarterly*, *Journal*, and *Sentinel;* they are so much help to me.

MRS. MARY A. FARRIS, No. Little Rock, Ark.

For years I was a sufferer from stomach trouble and general debility. About two months ago, becoming interested in the wonderful healing through Christian Science experienced by a friend, I was persuaded to see what it would do for me. I saw a practitioner, received four treatments, and commenced the study of the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. To-day I am in perfect health, and cannot find words to express my gratitude to God, and to Mrs. Eddy for her noble work. My healing was immediate, and in addition I have been entirely cured of the tobacco habit of over twenty years' standing.—J. G. SHARP, Cleveland, O.

I wish to express my loving and grateful appreciation of Christian Science and the blessings it has brought to me. The text-book, "Science and Health with Key to the Scriptures," first came under my notice about seven years ago, and it appealed to me then as a practical working-out of the Sermon on the Mount, which I had learned in early childhood, from Christian parents and church associations, to look upon as the rule of life. After seeing Science and Health I never rested till I possessed a copy of my own, and for the past four years it has been my daily delight to study the Lesson-Sermon. Through it the Bible has become illumined from beginning to end, and light has been shed upon many difficulties. My progress has been slow, but I am thankful for even a small understanding of the truth by which we learn the real nature of God and man. Christian Science is truly "a present help" to me in all the relationships of life and under all circumstances. My gratitude goes out to dear Mrs. Eddy for her revelations

of Truth, and it is my earnest desire to be a true Christian Scientist, worthy of the name.

MRS. DEBORAH SCOTT, Bathurst, Australia.
